Time to Talk Tough

EXTENSION OF REMARKS OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a column by William L. Ryan, Associated Press news analyst entitled "Talk Tough to Russia," which appeared in the Rochester (N. Y.) Democrat-Chronicle on July 9, 1951, and an editorial commenting on this column, which appeared in the Democrat-Chronicle the following day.

The burden of these articles is that it is high time to call the Soviet's bluff. In the light of the colossal evidence of bad faith exhibited by the Communists in the Korea cease-fire talks, in staging the talks in an enemy-held city, to the accompaniment of a barrage of enemy propaganda, this advice is both eminently timely and eminently sound. It is one thing for us to be judicious and temperate. It is something else again to submit to deliberate perfidy committed by an enemy who is without the rudiments of either civil or military honor.

Mr. Speaker, the time has certainly come, as these articles well point out, for us to come down off Olympus in our dealings with the Communists, and talk tough.

The articles follow:

[From the Rochester (N. Y.) Democrat-Chronicle of July 9, 1951]

TALK TOUGH TO RUSSIA

(By William L. Ryan)

Perhaps the time has come for the United States to assume that the Russians are going to act like Russians. With this in mind—should a cease fire be made to stick in Korea—perhaps this is the time for the United States to begin talking the toughest kind of talk to Moscow.

There are all sorts of reasons for believing the Russians, from Politburo to peasant, are scared. What they do now—and they most surely will have some sort of offensive improvised after Korea—will likely be prompted by that fear.

The Russians, with their vast national inferiority complex, may panic more easily

than we think. Today the bulk of the Russian people dreads war. They know what it is. The Politburo dreads a shooting war because it is aware that it is unready, internally and otherwise. It has made a strategic retreat in Korea—and Korea is beginning to look like a great Soviet blunder. The U. S. S. R.—and the czarist governments before it—always feared a ring of hostility. It is a reality today. Korea, opening the eyes of the Western World to Soviet designs, solidified and strengthened the opposition.

Moscow feared a rearmed West. Korea is making it a reality. Moscow dreaded a remilitarized Germany. But if Western Germany is rearmed, Moscow can blame its adventure in Korea. The Soviet Union now will bring its greatest propaganda barrages to bear against German remilitarization, and in favor of the kind of treaties the Russians want in Germany and Japan.

She may even make menacing gestures. The Western answer can be tough talk—tough talk which can penetrate the iron curtain to the masses of people behind it. They remember that Germany alone, with a heavily armed world on its back, almost brought the great Soviet Union to its knees. Let them now ponder the prospect of a united Western Europe backed by American might.

But it is not only dread of the West's arms which may now keep the Soviet Union in check. Russia itself is a vast complex of fear, the accumulation of decades of rule based on fear.

There is evidence in the Soviet press that the Russian worker is tired—very tired. In the ranks of the proletariat, swollen by the mass importation of country bumpkins with little aptitude or liking for industrial labor there seems to be a slow, despairing resentment. They may have a little more materially than their fathers or grandfathers had, but they are paying a heavy price.

When a worker lately snatched from the farm fouls up an assembly line, his "nitch-evo"—so what?—no longer is a refuge. He is accused of sabotage. He loses pay or he can even be sent away to a labor camp.

When this process is repeated many, many times, factories fail to meet their quotas. The industry fails to achieve goals imposed from above. With true Russian inability to find a middle course, the Politburo orders a shakeup.

Not many months ago a number of ministries underwent these shake-ups. New ones are in the offing now. Pravda has been lashing everything from "serious shortcomings to antistate activities in a number of industries. In particular the lumber, meat and dairy, food and fish industries and the ministry of light industry have been whipped editorially.

Note that all these industries are concerned with consumer welfare. The task

asked of them is impossible. From fear the Soviet Union is throwing everything into the yawning maw of its heavy industry—its war industry. But by succumbing to the great overriding fear the U. S. S. R. is creating new ones daily.

The fears accumulate and multiply themselves. Perhaps in the not too distant future the peak will be reached and the dam will burst. Perhaps the Politburo, more given to blunders than we have been led to suspect, is aware of this danger. Perhaps the time has come to tell Moscow we're sick and tired of their nonsense.

[From the Rochester (N. Y.) Democrat-Chronicle of July 10, 1951]

FEAR 'BEHIND THE CURTAIN

On this page yesterday, William L. Ryan offered some encouraging comment for anyone who is inclined to believe that Russia holds all the high cards. Mr. Ryan feels that Russia is beset by fears, that she could not be as tough an antagonist as too many persons believe. And he wondered, at the last, if it wouldn't be worth while for this country to begin talking up to the Soviets. Perhaps because this newspaper has expressed much the same opinion, it finds much to cheer in the Ryan article.

As a people we are too much inclined to take Russia's gabblings at face value. We believe what she says, no matter how absurd or how obscure her boasts and threats. Naturally the Democrat and Chronicle is opposed to any war that is not forced on us, but we do not believe that a courageous stand on our part will lead to war.

Here in Rochester last week was held an important meeting. It was the national convention of the Organization for the Rebirth of the Ukraine. These Americans of Ukrainian stock are not frightened at Russia's bulk. They have a confidence that their old country will yet have the shackles stricken from it, that it will live free, that their relatives will not have to wear the Russian brand. Organizations of this sort feed Russia's fears. She knows perfectly well that under her police state are millions of men and women who would make almost any sacrifice to free themselves.

This country cannot begin to realize the Russians' reason for worry. We are a country of many racial stocks, but we are one people. We are a free and responsible people; the Russians are police-state serfs. We have long coast lines to protect, but not so long as the Russians have. We can send a squad of soldiers to any isolated spot, confident they will hold their ground; Russia cannot trust her soldiers. We have our resources, and an assured manufacturing record. Russia lacks the experience and the ability. If we owned the same liabilities as Russia has, we would be sick with worry.

Cease Fire: Round One**EXTENSION OF REMARKS**

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article by Erwin D. Canham, showing the humiliating position in which the United States and the United Nations have been placed in the negotiations at Kaesong.

Our negotiations are under a white flag in an armed stronghold without any news or radio coverage. Once again the Communists are holding and playing all the trumps.

CEASE FIRE: ROUND ONE

(By Erwin D. Canham)

Once more the Communists have completely defeated the rest of us in the use of news as propaganda. They have made public, through the Russia Tass Agency, a detailed statement of what the Communist negotiators proposed at the Kaesong cease-fire conferences and what the United States officers replied. Perhaps they have falsified the record. But at any rate they have sent a precise account around the world.

Meantime the American officers, who ought to understand the operation of news and of a free press—but obviously do not—are tangled in obscurity and confusion. Only a day earlier, General Ridgway held a press conference in which he promised there would be a direct briefing for the correspondents every evening by a member of the delegation staff who had sat in on the conference sessions. He said he would make every effort to get the Allied press to Kaesong, and announced a plan for 16 correspondents and 16 photographers to make the trip. He said a generous amount of description of the atmosphere and color of the meetings would be provided.

Actually, the Allied press received only the scantiest reports of what happened at the first meeting, and then from officers who had not been at Kaesong and had only a little second-hand information. The plan to send correspondents to Kaesong was canceled at the last minute on the ground that it might upset the negotiations.

Meantime, from Moscow, from Peking, and from other Communist centers came a precise and detailed story of what happened at Kaesong. The Tass Agency said that the Communists at Kaesong proposed immediate cessation of hostilities, withdrawal of opposing troops from both sides of the thirty-eighth parallel to a distance of about 7 miles, and evacuation of foreign forces from Korea.

We do not know whether or not this Communist news story, which had exclusive factual possession of the world's news wires, is true or not. We ought to know. We would know if the American officers had given as good a briefing to Allied correspondents as the Communist officers gave to Communist correspondents. But they didn't.

Time and time again, in the propaganda-ridden history of the last few years, this sort of thing has happened. The Communists know the value of the war of words. They fight it shrewdly. We do not understand this war—least of all does the typical military mind understand the importance of news. And so we are beaten before we

start—beaten until we wake up. Sooner or later, somebody who understands these things beats some sense into the officials involved.

Obviously General Ridgway's intentions were all right. His advance set-up was excellent. But somewhere down the line, military red tape and excessive caution got in the way. And the Communists ran away with the major propaganda victory.

Their terms—summarized by themselves and unconfirmed by our people—include these four vital points: Establishment of a 6- to 7-mile wide nonmilitary zone on both sides of the thirty-eighth parallel; maintenance of the artificial boundary between North and South Korea; maintenance of the status quo as of June 25, 1950, the start of the war; and an exchange of prisoners.

Whether or not we can accept all these terms is very doubtful. Certainly we would exchange prisoners. A nonmilitary zone on the boundary between non-Communist and Communist territory sounds all right. But maintenance of the artificial boundary marked by the thirty-eighth parallel is bound to be open to grave dispute. And reversion to the status quo as of June 25, 1950, presumably means no inspection of what may be going on militarily north of the parallel. It means the descent of the iron curtain once more. It presumably means—as was made clear in the Tass story—the withdrawal of foreign troops from South Korea.

All these points will require much careful study. Already a violent debate has sprung up in the United States over the acceptability of the thirty-eighth parallel. One group says it is either that or a major war with China—resumption and extension of the present fighting. This group, which appears to include the administration, evidently feels that division at the thirty-eighth parallel would be acceptable if we have rights of inspection to detect military build-ups in the north.

A very vigorous contrary viewpoint has come from Democratic Senator DOUGLAS, of Illinois, an administration stalwart. Senator DOUGLAS says it would be a calamity if the thirty-eighth parallel is accepted by the United Nations as a basis for cease fire. He says it is pure fantasy to think the Communists will permit international inspection north of that line. His statement is apparently confirmed by the Communist demand at Kaesong for reversion to the status quo.

Senator DOUGLAS urges us to demand settlement at the so-called neck of the Korean peninsula, the narrow waist, nearly 100 miles north of the thirty-eighth parallel. He says that if we settle at the parallel, the Communists will have won a tremendous victory in the eyes of all Asia. "They would proclaim throughout Asia," he says, "that they had driven our forces and those of the U. N. from our positions of last November back to the thirty-eighth parallel and that they had won a crushing victory."

And now it remains to be seen exactly what we can get from these negotiations. The apparent Communist terms are not encouraging. Neither are the circumstances of the conference, surrounded by Communist armed forces.

Instead of meeting in a neutral spot, we are meeting under flag of truce behind the Communist lines. According to all the traditions of warfare, that makes us the ones who are suing for peace. And yet this is not the fact. The Communists, through Russia's Malik, made the decisive overture. We are not suitors. But we are put in that position, and there seems to be nothing we can do about it short of withdrawing from the negotiations.

If the Communist terms are as intractable as they appear to be, this may be the result before long anyway. Or the Commu-

nists may have been engaging in another propaganda spree. Until solid facts come out, we won't know. Stirred by the Communist propaganda victory, the U. N. officials will no doubt speak fast and specifically about the second session of the conference.

Meantime, it is obvious that we are by no means sure of an acceptable cease fire. The road to peace may still be long and hard. But it will be better to fight on for a just and honorable peace than to accept terms which would be defeat now and might mean worse fighting later on. So far, the U. N. forces have valiantly resisted aggression. They should continue to do so until the cause of peace is safe.

An Affirmative Foreign Policy**EXTENSION OF REMARKS**

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. MEADER. Mr. Speaker, recently I listened with interest to a former Communist who had been converted to the philosophy of a free economy. He described our ideological contest with the totalitarian Soviet system as religious warfare. He described the Communists as religious fanatics burning with crusading zeal for the cause in which they intensely, though mistakenly, believed. He cautioned that the free world could not combat an idea, however erroneous, with a vacuum.

In House Resolution 3798, I sought to contribute to the development of an affirmative foreign policy through demonstrating to the peoples of the world by performance that free enterprise is a superior economic system to totalitarianism.

Very thoughtful comment and constructive criticism is contained in correspondence with Dr. Paul H. Appleby, who is dean of the Maxwell Graduate School of Citizenship and Public Affairs, Syracuse University; former Assistant Director, United States Bureau of the Budget; former Undersecretary of Agriculture; former Special Assistant to Lend-Lease Administrator; and member of International Food Missions.

For the benefit of the Congress in its current consideration of the proposed foreign-aid program, I am inserting this correspondence in the RECORD.

SYRACUSE UNIVERSITY,

Syracuse, N. Y., May 25, 1951.

DEAR Mr. MEADER: I acknowledge with hearty thanks your letter of May 17 and the enclosed reprint from the CONGRESSIONAL RECORD.

In general terms I applaud heartily your purposes and nearly all of your remarks. I think the general point you make is indisputably valid and the dramatization through some such device as your proposed commission would be a thoroughly constructive step. I think you are to be congratulated on your insight and on your freedom from damaging partisan bias.

I have qualms about one part of your enunciation of agenda points. It seems to me that some of your phrases and some of

your paragraphs could be interpreted—without unfairness, even if not correctly—as a certain kind of “imperialistic” drive on behalf of American-type capitalism. At least, your language does not overtly, I think, recognize adequately the many variations in economic structures characteristic of modern societies outside of the iron curtain area, and the insistence of these nations on building in their own terms and not in terms that we find quite satisfactory in the United States. The nationalization of oil or the eviction of foreign ownership of an oil industry, has become a considerable problem internationally just now and illustrates the difficulties I had in mind. Actually, the foreign ownership of important industries in Yugoslavia, in Iran, in Iraq, in Mexico, in India, and in China has been an important aspect of the problem of world order, and if I read your proposal correctly it is predicated rather too sharply on an assumption of great increase in investment of the very kind that has proved offensive in the past. In many parts of the world and in case of certain kinds of investments, it seems to me that a realistic and cooperative approach to the problem of cooperation and world order will of necessity dictate a good deal of help directly to governments and directly through and from our own Government. I don't believe that the issue is wholly an either/or one, but any adequate general approach to the problem you are addressing, it seems to me, ought to include in its terms of reference possibilities for both governmental expenditure and investment and private investment.

With your more fundamental position, I think as already indicated, that there can be no quarrel at all. In one way it may be said that the modern world problem is a problem of raising the standard of living in the rest of the world at a rate commensurate with our own capacity for economic betterment. The United States is in the position of the family of privilege described long ago by Carlyle; that family declined interest in the needs for sanitation and health provision in the city at the foot of the mountain on which the family resided and when the plague came it did not stop at the foot of the mountain. The United States by its very economic preeminence has more at stake than any other society in the business of achieving a kind of world well being which will bulwark our own attainments and values.

With congratulations on your statesmanlike point of view, and with hearty good wishes, I am

Sincerely yours,

PAUL H. APFLEBY.

JUNE 1, 1951.

Dr. PAUL H. APFLEBY,
Dean Maxwell Graduate School,
Syracuse University,
Syracuse, N. Y.

DEAR DEAN APFLEBY: Thank you for your thoughtful comments of May 25, 1951, on my proposal to establish a commission on aid to underdeveloped foreign areas.

You have put your finger on the point most likely to be attacked by those unfriendly to the idea. I sought to make clearly, briefly, as did the President in his message—that it is a responsibility of governments to prevent imperialistic exploitation. I envisage as one of the most important and difficult tasks of the commission the development of workable and enforceable means to prevent such abuses of the free-enterprise system. The Sherman and Clayton Acts, other antitrust legislation, and the efforts of the Federal Trade Commission and the Department of Justice leave much to be desired in maintaining equality of economic opportunity within the United

States. Cartels and monopolies abroad are not regarded in the same light as are restrictive trade practices and agreements here. Evolution of an acceptable policy and workable means of enforcing it would not be easy. I don't pretend to know the solution. Perhaps, an able commission, after careful study, would not find it. I attempted to do no more than state an objective in the passages I have underlined in red on the enclosed reprint.

I recognize, also, that the statements in my speech might be interpreted to be an expression of pride in all things American, and an intention to make over all peoples into our images. Actually, I hold no such views. Religions, traditions, social customs and practices, as such, to the extent they do not impair an individual's right to make his livelihood in a free, competitive economy, need not be affected in any way. Any modification required by changed economic conditions would very likely be slow, depending upon education and acceptance of more modern concepts. This is a vast subject, but I would not pretend that religion and customs have no bearing on the economic plight of the underdeveloped areas. Nor do I advocate that they be “Americanized,” except that I think they should have “free”—as contrasted to “totalitarian”—economies if the point 4 objective is to be attained. I sought, at least, to hint at this attitude near the end of the third column on page 3.

I agree that the problem is not either Government grant-in-aid or private investment, but a judicious and balanced combination of both. Your reference to Carlyle's episode is apt—but I would counter that the greatest favor we can do for the underdeveloped peoples is to help them establish for themselves a system where the dynamic forces of individual free man are unleashed in the economic development of the natural resources of the areas they inhabit.

Sincerely,

GEORGE MEADER.

SYRACUSE UNIVERSITY,
Syracuse, N. Y., June 7, 1951.

Mr. GEORGE MEADER,
House of Representatives,
Washington, D. C.

DEAR Mr. MEADER: It was a real satisfaction to get your letter of June 1. While I had made my comment not on any assumption that your own thinking had missed anything that I might point out, but rather in terms of how others might interpret what you had in mind, the time you took in writing your letter was well spent as far as I am concerned. It reinforces my earlier judgment that you are pursuing with exceptional understanding an undertaking of great potentialities. You have my heartiest best wishes.

Sincerely yours,

PAUL H. APFLEBY.

Meet Your Congress

EXTENSION OF REMARKS

OF

HON. LOUIS E. GRAHAM

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following transcription of a speech by Senator GEORGE D. AIKEN, of Vermont, dated July 8, 1951:

MEET YOUR CONGRESS

(By Senator GEORGE D. AIKEN)

In the summer of 1950, after the Korean invasion, the President asked Congress to give him authority for the control of credit and power to do certain things considered necessary to the rapid building-up of our Armed Forces and for preparing for all-out war if needs be.

He did not ask for authority to control wages and prices. Not only did he not ask for such authority, but it was clearly understood that he preferred not to have it at that time.

Congress thought otherwise. We believed that should the war grow, it might be necessary to exercise price and wage controls in addition to the means of controlling inflation at its source through the imposition of taxes and restriction of credit.

Therefore, Congress wrote into the Defense Production Act of last September a provision for stand-by controls.

Although new taxes were authorized and stricter credit controls on installment buying were imposed, the President made no move to control wages and prices until January 1951.

In retrospect it appears that the new taxes and credit controls might have prevented any serious price boosts had it not been for one thing.

Between the outbreak in Korea and February 1, 1951, the administration made available nearly \$8,000,000,000 in new credit and purchasing power.

Under the whip-cracking of the White House and the Treasury, the Federal Reserve Board bought several billions in Government bonds.

From this source alone, the lending power of the country's banks increased billions of dollars.

When a bank has idle credit, it lends it if possible. That is what happened in this case.

And 60 percent of the loans from this new credit were made to commodity dealers, speculators, and processors who bid the price of certain commodities way up. Cotton led the way.

Not only did the administration provide speculators with huge amounts of credit, but in late fall and early winter Federal officials made a series of scare pronouncements about coming scarcities and high prices.

This resulted in considerable panic buying by consumers and by January prices had reached a level that the administration said necessitated price controls.

Not a bit of responsibility did the White House assume for its inexcusable and costly blunders. It had to have a whipping boy on which to put the blame.

Whom did it select? Not big business which has its own way these days. Not the transportation companies whose rates have soared until in some cases transportation costs now equal or exceed the cost of the goods. Not the Treasury, which started the inflation spiral in the first place. Not the Government practice of negotiating 40 billion in contracts without regard to any price ceilings at all.

It decided to put the blame on the American farmer—the man who Charlie Brannan told Congress earns the outrageous amount of 69 cents per hour.

So the campaign goes on. Big Government and big business and big-city newspapers against the American farmer—the most outrageous—the most unfair—the most unwarranted propaganda campaign of modern history. The whole pack in pursuit of a quarry which will not run.

I oppose giving further controls to this administration which has not shown its ability to properly use those it already has.

New England Pays More United States Taxes Than It Gets in Benefits

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George H. Arris, from the Providence Journal of July 11, 1951:

NEW ENGLAND PAYS MORE UNITED STATES TAXES THAN IT GETS IN BENEFITS—RHODE ISLAND RECEIVES LARGER PROPORTIONATE SHARE OF WHAT GOVERNMENT SPENDS THAN OTHER STATES IN AREA; COMMITTEE POINTS UP ISSUE

(By George H. Arris)

New England, according to the committee on the New England economy, pays substantially more in Federal taxes than it gets back in Federal expenditures.

In 1948 the region was receiving in the form of Federal Government expenditures, 71 cents for every dollar of taxes sent down to Washington.

Among the New England States, however, Rhode Island, the committee said in its report to the President's Council of Economic Advisers, gets a larger proportionate share of what the Government does spend in New England than any other of the six States.

The comparison is made in all six States in ratios. That is, Government expenditures in a State are taken as a percentage of total expenditures in the country, and the figure so attained is compared with that State's percentage of total United States population and total United States income payments.

RHODE ISLAND RATIO

Set up in this fashion, the committee's tabulation showed that Rhode Island, with 0.51 percent of United States population and 0.57 percent of total income payments in the country, received 0.62 percent of Government expenditures.

In other New England States Federal spending ratios run well below ratios of population and income.

No figures are given in the committee's report on the ratio of Federal taxes paid in Rhode Island to those in the country as a whole, so that it is not possible in absolute terms to get at the amount of actual money drained from the State because of the excess of taxes over Federal expenditures.

Because there is no fine breakdown of State figures in the report, it is impossible also to determine the importance to this State, as compared with other New England States, of husky military installations here and the amount of income generated by them. The most recent estimate of the value of such installations was \$129,198,505 last year. Payroll data shows that the Navy and Army are paying civilian employees in Rhode Island close to \$1,900,000 a month.

ONE BILLION DOLLARS DIFFERENCE

In the study of New England's Federal tax-expenditure relationship, which was a part of a section in the committee's report dealing with capital drain and trade balance, the economists said that the region collected in taxes and sent to other regions of the country close to \$1,000,000,000 more annually than it got back in Federal expenditures.

This deficit was the result of higher per capita incomes in New England, on which taxes were levied, than in many other regions, on the tax side of the equation. And, the result of the farm-support program, various

types of subsidies, and natural resource or other types of public development undertaken by the Federal Government in other parts of the country, in larger amounts than in New England.

The committee said, moreover, that the gap between taxes collected in New England and United States expenditures received had widened substantially in recent years. Whereas spending in New England in 1948 was 71 percent of Federal receipts from the six States, the ratio had been 83 percent in 1929.

NEW ENGLAND'S CHOICE

Discussing this gap, the committee said New England must choose between opposing Government spending unsuccessfully or seeking its fair share of such expenditures—a suggestion which drew fire from several corners of New England.

The committee, however, indicated in its report it would welcome the kind of public discussion it aroused in a region where, it said, "influential people, critical of Federal policies and urging retrenchment, do not want to be bailed out by the Federal Government."

"Here is the great issue," the committee wrote. "New Englanders must decide whether, as Federal operations continue to expand, the region should stand idly by while its income is drained off to benefit other areas and should continue to shun Federal aid of all kinds."

SEEK LARGER SHARE?

"Or, are New Englanders going to seek a larger share of the Federal outlays that increase markets, reduce costs, and bring other regional and national advantages?"

"This is an important issue which should be understood and debated more fully by all groups in the region."

The committee urged new economies in Federal Government as an aid to New England, revision of the tax structure so that the burden falls more on surpluses and less on costs, and "careful consideration by State and local governments of Federal programs which might contribute toward the improvements of the New England economy."

Concerning New England's balance of trade, the committee drew upon a study made in 1939 by Penelope C. Hartland, of Brown University, for much of its information on the excess of imports into the region (in dollar terms) over exports.

RAW MATERIALS

Imports in this instance meant the raw materials and goods which were bought and paid for by New Englanders. Exports were the finished goods and services sold.

In 1939, according to the committee, the excess of imports of commodities over goods exported amounted to \$1,306,600,000, or about 25 percent of the region's income. In part New England paid this balance by earnings on past investments in other parts of the country and by the sale of services—recreation, travel, insurance, education, dividends, rents, and royalties.

Sale of services took care of about 69 percent of the commodity trade deficit, leaving a final unpaid balance of \$404,300,000.

This 69 percent, finally, was made up by importation of capital. That is, outside corporations built plants here, outsiders purchased summer homes, investments trusts channeled new funds into New England enterprises, and foreigners sent capital into this part of the country.

STAKE IN INFLATION CONTROL

Because of the structure of the region's balance of payments, the committee said—that is, because it buys more commodities than it sells—New England has a basic stake in control of inflation.

According to an as yet unpublished analysis by the Federal Reserve Bank of Boston, the report said, New England was a net loser

by \$7,000,000 on commercial and financial accounts during 1950 for the first time on record.

This, it said, was primarily the result of what it called the differential impact of inflation upon regions. That is, the bulk of commodities—farm-grown and mined—has risen in price proportionately more than the price of goods made here and shipped to other sections of the country.

TARIFF POLICIES

Concerning trade with foreign countries, the committee pointed to the importance of both export and import business to New England and urged Federal Government consideration of this region in formulation of tariff policies.

It said that tariff reductions in recent years on hard fiber cordage, jute burlap, jute bags, raw wool, softwood lumber, zinc, bauxite, aluminum, copper, manganese, pig iron, steel ingots, unfabricated structural shapes of iron and steel had aided the New England economy as a heavy consumer of these materials.

But it urged Federal authorities to be cautious in making concessions affecting the important old industries in which domestic employment is declining.

"Any concessions on manufactured goods which impair New England's economic position in its large declining industries," it said, "should be offset by reduced barriers on imports of raw materials and goods into New England."

American Bar Association's Proposed Revenue Revision Act

EXTENSION OF REMARKS

OF

HON. A. SIDNEY CAMP

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. CAMP. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

SUMMARY EXPLANATION OF AMERICAN BAR ASSOCIATION'S PROPOSED REVENUE REVISION ACT OF 1951

TITLE I INCOME TAXES

Section 101, taxable years affected: Except as otherwise expressly provided, all amendments made by this title shall be applicable to taxable years beginning after December 31, 1950.

Section 102, elimination of the life-insurance factor of pension trusts from taxable income of employees: Under the present law, if a plan provides retirement-income-insurance benefits together with death benefits, the employee receiving such protection is deemed to receive current taxable income measured by the cost of term life insurance in the amount provided during the year. The result is inconsistent with the long-standing rule to the effect that group-insurance benefits are not currently taxable to employees. The amounts are generally small and the administrative difficulties far outweigh the advantage in revenue to the Government. PS-58, promulgated January 30, 1947, and revised March 7, 1947, mitigates this burden somewhat, but does not cure the administrative nuisance, both to the Government and to employers and trustees, of treating the life-insurance factor as taxable income. The bar association proposes to eliminate the insurance factor of pension trusts from taxable income by an amendment to section 22 (b) of the Internal Revenue Code.

Section 103, extension to 75 days of the time within which taxpayer on accrual basis may contribute amounts to pension plan and secure deduction therefor in year of accrual: Under the present law, a taxpayer on an accrual basis cannot take a deduction for the accrued amount of payments to a pension or profit-sharing plan unless actual payment is made within 60 days after the close of the taxable year of accrual. The bar association recommends that section 23 (p) (1) (E) be amended so as to extend this time period to 75 days after the close of the taxable year. The payments under many plans are determinable only when the audited results of the year's operations are known, and often this is difficult to obtain within 60 days.

Section 104, union welfare trusts, deductibility of contributions: The enactment of the Taft-Hartley Act has brought into the limelight so-called union welfare funds, many of which provide pension or annuity benefits. It is understood that the Commissioner of Internal Revenue has taken the position that contributions by employers to funds which provide such benefits are not deductible for income tax purposes unless they meet the requirements of section 23 (p) of the Internal Revenue Code, relating to conventional pension or annuity plans. The result of this position is to put in jeopardy the deduction of such contributions, since it will be difficult in most cases, if not impossible to meet the requirements of actuarial soundness applicable to deductions under section 23 (p). Accordingly, it is proposed to rectify the situation by making clear the deductibility of contributions to welfare trusts which meet the requirements of section 302 (c) (5) of the Labor Management Relations Act under section 23 (a) of the code relating to ordinary and necessary business expenses. This is believed to be consonant with the intention of Congress, which could hardly have intended that the 1942 amendments to section 23 (p) and 165 of the code should apply to these welfare trusts. This provision is made applicable to all taxable years beginning after December 31, 1941.

Section 105, pension and profit-sharing plans: extension of capital-gains treatment to distributions made within 1 year on account of either the employee's separation from the service or death: Under the present law, if the total distributions payable under a qualified pension or profit-sharing plan are paid to the distributee within one taxable year of the distributee on account of the employee's separation from the service, the amount of such distribution is considered a capital gain to the extent that the amount exceeds the amounts contributed by the employee. This provision is a very desirable one because if, when an employee retires and receives a lump-sum payment, he were taxed at ordinary income rates in 1 year on the total amount of distributions over what he has contributed, a large percentage of the amount he receives might be taken by the tax authorities. Subsection (b) of the bar association proposal would amend section 165 (b) of the code so as to extend capital gains treatment not only to situations where the payment is due to the employee's separation from the service, but also to situations where it is due to the employee's death after his separation from the service.

Subsection (a) is an amendment to section 22 (b) (2) (B), to extend the same capital gains treatment to nontraded plans. There seems no reason why, if the particular pension or profit-sharing plan of a corporation is set up on an annuity basis rather than on a trust basis, this technical distinction should mean a different method of taxation to the recipient of the payments. This section would be applicable to all taxable years since 1941.

Section 106, pension plans for partnerships and individual proprietorships: Un-

der existing law, partners and sole proprietors may not be included as beneficiaries under pension plans for their employees under section 165 of the code, although stockholders employed by their corporation are not so affected. The result is to discourage the establishment of such plans for the employees of business conducted in non-corporate form, and to discriminate against employees of unincorporated business. Section 106 would amend section 165 of the code by providing that the sole proprietor or partner who performs personal services in the business shall be treated as an employee as well as an employer for the purposes of that section; that the part of his income from the business which is attributable to his services shall be deemed compensation; and that where both personal services and capital are material income-producing factors, the apportionment of income to services shall be made under regulations prescribed by the Commissioner.

Section 107, taxation of annuity payments: Under present law, annuity payments are treated as in part a nontaxable return of premiums, and the balance as taxable income. However, the formula used treats as taxable income all of the excess annual receipts over and above 3 percent of the amounts paid for the annuity. The result is that many annuitants are never able to recapture their outlay tax-free, while others, through such recapture, incur a sharp rise in taxable income in the year following that in which the total cost has been recovered under this arbitrary formula.

The proposed amendment substitutes a constant yearly exclusion for the life of the annuitant. If he lives out his exact life expectancy, he will recover tax-free exactly the cost of the annuity. If he lives beyond such expectancy, he will recover tax-free more than his premiums paid; if he dies before the expiration of such expectancy, he will recover less. However, on the average, the results are equitable in that the revenues will not be reduced, and the annuitant's taxable income from this source will be constant.

Section 108, cancellation of indebtedness: Section 22 (b) (9) of the code permits a corporation in certain situations to elect to exclude from gross income the income which would otherwise be taxable to it upon the cancellation of indebtedness, on condition that the basis of its property under section 113 be correspondingly reduced. This provision, in situations to which it applies, relieves hardship by deferring an additional tax burden upon a taxpayer already embarrassed financially. However, the provision is a temporary one, not applicable to cancellations of debt occurring after December 31, 1949; the election to get its benefits must be made at the time the return is filed; it does not apply to noncorporate taxpayers; and it does not apply unless the canceled debt was evidenced by a security as therein defined.

Section 108 would make the provision a permanent part of the code; would extend the period of election until the expiration of the period for filing a claim for refund; would make the provision applicable to all taxpayers; and would eliminate the requirement that the debt be evidenced by a security. The reason for extending the date for election is that there is great uncertainty under the decisions (cf. *Helvering v. American Dental Co.* (318 U. S. 322) and *Commissioner v. Jacobson* (336 U. S. 28)) as to when cancellation of debt results in taxable income to the debtor, and the taxpayer is often unable to determine what action to take at the time the return is filed.

Section 109, last-in-first-out inventory: In cases where, upon retirement of elective inventories involuntarily liquidated, deficiencies or refunds are determined for the year of involuntary liquidation, the present law (sec. 22 (d) (6) of the Internal Revenue

Code) provides that no interest is payable on such deficiencies or refunds. Subsection (a) provides for interest on such deficiencies from January 1, 1948, or from the due date of the tax for the year of replacement, whichever is later; and provides for interest on such refunds from January 1, 1948, or from the date of filing of the claim for refund, whichever is later. In view of the recent addition (by Public Law 819, 81st Cong.) of subparagraph (F) to the code provision in question, a corresponding change is made by subsection 109 (b) of the bill for years to which subparagraph (F) is applicable.

Section 110, alimony paid under separation agreement: Under sections 22 (k) and 171 (a) of the code, amounts paid in accordance with the terms of a separation agreement between husband and wife, where they are not legally divorced or separated under court decree, are not deductible by the husband or taxable to the wife. With the privilege of splitting income introduced by the Revenue Act of 1948, which is open to all married couples not separated under a court decree, it is believed that where separate returns are filed, amount paid under separation agreements should be deductible by the husband and taxable to the wife, even though they are not legally separated under court decree. The proposed amendment is to that effect, although it should be noted that the husband and wife who are thus separated may, at their option, file a joint return, in which event the recommended change would become inapplicable.

Section 111, deduction of worthless stock loss in case of affiliated corporation: This section amends section 23 (g) (4) (B) of the Internal Revenue Code to remove an apparently unintended discrimination.

Section 23 (g) (4) provides that a corporation may deduct as an ordinary loss the loss on worthless stock in an affiliated corporation. In defining what is an affiliate for purposes of that paragraph, section 23 (g) (4) (B) provides that a corporation shall not be deemed to be an affiliate with the taxpayer unless more than 80 percent of the aggregate of its gross income for all years has been from sources other than royalties, rents, dividends, interest annuities, or gains from securities transactions. The limitation was put into the statute in order to exclude holding companies from the benefits of section 23 (g) (4), but as now worded the law inadvertently excludes a number of operating companies, such as banks and investment companies, just because much of their income is derived from rents, interest, or the like. The proposed amendment would extend the benefits of section 23 (g) (4) to losses on the stock of corporations "actively engaged in a trade or business," whatever the source of their income.

Section 112, extension of business-bad-debt deduction: Under existing law a distinction is made between business bad debts and non-business bad debts. The distinction is important because the former are deductible in full and the latter (in the case of a taxpayer other than a corporation) are treated as short-term capital losses which are deductible only against capital gains plus not more than \$1,000 of ordinary income. The nonbusiness bad debt is so defined under existing law as to include true business debts which do not become worthless until after the taxpayer has terminated his business. Since it is manifestly unfair to distinguish in this manner between business debts which become worthless while the business is still in operation and those which become worthless at a later date, section 112 amends the definition of a nonbusiness bad debt so as to exclude a debt arising in the course of the taxpayer's trade or business.

Section 113, change of election with respect to standard deduction: Existing law permits the individual income-tax payer to elect to take a standard deduction instead

of itemizing his deductions. This election must be made on the tax return in a manner prescribed by regulations. An election so made is irrevocable. This provision has worked unjustly for taxpayers who find subsequently that they have acted unwisely or whose correct taxable income is subsequently found to be different from that on the return. Section 113 permits the taxpayer to change an election with respect to the standard deduction for any taxable year, within the period of the statute of limitations. Such change must be made under regulations to be prescribed by the Commissioner with the approval of the Secretary.

Section 114, wages paid to dependents: Under existing law a taxpayer is permitted to claim a deduction in computing his income tax for wages paid by him to a person who is a dependent and for whom he claims an exemption. Since these wages reduce the extent of the recipient's dependency, it is undesirable to allow the deduction while also allowing the dependency credit. Section 114 disallows the deduction of wages paid to persons who are dependents of the taxpayer.

Section 115, unpaid expenses and interest, related taxpayers: Section 24 (c) of the code was passed at the request of the Treasury to eliminate a great inequity against the Government. Prior to that act, corporate-tax payers would be permitted deductions on the accrual basis for amounts of salaries or interest or the like accrued to related taxpayers; but the related taxpayers (being on the cash basis) might delay for a long time paying or might never pay a tax on the income. Despite the clear purpose of section 24 (c), which was simply to correct the injustice against the Government which was previously possible, the Bureau of Internal Revenue has with success applied that section even to cases where the related taxpayer, although on the cash basis, is actually taxed upon the accrued item upon a theory of constructive receipt. See *Lake v. Commissioner* (148 Fed (2d) 898). Section 115 of the bill would amend section 24 (c) so as to provide that, if the recipient of income is actually taxed on the income, whether or not received by him, the deduction will be allowed to the related taxpayer.

Section 116, credit for dividends received: Under existing law, section 26 (b) of the Internal Revenue Code limits the dividends received credit to 85 percent of the amount received as dividends from domestic corporations which are subject to income taxation. This credit is not extended to resident foreign corporations having substantial income from sources within the United States. Such resident foreign corporations are frequently owned by domestic corporations with the result that, although the foreign corporation is subjected to the regular normal and surtax rates with respect to its earnings from United States sources, dividends to the parent domestic corporation do not furnish a basis for the dividends received credit otherwise afforded similarly owned domestic corporations. The proposed amendment will remedy that situation by extending such credit, with what are believed to be appropriate limitations.

Section 117, installment sales: Section 44 (b) permits use of the installment method, in the case of sales of realty and casual sales of personality, only where the payments during the taxable year in which the sale is made are less than 30 percent of the selling price. Where no payments at all are received in the initial period, the Treasury holds that the conditions are not met and the installment method may not be used. The proposed amendment would avoid this interpretation and would permit application of the installment sales provisions where no part of the selling price is received during the taxable year.

Section 118, installment obligations: This section extends to the estate or beneficiary of a decedent who has elected to report income from installment obligations upon the installment basis a deduction for that portion of the estate tax which was imposed upon the value of such obligations.

Section 119, taxable years of approximately 12 months: This section gives specific legal sanction to the practice of authorizing the use of a 52-week or 53-week year for the purpose of reporting for the income tax.

Section 120, service rendered for a period of 36 months or more: Existing law provides that if at least 80 percent of the total compensation for personal services covering a period of 36 calendar months or more is received or accrued in a single taxable year by an individual or partnership, the tax may be calculated as if the income had been received ratably over the period, prior to such receipt or accrual, in which the services were performed. The relief provided by this averaging device is limited specifically to cases where compensation has been received in a single year for at least 80 percent of a complete task. Relief is denied in situations where an individual is employed continuously for long periods but receives portions of his compensation for the work in lump sums at infrequent intervals. Section 120 extends averaging treatment to cases in which 80 percent of the total compensation for work done to date over a period of 36 months or more is received or accrued in a single taxable year. This provision is made retroactive to taxable years beginning after December 31, 1941.

Section 121, election as to recognition of gain in certain corporate liquidations: Many corporations having no substantial accumulations of earnings and profits nevertheless hold real estate or unlisted corporate securities not readily marketable but considerably appreciated in value. Several times Congress has passed temporary legislation to permit such corporations to be liquidated under certain circumstances without adverse effects upon the stockholders; that is, by taxing to the individual stockholder as ordinary income only that part of the distribution which represents accumulated earnings, the remainder being treated as a capital gain, but excluding from tax the unrealized appreciation in value of assets, that gain being postponed until the stockholder sells such assets. Section 206 of the Revenue Act of 1950, the last such enactment, reactivated section 112 (b) (7) of the Internal Revenue Code, but applies only to those liquidations where the transfer of all the property in liquidation occurs within one calendar month in 1951, pursuant to a plan adopted after December 31, 1950. It is felt that the purpose accomplished generally by this type of legislation is beneficial to the public; and, if this is true, it should not be limited to a single short period. The proposed amendment would make permanent in the Internal Revenue Code the temporary provisions of section 112 (b) (7).

Section 122, gain or loss in connection with certain corporate liquidations: Under existing law, if a corporation is liquidated by distributing its assets to its stockholders, no tax is imposed on the corporation on any appreciation in the value of the assets over the adjusted basis, or cost, to the corporation. As far as the stockholders are concerned, any excess of the value of such assets over the cost or other basis of the stock is taxed as capital gains.

On the other hand, if the corporation sells its assets just prior to liquidation, a tax is imposed on the corporation, and when the proceeds are distributed to the stockholders another tax may be imposed on them. In a great many cases disputes have arisen between the Government and the taxpayer as to whether a sale was made by a corporation

or its shareholders. The problem first went to the Supreme Court in the *Court Holding Co.*, case (324 U. S. 331 (1945)), and again in the *Cumberland Public Service Co.*, case (338 U. S. 451 (1950)), where the Court said: "The oddities in tax consequences that emerge from the tax provisions here controlling appear to be inherent in the present tax pattern. * * * Congress having determined that different tax consequences shall flow from different methods by which the shareholders of a closely held corporation may dispose of corporate property, we accept its mandate."

Section 122 provides that if a corporation sells its assets just prior to liquidation, no gain or loss shall be recognized to the corporation. It contains safeguard provisions against liquidation being used as a device for paying at capital gain rates on sales in the normal course of trade.

Section 123, stock dividends: As the result of recent Treasury Department rulings, the receipt by a taxpayer of preferred stock tax-free as a stock dividend or in a corporate reorganization depends not only upon whether the dividend is in form a tax-free stock dividend or the reorganization is in form a tax-free reorganization, but also upon whether the preferred stock so received is sold by the receiving stockholder or whether it is subject to redemption under sinking fund provisions or by reason of an agreement that the stock may otherwise be redeemed by the corporation in whole or in part. This Treasury attitude makes uncertain the previously well-established law as to tax-free stock dividends and as to the tax-free status of stock received in exchanges under section 112 (b) (3) of the Internal Revenue Code. This uncertainty is hampering many legitimate transactions which should be consummated.

The effect of the proposed amendments is to state explicitly what is deemed to be declaratory of existing law, namely, that the effect of the tax-free character of a corporate distribution of stock should not be lost merely because the stockholder sells or intends to sell his new securities, or that the new securities are subject to a sinking-fund provision of reasonable length fixed with reference to assuring the marketability of the stock, or that the stock is subject to redemption, in whole or in part, at the option of the issuing corporation. The proposed amendments also include a provision that would close any loophole that may exist by reason of a taxpayer entering into a tax-avoidance plan to receive a tax-free distribution of stock, sell the stock, and then have the stock redeemed in the hands of the purchaser.

Section 124, involuntary conversion: Section 112 (f) of the Internal Revenue Code postpones the taxation of profits realized in involuntary conversions where similar properties are acquired to replace those converted. The present statute has been construed to limit the relief to situations where the specific funds received on the involuntary conversion can be traced into similar property. It is often necessary to replace the property before the proceeds of the involuntary conversion are actually in the hands of the taxpayer. Section 124 of the bill amends section 112 (f) so as to provide that it is immaterial whether the money into which such property has been converted is expended directly in the acquisition of other similar property or whether it is used to replace funds already expended by the taxpayer in such acquisition.

Section 125, definition of reorganization: This section provides that section 112 (g) of the Internal Revenue Code (relating to recognition of gain or loss in corporate reorganizations) be amended so as to provide that no gain or loss shall be recognized where assets exchanged solely for stock are transferred to a corporation which is a wholly

owned subsidiary of the corporation from which the stock is received. Under the present definition of reorganization in section 112, as construed by the courts, a reorganization which would in all other respects be nontaxable may be made taxable if the assets transferred in exchange for a stock are transferred not to the corporation issuing the stock but to a subsidiary of that corporation. The nature of the interest of the corporation transferring the assets and the nature of the interest of the corporation issuing the stock in return therefor are substantially the same whether the assets are transferred directly to the corporation which issues the stock or to a subsidiary of that corporation.

Section 126, distribution of stock on reorganization: This section of the bill provides for the nonrecognition of gain from the receipt of stock in certain corporate reorganizations known as spin-offs. A typical spin-off occurs where a part of the assets of the corporation is transferred to a new corporation in exchange for all the stock of the new corporation which is thereupon distributed to the stockholders of the original corporation without the surrender by them of any of the stock of the original corporation.

A similar provision was contained in section 112 (g) of the Revenue Act of 1932 and prior acts, but this was omitted in the Revenue Act of 1934 because the decision of the Board of Tax Appeals in *Evelyn F. Gregory* (27 B. T. A. 223 (1932)) indicated that such provisions might be subject to abuse and held to apply to what was regarded as in substance the distribution of a dividend. The reversal of that decision in 69 Fed. (2d) 809 (CCA 2, 1934), affirmed (293 U. S. 465 (1935)), removed the danger of such abuse. Judicial and administrative interpretation of the law since 1934 has established safeguards which now prevent such abuse of the reorganization provisions. It is proposed to restore this provision to the law because it is believed that it is economically unsound to impede reorganizations which divide one corporate enterprise into a greater number of corporate enterprises where such division is undertaken for legitimate business purposes and is not a mere device for the distribution of a dividend. Where stock of a new corporation is distributed without the surrender of stock of the old corporation, the result is identical, in substance, with transactions in which stock of the new corporation is distributed in exchange for the surrender of either all or a portion of the stock of the old corporation—transactions which give rise to no recognized gain under present law. It is not intended to change the existing law as to such transactions but to amend the law so as to permit in the future the same substantial result to be accomplished with the same tax consequences by a spin-off reorganization, both types of reorganization being subject to the general limitations embodied in the *Gregory* case and subsequent decisions based thereon.

Section 127, basis of property included in decedent's estate: Under the present law, if property passes by virtue of a decedent's will or by inheritance from him, the income-tax basis for such property in the hands of his estate, devisee or heir, becomes the value at the date of death (or such other valuation date as is used for estate tax purposes). With two minor qualifications, the foregoing rule does not apply to property transferred inter vivos by a decedent even though such property may be includible in his gross estate for estate tax purposes, as, for example, property transferred in contemplation of death. The proposed amendment would change the law so that if property were transferred either inter vivos, or by reason of the decedent's death, and if such property were includible in his gross estate for estate tax purposes, the income tax basis of such property would become,

after his death, its value on the date of death (or other applicable valuation date).

Section 128, adjustment of basis for depreciation: This section amends section 113 (b) (1) (B) of the Internal Revenue Code and prior revenue laws to mitigate the effect of the Supreme Court's decision in the case of *Virginian Hotel Corporation v. Commissioner* (319 U. S. 523 (1943)). Section 113 requires that the original cost or other basis of property be adjusted to reflect depreciation and depletion sustained since the property was acquired. In 1932 the provision was amended to require the deduction of depreciation "allowed" where it was in excess of the depreciation "allowable." The amendment was made at the request of the Treasury, and the legislative history of the amendment shows very clearly that the sole purpose of the provision was to cover a situation where the excessive depreciation resulted in reducing the taxes collected by the Government in a year which had become barred, so that if the excessive depreciation were restored the taxpayer would in effect be getting a double deduction against the Government. However, the Court in the *Virginian Hotel* case reached an incongruous and inequitable result. That decision prevents a taxpayer from correcting a prior erroneous depreciation figure, even when the Government has not been injured by the error. Section 128, in line with the otherwise universal practice of the Federal income tax statutes from 1913 to date, would permit a taxpayer to compute the taxes for any year on a correct basis, without regard to any error in prior years, so long as the error did not deprive the Government of taxes to which it was entitled.

Section 129, farm expenditures for soil and water conservation: Under existing law, farmers are often required to capitalize costs of soil- and water-conservation improvements to their land. However, it is often impractical for farmers to keep adequate records for the purpose of determining the amount of these costs. For example, a farmer who uses his tractor for plowing in the morning and for large-scale contouring in the afternoon theoretically must capitalize some of the depreciation on the tractor and some of the cost of gas and oil. Moreover, farmers cannot depreciate these improvements because land is a nondepreciable asset. Accordingly, farmers who make these improvements must wait until they sell their farms to obtain a tax benefit for incurring the cost of the improvements. It is not practicable to set up an arbitrary depreciation rate, and instead this section provides that farmers and ranchers be granted an option to capitalize or currently deduct the cost of land improvements. It should be emphasized that this provision will not in any way affect treatment of cost of structures, appliances, and facilities which are subject to the allowance for depreciation. These costs will continue to be capitalized. It might be noted that the State of California adopted a similar law in 1949.

Section 130, retirement of bonds: Section 117 (f) provides capital-gain treatment for the redemption of bonds and similar securities in registered or coupon form, although the gain from payment of other evidences of indebtedness is ordinary income. Under the present law, it is possible to convert ordinary evidence of indebtedness into bonds and similar securities without gain or loss and the gain from the redemption thereof will be treated as a capital gain. The Treasury complained that ordinary income could thus be converted into capital gain merely by changing the type of the evidence of indebtedness and in order to prevent this practice H. R. 6712, the tax revision bill of 1948, contained a provision to the effect that capital gain would result in such cases only where the evidence of indebtedness was originally issued in coupon or registered

form. It is believed that the purpose sought to be accomplished by this proposal was proper but that it was too extreme. Assets of a character which give rise to capital gain need only be held 6 months under section 117, and the proposed amendment provides capital-gain treatment where the conversion occurred 6 months or more prior to the redemption.

Section 181, holding period for capital assets: Under existing law, it has been held (*Commissioner v. Gracey* (159 F. (2d) 324)) that if a noncapital asset is exchanged for a capital asset, the holding period for the former may be tacked on to the holding period for the latter for purposes of deciding whether the capital gain is long term or short term. This construction offers a loophole for tax avoidance, and the proposed section closes this loophole by preventing such a tacking-on.

Section 132, capital gains upon maturity or surrender of insurance policy: Under the present law, amounts received upon the maturity of an endowment policy or the surrender of a life-insurance policy during the lifetime of the insured are treated as ordinary income. In practical effect, the present system amounts to the taxation in a single year of income that was actually accumulated over a period of many years, and the result is that the recipient may be taxed at a considerably higher rate than that at which he would have been taxed if the net gain had been paid out to him over the life of the policy in the form of distributed earnings. Section 132 of the present bill would eliminate this harshness by amending section 117 of the code so as to extend capital-gains treatment to such situations.

Section 133, deduction of contributions under disability benefit plans: Several States have enacted legislation providing for disability benefit programs and requiring contributions by both employers and employees to such funds. In some States provision is also made that, under certain conditions, contributions may be made under approved private disability plans in lieu of contributions to the State fund. In such cases payments by the employer and employee are in no sense voluntary, insofar as they do not exceed the amounts required to be paid to the State fund in the absence of an approved private disability benefit plan. In California, New Jersey, and Rhode Island (and possibly other States) the State courts have held that payments required to be made to the State fund are taxes, and the Bureau has ruled that the full amount of the contributions to such fund by both employers and employees are deductible as taxes. On the other hand, the Bureau has ruled that the full amount of the contributions made by employees to approved private plans in California and New Jersey constitute personal expenses which are not deductible for income-tax purposes. Since there seems to be no valid reason why there should be a discrimination in favor of the State fund in such cases, section 133 removes such discrimination by providing that contributions made under approved private disability plans shall be deductible in the same manner and to the same extent and amount as the payments which would be required to be made to the State fund in the absence of such approved private disability benefit plan.

Section 134, net operating loss deduction: The present law permits a corporation, but not an individual, to include in the computation of a net operating loss carry-back or carry-over losses arising from the sale of property used in a trade or business. The proposed amendment is intended to accord to individuals the same privilege now granted to corporations.

Section 135, refunds based on foreign-tax credit: Section 131 (c) of the Internal Revenue Code permits the Commissioner, without any time limitation, to assert additional

tax for prior years resulting from any claim of foreign-tax credit in excess of the foreign tax which is ultimately paid by the taxpayer. However, if the amount of credit claimed under section 131 for foreign taxes is less than the amount ultimately paid, and if the statute of limitations for filing refund claims has expired under section 322 of the code at the time that the additional foreign taxes are finally determined, the taxpayer is barred by the statute of limitations from securing a refund of United States taxes paid for the earlier year because of his not having claimed a sufficient amount of foreign-tax credit. In other words, the assessment of additional United States taxes is never barred, whereas the refund of United States taxes is barred within the customary periods in section 322.

The proposed revision affords parallel treatment in the two instances referred to, providing equality to taxpayers with respect to the treatment of such foreign-tax credits.

Section 136, accrual of foreign taxes: Under present rulings, credits for foreign taxes are not allowable to accrual-basis taxpayers until the final determination of controversies abroad with reference to such foreign taxes. Delay in such foreign determination often results in the taxpayers' loss of any substantial benefit of the credit, because of reduction or elimination of foreign income in the later year and the resultant credit restriction under section 131 (b) of the code.

The proposed amendment authorizes the computation of such foreign-tax credits under the rule of accrual in the year with respect to which the tax is imposed.

Section 137, taxation of the income of estates and trusts: Under the law as it existed prior to 1942, the income of many trusts was wholly or partly taxable to the trust rather than the beneficiary, although the income was actually distributed to the beneficiary. To prevent this form of tax avoidance, Congress adopted in the Revenue Act of 1942 a very complicated set of rules for the determination of distributable income. Two of these rules, known as the 60-day and 12-month rules, require the computation of trust income for arbitrary periods of time, and have proved unduly burdensome and difficult to apply.

The proposed amendment will eliminate these highly technical rules without reopening the loopholes for tax avoidance which Congress sought to abolish in the 1942 act. This is accomplished by taxing to the beneficiary any distribution from a trust, provided the amount of this distribution does not exceed the amount of net income realized by the trust by the end of its taxable year.

The amendment limits the amounts includible in the income of the beneficiaries to the net income of the estate or trust, thus abrogating the rules of the *Johnston v. Helvering* (141 F. (2d) 208), and *McCullough v. Commissioner* (153 F. (2d) 345). The amendment is intended to provide that income shall retain its character and identity in the hands of the beneficiary, thus making it clear that the estate or trust is a conduit of property passing through it to a beneficiary.

The proposed amendment also clarifies the law relating to the ultimate tax on items such as capital gains which are taxable as gross income under Federal tax law, but are treated as items of principal under State law. Such items under the proposed amendment will remain taxable to the fiduciary unless the will or trust instrument specifically provides for their distribution to a beneficiary.

Section 138, income of discretionary insurance trusts: This section of the bill provides that section 167 (c) of the Internal Revenue Code relating to the taxation of income of insurance trusts to the grantor, be amended so as to tax the grantor only

to the extent that trust income is actually used to pay premiums on insurance policies on his life. This would bring the taxation of insurance trusts in line with the present taxation of maintenance trusts as to which, since 1943, it has been provided that the grantor will be taxed only to the extent that trust income is actually used for the support or maintenance of persons he is obligated to support.

Section 139, statute of limitations in case of failure to file return: There is presently no statute of limitations where no return was filed, however innocently. The proposed amendment would provide a 6-year statute of limitations (which is double the normal period) where the failure to file a return was not due to fraudulent intent. In the absence of fraud, the reasons underlying the policy of repose in other fields appear equally applicable to tax liabilities.

If the rulings of the Commissioner of Internal Revenue, at the time a return would otherwise be due, are to the effect that no return is necessary, and the failure to file results from such rulings, the normal period of limitations should operate just as though a return had been filed, and the proviso clause of this section so provides.

Section 140, relief of fiduciary from personal liability for decedent's fraud: Under the present law, an executor or trustee who distributes assets of the estate becomes personally liable for taxes which may be due at the time of the distribution. If, unknown to the executor or trustee, the decedent filed a fraudulent income-tax return, no statute of limitation runs which would bar the Commissioner from asserting a deficiency against the executor or trustee for personal liability after he had distributed the assets.

Section 140 allows the executor or trustee to protect himself by asking for a release from this liability prior to making distribution.

Section 141, penalty for failure to file return: Under this section, the provisions of the income tax laws relating to penalties for failure to file returns would be amended by liberalizing the conditions under which no penalty is applicable and by vesting in the Commissioner discretion to reduce or remit penalties in proper circumstances. Under the present law, penalties are not imposed if failure to file is due to reasonable cause, but the courts have defined those words so strictly that in many cases the section works great hardship. This section proposed to eliminate this harshness by an amendment to section 291 of the Internal Revenue Code, and to eliminate a parallel harshness now contained in section 506 (f) of the Internal Revenue Code which denies a deficiency dividend credit to a personal holding company if there is a finding that any part of the deficiency is due to a failure to file the return on time, unless such failure is due to reasonable cause. The principal changes are (a) to provide specifically that if the failure to file results from the belief founded upon a reasonable basis, that no return is required, this shall be deemed reasonable cause, and (b) to give the Commissioner authority to abate, reduce, or refund the penalty, as he deems proper under the circumstances.

Section 142, period of limitations on claims against transferees: Under existing law, the Commissioner is given 3 years in which to assess income taxes against the taxpayer. If the taxpayer has transferred his assets without consideration, the Commissioner is given an additional year to assess against the transferee. Where, however, the Commissioner has done nothing within the 3 years and the taxpayer thereafter transfers his assets, there seems to be no reason to allow the Commissioner to revive his dead claim by assessment against the transferee, and the proposed section would specifically prohibit him from doing so.

Section 143, transferee not bound, in absence of timely notice, by determination against transferor: The law provides generally that if assets of a transferor are transferred to another, the transferee, under the trust fund doctrine, shall be responsible for such taxes as may be held to be owed by the transferor. Under the present law, it frequently happens that after such transfer the Commissioner will issue a deficiency notice to the transferor without notifying the transferee against whom the tax will ultimately be assessed. In such cases (for example, a dissolved corporation) a petition may be filed by former officers who have no real interest in the liability and the decision may be rendered that the tax is due by the transferor. In a number of decisions it has been held that such a decision against the transferor is binding on the transferee regardless of the fact that such transferee has not had any opportunity to defend himself. Thus, the transferee may never have his day in court.

The proposed amendment provides that no decision rendered against the transferor after the transfer of assets shall be binding upon the transferee unless said transferee shall have been given personal notice of liability and a full opportunity to appear and be heard in said previous proceeding.

Section 144, limitations in criminal fraud cases: The general Federal statute relating to tolling the statute of limitations in criminal cases is 18 United States Code 3290, which provides: "No statute of limitations shall extend to any person fleeing from justice." However, for crimes arising under the revenue laws, section 3748 (a) suspends the 6-year statute of limitations for the time during which the defendant "is absent from the district" where the offense is committed. The term "district" as here used means the judicial district wherein the return was filed. *U. S. v. Anthracite Brewing Co.* (11 F. Supp. 1019). Yet many taxpayers are by statute required to file their returns with a collector outside their judicial district. For example, residents of the District of Columbia must file their returns in Baltimore. Also a taxpayer, for legitimate reasons may change his residence to another judicial district after the return is filed. In such cases, there is no effective statute of limitations.

This section, therefore, provides that the statute of limitations in cases involving crimes under the revenue laws be tolled only for the period the taxpayer is actually beyond the jurisdiction of the courts of the United States.

Section 145, limitation period in certain cases before the Tax Court. By reason of uncertainties frequently existing as to the year for determining the deductibility of a bad debt or of a worthless security, the Revenue Act of 1942 provided a special 17-year period of limitations within which to claim refunds or credits attributable to the allowance of deductions for such items. This was accomplished by the insertion of section 322 (b) (5) in the Internal Revenue Code. This section (as amended by sec. 504 of the 1943 act) is applicable to years beginning after December 31, 1937.

Under section 322 (d) of the code, this special 7-year statute of limitations is made applicable to proceedings in the Tax Court but that section in this respect was made applicable only to years beginning after December 31, 1942. It thus happens that in certain proceedings before the Tax Court, the 7-year statute is inapplicable to years ending before December 31, 1942, although the taxpayer, had he not filed a petition with the Tax Court, would be at liberty to file a claim for refund and, if necessary, prosecute the refund in other courts. The proposed amendment would make the 7-year statute applicable in all such proceedings.

Section 146, extension of period for refund in case of waiver by transferee: Under

existing law, both the taxpayer and his transferee may agree in writing with the Commissioner to extend the period of limitation for assessment of the tax. If the taxpayer does so, his time for claiming a refund of overpayment is correspondingly extended. However, (probably due to a legislative oversight), such an extension of transferee liability under existing law does not extend the transferee's period for claiming a refund of an erroneous payment. The proposed amendment would remove this discrimination and give the transferee a similar extension of time.

Section 147, exemption of personal holding company classification of corporation joining in consolidated return: Under the Revenue Act of 1942, a personal holding company not filing a consolidated return was subject to personal holding company tax but not to excess-profits tax. When the 1942 act extended the privilege of filing consolidated returns to affiliated corporations generally, it provided that if an affiliated group wished to file a consolidated return all of the corporations in the group, including any affiliated personal holding company, must join in the return. The bar association believes that it was not the intention of Congress that a holding company in such circumstances should be subject to both the personal holding company tax and the excess-profits tax, and has recommended an amendment to section 501 (b) of the code which would exempt such corporations from the personal holding company classification. Section 131 of the Revenue Act of 1943 changed this rule for the later years of the excess-profits tax (see S. Rept. No. 627, 78th Cong., 1st sess., p. 64), and, of course, the bar association recommendation has no application to years after the elimination of the excess-profits tax. The recommendation applies only to correct inequities done in 1942 and 1943.

Section 148, family partnerships: This section would clarify the tax status of so-called family partnerships. This subject has become greatly confused by judicial decisions which have departed from the otherwise generally recognized principle that the income from donated or purchased property is taxable to the donee or purchaser of that property. The amendment proposed to section 3797 is somewhat longer and more detailed than might be wished, but this detailed treatment seems necessary in order to safeguard the Government's interest and prevent family partnerships from being used as a device to avoid taxes on the income from personal services of one member of the family. Under the proposed amendment, a partner who has contributed capital to the partnership must be recognized as a partner, even though he acquired that capital by gift. On the other hand, if the gift was made by a member of the donee's family, who continues as a partner, the proportion of the donee's interest in the partnership income must bear the same ratio to his capital as that of the donor; if in excess of that ratio, the excess would be taxed to the donor. In such a situation, it is also provided that, if the partnership agreement does not provide for a reasonable allowance for personal services rendered by the donor, a reasonable amount shall be attributed to such services, taxed to the donor and deducted from the taxable share of the donee of the partnership interest.

Section 149, mitigation of statute of limitations: The present section 3801 includes provisions dealing with certain situations in which one taxpayer is taxed on an item of income which has previously been erroneously taxed to another taxpayer, and is designed to avoid the Government's keeping both levies. As it stands now, however, such remedial effect does not apply except where the taxpayer who erroneously reported the

income was, at the time of the erroneous reporting, related to the taxpayer who correctly reported the item of income, as (A) husband and wife, (B) grantor and fiduciary, (C) grantor and beneficiary, (D) fiduciary and beneficiary, legatee, or heir, (E) decedent and decedent's estate, or (F) partner.

The proposed amendment eliminates the requirement of relationship, so that if an item of income is taxed to any taxpayer, any other taxpayer who has already paid income taxes on the item will be entitled to a refund of such income taxes.

This section of the bill also changes existing law in two other respects:

1. It is often difficult to determine the taxable year in which the taxpayer is entitled to take a deduction from gross income. The period of limitation for claiming a refund runs from the date of filing the return or paying the tax. If the taxpayer guesses wrong as to the year to claim an admittedly allowable deduction, and the determination that he has guessed wrong comes when it is too late to claim the deduction for the right year, he does not get the deduction at all. Section 149 (b) (3) of the bill is designed to relieve this inequity. The taxpayer would be given relief where he took a deduction in an incorrect year if, at the time he took the deduction, the statute of limitations had not run for the year in which he should have taken the deduction.

2. Because section 3801 has been designed to give reciprocal relief to taxpayers and to the Commissioner in similar situations, the same section of the bill would protect the Commissioner against the running of the statute of limitations where he asserts a deficiency for failure to include an item of income for a particular year which proves to be the incorrect year, if the assertion is made at a time when he could have made the assertion as to the correct year if he had then known the correct year.

Section 150, net operating loss deductions by transferee corporations: Under existing law, a net operating loss of a corporation which transfers its assets to another corporation in a tax-free reorganization or liquidation cannot be used as a carry-over or carry-back by the successor corporation, except perhaps in the case of a merger involving no termination of the corporate entity under State law. See *New Colonial Ice Co., Inc. v. Helvering* (CAA 2d, 1934, 232 U. S. 435); cf. *Stanton Brewery, Inc. v. Helvering* (CAA 2d, 1949, 176 F. 2d 573). The bill provides for a carry-over, but not a carry-back, in cases of tax-free reorganization or liquidation, provided 50 percent or more of the controlling stock of the transferee is owned after the transfer by persons who owned a substantial interest (10 percent or more) in the transferor in the year in which the loss was incurred. The requirement that control be retained in such persons is deemed advisable in order to prevent abuse through acquisitions of loss corporations by new interests in situations where section 129 may not be sufficient to bar the way. It has been deemed wiser not to attempt to encompass carry-backs within the purview of the present bill, not only because of technical complexities, but because the carry-over provides the most important elements of relief in this area, and particularly because the carry-over is applicable to 5 years while the carry-back may be applied to only 1 year. Consideration will be given, however, to the drafting of an appropriate amendment to cover the carry-back problem.

Section 151, interest on deficiencies offset by overpayments for same year: In cases where there is an overpayment of excess-profits tax and resulting underpayment of income tax, or vice versa, the taxing authorities charge interest on the entire underpayment from the due date of the return, but

credit interest on the entire overpayment, only from the date it was paid, which may be the date of the last installment. Since the underpayment could have been paid in installments if it had been paid on time and since the amount of each installment of the overpaid tax was greater than was legally due, it is only fair to the taxpayer to set off the overpayment against the underpayment and charge or credit interest on the balance. However, present law does not permit this. Section 151 would require it.

Section 152, tax treatment upon death of partner: Partnership agreements often provide for payment of specified amounts of future partnership income to the estate or widow of a deceased partner. Such provisions are designed to produce roughly the equivalent of the decedent's interest in the assets, including his share of income earned by the partnership but not received or accrued at death. The tax status of such payments is uncertain under existing law. In some cases such payments have been taxed as income to the surviving partners and in others to the estate or widow of the deceased partner.

Section 152 excludes amounts so distributed from the distributive share of the surviving partners, except that this rule does not apply to that portion of the distributions which represent payments for decedent's interest in tangible and other assets of the partnership which have an adjusted basis in excess of zero. Amounts so excluded from income of the survivors are treated as income of the estate or widow of the decedent in the year received.

Section 153, gain or loss on sale or exchange of residence: Under existing law a gain realized upon the sale or exchange of a taxpayer's personal residence is taxable, but a loss so realized is not deductible from income. During the current inflation in real estate, many taxpayers who have been forced by circumstances to move their residences have been taxed upon large gains when they disposed of the old residence but have been forced to reinvest the entire proceeds or even more in order to obtain a new home. This has caused widespread complaint at taxation of ephemeral profits, and it is believed that relief is warranted.

The proposed section 153 limits the recognized gain to the cash and other benefits received and not reinvested, with appropriate provisions to cover anticipatory replacement cases and the rather complicated problems of assumed mortgages. It also provides that the cost of the new property shall be reduced by the amount of gain not recognized on sale of the prior residence or increased by the loss on such sale, as the case may be. The effect is that there is a continuing transaction from the purchase of the first residence until sale of the second, with no tax consequences (except for cash received and not reinvested) upon the disposition of the first residence.

Section 154, deduction of industrial and commercial research and development costs: For many years there has existed great confusion, uncertainty, and litigation as to the proper treatment for income-tax purposes of industrial and commercial research and development expenses. It is very difficult to apply orthodox accounting principles to such expenditures and there is no uniform accounting practice in respect of such items. Treasury Department regulations formerly permitted taxpayers to elect either to expense or capitalize such charges, but such regulations were in effect held invalid by decisions of the Board of Tax Appeals, and the present regulations (sec. 29.23 (1) of regulations 111) indicate that such expenditures must generally be capitalized and recovered by depreciation allowances if the taxpayer can show that the intangible business asset has a useful life in the production of business income for a reasonably definite

limited period. However, it is frequently impossible to determine the useful life in the business of an industrial or commercial product, service, or process resulting from research and development expenses.

In order to clarify the existing confusion in respect of the tax treatment of such expenditures, and to prevent tax discrimination between large businesses having continuous programs of research and small or beginning business enterprises, section 154 provides generally that expenditures made in industrial or commercial research and development or improvement of industrial or commercial products, services or processes may, at the election of the taxpayer, be deducted as expenses or capitalized and charged off over a period selected and designated by the taxpayer. Merely providing for deductibility of such expenditures probably would be satisfactory to most large businesses. However, a small business which has unusually large expenditures in connection with a research program, or a new or beginning business enterprise, must be allowed the right to capitalize such costs and recover them by amortization deductions over the estimated useful life, in order to insure equality of treatment with large businesses which can and usually do deduct the full amounts of such expenditures from current income. Since, as a practical matter, it is impossible to estimate with any degree of certainty the useful business life of an intangible industrial or commercial product, service, or process resulting from research, it is provided that the taxpayer may designate the period over which the capitalized costs of a specific research project or undertaking shall be amortized. Any temporary loss of revenue resulting from a taxpayer's selection of an unreasonably short amortization period will ordinarily be recovered in later years when no amortization deduction will be allowable.

Proper safeguards are provided to insure that the taxpayer will keep adequate books and records, and furnish adequate notices (1) of election to capitalize research costs of a specific project or undertaking, and (2) the period over which such capitalized costs are to be amortized. Proper provision is also made to prevent any application of the new provision to costs of constructing buildings or other tangible property, except models, prototype machines, or similar products of research projects.

Section 155, collection of delinquent taxes from Federal employees: There is no statutory authority for the enforcement of collection of delinquent taxes from Federal employees. This section will give Federal taxing authorities the right to enforce collection of these taxes by giving notice to the particular agency employing such employee, and authorizing the agency to withhold 10 percent of the compensation up to an annual rate of \$10,000 and 25 percent of the portion of such compensation in excess of such rate. The proposed legislation places Federal employees and employees in private industry on an equality, and also provides for a continuing levy on both classes of employees.

Section 156, recognition of gain or loss on dissolution of subsidiary corporation by parent. It often happens that a corporation desires to purchase the assets of another corporation, but the latter is unwilling to sell at current value merely because of a low-tax base resulting from depreciation deductions and the inflation in value accruing since acquisition which would result in a substantial tax to the selling corporation and a second tax on its stockholders on distribution of the proceeds. In such a situation, the stockholders of the second corporation are usually willing to sell their stock. However, the purchasing corporation is immediately faced with the possibility that when it liquidates the other, in order to take over the assets, it will be faced with the

claim that it may not use the true cost of the acquisition for future depreciation, but must use the depreciated basis in the hands of the former owner. Where it has appeared that the purpose of buying the stock was to take over the assets, the courts have held favorably to the taxpayer, because the price paid for the stock in reality represents the cost of the assets. The matter has not, however, been sufficiently crystallized and clarified by judicial decision to make this effect certain, and as a result there is continued litigation in this field which discourages such property acquisitions. Section 156 would clarify the statute by providing a practical mechanism, through which, after a purchase of stock, the purchasing corporation may use, as the basis of the assets purchased, the cost so paid for the stock.

TITLE IA. EXCESS-PROFITS TAXES

Section 191, effective date of amendments: Except as otherwise specifically provided, this title becomes effective upon the enactment of the act. The provisions of this title relate to the World War II excess-profits tax law, and do not affect the provisions of the Excess Profits Tax Act of 1950.

Section 192, carry-overs and carry-backs allowable to transferors and transferees in nontaxable reorganizations:

As the law now reads, the excess-profits credit carry-over or carry-back is allowed only to the taxpayer. If a corporation loses its identity in a reorganization, the new corporation cannot carry over the unused credit of the old company or companies; neither can an unused credit of the new company be carried back against the excess-profits net income of the old company. This section would permit the normal application of these credits by respecting the substantial identity of the old and new corporations.

Section 193, source of preferred stock dividends paid in first 60 days of taxable year: In enacting section 718 (c) (2) of the Internal Revenue Code, Congress apparently desired the conclusive presumption there established as to the source of distributions made in the first 60 days of the taxable year to act as a deterrent to the postponement of distributions by corporations into a succeeding year—postponement often carried out in order that there might be, by this manipulation and timing, a minimization of the reduction of equity invested capital for the year. In the case of preferred stock, where periodical payments are provided for under charter or bylaw provisions, there is no such field for manipulation; and there is no need for the application of a conclusive presumption which may be contrary to actual fact. Section 193 amends section 718 (c) (2) of the code to make the conclusive presumption inapplicable in such cases, and leaves the effect of such distribution upon equity invested capital to be tested factually during the first 60 days just as it is tested factually during the remainder of the year.

Section 194, computations of equity invested capital: Prior to the amendment of section 718 of the code by section 219 of the Revenue Act of 1942, in computing the invested capital of a corporation which acquired all of the assets of another corporation solely for the voting stock, only the basis of the assets on hand at the time of the acquisition by the new corporation could be included in invested capital. In other words, the deficit of the old corporation which did not reduce its own invested capital did reduce the invested capital of the new corporation. Section 219 of the Revenue Act of 1942 was designed to overcome that result and to provide that the invested capital of the new company should be the same as the invested capital of the old company and that the deficit of the old company would not be applied to reduce the invested capital of the new company. In interpreting that section in TD 5267 (adding sec. 30.718-7 of regula-

tion 109, approved May 27, 1943), the Treasury has taken the position that section 219 does not apply to a tax-free exchange involving two or more transferors. Section 194 of this bill amends section 718 (c) (5) of the code to provide explicitly that if a corporation acquires all of the assets of one or more corporations under the conditions set forth therein, then the benefits of that section should be derived by the resulting corporation.

Section 195, review of abnormalities by the Tax Court. This section would change existing law in the following respects:

1. Restriction of assessment and collection of deficiency while application for relief pending: Since 1924 it has been provided by law that, except in certain unusual cases, a taxpayer may litigate taxes, other than excise taxes, before being called upon to pay them. However, under the excess-profits-tax provisions, as now interpreted by the Tax Court and administered by the Bureau of Internal Revenue, the Commissioner may determine a deficiency in excess-profits taxes and may proceed to assess and collect such deficiency even though the taxpayer has pending a claim for relief, which may or may not eliminate the deficiency in whole or in part. The bill would amend section 732 (a) so as to prohibit the assessment and collection of the proposed deficiency until the claim for relief is finally determined.

2. Tax Court jurisdiction where tax not paid: In *American Coast Line, Inc. v. Commissioner* (6 T. C. 67 (affirmed 159 F. (2d) 665)), the Tax Court held that it had no jurisdiction to review a denial by the Commissioner of a claim for relief under section 722 where all of the statutory excess profits tax had not been paid. A dissenting opinion in that case described the decision as ascribing an "inconsistent and inequitable" purpose to the Congress, since the statute provides that the taxpayer may withhold a part of the tax in dispute until the relief claim is determined. The bill would resolve this apparent inconsistency and make it clear that the Tax Court may pass upon such relief claims before the tax is paid.

Section 196, appellate court review of abnormalities: Sections 732 (c) and 732 (d) of the code provide that decisions of the Tax Court rendered in relief cases shall be reviewed only by a special division of the Tax Court, and that no review shall be had of such decisions by the court of appeals. The special division of the Tax Court permits no hearing on review of the trial judge's decision. This proposed amendment provides for review of such relief decisions by the full Tax Court, and for review of law questions by the courts of appeals in the same manner as other decisions of the Tax Court are reviewable.

TITLE II. ESTATE AND GIFT TAXES

Part I. Estate tax

Section 201, estates to which amendments applicable: Except as expressly otherwise provided, the amendments apply only to estates of decedents dying after the enactment of the act.

Section 202, rates and credits: The present estate tax rate structure is, for historical reasons, complicated and unwieldy and should be simplified. The proposed amendment combines credits and makes possible computation of the tax due by applying a single schedule to the net estate, which itself would be arrived at by subtracting a single specific exemption and then subtracting a single set of credits.

Section 203, proceeds of life insurance: This proposed amendment to section 811 (g) of the Internal Revenue Code would make it clear that insurance is to be treated like any other property, and affected by all provisions governing the inclusion of other property in a decedent's gross estate. When proceeds of policies are receivable by a

beneficiary other than a decedent's estate and all of the incidents of ownership in respect to said policies were irrevocably transferred by the decedent during his lifetime, and not in contemplation of death, the proceeds of such policies should not be included in the gross estate. The present rule seems very unfair, in that life insurance, to the extent that the decedent has paid the premiums thereon, may not be assigned or transferred by complete and outright gift in such manner as to exclude the proceeds from the donor's taxable estate, although such disposition can be made of any other kind of property.

Section 204, exclusion of interest in employees' trusts: Section 165, while it exempts employees' trusts from income tax under certain conditions, subjects the beneficiaries of such trusts to income tax on the benefits received. It seems undesirable and probably not in accord with the intent of Congress to subject these benefits to both income and estate taxes, and it seems more logical that they should be subject to the income tax rather than to the estate tax. Yet there appear to be some indications in the law today that Federal estate and gift taxes might be applied to the value of a deceased employee's interest in a plan, and to a living employee's power to deal with such interest, respectively. Sections 204 and 267 of the bill would clarify this by amending sections 811 and 1003 of the Code so as to provide that employees' interests in trusts qualified under section 165 shall be exempt from Federal estate and gift taxes.

Section 205, optional valuation: Under present law, an executor can elect at the time he files the estate-tax return to value the property of the decedent as of the date of death or as of a date 1 year after death. This election, once made, cannot be changed. It sometimes happens that at the time the return is filed the executor considers the election to be of no importance because the value of the gross estate is less than the specific exemption authorized by the law. If the Commissioner of Internal Revenue later increases the value of the gross estate by adding inter vivos gifts which the executor had considered not a part of the gross estate, the election may become most important.

The proposed amendment would make the election available to the executor of an estate not only at the time the return is filed, but also at the time the election becomes important because of the inclusion by the Commissioner of other assets in the gross estate, or because of the increased valuation of reported assets.

Section 206, deduction of expenses paid from nonprobate assets: Under the existing provisions of section 812 (b) of the Internal Revenue Code, permissible deductions from the gross estate for administrative expenses, claims, and the like are only those which are recognized and permitted under the laws of the jurisdiction within which the estate is being administered. As a consequence, where expenses have been incurred in connection with assets includible in the gross estate but not comprising a part of the probate estate, and such expenses have been properly paid out of nonprobate assets, a deduction for Federal estate tax has been denied. For example, in *Estate of Wright* (8 T. C. 531 (1947)), a deduction for attorney's fees paid by the beneficiary to collect life insurance which was included in the insured's taxable estate was disallowed. Section 206 of the bill would amend section 812 (b) of the Internal Revenue Code so as to allow a deduction on account of administration and like expenses which are, in fact, paid out of assets included in the gross estate but not administered as part of the decedent's probate estate, or which are paid by the persons beneficially interested in such assets.

Section 207, time for claiming credit for State death taxes: Under existing law, the credit for State inheritance, estate, legacy, or succession taxes is allowable against the basic Federal estate tax only to the extent that such taxes are paid and the credit claimed within 4 years after the estate-tax return is filed. Usually, the amount of State taxes payable cannot be finally ascertained until the Federal estate-tax liability is settled. Where that settlement is not reached within 4 years after the Federal return is filed, the credit is lost to the extent of any State taxes paid after the expiration of the 4-year period. The proposed amendment will remedy that situation by extending the credit for taxes paid within 4 years after the Federal return is filed, or before the Federal estate tax is paid, whichever is later.

Section 208, credit for gift taxes: At the present time the Internal Revenue Code provides for a credit for gift taxes paid by a decedent during his lifetime. The limitations placed upon this credit, however, are such as to result in a disallowance of a large part of the amount actually paid as a gift tax in those cases where property on which a gift tax has already been paid is for some reason still required to be included in the gross estate. Section 208 of the bill would amend section 813 of the code to make the credit equal to the full amount of gift taxes that resulted from the prior taxation of the property transferred as a gift.

Section 209, deduction for litigation expenses: In Federal estate-tax cases which must be litigated in the Tax Court, the district courts, or the Court of Claims it is not always clear under what circumstances a deduction is allowable from the gross estate for attorneys' fees and other expenses incurred in such litigation. While the Tax Court has promulgated a rule under which such deductions may be allowed, the proposed amendment would make the deduction of these expenses allowable not only in the Tax Court but in the other Federal courts.

Section 210, limitation period for transferees: This section would amend section 90 (b) of the code to provide that the period of limitation for assessment of the estate tax against a transferee or fiduciary shall be the same as the period of limitation for the assessment of such tax against the estate, except where the estate is insolvent. The Commissioner should be allowed the additional year to proceed against transferees only where the additional tax was asserted against the executor within the 3-year period but was uncollectible because the transfer left the estate insolvent. See comments on section 255, below.

Section 211, extension of period of limitation: Under existing law, the Commissioner of Internal Revenue has no authority to enter into an agreement with a taxpayer to extend the time within which the estate tax or the gift tax may be assessed. Such authority does exist in the case of income taxes. The proposed amendment would extend such authority to estate taxes, and section 253 would accomplish the same result in the case of gift taxes. Occasions arise in which the absence of this authority means that settlement negotiations must be hurried, or that no real negotiations can be undertaken at all because of the shortness of time within which the commissioner may assess the tax.

Section 212, lien for tax: This would amend section 827 of the code to provide that the lien imposed by the estate tax provisions will be subject to the same limitations as liens for income taxes when applied against purchasers for value and others in like situations, such as bona fide mortgages and pledges and judgment creditors. Under the present law, the estate tax is a lien for 10 years against the gross estate—a lien

which need not be recorded, and which attaches to the property in all but a few instances even though mortgaged, pledged, or sold to a bona fide purchaser for value. It does not attach to property sold to a bona fide purchaser by a transferee, trustee, beneficiary, etc., but does attach to property mortgaged or pledged by such persons and also to property sold by an executor to a bona fide purchaser. It is felt that estate tax liens, like liens for other taxes, should be recorded in order to be valid against mortgagees, pledges and bona fide purchasers for value. Section 212 of the bill, therefore, makes the provisions of sections 3672-3679 of the code, which relate to recording, release and enforcement of liens for other taxes, applicable to the estate tax.

Part II. Gift tax

Section 251, gifts of future interests: At present any gift of a future interest is subject to gift tax irrespective of amount. The proposed amendment to section 1003 (b) of the Internal Revenue Code would allow an exemption from gift tax of any gifts of future interests to the extent of \$3,000 in any year for all such gifts. The purpose is to remove the necessity of many small returns, and since the exemption for each year is nominal in amount, the effect on the revenue would be negligible.

Section 252, lien for tax: See the comments relating to section 212, above. While section 1009 of the code divests property sold to a bona fide purchaser of the lien, there is no protection for bona fide pledges and mortgagees and no specific provision for recording the lien, and this amendment would apply to gift taxes the provisions of sections 3627-3679 of the code, which relate to the recording, release, and enforcement of liens for other taxes.

Section 253, extension of period of limitation: See the explanation of section 211, above.

Section 254, adjustment of values after period of assessment: While the concept of a statute of limitations is firmly grounded in our law, in the tax field one situation has arisen which is technically not covered by any statute of limitations but which in actual practice should be. In certain cases the Commissioner of Internal Revenue has altered the values placed by the taxpayer on property transferred by gift, after the expiration of the statute of limitations with respect to the gift tax return on such property; or the Commissioner has gone back and revised certain exclusions which were allowed or which were not questioned at the time. The Commissioner has contended that, although he cannot assert any additional tax deficiency based on an outlawed gift, there is no statute of limitations to prevent his placing a subsequent gift in a higher tax bracket by revising values reported in returns for earlier barred years. The result is essentially the same as an extension of the statutory period, however long the time elapsed since the transfer. This amendment to section 1016 of the code would prevent an increase in taxes for open years by a revision of gift tax returns for earlier years to which the statute of limitations bars the collection of additional taxes.

Section 255, limitation period for transferees: Section 1016 (a) of the code provides a 3-year period of limitation on the assessment of deficiencies in gift tax. Section 1009 makes the donee personally liable for taxes not paid when due, and section 1025 gives an additional year for assessment against transferees, including donees. As construed (See *Evelyn N. Moore* (1 T. C. 14, affirmed 146 F. (2d) 824)), the Commissioner is allowed 4 years to collect from the donee, even where no attempt was made to collect from the donor within the 3-year

period and where the donor was at all times financially able to pay. For the same reasons stated in connection with section 210, above, it is proposed to amend section 1025 to give the transferee only in cases where timely collection from the donor was prevented by his insolvency.

Section 256, exclusion of interest in employees trusts: This section is explained by the comments on section 204, above.

Title III. Manufacturers' excise taxes

Section 301, sale price: Section 3441 of the Code, prescribing methods for determining the sale price by which various manufacturers' excise taxes should be measured, originated as section 604 of the revenue bill of 1932, which became section 619 of the Revenue Act of 1932. The report of the Ways and Means Committee on that bill (H Rept. No. 708, 72d Cong., 1st sess., pp. 37-38) showed the intent to base the tax on the normal factory price, and that where, by reason of the relationship of the parties, the price charged does not represent a fair value, the tax should be on the same value as in the case of similar sales between the independent parties. However, the courts have held that, where the manufacturer acts as distributor or sells through a controlled sales agency, the tax must be measured by the distributor's sale price, while the manufacturer who does not perform the economic function of distribution is taxed only upon the factory price. (See *C. W. Fitch Co. v. U. S.* (323 U. S. 582); *Compana Corp. v. U. S.* (38 F. (2d) 400); *Ayer & Co. v. U. S.* (38 F. Supp. 284).) These inequities and discriminations would be avoided by the proposed amendment to section 3441, which would exclude from the tax base in such situations costs attributable to selling and distribution, as distinguished from manufacturing.

Section 302, removal of conditions on refunds: This section would repeal section 3443 (d) of the Internal Revenue Code which requires, as a condition to the recovery of overpayment of manufacturers' excise taxes, that the person who paid the tax establish (1) that he has not included the tax in the price of the articles with respect to which it was imposed, or collected the amount of the tax from the vendee or (2) that he has repaid the amount of the tax to the ultimate purchaser of the article or has secured the written consent of the ultimate purchaser to the credit or refund. These limitations on refunds are grossly unfair in at least two respects. They impose an impossible burden of proof as a condition to the recovery of taxes which admittedly were illegally collected. Generally taxes are refundable upon showing simply that they were illegally collected. If any restriction based on equity is to protect the Government against refund, the burden of establishing the existence and the extent of the equity should be on the Government which asserts it; and if the equity cannot be established the legal rights should prevail. Moreover, the provisions unjustifiably discriminate against one who has promptly paid the taxes claimed of him and in favor of those who have withheld payment.

Section 303, appeals to Tax Court: This amendment would give the Tax Court of the United States jurisdiction over disputes involving manufacturers' excise taxes imposed by chapter 29 of the Internal Revenue Code. At the present time the Tax Court does not have such jurisdiction, and, in contrast with the procedure permissible with respect to income, estate and gift taxes, a person has no alternative but to pay manufacturers' excise taxes and litigate their correctness subsequently—an alternative which is unusually burdensome in view of the restrictions on refunds discussed under section 302, above.

Title IV. Miscellaneous

Amendments and Provisions

Section 401, statement of grounds for deficiency: In some cases the Commissioner's notice of deficiency is not complete and the issues are not clarified by his answer to the petition. The Tax Court has held that in such cases it has no power to compel the Commissioner to state the basis for deficiency. Such power should be conferred upon the Tax Court and section 401 provides that this be done by an amendment to section 1111 of the Internal Revenue Code.

Section 402, small claims and settlement branch of the Tax Court: An increasing number of cases have been filed with the Tax Court involving small sums of money, and it is common knowledge that there are many more cases in which revenue agents determine deficiencies of a few hundred dollars, sometimes on more or less arbitrary grounds, and the taxpayer feels impelled to pay the tax because of the expense of appealing to the Tax Court and going to some distant city to have the case heard according to formal court rules. The expense of such a proceeding and such travel may well amount to as much as the tax involved. The persons against whom such small amounts are determined are often people who can ill afford to pay such amounts.

The proposed amendment provides for the establishment of a small-claims branch of the court to be administered by one judge of the court. The judge is authorized to appoint part-time commissioners in all of the collection districts throughout the United States who will hear these small cases in an informal manner similar to that prevailing in the small-claims acts in effect in many States. All cases in which the deficiency or claim is less than \$1,500 would be heard in this manner unless the petitioner expressly moves that his case be heard by the court in the usual manner. Provision is made for appeals from the commissioner to the judge of the court in charge of the small-claims branch, who will then decide the case appealed subject to review by the full court or by the appropriate court of appeals. Provision is also made that service of any person as a commissioner of the court under the proposed provisions shall not bar such person from acting as attorney in other cases against the United States. This last provision is believed important because it is hoped that the commissioners may be drawn from well-qualified lawyers who would serve in such capacity as a matter of public service, thus assuring appointment of the high type of commissioners necessary to make such a plan a success.

A Small-Business Man

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 20, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, from the morning paper comes a statement purporting to tell us a part of one of the operations of our President when he was not so small a businessman:

[From the Washington Times-Herald of July 12, 1951]

WASHINGTON REPORT

(By Fulton Lewis, Jr.)

President Harry S. Truman is always using big business for his political whipping boy. During the past few days I've been

telling you about one of the President's flings into big business—a 60,000-share oil stock selling scheme.

The President's attitude today in regard to big corporations is hard to understand. He made money out of his oil stock venture, which, at a minimum, was in the \$200,000 class. Big business is largely manufacturing a product and selling it on a competitive basis.

In the President's oil stock scheme there apparently wasn't much competition, since he sold some shares with a par value of \$1 for \$25. I doubt if many corporations could get away with that today.

In order to find out how it was managed by the Morgan Oil & Refining Co. of Kansas City in 1916, while the President was treasurer of the company, I submitted the incorporation papers to a prominent attorney. He is Bernard T. Hurwitz, of Kansas City.

Mr. Hurwitz was blue sky commissioner in the State of Missouri, from January 1, 1922, to May 1, 1925. He knows a lot about wildcat oil schemes. He spent most of his time examining so-called business trusts operating as business companies, which is exactly what Mr. Truman and Morgan had set up.

Here are some pertinent paragraphs from his legal analysis of the Truman-Morgan oil-stock trust agreement:

"I have examined the amendment agreement and declaration of trust of the Morgan Oil & Refining Co., which said agreement was entered into on March 1, 1917, between D. H. Morgan, Harry S. Truman, Jerry Culbertson, J. J. Hurt, and Earl S. Ridge as trustees, and D. H. Morgan as subscriber. The said instrument having been recorded in the office of the recorder of deeds for Jackson County, Mo., at Kansas City, as instrument No. 1165257, in book 1759, at page 278.

"Without attempting to go into a detailed analysis of the trust agreement of the Morgan Oil & Refining Co., this agreement obviously attempts to give to the trustees and organization all of the benefits of corporate organization, such as freedom from personal liability, without incurring any of the obligations of the corporate entity.

"Declarations of trust were popular during the period from 1915 to approximately 1925, with oil-promotion companies seeking to raise funds by the public sale of stock. Oil promoters in that period were of the opinion that (1) the companies could operate with all the rights of a corporation, without being subjected to any of the obligations of a corporation; and (2) compliance with the blue sky or securities laws of the State were not necessary.

"I found a large part of my time as blue-sky commissioner or securities commissioner taken up investigating such companies and in issuing cease-and-desist orders against them. Business enterprises operating under declarations of trust were designed primarily to escape and evade the inquisitorial powers of the State, both with respect to the matter of original organization and with respect to the promotional sale of stock."

Kansas adopted the first blue-sky law, to nip the enthusiasm of wildcat stock promoters, in 1911. Missouri adopted a similar law in 1913. That was 3 years before the Truman-Morgan company got underway.

Both State laws were imperfect. But I'll let Hurwitz take over from here on that angle:

"These laws were imperfectly drawn, and under some of the earlier decisions, some of the courts held that certificates of interest or certificates of stock in a business trust could be sold without compliance on the part of the promoter with the earlier blue-sky laws.

"The Missouri law was amended in 1923, and from the date of the adoption of the amended laws, the so-called business trusts passed out of the picture. As a matter of fact, one of the principal reasons that most

of the States amended their blue-sky laws was in order to subject these enterprises and their promoters to scrutiny."

That will give you a little background for your listening pleasure next time President Truman starts working over the country's business interests.

The Position of the Consumers League of Michigan on National Economic Stabilization

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1951

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I include a copy of the statement of position of the Consumers League of Michigan regarding national economic stabilization, together with a covering letter from the president of this organization, Mr. William G. Diamond, of Detroit, Mich.

The statement includes a comparison of food prices for the years 1939 and 1951.

The article follows:

CONSUMERS LEAGUE OF MICHIGAN,
July 7, 1951.

To Members of Congress and United States Senators from Michigan:

We are enclosing for your information a statement of our organization's position regarding what we feel should be included in a national economic stabilization program. Traditionally our organization has dealt principally with labor standards, grade labels, and similar matters, assuming an active program in the general economic field only during the past war. At our June annual meeting our membership was sufficiently moved by the turn of events during the past year to again take up the matter of general economic controls. The enclosed statement is a summary of feelings expressed at the annual meeting as well as an amount of sampling of members' opinions since then, including formal action taken by our executive officers.

I wish to point out that our organization's membership is what could be easily called a good cross-section—women and men, reasonably large incomes to small incomes, younger persons to some who have qualified for retirement, nonpartisan, etc. The statement of our position was prepared with considerable effort toward taking into account the greatest common agreement of our members.

We respectfully submit our statement in the hope that it will be of some use to you in what must be a very trying time of decision. Regardless of the outcome of the current legislative action we will take the liberty of writing to you from time to time on what we observe and what we feel could be done as we see the situation.

Sincerely yours,
WILLIAM G. DIAMOND,
President, Consumers League of Michigan.

STATEMENT OF POSITION REGARDING NATIONAL ECONOMIC STABILIZATION

We, as consumers, have felt a very real squeeze between our expenses and incomes during the past year, in some cases having to dip into savings or go further into debt. It is equally true that we feel a consider-

able amount of the squeeze could have been prevented by prompt, intelligent application of reasonable economic controls. The future seems to have in store for us more of the same squeeze which, if met by reasonable legislative action, can be prevented to a large extent. The past year's squeeze has come close on the heels of a touch-and-go spiral since 1946.

It is our assumption that there will be continued extensive defense requirements on personnel, matériel, finances, etc., as well as increasing private and/or public expenditures for overseas economic aid.

From the outset then we feel that an adequate and national stabilization program must be continued to exercise restraints where necessary and that positive aid be granted in some instances to meet the pinch caused by "artificial" national demands on our economy. The current lull evidenced by price reductions and apparently arising out of peace overtures, industrial change-over lags, miscalculated inventories, and credit restrictions are obviously temporary and likely to end within 4 to 5 months. For example, it is extremely difficult for us to believe that the current armistice negotiations will relieve significantly our defense commitments—past experience would dictate that we will have to shift our efforts from one geographical area to another or from one type of effort to another.

The consensus of our members is that a 1-year continuation of a stabilization program would be the very minimum necessary—preferably it should extend 18 to 24 months. (1) A shorter period than 1 year would tend to undermine the attitude with which the public would regard the program; (2) defense requirements are predicted to make abnormal requirements for 12 to 24 months—and now we learn that the program is 20 percent behind schedule; (3) a year would be a minimum time for business, farm, labor, and such organizations to formulate and develop their plans and operations; (4) a continuing study by an appropriate congressional committee during the year's operation of stabilization should reveal the necessity of relieving or increasing controls even before the termination of the period set now.

We further believe that roll-backs should be encouraged and ceilings imposed on those commodity prices which evidence indicates rose chiefly out of speculation on the war. That there should be a thorough examination of the relationship of food prices and food subsidies seems to be imperative, for it is not easy to accept the fact that we furnish tax receipts on the one hand for direct payments to the food industry and on the other hand pay the highest relative food prices in history.

Tax bills are in the mill which will further reduce consumers' purchasing power. These increases plus any approved but unjustified price hikes will have a very serious effect on morale at a time that high morale is a prime requirement. For instance, the most recent Consumers Price Index report shows Detroit's cost of living as having advanced 0.4 from April 15 to May 15. It is elementary to show that this apparently small rise in expense if continued over a year would more than erase the return to be gained from interest on United States Savings bonds—in the past, a very useful anti-inflation device as well as source of income to the Federal Government.

We are of the opinion that there must be a real coordination of the various Federal Government actions which have the direct effect of stabilizing (or failing to stabilize) the economy (i. e. taxes, credit, and issue of money, subsidies, direct price controls, allocation of manpower and materials, etc.). State and local governmental programs would necessarily have to be observed closely, too, and measured to see their results on the national program. Flexibility and balance of program are many times

equal in importance and necessity to the substance of the program; we feel that is the case here.

Our members are convinced that the current emergency—declared or undeclared—is of a sufficiently serious nature and wide enough in scope that the problems and their solutions are above group advantage or partisan politics. We seek enlightened leadership and a sound way or ways out of the difficulties we face.

And, finally, basing the decision on information gained through perhaps a method similar to the "running study" suggested above, we trust that unnecessary restrictions will be removed just as soon as evidence is clear they will not be needed. We dislike controls equally with most other groups, but we are willing to pull our share of the load including restrictions in order to see, first, that our Nation meets its clear-cut responsibilities, and secondly, and equally that we show some progress in spite of the added responsibilities.

Following is the most graphic illustration yet to come to our attention of the ground we consumers have lost with food-dollar in the past 12 years. The list was prepared by Arynness Joy Wickens, Deputy Commissioner of the United States Bureau of Labor Statistics.

Foods which \$10 bought in 1939 and now:

TEN DOLLARS, 1939

Ten pounds flour.
Five pounds sugar.
Fifteen pounds potatoes.
Two loaves bread.
Seven quarts milk.
Six pounds rib roast.
Two pounds bacon.
Two pounds butter.
One package rolled oats.
Two dozen oranges.
One pound coffee.
Five pounds cabbage.
Three pounds green beans.
Two pounds veal cutlet and pork chops.
One can salmon.
Three pounds onions.
One pound cheese.
Two dozen eggs.
Three pounds apples.
Two cans tomatoes.
Two bunches carrots.
One can peaches.
Two cans peas.
One head lettuce.
One box dried prunes.

TEN DOLLARS, 1951

Ten pounds flour.
Five pounds sugar.
Fifteen pounds potatoes.
Two loaves bread.
Seven quarts milk.
Six pounds rib roast.
One pound bacon.

Reclamation: For What?

EXTENSION OF REMARKS OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1951

Mr. POULSON. Mr. Speaker, I believe anyone who reads this article by Oliver Carlson, which appeared in the Freeman magazine, will agree with his conclusion that the time has come for the people of the United States and the Members of Congress to take a new,

hard look at the Bureau of Reclamation and its grandiose plans.

As this article clearly points out, this country is threatened with bankruptcy because of the wild, fantastic, wholly infeasible, and spendthrift plans advocated by Secretary of the Interior Chapman and Reclamation Commissioner Straus.

The complete article follows:

RECLAMATION: FOR WHAT?

(By Oliver Carlson)

On August 5, 1948, Michael W. Straus, Commissioner of the Bureau of Reclamation, submitted to his boss, Secretary of the Interior Oscar Chapman, a report entitled "Reclamation Program, 1948-54."

The 7-year plan envisaged by Commissioner Straus and his engineers and planners admittedly would cost the American taxpayer a tidy sum. But, declared the report, " * * * the benefits would be substantial, too, and permanent. A huge increase in crop and livestock production would result, as well as an enlargement of electric-power facilities * * * one benefit in itself that indicates the impressiveness of the probable returns is the crop production."

Commissioner Straus and his planners estimated that the program when completed would furnish "a full water supply for some two and one-half to four and one-half million acres." His report indicated that more than 24,000 new family-sized irrigation farms would be created, with a population of from 75,000 to 100,000 persons. The estimated cost for this program, declared Mr. Straus, would total \$3,891,000,000—with expenditures rising steadily from a mere \$204,200,000 in 1948 to \$720,200,000 in 1954.

In other words, cost to the taxpayer would be approximately \$1,000 per acre to turn this arid land of the West into usable croplands. It would represent an investment by the American taxpayer of \$160,000 for each of the 24,000 new farms envisioned by Commissioner Straus. And this cost per farm, remember, would not include farm buildings or equipment—just the raw land.

Is land so precious and the need for new croplands so great that the taxpayers of this country must invest \$160,000 per farm?

If Commissioner Straus and his engineers had consulted with the experts from the Department of Agriculture, they would have learned that our agricultural crisis was due not to a shortage of tillable land or a shortage of crops. Quite to the contrary, they would have discovered that the Government was spending hundreds of millions of dollars to keep crop surpluses off the market. And these surpluses—of cotton, corn, wheat, potatoes, etc., were precisely of the crops which would be raised on the land Commissioner Straus and his engineers propose to reclaim and irrigate.

In the recently issued report by the President's Water Resources Policy Commission, are set forth for all to read the necessary principles to govern the future development of our water resources:

1. A simple procedure for determining whether the money to be invested in a river basin program will be well-spent.
2. The need for a system of repayment designed to treat alike all who enjoy the advantages of Federal investment.
3. That sound management principles be applied to every project.

There is very little in common between these principles and those upon which the Reclamation Bureau has been operating.

The American farmer has learned how to produce more food for more people on less acreage. Forty years ago there were 3.55 acres of cropland for each person in the United States. Today it amounts to 2.55 acres per person. In other words, we need

an average of an acre less per person to feed America and to take care of our large export trade. More than that—the people of this country as a whole are eating more food and better food than ever before. Yet we have less land in crops today than we had 20 years ago when our population was 25,000,000 less than it is now.

But isn't it true that more land will be needed to take care of our increasing population in the years to come? Aren't Commissioner Straus and his planners just showing good foresight in reclaiming arid lands of the West at this time to take care of the increased population 25 years from now? Not at all.

According to the studies of the Water Resources Policy Commission, productive croplands of the United States can be increased by 44,000,000 acres merely by the improvement of existing farm lands now in use. The Commission declares that an additional 10,000,000 acres can be obtained by clearing land of trees, stumps, and brush while another 16,400,000 acres are available through low-cost clearing and drainage.

If the Water Resources Policy Commission experts know what they are talking about, we can add approximately 70,000,000 acres to our productive croplands without the expenditure of billions of dollars of Federal funds. Drainage costs per acre, even at our present inflated prices, would be less than a tenth of the cost of reclamation projects to irrigate land.

The Reclamation Bureau today, with its more than 17,000 permanent employees and its multi-billion-dollar programs, has been turned into a mighty political lever by Secretary of the Interior Chapman. Every project developed or proposed by the Reclamation Bureau in any of the 17 Western States is exploited to the fullest in developing and consolidating political power for the administration.

Oscar Chapman is the chief political strategist and manipulator on behalf of the administration in the far West. He took over this job in the presidential campaign of 1940. His power and influence have grown steadily ever since. President Truman relies upon Chapman completely for political policies and strategy in the Western States.

Many Democratic politicians on the Pacific coast have told me admiringly they regard Chapman as the top figure in the administration. He possesses, they say, more detailed information about the strength and weaknesses of political figures in the West than any other top administration official. When he visits the West to dedicate a new dam or irrigation project, his assistants bring with them complete and up-to-date dossiers on every important figure in the area. Chapman always spends a good deal of time with the key administration supporters planning strategy and letting it be known that, so far as it is within his power, jobs and contracts will go to deserving Democrats. Chapman believes in doing good for the West—but more than that, he believes in doing good for those who will strengthen the Truman political machine.

Reclamation is a sacred word in the arid and semiarid regions of the far West—and has been so for more than half a century. The Mormons under Brigham Young pioneered the irrigation projects of the West. They began bringing water to the dry and thirsty land of the Great Salt Lake Basin early in 1848. Thanks to them, tens of thousands of California-bound gold-hungry immigrants were saved from starvation during the next decade. Nearly all of the arable land in Utah and southeastern Idaho is the work of the Mormons. Men, mules, and horses—without State aid or intervention of any kind—transformed several million acres of semidesert into croplands within a few years.

Spurred by the accomplishments of the Mormon farmers, the whole West from Montana to southern California was soon afire with plans for developing irrigation and reclamation projects. Where but yesterday there had been only sagebrush, tomorrow there would be fields of grain, orchards, and rich pasture lands.

In 1894 Senator Carey, of Wyoming, sponsored an act whereunder the United States Government agreed to donate up to 1,000,000 acres of public land to any State that would agree to reclaim this land. By 1900 there had been organized the National Reclamation Association. Theodore Roosevelt became an ardent enthusiast for reclamation and conservation, and threw the full weight of his personality and his power as President behind the campaign. As a result, the Reclamation Act became a law of the land on June 17, 1902. This act provided for a survey of potential developments and the subsequent construction of needed irrigation projects. To finance the surveys and assist the people of the West in constructing the dams and ditches, Congress set up a Reclamation Revolving Fund, to be derived entirely from the sale of public lands in the 16 Western States (Texas was later added to the list).

The Secretary of the Interior then established the Reclamation Service, which many years later became the Bureau of Reclamation. The Reclamation Act had been designed to help the small farmer, not the speculator. It therefore provided that no individual owner could get water for more than 160 acres of land. Furthermore, these owners had to live near or on the land that was reclaimed. Repayment of the total cost of each reclamation project was apportioned to every landowner getting water, and repayment had to be completed within 10 years. Beyond this all other controls were to be handled at the local level.

In 1914 Congress doubled the repayment period, extending it to 20 years. In 1926 it was further extended to 40 years. At present there is a 50-year repayment policy.

This fivefold extension of repayment time appears on the surface as a wise and justifiable move to ease the burdens of the farmer in the reclamation districts. But in reality such a greatly lengthened repayment plan means governmental control of the project for the entire adult life span of the people involved. Both political and financial control remains in the hands of the Federal Government. In the second place, there is less likely to be a careful scrutiny of construction and overhead costs by the people in the reclamation districts themselves when the repayment period is spread over half a century.

The revolving fund originally established was voted additional funds in 1920 when Congress passed the Mineral-Oil Leasing Act. This provided that 52.5 percent of the oil royalties from all public lands and leases were to be paid into the reclamation fund. In 1939 Congress passed the Hayden-O'Mahoney amendment to the departmental appropriations bill, enlarging the reclamation fund once more. This time it was to receive 52.5 percent of all receipts (including penalties) received by the Treasury Department from land within naval reservations for the period from 1920 to 1939.

The economic feasibility and financial soundness of reclamation efforts during the first three decades of this century have given way to the stupendous but often questionable projects of recent years. The revolving fund principle has been tossed overboard. For the past decade or so the Reclamation Bureau has been submitting an annual budget and getting direct appropriations.

It is important to remember that nearly 15,000,000 acres of western lands have become lush and fruitful by virtue of reclamation.

mation projects privately and locally financed and engineered. An additional 5,000,000 acres has been reclaimed during the past 50 years through the work of the Bureau of Reclamation. Of this 5,000,000 acres, more than 80 percent (4,200,000 acres, to be exact) had already been reclaimed by the end of 1945; that is to say, before Mr. Oscar Chapman became Secretary of the Interior.

Total expenditures by the Bureau of Reclamation during the past 5 years under Chapman total almost \$1,000,000,000 and represent almost as much money as was spent by his predecessors in the 43 years that the Bureau had been functioning. The expenditures under Chapman for 1950, amounting to \$359,703,710, exceed by more than \$50,000,000 all moneys expended by the Reclamation Bureau up to the time Franklin Delano Roosevelt took office in 1933.

Not only have Bureau of Reclamation costs mounted at an astronomical rate during the Chapman-Truman administration, but no serious attempt has been made to make the irrigation activities and multiple dams self-sustaining and self-liquidating. The devices used by the Secretary of the Interior include:

1 Enlisting local or regional support for a project by playing up motives of self-interest. There will be patronage to insure support of local politicians. There will be jobs for the unemployed. There will be lucrative contracts for the business interests. There will be easy pickings for land speculators. There will be cheap water for the farmer and cheap power for the homes and industries.

2 Always submitting very low estimates whenever a new project is proposed for which Congress is to authorize the money. Once the project is under way, estimated costs invariably rise again and again. Chapman and Strauss learned long ago that Congress, grumblingly perhaps, will nevertheless go along in voting the new supplemental appropriations to complete a project rather than leave it unfinished.

In 1937 when the Reclamation boys presented their original estimated cost for the Colorado-Big Thompson project in the State of Colorado, it came to \$44,000,000. By 1947 after the project had been partly completed, this had been revised upward to \$128,000,000—and in 1948 to nearly \$132,000,000.

Then there is the Hungry Horse project in Montana. Originally this was to cost a mere \$6,348,000. By 1947 the estimated cost had multiplied to \$48,000,000; and in the following year, costs of completion were expected to run to \$93,500,000. By the time this project is completed it may have cost us \$150,000,000.

3. The self-sustaining and self-liquidating requirements provided by the Reclamation Project Act of 1939 and other acts of an earlier date, have been largely nullified by a legal opinion handed down by one of Mr. Chapman's solicitors, Fowler Harper, of the Department of the Interior. Harper's opinion, declared Congressman JENSEN, of Iowa, in hearings on the Interior Department appropriation bill for 1949, nullified the basic law of the land and "in my estimation, has been very detrimental to reclamation, hydroelectric power funds, and everything else pertaining to reclamation, irrigation, and hydroelectric power projects."

What the Fowler Harper opinion did in actuality was to give a special subsidy to the water and power users of the project by throwing interest and amortization costs upon the taxpayers of the Nation.

The politicization of the Bureau of Reclamation under present leadership, and its corrupting influence upon the very localities and regions which it proposes to help, demand full-scale investigation and publicity. Up to now the Reclamation Bureau has been a sacred cow which no one dared investigate. But the citizens of West and East alike need to be told the full story.

That the West will need more hydroelectric power and more water as its population and industries grow is beyond question—but from now on every project planned for the West must be concerned with supplying water to cities and industries, not to reclamation of croplands.

The steel mills, aluminum and magnesium plants, copper, zinc, lead, and other metal refineries, foundries and manufacturing plants—without which the new West cannot grow—these and the other thousands of manufacturing plants are the ones that need water and power. It takes 270 tons, or 65,000 gallons, of water to process 1 ton of steel. And though the average person drinks less than 2 quarts of liquid a day, the daily per capita use of water for domestic and industrial purposes is more than a thousand gallons. Without this supply of water Los Angeles, Salt Lake City, Denver, and a host of other western cities would shrivel up and die.

The time has come for the people of the United States and their representatives in Congress to take a new, hard look at the Bureau of Reclamation and its grandiose plans. The question must be asked—and asked soon—"Reclamation, for what?"

Statement of President William Green, American Federation of Labor, on the Need for Strong Controls

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. SABATH. Mr. Speaker, I take pleasure in inserting the remarks of President William Green, of the American Federation of Labor, delivered at an informal meeting of about 200 Members of the House in the Ways and Means Committee room this morning, called by me, in which he directed attention to the dangers that threaten our Nation and our economy unless strong controls are continued under the Defense Production Act.

In his characteristically clear and forceful manner, Mr. Green detailed the dangers that lie ahead unless we effectively apply controls over the economy. His remarks were of such deep interest, I felt they should be made available to each and every Member. The following is a transcript of his statement:

I appreciate very much this opportunity to appear before you and present the views of organized labor on the present crisis confronting the Nation.

The American Federation of Labor and organized labor have consistently supported the Nation's defense effort. Labor unions who have always been the first target of Communist infiltration know the importance of building the defenses of the free world against Soviet imperialism and aggression.

Organized labor also knows that the fight against communism is not merely a fight on the battlefield. Just as important is the fight against inflation at home. By its very nature, the defense program means the danger of inflation. A program to increase production of guns, tanks, aircraft, and other military equipment reduces the amount of goods available to civilians while, at the same time, increasing the money available to buy

this limited supply of goods. The result can only be increased pressure on prices which can easily lead to catastrophe unless we are willing to apply effectively direct controls over the economy.

All of us know that ever since the outbreak of the war in Korea, the threat of inflation has been very real. The dollar has declined seriously in real value. A few facts and figures will prove this point.

Today's dollar is worth only 54 cents as compared with the dollar in 1939. By May 1951, the cost of living, as indicated by the Consumers' Price Index of the Department of Labor, had increased by 88 percent over the 1939 level. For food, which is the most important item in the worker's cost of living, the increase was 139 percent. The dollar today will buy only 42 cents worth of food in 1939 terms.

The above figures give some idea of the tremendous increases since pre-World War II days in the prices which workers have to pay to meet everyday living costs. Moreover, recent short-run increases have markedly decreased the purchasing power of the worker's dollar. From June 1950 to May 1951, the cost of living rose by 9 percent. Again food prices led the way with an increase of 12 percent. By May 1951, the food dollar was worth only 89 cents in pre-Korean terms.

Although there has been a slight slackening in the rise of prices in recent weeks, this should certainly not lull us into any false sense of security. Charles E. Wilson, Director of the Office of Defense Mobilization, in his second quarterly report to the President, has estimated that the gap between consumer buying power and the amount of goods that will be available for consumers to buy will reach between ten and twenty billion dollars. It is obvious that unless there is authorization to hold down price levels, this gap will create a tremendous inflationary pressure in the economy. Price Stabilizer Michael V. DiSalle has stated that if presently planned price orders are not permitted to go into effect, there may be an increase of 7 percent in the cost of living within the next few months. This is almost as much as the total increase since the beginning of the Korean war.

It is important to emphasize that the rise in prices that has taken place within the past year has seldom been equalled in the history of our country. In fact, except for the inflation of World War I and that of 1946, there has been no comparable price rise since the Civil War. It would be extremely ruinous to our entire economy if the inflationary movement, which has now somewhat abated, were permitted to resume its upward course.

These figures emphasize the importance of the crisis confronting the Nation. To meet this crisis, Congress has been asked to strengthen the Defense Production Act. This act is the basic law of the defense program. It provides the framework for both price control and wage stabilization. Unfortunately, the act in its present form is inadequate to do the job of guiding our Nation's efforts through the months ahead.

The President has made a number of specific recommendations regarding this law. Organized labor felt that the President's recommendations did not go far enough and has submitted a number of other suggestions for strengthening the law. Action on this law has already been taken by the Senate of the United States.

The workers of the country are extremely disappointed by the action which the Senate has taken. The Senate did not merely refuse to strengthen the law; instead it adopted a number of specific amendments which will serve to cripple the operations of our control authorities and help to bring on inflationary increases in prices. Not a single one of the President's recommendations for

strengthening the law were adopted. In my opinion, this is truly shocking. Here is the President who has lived with the law, worked with it, telling the Congress it is inadequate and making specific recommendations for its approval. Instead, the Senate has rejected every single one of his suggestions.

The bill is now before the House of Representatives. The House has already adopted a number of amendments which will seriously weaken the bill.

I want to urge every Member of Congress to think carefully about his votes on these questions. The votes on this bill will affect the entire stabilization program and the whole defense effort of the country.

Because organized labor was so concerned about developing an effective defense program, we have voluntarily joined in the Nation's stabilization program. We have voluntarily submitted to the restrictions of a wage-stabilization program. We have voluntarily agreed that wage increases which workers can obtain from their employers are subject to the regulation and orders of the current Wage Stabilization Board. We have taken this step voluntarily because we have assumed that the other groups in our economy would make similar sacrifices. We have expected businessmen and farmers, as well as workers, to join together in this defense period under a program of equality of sacrifice.

However, unless Congress strengthens the Defense Production Act, the cooperation of workers in the defense program will have to be reconsidered. Without making any threats at all, because I do not want to threaten anyone, I think I can say that the Defense Production Act as passed by the Senate means a program of controls in which strict controls are placed on wages without similar strict controls over prices. How can the workers of this country accept a stabilization program that means strict regulation of the wages they receive, but little or no regulation over the price of things that they have to buy?

For this reason, the future of our whole stabilization program hinges on the action which Congress will take on this Defense Production Act. I want to urge every Member of Congress to study the proposals made by the President and organized labor for strengthening the law. I know that if they do this, they will live up to their responsibilities and will support a law that will meet the crisis now facing the Nation.

Delmarva Chicken Festival

EXTENSION OF REMARKS

OF

HON. EDWARD T. MILLER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. MILLER of Maryland. Mr. Speaker, in these days of high meat prices it is important to get the best results from the food on hand. Good cooking is essential for good eating even when one has the good judgment to select a fine Maryland chicken.

Yesterday, at the Delmarva chicken festival in Salisbury, Md., 197 fine cooks from many localities competed in the fourth annual contest to determine the best way to cook a chicken.

The winner was Mrs. Aubrey G. Romshe, of Snow Hill, Md. Her original

prize-winning recipe is inserted here, for the benefit of lovers of good food:

One chicken—three-four pounds, cut in serving pieces.

One onion chopped.

One-half cup water.

One teaspoon salt.

Two tablespoons fat.

Three tablespoons vinegar.

Two tablespoons brown sugar.

One-half tablespoon prepared mustard.

One tablespoon Worcestershire sauce.

One can tomato sauce.

Brown sugar in fat and remove to roaster. Brown onion in fat and add remaining ingredients. Simmer 30 minutes. Pour over chicken. Bake in moderate oven (325-350 degrees F.) 1 hour.

Federal Public Housing

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. PHILLIPS. Mr. Speaker, the present Public Housing Act has been with us about 2 years. During that time, at the cost of a great many millions of dollars for administrative overhead, the Government has been able to build approximately 35,000 units. During the same time, private industry has built 2,000,000 units, or more. This, to the intelligent mind, should suggest that passing a bill does not necessarily build houses; that takes carpenters, and plumbers, and other workmen, and it takes lumber and plaster and other materials. It also takes an honest effort to produce results, and it has been my contention that the best results always have been secured, and always will be secured, first, from private industry which has an interest in getting the houses built and ready to sell, and second, from the agencies of government nearest home. These would include the States and the counties and the cities.

The act we passed 2 years ago was curious in itself. It was only the second time we had deliberately bypassed the Congress and told an agency of Government to go direct to the Treasury and stick in its hand and take out money without the customary controls. It obligated the taxpayers for about \$19,000,000. That is a lot of money.

It was an 84-page bill. Do you remember it, Mr. Speaker? I do not recall how many Representatives voted for the bill and how many voted against it. I know that I voted against it. I want housing, for veterans, for nonveterans, not waste and delays and politics. Some of the Members write weekly letters home, or newspaper columns. I was very much interested to reread recently the letter written to his constituents at the time the Act was passed, by the distinguished Representative from the Second District of New Hampshire [Mr. Cotton] and it is so pertinent now that I have asked his permission to include it in

this extension of my own remarks. Mr. Cotton's letter was as follows:

YOUR CONGRESSMAN REPORTS

(By NORRIS COTTON)

JULY 7, 1949.—This is the last week that the House will look upon the familiar scenes of the Chamber it has occupied for nearly 100 years (since 1857). Next year, when it returns from its temporary quarters, the Chamber will be completely remodeled and old landmarks will have disappeared. It is strikingly significant that the last act in the old Chamber may well mark the end of an epoch in our history and the beginning of a new and strange America.

I refer to the passage of the huge Federal housing bill.

Let me tell you why I believe this sweeping statement is justified, why I joined in the long and hopeless fight to strike public housing out of the bill, and why I voted against its final passage.

First, by this act we mortgage our entire future. It permits a Government agency to make contracts for the next 40 years to the amount of twelve to sixteen billion dollars. (Some of this may be paid back but let us not fool ourselves that much of it will.)

These contracts pledge the "faith and credit of the United States." They cannot be broken. The Eighty-second or the Eighty-third Congress or the Ninety-eighth or the One hundredth Congress must appropriate the money. No control is left to the people's representatives come flood or famine, peace or war, hell or high water. No such statute has ever been written before. We vote billions for foreign aid and other purposes but we can watch them, reduce them, or stop them at any time. This, however, is an increase in our national debt and must be paid, just as the interest and principal is paid on that debt.

New Hampshire's share of this obligation is just under \$40,000,000. Do you think our legislature would vote to bond the State for that amount at this time for the slight assistance that two or three of our larger cities might receive? I don't. The share of my own town would be over \$600,000. Do you think our town meeting would vote to issue these bonds? I don't.

How can we talk out of one corner of our mouth about Hoover reorganization and Government economy and then vote this burden on us for 40 years and on our children for many years more?

Second, by this act we create a mighty political machine and a vast army of Federal employees. It is claimed that under it the Federal Government does not build houses but that the local and city governments issue bonds and award the contracts while Washington guarantees the money, pays the interest, and retains enough control to see that it is spent properly. (Incidentally, the Federal Government owns the houses for 40 years.)

This plan has none of the virtues of either Federal or local control and all the sins of both. Can you see the mad scramble of contractors, architects, and sellers of materials to get in on this? Can you imagine the patronage that local bosses and city machines will enjoy? "Where the carcass is, there will the vultures gather." At the same time, Washington, with its finger in the pie, will reach new heights in bureaucracy never before attained in peacetime, and, in the words of the Declaration of Independence, will "send swarms of officers to harass our people and eat out their substance."

No, I could not vote for this monstrosity. I would vote for reasonable Federal aid for slum clearance to be controlled by Congress and scrutinized by its committees on appropriations, and for aid in stimulating private building of low rental units and homes,

but not to issue a blank check for 40 years of Government extravagance and debauchery to the tune of three hundred millions a year.

One hundred and thirty-three years ago a letter went up to New Hampshire on this subject when Thomas Jefferson wrote our Governor Plumer:

"I place economy among the first and most important virtues, and public debt as the greatest of the dangers to be feared. To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude. If we can prevent the Government from wasting the labors of the people under the pretense of caring for them, they will be happy."

How We Got Into This Jam in Asia

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the third article in a series I wrote at the request of the Scripps-Howard papers. This is taken from the Birmingham Post-Herald of June 27, 1951:

HOW WE GOT INTO THIS JAM—UNITED STATES, DELUDED BY MYTHS, EMBRACED STALIN, SCUTTLED CHIANG

(By Representative WALTER JUDD)

WASHINGTON, June 26—The United States is involved in a major war in Asia because we have consistently let ourselves be deluded as to the aims and purposes of our enemy.

The No. 1 myth of our age was our believing in World War II that because we were fighting Hitler and Russia was fighting Hitler, it must follow that Russia was a democratic nation very much like ourselves.

The Soviet Union is not a peace-loving democracy. It did not and does not believe in the same kind of society as we do. There was no evidence and there is no evidence that it ever intended to cooperate in building the sort of world of justice, freedom, and peace for which we have fought two world wars.

Our second miscalculation was the myth that the Communists in Asia, or at least in China, were different. They were supposed to be simply agrarian reformers. The belief didn't just happen; it was skillfully organized and put over because it was useful to the Kremlin.

When history is written, it will seem fantastic that the supposedly enlightened and sophisticated Americans could be beguiled into basing their country's foreign policy toward Asia on an assumption which was contradicted by all the evidence.

"AGRARIAN REFORMER" PHRASE

Our State Department policy makers are now ashamed of the "agrarian reformer" phrase. But it played a decisive role in their thinking and it was the chant of most of our opinion-forming agencies.

However potent the agrarian reformer lie was, it alone did not trick us into withdrawing support from the Chinese Nationalists. For that we needed a justification in self-interest. This was supplied when it was alleged that the Chinese Nationalists were not fighting the Japanese as hard as the Chinese Communists were.

Less than 10 percent of the Japanese casualties at the hands of the Chinese were inflicted by the Chinese Reds. As late as 1944 the Chinese Reds allowed the Japanese to pass through their territory to drive 1,100 miles south to kill thousands of loyal Chinese. For 7 years Yen-an, the Red capital, lay within 100 miles of Japanese armies in north China. If the Chinese Reds had been a real threat, the Japanese would have wiped them out. The fact was that Japan appreciated the help of the Chinese Reds against Chiang Kai-shek.

When Japan's surrender made the argument of who was killing the most Japanese irrelevant, another excuse was invented to justify our withdrawing support from Chiang. This was that the Reds were doing more for the common people of China.

ORIGINAL REFORMER

The original social revolution in China was being carried on by Chiang Kai-shek and his associates, mostly American-trained. Eight years of fighting the Japanese and the Chinese Communists with the merest trickle of American aid, halted that revolution.

But we Americans were told that the Chinese Reds had taken it up. It was true that while the Reds were carrying on a policy of withholding food from the cities, the country people ate better. But the apparent rural prosperity lasted only until the starved-out cities fell. The Chinese Reds now take a larger part of the farmer's crop than his old landlord ever did. And the peasants now lack even their former liberty.

While the process of starving out the cities was going on, we were told that the Communists would never take the cities because they knew they couldn't organize them. The fact was that long ago the Chinese Reds had decided that they should take the country first as a means of getting the cities.

When the Communists were gaining North China, we were given another myth by the apologists in our own country for communism. This was that China was too big to be one country. Divide her along the Yangtze River and maybe the Nationalists could handle the problems of the south. This lulled us into doing nothing just long enough for the Reds to seize the whole of China.

STILL ANOTHER MYTH

Now that the Chinese mainland is Communist-occupied except for scattered areas, we are given another myth. This is that if we build up Mao Tze-tung, the Red dictator, he will turn against Russia and come over to our side. But Mao has been saying for 29 years that China must be tied solely and completely to Russia.

Still, we are told that if we give Mao more territory—Formosa, for example—he will desert the winning side in Asia and join us losers. The phrase used is that he will become "another Tito."

Anybody who knows anything about Chinese history knows that there is only one Tito in China. That is Chiang Kai-shek, who deserted the Russians in 1927, became a Christian, and fought for China's independence when we and the British were selling munitions to Japan. He continued to fight for the independence of China after we and the British, at Yalta, deeded control of Manchuria to Russia.

You will hear it said that America need not fear communism in China because the Reds will not be able to convert the people to their way of thinking, will fail to solve China's economic problems, and eventually the Chinese will absorb their conquerors as they absorbed conquerors before.

IGNORANCE OF HISTORY

Such arguments show a complete ignorance of history and of communism. The Reds have never tried to convert a majority of any people. They have never claimed

more than 3 percent of the Russians, 6 percent of the Poles, 8 percent of the Czechs. When they find their ranks getting too large, they hold a purge. All they ever want is a hard, disciplined corps to control all the rest.

Again, since when have the Communists solved anybody's economic problems? They haven't solved Russia's; after 30 years they have no answer for the misery of their own masses except renewed self-sacrifice to a dream of world conquest. Economic problems can be solved only in an atmosphere of freedom, as the history of the United States shows. But every tyranny that comes along uses economics as a weapon.

One more myth remains—that the ancient Chinese will swallow up their conquerors. But this takes time. It took the Chinese 100 years to overcome the Mongols, 267 years to overcome the Manchus. Perhaps in a couple of hundred years they will overcome the Communists, although to say they will is as logical as telling a patient he will get over cancer because he recovered from the measles.

But what will happen to us, our children, and our country in the meantime?

Shall We Limit Federal Taxing and Spending?

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

SHALL WE LIMIT FEDERAL TAXING AND SPENDING?—IF YOU THINK SO, HELP SECURE THE ADOPTION OF HOUSE JOINT RESOLUTION 252 FOR A CONSTITUTIONAL AMENDMENT

STRATOSPHERIC DEBT

Mr. GWINN. Mr. Speaker, every newborn American baby opens his eyes to a debt of approximately \$1,700 to the Federal Government. That debt is equivalent to an \$11,000 mortgage on every owner-occupied dwelling in the Nation. That is their part of our national debt which reached the staggering figure of \$257,357,000,000 in the fiscal year 1950.

Now we find that Truman's bloody peace has already cost more than Roosevelt's war. Having the power to do almost anything and to tax without limit, the administration and a majority in Congress are committed to a program of exchanging favors in return for votes. Congress lacks the will or capacity to stop the present trend into more socialism and even more taxes. A government so dishonest and irresponsible at home can exercise no moral authority abroad. Without American moral leadership it seems peace is impossible and continued war inevitable.

So to correct the evils of such a government in our domestic affairs, the people themselves must reduce the amount of government. They must reenact constitutional limitations redefining the kind of government they want. Without that Congress is defenseless against the scramble of interminable organized pressure groups that continue to increase.

THE CONSTITUTIONAL AMENDMENT

There are a number of tax limitation proposals pending before the House. One provides a limitation of 25 percent

on Federal income tax rates. Twenty-five of the State legislatures have approved such an amendment as the Honorable NOAH M. MASON, of Illinois, shows in his speech in the House of Representatives on Thursday, June 28, 1951.

My resolution, introduced on May 4, 1951, is unlike other proposals. It would amend our Constitution to limit the total Federal tax take for nonmilitary expenditures, including interest payments on the national debt, to 5 percent of the national income in any one year. Less than that percentage met all of our nonmilitary needs from 1789 to 1940, including costs of all wars besides.

What would it mean now in dollars and cents to the Nation and to every individual? In the fiscal year 1950, the national income was at the rate of \$219,200,000,000. All Federal taxes imposed on the people during the same period amounted to \$37,044,733,557. Nonmilitary expenditures approximated \$21,000,000,000 in fiscal 1950, thus exceeding military expenditures which totaled about \$19,000,000,000. In all, Government expenditures exceeded receipts by \$3,122,102,357. These figures show that expenditures of the Federal Government for nonmilitary purposes took 10 percent of the national income.

ITS EFFECT

Effective legislation of the kind proposed would have nearly cut in two these outlays for nonmilitary purposes. Instead of \$21,000,000,000, nonmilitary expenditures would have accounted for \$10,960,000,000. Leaving military expenditures at their actual figure for that year, the total Federal expenditure would have amounted to \$30,000,000,000, approximately. Thus taxes imposed on the people for the year would have been reduced by more than \$7,000,000,000. This would have effectively dried up on the books Socialist legislation, the only way it will ever be repealed.

The amendment envisages the need for additional revenue in time of war. It requires special war taxes to meet war costs. By separating the cost of civilian government from war costs we stop the government raising taxes for war and spending it for other purposes. It also requires special taxes from time to time for the purpose of retiring the national debt. Finally, the amendment restores to the Constitution a limitation which prevailed from 1789 up to 1913, when the Sixteenth Amendment removed it with such evil consequences.

The amendment proposed reimposes on the Federal Government the same character of limitations that have been retained by most of the States and cities from the date of their organization. The result is that most of them are sound and the Federal Government almost bankrupt.

THE NEEDED REMEDY

The National Committee To Limit Federal Taxing Powers supports this amendment. It believes this to be the most feasible remedy yet offered.

Government hand-outs are the sure symptoms of communism. They are contagious. They foster corruption in Government, often under the guise of social

welfare. The end result of this robbing-Peter-to-pay-Paul philosophy is higher taxes.

If we limit the Federal Government's power to impose taxes on the people, as we have done in the States and municipalities, we automatically curtail Government spending. This has stopped even Socialist mayors. If we withhold our money, our officials cannot carry us into socialism or communism. This will enable our elected officials to resist requests from those who clamor for more and bigger hand-outs. It will put method instead of madness in our present Government housekeeping. It will hasten the return of our Nation to a balanced budget. At the same time, it will not reduce our military efficiency nor impair our defense preparedness. Rather it will strengthen us at home and command respect among the other nations.

HOW YOU CAN HELP

If you agree with this proposal, will you organize in your community to support this amendment? Let us stop the spectacle of attempting to make legal the immoral taking by force of one man's house or his cattle or his wages or savings and giving it to another without price.

Talk the matter over with your friends and associates. Write your Congressman and tell him your thoughts on this resolution, and tell him you want to help him, by this resolution, to resist the special pressure groups.

Help yourself—the taxpayer.

House Joint Resolution 252

Joint resolution proposing an amendment to the Constitution of the United States relating to taxes and the national debt

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"SECTION 1. All taxes levied and collected for nonmilitary expenditures including interest on the national debt in any one year shall not exceed 5 percent of the national income for the nearest preceding calendar year for which figures are available; nonmilitary expenditures shall include all of those not defined as military expenditures.

"The Congress shall define what constitutes military expenditures, which shall include only such outlays as are used for raising and maintaining personnel for the Armed Forces and for the facilities and materials needed by them to be effective, and for benefits and pensions to veterans.

"The Congress shall also define what constitutes national income.

"SEC. 2. In the event that the United States shall become engaged in war, the Congress shall lay and collect a special war tax which shall be used solely to defray the military costs of that war.

"SEC. 3. The Congress shall from time to time lay and collect a special tax to be used solely to retire the national debt.

"SEC. 4. The power of Congress defined in section 8, article I, of the Constitution to 'borrow money on the credit of the United States' is hereby limited to the power to borrow money when approved by a vote of the people only to meet the needs of a state of war, or to meet a national emergency."

Organized Labor's Demand for Strong Controls

EXTENSION OF REMARKS OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. SABATH. Mr. James B. Carey, secretary-treasurer of the CIO, in addressing a conference called by me, of some 200 Members of the House this morning, presented a thorough outline of organized labor's position in the fight to insure effective controls during the present emergency. He pictured the plight of the working people and their families faced with skyrocketing prices, higher rents, and the ever-increasing danger of greater inflation, and the added strain on all Americans as a result of the mounting costs of our defense program.

He advocated strengthened controls and urged that every Member of the Congress stand up and be counted so the American people will know those interested in protecting their welfare and in favor of our defense program.

His statement follows:

I want to express the appreciation of the CIO for you gentlemen taking time off in these hectic days to hear our position on the Defense Production bill you are now considering.

We, of organized labor, feel that the decisions you are making these days on this bill are going to be world-shaking in their effect—that they are either going to help us in our fight against Communist aggression, or they are going to expose us to a devastating inflation that will mean dozens of divisions of armed men added to the Communist forces.

We know that the hour is late, that many Congressmen have made up their minds on how they are going to vote. But we of organized labor feel that it is our duty to make this last-minute appeal, to make it candidly and bluntly, on what we believe will be the consequences of the bill as it is now shaping up.

The working people of America, and I know millions of consumers who are not working people must be deeply puzzled about what is going on in Congress today. They see the spectacle of Representatives of theirs—men who hate inflation as much as they do—voting with the special interests in favor of higher prices, higher rents, more speculation, more profiteering, more inflation. These millions of consumers whether they be wage earners, white-collar workers, families of servicemen, people on pensions—are asking themselves, what can have come over so many of our Congressmen that they are abandoning our most elementary interests and the interests of our national defense?

I know that millions of these people are not writing to their Congressmen, because millions of them are not experienced as are the slick lobbyists. These millions are simple people who don't know the intricacies of legislation or even how to get in touch with their Congressmen. And millions of them are puzzled and baffled by what is going on.

But let this bill pass in its present form, and let the inevitable increase in the cost of living take place. Let the inevitable profiteering continue and grow, and you will see a real awakening on the part of the

American people. But that will be after much of the damage will already have been done. Billions of dollars appropriated for defense equipment will be eaten up in high prices. There will be a race of wages and prices chasing each other more and more frantically. People who have suffered because of this will become embittered and cynical about this defense effort.

And sitting in his perch in the Kremlin, Stalin can have a good chuckle about how easy it was to dupe the American people, about how easy it was to dupe those who profess to be the most ardent anti-Communists in America.

After years of experience in dealing with Communists all over the world, even seeing them in Moscow itself, I am convinced that this proposal of an armistice by the Russians was clearly timed as an attempt to scuttle our national defense and our economic defense. I am convinced by everything I know about Communist tactics that Stalin would rather suffer some temporary loss in Korea if he can only lull the American people to sleep, make us slow up in our defense, let us have a joyride of inflation, turn group against group and class against class.

Then when we are involved in that mad inflation, he can throw his Sunday punch and we will be in for all the horrors that will follow.

That's why I say that in our opinion of Communist strategy the votes you are taking are not only on price and wage controls, but you may be taking the responsibility on whether we are going to win or lose that fight for freedom.

In my humble judgment—and I recognize the honesty of the convictions of many Congressmen who voted against real price controls—I believe that if those people had been on Stalin's payroll they could not have done a better job for the foreign policy of the Soviet Union.

Right now in Milan, for example, the representatives of 50,000,000 organized workers, in the free trade-unions of the world are meeting to determine their course. Many of these groups are powerful in their own national governments. They exert tremendous influence in every continent of the globe. They are the front-line fighters against communism in every factory, shop, ship, dock, mine. Today they are looking to you here to see what America is going to do—whether the actions you take means that America is going to desert the other free peoples or whether we are going to see this thing through and not be sidetracked by Stalin's little tricks.

Let's review for a minute what is happening here in Congress. We had understood that this program of national defense was on a basis of equality of sacrifice. Yet this bill as passed by the Senate, and now shaping up here would penalize people most if they have the lowest incomes. It would penalize the fixed-income groups most, particularly families of our servicemen and hundreds of thousands of disabled veterans.

What this bill is saying to the American people is: "We are going to provide to the manufacturers a guaranty that they can keep their high prices no matter how high their profits are. We are going to guarantee to the big ranchers that their standard is not now parity but 150 percent of parity, we are going to give landlords a 20 percent or more increase in rent over 1947; we are going to allow speculating and profiteering even on our Government's defense program to not only continue but to now get the blessing of Congress."

You will further be saying to the American people: "You who are worst off—you of fixed incomes and low incomes, you who are disabled servicemen or families of service-

men, you who are on pensions or are poorly paid white-collar workers—to you we promise higher and higher prices and rents, no matter how little you are able to bear it."

In other words, you will be saying: "Our policy on national defense is now giving more profits to those who have them and take away from the meager standard of living of those who have too little."

You may accuse us of organized labor of a certain point of view, but you cannot accuse Eric Johnston or Charlie Wilson of having labor's point of view. Yet Johnston and Wilson, big businessmen in their own right, have solemnly said that this bill will cost every American family \$1 a day in increased living costs.

The provision against beef roll-backs and against the use of quotas, means according to the Government authority, Mr. DiSalle, no effective control over meat prices at all. Yet meats make up one-eighth of the average budget of moderate income families.

The worst is yet to come when the big defense spending starts this fall. We will then see that as fast as Congress appropriates money from the people's taxes that money will evaporate like snow on a hot sidewalk to feed the fires of inflation.

There is also before you the so-called Lucas amendment which would take away power of the tripartite Wage Stabilization Board to handle disputes, and allow disputes to fester and break out into ugly disturbances of our defense production. The present system in the WSB is what was recommended by the public, farm, and labor members of the President's Mobilization Board. To pass the Lucas amendment is to say to the Nation that the law of the jungle is to prevail and not the orderly process of mediation and conciliation.

Let me make the position of organized labor, at least the 6,000,000 members of the CIO, perfectly clear in this. You may remember that when the NAM and Chamber of Commerce proposed that both wage and price controls be dropped, we termed that a bribe to organized labor and we indignantly rejected it.

We knew perfectly well as we know now, that in any race with prices, labor that is organized can take care of itself. But we know also that there are 30,000,000 workers for wages and salaries who do not have organized labor's protection of contracts and who will be the chief victims.

We, therefore, insisted that economic stabilization continue even though it meant restrictions on our right to share in the Nation's production and of our employers' profits.

We take that stand because we know that the position of the NAM and Chamber of Commerce will be ruinous to this Nation and to its people. Yet we see here, dozens of perfectly decent Members of Congress running for fright into a position that at least goes two-thirds of the way to the NAM demands.

Let me tell you what you are in for. NAM says that it wants only indirect controls such as increased taxes. But then NAM went to the Senate and proposed a tax program of placing all personal income taxes, some \$22,000,000,000, on the shoulders of the consumers. This would require a 20 percent tax on everything but food and rent. Do you know what that would do, in addition to increased prices?

The man earning \$100,000 a year would pay no income tax. His Federal sales tax would amount to only 3.8 percent of his income. That would be his total Federal tax—3.8 percent of his income. The man earning \$3,000 a year, however, would have to pay 8 percent of his income.

This is the kind of a shameful deal the NAM is leading you into. Do you think the

American people would stand for that very long? I don't.

Let me just show you a few things of what happened in 1946 and is repeating itself today. I want to read from a letter sent by the NAM to its Board of Directors. This letter is dated _____ and is signed by _____

Now here I want to show you the campaign they engaged in. [Shows exhibits.] You know what happened after that. Meat prices went up 56 percent in 5 months and all food prices 28 percent in 5 months. Are we going to be fooled again only 5 years after that shameful episode?

This is a bill to please that oddly assorted group who have some political ends in common. It is a bill to please John L. Lewis, the Communists and the NAM.

If we were to recommend to the working people of this country that we support or even try to live with such a bill they would call us idiots. And they would be right. We would simply be playing into the hands of the John L. Lewis and Communist faction in the labor movement. And that would be of no service to our Nation.

What this bill would do in effect is to allow prices and profits to skyrocket and then try to hold wages down. Gentlemen, as far as organized labor is concerned that cannot be done. You are trifling with disaster.

You cannot have a bill that is two-thirds bad. In our judgment, and we are speaking with deliberation now, we would rather see no bill at all. If the big corporations, the big ranchers, insist on having their way and you are giving them two-thirds of what they want it will be better to give them their way. Then let the situation of 1946 repeat itself, when meat prices rose 56 percent in 5 months.

We cannot and will not support an economic stabilization program that is a fraud on the American people. We are in here today at this eleventh hour because we feel the dangers so deeply that we want to do what we can to avert the disaster.

We ask you to examine this problem again, to talk to your fellow Congressmen, and to show the American people that we have not fallen for Stalin's trickery, that we are determined to see this job through until the dangers of Communist aggression are over, and to that end we are going to put into practice the doctrine of equality of sacrifice.

Organized labor has said repeatedly that we are prepared to pull in our belts in this national emergency and to share fully in the sacrifices that will be required. We did this during 1950 and in the face of tremendous corporation profits. The average factory worker ended the year with just 3 cents more a week, enough for one postage stamp more to spend than at the beginning of the year. This was in spite of working longer hours.

We cannot and will not tell the working people of America that they must cut their standard of living in order to provide additional profits for the big corporations and the big ranchers.

We ask every Member of Congress who feels this problem deeply to fight for a decent bill until the last minute and then insist that everyone stand up and be counted. We know that the record on this action will be made, not only in the votes registered here but in the prices that will be registered in store windows and in the guns and tanks and planes that will not be built because inflation destroyed them first.

Yes, if these gentlemen who support the NAM and the big ranchers believe in their convictions let them, too, stand up and be counted, and let the results of their action be laid out before the American people.

We ask you who believe in protecting the American people and our defense to stand by your guns for a decent bill.

We ask you to do that in the name of America, of our fighting men, of our future. If you do you will have made peace with your conscience and 45,000,000 families will bless you.

Appeasement Roots in Britain

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York World-Telegram and Sun of July 11, 1951:

APPEASEMENT ROOTS IN BRITAIN

Aneurin Bevan and his left-wing supporters in the British Labor Party have issued a new policy statement which ought to win plaudits from the Moscow radio.

It is filled with denunciations of American hoarding of raw materials, the American arms program, and hysterical Americans who are accused of engaging in an anti-Communist witch hunt.

American air bases have been established in Britain to help defend that country and continental Europe from attack by Russia. The Bevanites seem to feel that this gives them the right to make certain demands on us, as they do in five specific proposals which they contend should be the base for future British-American relations.

1. Withdrawal of American recognition from Chiang Kai-shek and a negotiated settlement of outstanding questions with Red China (That follows the Moscow-Peiping line without a quibble.)

2. Abandonment of plans to rearm Western Germany or bring Franco Spain into the Atlantic Pact (That, too, is right down the Kremlin's alley.)

3. Peace proposals to Russia, including an invitation to join in a world-wide mutual aid program (That suggests a bigger Marshall plan, with Uncle Sam putting up the money, as usual. And the Bevanites want the economic assistance whether Russia joins up or not, being willing to take our money even though they don't like us.)

4. Establishment of a "more realistic allocation of raw materials between the United States and its allies." (Our allies have equal access with us to raw materials—if they have the money to buy them. Presumably Mr. Bevan wants us to divide up what we've bought and paid for. Since most of our buying has been from British possessions, this would be a case of Britain selling its cake and then getting it back. And the word "allies" is not used in its military sense, as the next demand of the Bevan left-wing bloc makes clear.)

5. A scale-down of the Western arms program to release labor and resources for "world mutual aid" ("Scale-down" as used there means abandon.)

Of course, if Russia had any sincere desire to join in a world-wide mutual aid program, Western rearmament would be wholly unnecessary. But even Henry Wallace seems to have given up the notion that Russian aggression could be bought off by a show of generosity.

Since the left-wing bloc represents a small minority in the British Parliament, it may seem that its irrational demands can be shrugged off as of little consequence. But this bloc exercises a voice in British policy

far out of proportion to its numerical strength. Without its support the British labor government cannot remain in power.

When our own Government compromises with the viewpoint of that British Government, it is very likely to be yielding in fact to the minority Bevan group, which is more sympathetic to the general Russian position than it is to America's. Our State Department's appeasement policy in Korea undoubtedly had its roots in this situation within the British Labor Party.

H. R. 4552

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. LANE. Mr. Speaker, I wish to extend my remarks and include a statement submitted to me by John W. Edelman, Washington representative of the Textile Workers Union of America, CIO, in opposition to H. R. 4552, the so-called Lucas amendment:

H. R. 4552

I. PURPOSE AND EFFECT OF H. R. 4552

Would abolish the existing Wage Stabilization Board and substitute a new board. The following are the most significant changes in functions and composition provided for the new Board:

1. H. R. 4552 abandons the tripartite principle of equal responsibility for labor, management, and the public, by establishing a board composed of a majority of public members.

2. H. R. 4552 strips the board of its responsibility for the day-to-day administration of wage stabilization controls, by removing its power to promulgate general policies and regulations and by casting doubt on its power to adapt policies and regulations to the equities and needs of particular cases.

3. H. R. 4552 changes the Board's dispute-settlement jurisdiction. Its effect is unclear: it appears to confine this jurisdiction to wage issues in cases referred by any party; but its new effect may be completely to wipe out any dispute powers. At present, the board's dispute-settlement jurisdiction extends to all issues in dispute in cases brought to the Board by mutual voluntary agreement or by Presidential certification.

II. REASONS FOR OPPOSING H. R. 4552

(1) It requires wasteful and inefficient administration of wage-stabilization controls; (2) it prevents solution of the problem of defense-mobilization emergency labor disputes; (3) it destroys the principle of tripartism; (4) it disregards experience, (5) it serves no real need; and (6) it raises serious legal problems:

1. H. R. 4552 is wasteful and inefficient in wage stabilization administration: The bill upsets the present carefully conceived design of economic stabilization controls. At present, the Economic Stabilization Agency is the top planning and coordinating staff for price and wage controls. Its staff is small. It was designed to supervise and direct, but not to operate, the day-to-day administration of price and wage controls. Such administration is delegated to the Office of Price Stabilization and the present Wage Stabilization Board. These agencies are designated and equipped for the realities of economic stabilization regulation. They deal directly with the affected parties;

they are subject to the individual and group pressures and requirements which spell out in concrete terms the desirability of new or amended regulations or policies. In sum, the present set-up provides a top agency for planning, and coordinate price and wage agencies for operations.

H. R. 4552 destroys this sensible arrangement. While leaving the price mechanism untouched, H. R. 4552 wipes out the power of the Wage Stabilization Board to issue regulations. The bill does permit the Board to make recommendations, but it vests sole authority to promulgate general policies and regulations in the Economic Stabilization Agency. This entails the waste of scrapping a presently operating arrangement.

H. R. 4552 divorces responsibility for interpretation, application, and enforcement of regulations from the power to issue regulations. The Board is to interpret, apply and enforce; the Administrator is to promulgate. This apparently invites duplication of staff and effort, and ambiguity of direction.

The incongruity of this organization is emphasized by the act itself. Section 402 (c) of the act, which is not affected by the bill, establishes the basic requirements for wage stabilization regulations and policies. They must be generally fair and equitable; they must prevent hardship and inequity; they must reflect consideration of the base period, of the national effort for maximum production, of whatever factors are deemed generally relevant. These standards demand administrative judgments which cannot be made apart from flesh-and-blood problems posed by real cases. These statutory requirements cannot be satisfied by general regulation alone. No abstract and general pronouncement, especially by an agency not responsible for applying and enforcing the pronouncements, can achieve equity, lessen hardship, or serve the other statutory goals, in every particular case. The bill denies the administrative flexibility which seems required by other provisions of the act.

The bill has the purpose and effect of casting doubt upon the Board's authority to decide cases on their individual merits. Now, the Board is free to promulgate policy in whatever way it sees fit, by decision or regulation. It bases its policy determinations on knowledge of real problems, gained through its cases and experience with the regulations and policies it has promulgated. This method of wage-stabilization administration is more flexible, economic, and sensible than that proposed by H. R. 4552.

2. The bill prevents solution of emergency labor-disputes problem: It is obvious that labor disputes may become a more serious national problem in this period of defense production. This period combines extraordinary need for maximum production with extraordinary economic pressures. A government-as-usual attitude toward labor disputes will hardly meet the national need.

The Wage Stabilization Board is now the only agency established to deal with the special industrial relations problem created by our mobilization effort. The President, in Executive Order 10233, assigned to the Board jurisdiction over labor disputes, wage and nonwage issues included, which were referred to the Board by voluntary agreement or by Presidential certification. This is a limited jurisdiction. As the need might arise, the President was free to satisfy it, presumably by additional delegations of authority to the Board.

H. R. 4552 rolls back most of the dispute-settlement authority granted by Executive Order 10233; it freezes the authority of the President to deal with the national industrial relations problems as they arise. The bill is unclear; the Board may have authority only over wage issues; or it may have no dispute-settlement power whatever. Further, under the bill, cases are to be brought to the Board

at the request of any Government agency, or any party, rather than by Presidential certification or voluntary agreement. Finally, the bill prevents the assumption of any additional labor-dispute jurisdiction by the Board. Whatever may happen, the bill prohibits any use of the Board in the solution of the national industrial relations problem. The bill is therefore too rigid and narrow.

3. The bill destroys the principle of tripartitism: The present Wage Stabilization Board is composed of an equal number of members representative of each of three groups, public, labor, and management. The underlying principle is that each of the three groups brings its own special insights and abilities to the task of formulating, applying, and enforcing all wage-stabilization regulations and policies. The nub of tripartitism is that wage and other industrial relations problems are best solved if the three groups are equally and jointly charged with responsibility.

Tripartitism is given no more than lip service in H. R. 4552. While the bill provides for representation of three groups, it prohibits equality of representation. The number of public members must exceed the number of labor and management members combined.

This is tripartitism in name only. The bill recognizes that tripartitism is desirable, for it avoids establishment of an all-public board. But partial tripartitism is ineffectual, the value of tripartitism lies precisely in equal representation.

4. The bill disregards experience: Although the bill apparently regards the Wage Stabilization Board as a new and untried administrative device, the plain fact is that the record of the War Labor Board offers directly related experience. That Board was a successful Board. In many ways it was accepted as a model by the Congress in enacting the Defense Production Act and by the President in establishing the present Wage Stabilization Board.

The success of the War Labor Board teaches lessons which are disregarded in H. R. 4552. That Board was tripartite in the true sense, and it is generally agreed that its success is due to this factor as much as to any other. The history of the Board demonstrates that the public members were only rarely outvoted by the labor and management members. The War Labor Board was responsible for both dispute settlement, nonwage as well as wage issues, and wage stabilization. In administering wage-stabilization controls, the War Labor Board was free to use, and did use, both general regulations and specific case decision. H. R. 4552, in all its major provisions, disregards the pertinent wartime experience.

5. The bill serves no real need: Nothing in the record of the present War Stabilization Board calls for the restrictions contained in H. R. 4552. It is impossible to know the need which the bill was designed to serve, inasmuch as there is no report accompanying the bill, and the hearings fail to give any clear or definite impression.

On wage stabilization, the present Board has been engaged in its initial establishment of policy. Any impression that basic wage stabilization policy has been established, in the 10 percent formula or otherwise, misreads the requirements of the Defense Production Act. In the face of the statutory command to prevent and correct hardships and inequities, no single formula or ceiling can do the entire wage stabilization job. The need to conform wage regulations to specific cases will remain, whether the Board or the Economic Stabilization Agency administers the controls. No stricter wage stabilization standard can be imposed by the mere administrative shifting of wage stabilization responsibilities.

So far as disputes are concerned, the Board has not exercised its jurisdiction under Executive Order 10233, and so could not have abused these powers. The Executive order prohibits any conflict with existing legislation, including the Labor-Management Relations Act. Thus there is no need for the bill's dispute provisions.

Nor is there reason for abandoning the tripartite composition of the Board. Almost all of the Board's actions have been unanimous. In none have the public members been outvoted by labor and management representatives. And the War Labor Board experience demonstrates that this fear, as well as the others which may have led to H. R. 4552, is fanciful.

6. The bill raises serious legal problems: The bill creates problems of statutory construction. It does not clearly define the functions of the new Board. The Board is empowered to "advise as to the interpretation, or the application to particular circumstances, of policies and regulations . . ." The effect of this advice is uncertain. It is binding upon the parties with the same force as a decision of the present Board? Or is it, like most advice, of only persuasive value, so that it may be disregarded without legal penalty?

The scope of the advice is also vague and uncertain. Under the bill, "stabilization of wages, salaries, and other compensation means prescribing maximum limits thereon." Does this phrase include advising as to the limits in individual cases, or is it intended to be only general in scope? Is it confined to definite mathematical formulae, or can the limits be expressed in general and discretionary terms?

These questions demonstrate that the language of H. R. 4552 is indefinite and ambiguous. Its effect therefore cannot be predicted accurately. It may upset the present proved method of administration without providing any clear alternative.

Finally, the dispute settlement provisions raise serious constitutional issues. In assigning dispute functions to the Board, the President was acting not under his statutory authority but his constitutional powers to enforce the laws and to promote the defense effort. This was the authority relied on by President Roosevelt in establishing the National Defense Mediation Board and the War Labor Board. The authority of these Boards was upheld by the courts. The present Board was given a far more limited jurisdiction in Executive Order 10233, in terms of both number of cases and effect of administrative action. Nevertheless, the bill prohibits not only this Board but any other agency from dealing with labor disputes except as authorized by statute. H. R. 4552 may therefore interfere unconstitutionally with the executive branch.

WHAT'S WRONG WITH THE LUCAS AMENDMENT

The Lucas amendment (H. R. 4552) would abolish the existing Wage Stabilization Board and substitute a new Board with different composition and responsibilities. H. R. 4552 follows exactly the proposals of the National Association of Manufacturers.

The proposed Board would have a majority of public members. The present Board requires equal representation and responsibility for public, labor and industry.

The proposed Board would be stripped of power to issue general policies and general regulations, and perhaps also to decide particular cases. The present Board is exercising these powers.

If H. R. 4552 becomes law the Board would have very little, if any, labor dispute jurisdiction. The present Board has limited dispute jurisdiction and is the only agency which has been created specially to handle

labor problems which could threaten the mobilization program.

1. H. R. 4552 destroys the benefits of tripartitism: By providing that the public members shall outnumber the labor and industry members combined, the Lucas proposal abandons the principle of equal tripartite responsibility in the industrial relations field, as if it were an untried or unsuccessful technique. The fact is that equal responsibility has met the acid test of wartime experience. The War Labor Board had equal numbers of public, labor and industry members; and its success, which no one has challenged, was due in large part to this equal participation by the three groups which have special experience and insight in this field.

The War Labor Board experience demonstrates once and for all that there is no real possibility that labor and industry members would outvote the public members if equal representation were preserved. Under the present Board, according to its Chairman, "There is no evidence that there had been any ganging up in this Board; this Board is developing into a cooperative team."

Equal representation is needed to maintain cooperation. The present Wage Stabilization Board, in a public statement supported by every member, public, labor and industry, urged Congress to preserve the established tripartite system, which it described and defended as follows: "Decisions are made after discussion among equals. They are reached through the exercise of persuasion rather than the exercise of a dominant voting power by any particular segment of the Board. Only through participation by equals can real cooperation be achieved in reaching decisions affecting millions of employees and their employers. Only in this way can those employees and employers be assured that Government is fully aware of their problems, their needs and their desires."

2. The amendment provides a method of wage stabilization administration which is wasteful and unworkable: This amendment provides that the Board may "formulate and recommend" general policies and general regulations to the Economic Stabilization Administrator, who is to promulgate them. It provides also that the Board shall "advise as to the interpretation, or the application to particular circumstances, of policies and regulations promulgated by such Administrator. . . ." The phrase "formulate and recommend", apparently means that the Board is to initiate the general wage regulations and policies; but cannot issue them, even though it may be responsible for their interpretation and application. The Administrator, on the other hand, can veto the recommendations of the Board, but may not be able to get the Board to change its position to conform to his.

Where does this leave the public? When the Board gives advice on the meaning of a regulation, is the advice legally binding and final, or may the Administrator, who issued the regulation, give a higher priority kind of advice? It is impossible to say definitely who is responsible for what, under this amendment. The public, the Board, and the Administrator are bound to be uncertain and confused.

The intention may be to make the Administrator bear the responsibility for day-to-day wage stabilization administration. How practical is this? The Office of the Administrator is now small, and not specialized in industrial relations. It is designed only for top-level supervision of stabilization policy. The practical administration of price and wage controls has been effectively delegated to the Office of Price Stabilization

and the present Wage Stabilization Board. The Lucas amendment retains this sensible arrangement on the price side, but eliminates it on the wage side. The wage control administration it provides is a merry-go-round of confusion and duplication which cannot bear the strain of actual operation.

The incongruity of this organization is emphasized by the act itself. Section 402 (c) of the act, which is not affected by this proposal, establishes the basic requirements for wage stabilization regulations and policies. They must be generally fair and equitable; they must prevent hardship and inequity; they must reflect consideration of the base period, of the national effort for maximum production, of whatever factors are deemed generally relevant. These standards demand administrative judgments which cannot be made apart from flesh-and-blood problems posed by real cases. No abstract and general pronouncements, especially by an agency not responsible for applying and enforcing the pronouncements, can achieve equity, lessen hardship, or serve the other statutory goals, in every particular case. The Lucas amendment denies the administrative flexibility which seems required by other provisions of the act. The system provided by the amendment cannot work successfully.

3. The amendment prevents effective handling of emergency disputes: The present Wage Stabilization Board is the only agency established to deal with the special industrial relations problems created by our mobilization effort. By Executive order, the Board was given jurisdiction over labor disputes, including nonwage as well as wage issues, only when both parties voluntarily agreed to submit the case to the Board or when the President certified that the dispute substantially threatened the progress of national defense. This was a limited jurisdiction, which the President was free to amplify.

The Lucas amendment rolls back this dispute authority. Moreover, it freezes the authority of the President to deal with industrial relations problems as they arise. The exact effect of the amendment is unclear. It implies that some labor dispute jurisdiction may be exercised by the Board in giving advice on the interpretation and application of the Administrator's regulations. But what dispute jurisdiction is conferred by the weak and obscure verb "advise"? And whatever the substance of this jurisdiction, is it to be exercised ultimately by the single Administrator or by the tripartite Board? If the intention is to give the Administrator the responsibility for the day-to-day operation of wage stabilization, the amendment gives no dispute jurisdiction to the Board.

Finally, this amendment prevents the assumption of any additional labor dispute jurisdiction by the Board. Whatever may happen, this tripartite Board, which alone knows the wage stabilization problems, cannot be used to deal with labor disputes in any way. Clearly, this proposal is too rigid and narrow.

In attempting to prevent the President from creating any new agency to advise him as to emergency labor disputes, the proposed amendment raises serious constitutional issues. It is doubtful that Congress has the authority to prevent the President from seeking specialized advice from any source on how best to enforce the laws and to promote the national defense. These are the powers which support the Presidential assignment of dispute functions to the present Board. These powers are granted by the Constitution to the executive branch. By confining the exercise of these powers, the amendment may be an unconstitutional interference with the Executive. There is no

point to straining the Constitution in this way.

SUMMARY

This amendment discards the tried and tested, and substitutes the unsound and unworkable. It destroys the principle of equal tripartism which marked the success of the War Labor Board. It establishes a method of wage-stabilization administration which is impractical and ineffective. And it prevents adequate handling of labor disputes in this period of national mobilization.

Each of these provisions obstructs effective agency operation in wage stabilization and industrial relations. Why enact any of them? No report in explanation or justification accompanies the Lucas amendment. There is no need for the amendment, and no advantage in passing it to compensate for its outstanding defects. It should be defeated.

Will New Declaration of Independence Be Needed?

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. O'HARA. Mr. Speaker, under leave to extend my remark: in the RECORD, I include the following editorial from the Fairmont Daily Sentinel, Fairmont, Minn., issue of Monday, July 9, 1951, entitled "Will New Declaration of Independence Be Needed?"

WILL NEW DECLARATION OF INDEPENDENCE BE NEEDED?

Less than two centuries ago our forefathers signed a Declaration of Independence, then went out and freely spilled their blood that this Nation might be free.

For a hundred and seventy-five years we who came after them have sung praise to their foresightedness and heroism. We have lauded the statesmanship of the original signers.

For more than a century and a half our Republic prospered and grew and we were independent and free of entangling alliances, outside commitments.

The original signers of the Declaration of Independence had little complaint, compared to the legitimate complaint the people of the United States have had since 1914. They complained of taxation without representation, it is true, but they knew of no such taxes as we have today. They then had as much voice in their own affairs, if not more, than we have today. We have paid infinitely more in lend-lease, in Marshall planning, in do-gooding in a single year to nations whose friendship has been doubtful, than the Colonies paid to England in all of their existence under her rule.

We hold membership in the United Nations. Gradually, little by little, we are losing our sovereignty. One day we shall find it gone. We are becoming a part of a vast world organization in whose iron circle Russia's "nyet" can stymie any objective. We have a coterie of politicians who are selling, giving away, and throwing over the transom the freedom, liberty, and sovereignty bought by the men of '76.

We can say that and more, today, but when the last link in the chain has been forged, what then?

Congress' Tendency To Relax Controls Now Is Frightening

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of my colleagues the following editorial, which appeared in the Brooklyn Eagle of July 11, 1951:

CONGRESS' TENDENCY TO RELAX CONTROLS NOW IS FRIGHTENING

Moscow's motive in authorizing Mr. Malik to propose in the United Nations a ceasefire on the peninsula of Korea is no less an enigma than other decisions formulated by the masters of the Kremlin.

It may be that after a year of failure there is a realization that the struggle is futile. There has undoubtedly been a complete loss of faith in the effectiveness of Chinese and North Korean puppets. Reverses, furthermore, are impairing Soviet prestige throughout the world.

There could be no greater mistake among leaders of the United Nations than to lose sight of the real nature of Communist imperialism, as fashioned and guided by Moscow, and to attribute the Korean overtures to a sincere desire for world peace.

In fact, peace in Korea, if established, will mark the beginning of new danger and new fears and anxieties. It will force to the forefront of all minds throughout the free world the question of where and when the next blow will fall.

Unless realism and wisdom prevail, peace in Korea will be attended by the peril of complacency, the complacency that made it so easy for Hitler in the war's early years virtually to destroy his comfortable, easy-going, business-as-usual neighbors.

One of the possible explanations of Moscow's peace proposal is suggested by Charles E. Wilson, head of the Office of Defense Mobilization. It is intended, Mr. Wilson believes, to lull free countries into a sense of security while the program of world conquest goes forward.

Korea, Moscow realizes, was a mistake. It has not only failed as an enterprise of Communist expansion but it has had the effect of making the free nations conscious of their danger. The last year of war has been marked by the building of formidable military power, also by the development of the readiness and the will to resist. Things have not worked out in accordance with the Kremlin's design.

There is reason for fear and dismay, accordingly, in the increasing signs that the Kremlin's change in tactics may bring about that altered spirit that plays so satisfactorily into the hands of aggressors who crave a moral let-down among their potential victims.

Mr. Wilson is shocked to learn that even before a truce has been arranged in the Korean war there is a movement to wreck the country's entire defense program. This movement is undoubtedly under way and the evidences of its progress will cause rejoicing in Moscow.

Congress considers cutting back the strength of the Armed Forces to 3,000,000 men. There is also a disposition in Congress to surrender abjectly to the forces of inflation through a weak control law which will

give the pressure groups all they desire at the expense of the consumer.

This drift has frightening dangers. It reflects the delusion that Russia has changed, that it has decided to cooperate with other nations in the peaceful solution of world problems. It is far more likely that, for Russia, peace in Korea means nothing more than a battle lost, to be followed at some later date by a new effort to carry out the design of Red imperialism.

Eightieth Congress Looks Better Now

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Marr McGaffin in the Minneapolis Tribune:

"WORST" CONGRESS OF 1948 LOOKS BETTER NOW

(By Marr McGaffin)

WASHINGTON.—The maligned Eightieth Congress is beginning to look pretty good in comparison with the two that have followed it.

Back in 1948 President Truman called the Republican-controlled Eightieth Congress the "worst in history." Later he softened it a bit by calling it the "second worst."

That was just before the 1948 Presidential campaign, and President Truman was out on a barnstorming tour across the country.

He was mad at Congress because it hadn't given him what he had asked. The Republicans had turned down much of his Fair Deal program. They had cut taxes and appropriations.

But mostly he wanted the country to return control of Congress to the Democrats.

Since then President Truman has had two Congresses, both controlled by the Democrats, but here's what happened.

The President submitted 47 proposals to the "second worst Congress in history" and got action on 12 of them.

He asked the Democrat-controlled Eighty-first Congress to act on 50 proposals and got action on only 15.

But the present Eighty-second Congress has paid even less attention to Presidential recommendations than either of the other two.

Out of 47 White House proposals, action has been completed on only 9. Five White House recommendations have been flatly rejected by the Eighty-second Congress compared with one rejection each by the Eighty-first Congress and the Republican-controlled Eightieth Congress.

The Republicans, when they were in control, at least gave the President a hearing on most of his recommendations. They pigeonholed six of them but held hearings or took partial action on the others.

The Democrat-controlled Eighty-first Congress, on the other hand, simply ignored 13 of his recommendations. The Eighty-second Congress has upped the ante to 16 blank stares.

Fact of the matter is that Presidential influence with Congress has diminished since members of Mr. Truman's own party have been in control.

Generally, the blame is put on the southern Democrats. Some of them are more conservative than the Republicans. But that isn't the whole story.

The southerners have differed sharply with the President on his fair-employment-prac-

tices legislation and on price controls where they have touched the South's agricultural interests.

But outside those two fields the Democrats, both North and South, have found it hard to go along with him on tax increases, Government spending, and some phases of his foreign policy. They've bucked him on rent control, credit control, and expansion of Federal housing projects.

President Truman rapped the Eightieth Congress hard for the restrictions it put in the Trade Agreements Act. When the Democrats took over the wheel, they kept most of them in the act.

The Republican-controlled Eightieth Congress did its best to get some investigations going and to dig up some dirt in the Democratic record. But it remained for the Democrat-controlled Eighty-first and Eighty-second to root out the influence peddlers that were operating inside the administration.

Even with respect to getting its job done, regardless of political issues, the Eightieth Congress now appears to have stacked up fairly well.

During the first 6 months of the Eightieth Congress, 145 bills were passed. The Eighty-first Congress whipped through 154 bills in its first 6 months.

But the present Eighty-second Congress has enacted only 58 measures during its first 6 months.

Historic Shrines in New Jersey

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 11, 1951

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting address sent to me by a very distinguished citizen of the State of New Jersey, and a good friend, George Stringfellow. The address is on the subject Historic Shrines in New Jersey, and was delivered by William C. Cope on Flag Day, June 14.

JULY 13, 1951

Mr. President, the other day I offered for insertion in the Appendix of the RECORD an address on historic shrines in New Jersey delivered by Mr. William C. Cope. I did so as a matter of courtesy to the vice president of the Edison Corp., Mr. George Stringfellow. I have been advised by the Public Printer that the cost of printing the address will exceed by one-third of a page the two printed pages allowed under the rule without a statement of cost and will be \$191.34. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Master of Ceremonies, brother Elks, and friends, I have chosen as my topic for this occasion, Historic Shrines in New Jersey.

New Jersey is one of the great States of the Union.

At Ithaca College, on June 2, I delivered the fifty-sixth commencement address and received an honorary degree, doctor of laws. On that occasion, in the interest of good public relations, I felt constrained to place New

York first among the great States of the Union; New Jersey, a close second; and my native State of Ohio was tossed into third place. I did not promise, however, to keep in perpetuity this arrangement. In fact, I suggested to my audience of 2,000 people, when I returned to New Jersey, I might find it necessary to rearrange these three great States.

At this point, I would like to say I spoke at the Ithaca College commencement to the topic, The World Does Get Better. People play a big part in making the world better. I mentioned, in my address, that organizations, such as the Elks, play a substantial part in making the world better. I know of no organization here in New Jersey that does as much for poor little crippled children, whose minds, hearts, and souls are housed in bent and twisted bodies, as does the Elks. The Elks deserve great praise for the wonderful work the respective lodges, here in the State, do for unfortunate crippled children.

I do not know, if and when members of the Elks from the State of New Jersey visit lodges in other States—Florida say—just how they answer when called upon to tell the State they are from. I do know Rotarians, and I have been a Rotarian for a long time, when called upon to tell the State they are from, when visiting a Rotary Club outside of the State, say, rather meekly, "New Jersey." But, when Rotarians from Texas are called upon to tell the State they are from, they shout "Texas." They are proud of their State and say so with enthusiasm.

We have, here in New Jersey, so much to be proud of and so much to be enthusiastic about that we should not hide our lamp under a bushel. New Jersey is one of the leading and foremost States of the Union. Many great men have come from New Jersey. Elias Boudinot lived in Elizabeth. Mr. Boudinot presided at the Continental Congress when the Constitution of the United States was written and approved by the delegates. His old home in Elizabeth, Boxwood Hall, is a historic shrine, kept up by the State.

Grover Cleveland was born in Caldwell, N. J. His birthplace is a historic shrine cared for by the State.

Garret A. Hobart lived at the edge of Paterson. He was Vice President of the United States when William McKinley was President. Mr. Hobart's home is preserved by the Passaic County Park Commission. It stands on the side of Garret Mountain, which overlooks the city of Paterson.

Woodrow Wilson, while born in Virginia, was schooled at Princeton, became a professor at Princeton and later president of this great university. He was elected Governor of the State of New Jersey and President of the United States and remained a citizen of New Jersey until his death.

Woodrow Wilson was the greatest scholar ever to occupy the President's chair. He was a man of magnetic and dynamic personality, an impressive gentleman of considerable poise and bearing, though he never rated himself as a handsome gentleman. He frequently said from the platform:

"As to beauty, I am no star,
There are others more handsome by far;
But my face, I don't mind it,
For I am behind it;
'Tis those in front that I jar."

Our precious American flag, the Stars and Stripes—was unfurled officially for the first time right here in New Jersey.

Philadelphia, Pa., may have been the Cradle of Liberty insofar as our Republic is concerned. The Battle of Lexington and Concord in Massachusetts may have been where the first shots of the Revolution were fired. But, New Jersey was the battleground of the Revolution.

Washington crossed the State of New Jersey with his army four times. Three major battles, that were turning points in the American Revolution, were fought right

here in New Jersey. They were the Battle of Trenton—the Battle of Princeton and the Battle of Monmouth. More than 90 lesser engagements were fought in New Jersey.

The winter of 1777-78, when Washington's Continental Army was encamped at Valley Forge, has received publicity that has made Valley Forge immortal. Nevertheless, Washington's army spent three winters in New Jersey—1777 at Jockey Hollow; 1778-79 at Middlebrook, on route 29 near Bound Brook and Somerville; and 1779-80 again at Jockey Hollow. The winters at Jockey Hollow were possessed of as much privation and suffering as the winter of 1777-78 at Valley Forge. At Jockey Hollow, the winters were severe—snow was from 4 to 6 feet deep. It was extremely difficult to get food to the soldiers; heat was very meager, and shelter was extremely poor. Clothing was quite scanty and much sickness and suffering were prevalent.

I wish to call your attention to a historic shrine here in New Jersey, located in the city of Newark, county of Essex, on the south bank of the Passaic River. This shrine is a monument erected to commemorate the landing of the Pilgrim Fathers, who first settled in what is now the city of Newark. On this shrine is an inscription that says these settlers intended to establish a kingdom of God here on earth, as near as it would be possible to do so. This was the last attempt to establish a theocracy in the Western Hemisphere. A theocracy is pretty much of a dictatorship of religion and government by the clergy.

We do not know the exact day of the month the Pilgrim Fathers landed on the south bank of the Passaic. We do know on the 21st of May 1666, they held their first meeting to organize their church and government. They probably landed 3, 4, or 5 days prior to May 21. Their first formal action was to set up a church that would control orderly government for them.

When their ship cast anchor in the Passaic, they began to unload their belongings and come ashore. Some hostile Indians ordered them to put their things back on the ship because these Indians felt these white settlers had no permission to land where they did. Presently, along came an Indian chieftain with his warriors, who told the settlers they could unload their belongings because arrangements had been made for them to take up a settlement on the Passaic by a committee that had preceded these pioneers. There were 64 of them—12 from Branford, and 53 from Milford, Conn. Their leader was Capt. Robert Treat.

They first called their settlement New Milford, which was named after Milford, Conn. This name was changed years later to Newark because a preacher at the "Old First" church, whose name was Pierson and who was very popular, came from Newark-on-Trent in England.

The settlers landed in a forested area, which was very much of a wilderness. There was a stream that ran from about where the courthouse now stands down past Broad and Market Streets. On the banks of the stream were time-worn paths that the Indians traveled. The virgin forest was full of wild animals—bears and wolves in particular.

On the southeast corner of what is now Broad and Market Streets, there was a large pond and swamp. The stream and the pond have long since disappeared. They are subterranean areas under the city of Newark at this time. The Bamberger store has as its foundation tremendous caissons, driven deep into the earth because of what is termed "an underground river." The Kinney Building, on the four corners, is carried on cofferdams for the same reason.

Our next stop is Ringwood Manor State Park about 30 miles from Newark. It is located at the head of Wanaque Reservoir.

In this famous State park, which is a very beautiful park, there is an old mansion of 78 rooms. The history of Ringwood antedates the American Revolution. In 1730, iron mines were being worked at Ringwood. At least 12 of them have been operated. Millions of tons of good iron ore have been taken from these mines since 1730.

A man by the name of Faesch came over from Europe to search for copper ore, prior to 1730. He traveled through the Ramapo Mountains but instead of finding copper ore, he found iron ore deposits of very good quality. The London Co. was organized in England to operate the Ringwood iron mines. A man named Hasenclever was sent over, after Faesch, authorized to spend £35,000 to develop and exploit the iron mines at Ringwood. Hasenclever was something of an aristocrat and apparently not too much of a businessman. He just about bankrupted the London Co. by spending £55,000. Hasenclever, it is said, had a brass band play for him every night at dinner. He enslaved the Indians and some Negroes. He had his own militia, which he had drilled on the property at Ringwood, and which was used to maintain peace and order.

Upon reorganization, the name of the company was changed to the American Co. and in 1771, a Scotchman by the name of Robert Erskine was sent over to manage the Ringwood iron mines. Robert Erskine was an able geographer and topographer. George Washington drafted Robert Erskine to prepare the maps for the Continental Army. Some historians say if it had not been for Robert Erskine, George Washington could not have won the American Revolution. Robert Erskine planned the roads and the hideouts for Washington and his troops.

Ringwood is about halfway between West Point and Morristown. The road, that went right in front of the manor house at Ringwood, at the time of the American Revolution, was on top of one of the Ramapo Mountains, about 9 miles long, and was called Cannon Ball Road. It is practically inaccessible today. It was the road over which cannon balls, made at Ringwood for use in the Revolution, were transported.

During World War II the Ringwood mines were completely rehabilitated by the United States Government at a cost of four or five million dollars. Modern machinery was installed, large buildings were erected, and the railroad repaired between Ringwood and Haskell to carry the iron ore to the Erie Railroad for shipment to other destinations for smelting and processing. The rehabilitated mines were not operated, however.

At Ringwood, in front of the manor house, you can see several links of what is called the West Point Chain. This chain, it is said by some historians, was placed across the Hudson River during the Revolution to keep British ships from going up the river. Some lengths of the chain are on the grounds at West Point. Part of the chain was undoubtedly made at Ringwood. Each link weighs about 85 pounds. Every other link has an opening so the links could be hooked together.

To the left of the manor house is a stone building that was the blacksmith shop where Washington and his troops had their horses shod. Near to the blacksmith shop is the only water wheel I know of in practical operation here in the State of New Jersey today. This water wheel pumps millions of gallons of water every year into the reservoir on top of the mountain back of the manor house. The water flows by gravity from this reservoir to the mansion and the buildings and all about the picnic grounds in the park.

About 2,000 feet from the mansion, on the old road to Morristown, which is practically abandoned today, is an old pre-Revolutionary cemetery. In this cemetery Robert Erskine is buried. George Washington at-

tended Robert Erskine's funeral, it is said, instead of Major Andre's, who, on the same day, was hanged and buried near Tappan. Robert Erskine's grave is a vault partly above the ground, with a large stone slab on top. Prior to about 40 years ago it is said some bricks fell out of the upper structure, and, according to legend, Robert Erskine's spirit and skeleton in the form of a ghost came out from his grave through the opening made by the fallen bricks and sat upon the stone slab with a blue light, very often at nighttime. According to legend, quite often, Robert Erskine's ghost, with the blue light, would follow travelers at nighttime up and down the valley. Sometimes, it is said, Robert Erskine's skeleton would rattle along behind these going up and down the valley at night. The blue light was always with the ghost, which only appeared under cover of darkness.

About 40 years ago Mrs. Hewitt, who was a widow at that time, decided to have the bricks replaced and end this ghostly apparition. As the story goes, neither ghost nor blue light has ever been seen since the bricks were put back, by order of the Widow Hewitt.

We will now travel over to Morristown. We will make a brief stop at the Ford mansion in Morristown, which is now called Washington's headquarters, and which is under the control of the National Historic Society. George Washington stayed with the Fords at this mansion both winters his army was encamped at Jockey Hollow—the winter of 1777 and the winter of 1779-80. This is one of the most interesting historic museums in the United States with respect to Revolutionary curios, mementos, etc.

When George Washington left the Ford mansion in the spring of 1780 he had Mrs. Ford take inventory of her belongings. She reported to him the only item missing was a silver spoon. When Washington returned to Mount Vernon he sent Mrs. Ford a sterling silver spoon with his initials engraved upon it. This experience is testimony to Washington's character, honesty, and honor.

Back of the YMCA in Morristown, on a rather steep hill, is Fort Nonsense, which Washington had erected, but which was never used. The embankments are still intact and replica gates (heavy wooden gates) still hang to the posts.

Between 3 and 4 miles from Morristown is Jockey Hollow National Historic Park. This is a very interesting place. Many sites are identified with markers where militias, companies, or military units, of one kind or another, from Rhode Island, Connecticut, Massachusetts, New York, New Jersey, Pennsylvania, Maryland, and Delaware, were encamped.

Under a spreading oak tree, there is a grave with a modest, little, white granite marker, which identifies the spot near which Captain Patton was shot and killed by his own troops when they mutinied under his command. His troops had not been paid for a year or more. They became hostile and difficult to handle. They were determined, in their fury, to march upon the Continental Congress in session in Philadelphia. Captain Patton was just as determined to restore order, and prevent mutiny and desertion. When he stood in their way, he was shot and killed and his troops, out of control, started on their march toward Philadelphia. They got as far as Princeton before they were apprehended and brought back.

In Jockey Hollow National Historic Park you will find the famous Tempe Wickes house. It is pretty much in the same condition and still has the same or similar furniture as was there at the time of the Revolution. Tempe Wickes, you will remember, was a vivacious young woman who had a very beautiful horse that she rode about her father's farm. Some historians say, the British, being very anxious to get her horse, rode after her in an attempt to capture

Tempe and her spirited horse, one day when she was out riding around the countryside. She rode so fast the British lost track of her and she was able to return to her home and hide and shelter her fine horse in her bedroom with the result the British did not capture her horse, and take the animal away from her. I suspect this story is not too true. If anyone tried to seize a horse, it might have been Washington's spirited patriots, and not the British, because there is no authentic evidence that the British were ever in Jockey Hollow.

We shall now drop down to Springfield. In the early summer of 1780, the Battle of Springfield was fought. Lord Cornwallis commanded 5,000 British soldiers on their way to Morristown to burn the stores there. General Greene commanded 1,500 colonial patriots, who were determined to stop the British. The church still stands in the center of Springfield where Preacher Caldwell turned his hymnbooks over to the colonial gunners to be used as cannon wadding. The author of the hymnbooks was a man named Watts. Preacher Caldwell said to the colonial patriots, "Give them Watts." The Battle of Springfield was fought and won by our American patriots. Not long after the Battle of Springfield, Preacher Caldwell's wife, with a small baby in her arms, was shot at nighttime by a British soldier, who fired through the window of her home, killing both Mrs. Caldwell and the baby in her arms. This is one of the awful tragedies of the American Revolution. Some time later, Preacher Caldwell himself was shot and killed by a fanatical, unpatriotic colonial Tory. This devilish Tory was brought to trial in a church in Westfield, convicted and ordered to be executed at once. He was taken out to a hill near to the church and hanged. The hill is still known as Gallows Hill.

We shall now journey on to Middlebrook where Washington's army was encamped during the winter of 1778-79. It was at Middlebrook in 1777, where Washington and his army stopped on their way to Jockey Hollow, that the American flag—the Stars and Stripes—was officially unfurled for the first time in the Colonies.

Our next stop is at Princeton. The Battle of Princeton was fought and won January 3, 1777, and was one of the turning points of the American Revolution. At Princeton is a State park of 55 acres that preserves a part of the Revolutionary battleground and commemorates the Battle of Princeton. In this park, a house still stands in a state of good preservation—the Clark house—where General Mercer, bayoneted and mortally wounded during the battle, died.

On Christmas night 1776, George Washington, with his army of 1,200 men, crossed the Delaware and fought and won the Battle of Trenton, which was another turning point in the American Revolution. George Washington divided his army of 1,200 soldiers after crossing the Delaware under cover of darkness and sent half of his soldiers down the river road to Trenton and the other half out by the way of Bear Tavern in order that he might salvage a part of his army if he suffered defeat.

Washington Crossing State Park, 8 miles out of Trenton, marks the site where Washington and his troops landed the famous night they crossed the Delaware. There is also preserved in Washington Crossing Park a part of the road over which Washington marched his troops Christmas night 1776 by way of Bear Tavern, which is called Continental Lane. It is grown up with brambles but can still be easily identified.

The night Washington crossed the Delaware, a Tory, named Wall, attempted to deliver a message to General Wahl, the commander of the Hessians at Trenton, notifying him that Washington and his army were crossing the Delaware. Some say the Tory,

astride his horse, swam the Delaware River Christmas night to notify General Wahl that Washington was crossing the Delaware in preparation for battle. Tory Wall was unable to contact General Wahl because General Wahl was having a big party, where revelry, drinking liquor, and carousing were supreme. General Wahl was enjoying a banquet and playing cards; consequently he would not see Tory Wall. General Wahl ordered his butler to talk with Tory Wall. Tory Wall handed the butler the note purposed to inform General Wahl that Washington, with his army, was crossing the Delaware. The butler delivered the note to General Wahl, but apparently General Wahl, being liquored up and in a mood for revelry, stuck the note in his vest pocket and forgot all about it and did not read it. The next day the note was taken from General Wahl's clothing on his dead body. Had General Wahl read the note delivered to him by the infamous American Tory, the Battle of Trenton would probably have been very different from what it was, and it might well have been the American Revolution would have been lost.

Our next stop is at the Hancock House at Hancock Bridge near Salem. The Hancock House was built in 1734. The bricks used in building the house came from the other side. The house, at this time, is in a state of fine preservation and is one of New Jersey's sacred shrines. General Simcoe, in charge of the British troops, entrapped some colonial patriots in the attic of this house, where they were apparently billeted. As you enter the attic, you will see a number of stains on the floor. These stains, we are told, are the stains from the blood shed by the American patriots, who were bayoneted, mortally wounded, and bled to death.

We shall next stop at Somers Point near Atlantic City. Here we will find the old Somers Mansion where Capt. Richard Somers 2d was born and raised. At the age of 26 he entered the United States Navy. Under President Thomas Jefferson in 1804 the War with Tripoli was fought and won. Captain Somers, on an American war vessel over in the Mediterranean, volunteered to go with others on a ship loaded with gunpowder to blow up the ships of the pirates anchored in the Bay of Tripoli. The project was a complete success but Captain Somers never returned. He lost his life in this engagement.

And, now, we shall go to Freehold. Near Freehold, the Battle of Monmouth was fought and won, though it came within a hair's breadth of being lost. General Lee was not able to lead his troops to victory. George Washington lost his temper at the battle of Monmouth and became so infuriated at General Lee that he cursed him out right on the battlefield and dressed him down heatedly. General Lee was later court-martialed and dismissed from the Army. Washington rallied the troops that were disorganized and in retreat and led them to victory. The Battle of Monmouth was another turning point in the American Revolution.

Nearby, just across the highway from the Monmouth Battleground, is the Molly Pitcher Well. Molly Pitcher carried water to the American patriots during the Battle of Monmouth in 1780. When her husband, who fired a cannon, fell; she took over the cannon and continued to fire it herself. Molly Pitcher was one of the famous women of the American Revolution.

And lastly, I want to call your attention to Clarksburg, N. J., about 10 miles beyond Freehold, toward Trenton. In 1710, two brothers, Abraham Lincoln and Mordecai Lincoln 2d, came to New Jersey from Massachusetts. They settled in or about Clarksburg. Mordecai 2d was the great great-grandfather of Abraham Lincoln, the rail splitter. Abraham Lincoln was the great

great-uncle of Honest Abe, the great emancipator. Abraham Lincoln operated a forge. Some say the building still stands near Imlaystown, not far from Clarksburg, in which Abraham Lincoln's forge was operated.

Mordecai 2d bought 500 acres of land at Clarksburg. He married, around 1714, Hannah Salter, daughter of one of the early pioneers in New Jersey. Three children of this marriage were born right here in New Jersey. John Lincoln was one of the children. John was the great-grandfather of Abraham Lincoln. He migrated to Pennsylvania and thereafter down the Shenandoah Valley to Lacey Springs, Va. He is known in history as Virginia John.

In a pre-Revolutionary cemetery at Clarksburg, there is buried little Deborah Lincoln, who died May 15, 1720, at the age of 5 years and 3 months. This little girl was the great-aunt of Abraham Lincoln.

On the Hannah Salter branch of Lincoln's ancestral tree his ancestors here in New Jersey can be traced back, with accuracy, three generations. Why historians have bypassed the Lincoln ancestral history in New Jersey is more than I can tell you.

If our New Jersey traditions, our democratic processes, and our precious Constitution, which is the greatest written authority for the administration of good government by free people the world has ever known, are to be preserved, we must place greater emphasis upon patriotism and an appreciation of our democratic way of life than are being placed at this time.

Unfortunately, it appears that communistic Russia does about the best job of selling, to the nations of the world, the worst form of government that the world has ever known. And I am afraid the United States does about the worst job of selling, to the nations of the world, the best system of government that has ever been conceived by man.

I know of no organization better qualified or equipped to help us preserve our precious heritage and our free democratic processes than the Benevolent and Protective Order of Elks right here in the United States.

If This Be Peace!

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article that appeared in a recent issue of *Barrons*. American diplomacy will take another defeat in the Korean talks and as matters stand today the United States and the United Nations are sorry spectacles in the eyes of the world. The sacrifices in life and in property seem to have been in vain because of a lack of a definite foreign policy in the Far East. In view of our present leadership, what justification is there to pour additional billions of dollars in questionable ventures all over the world.

IF THIS BE PEACE—IT WILL TAKE POWER TO MAKE IT STICK

Of the Korean cease-fire affair, still in the balance as this issue of *Barrons* goes to press, one observation may be made at the beginning. It represents one of the strangest and in many ways most distasteful efforts at peace negotiation in which the

United States of America has ever been involved.

Six years ago in Tokyo Bay on the battleship *Missouri* Gen. Douglas MacArthur received the surrender of the Japanese in a ceremony consonant with the long traditions of human warfare and charged with hope for the future. One has only to recall that proud moment to take the measure of what went on last week and is still in progress.

A man called Malik hints in a radio address that Russia might favor a Korean settlement. The free world leaps to attention. Mr. Trygve Lie, on vacation in Europe, hurries home. Mr. Entezam, president of the U. N. Assembly, seeks an interview with Mr. Malik who plays sick. Mr. Truman makes the first Soviet overture the occasion for a highly partisan speech in which he defends Mr. Acheson as the greatest Secretary of State in United States history. Mr. Acheson voices suspicion of the Soviet offer, but sets the wheels in motion for probing it. Out of all this was the Ridgway offer born.

The probable terms of truce, providing for a buffer zone along the present line of fighting and for international inspection behind the lines, are tolerably stiff. Even if they are accepted, the prospect that opens is scarcely exhilarating. After suffering 80,000 casualties the best that can be had is settlement at or near the thirty-eighth parallel with Korea truncated and unification left in the air. After months of fighting, and internal turmoil, the administration is making precisely the kind of cease-fire offer which MacArthur made last March on the eve of his summary dismissal.

It is easy in these circumstances to turn wholly cynical, both toward the possible settlement and even more toward the war which it may bring to a close. We believe that something better than cynicism is required. The fact that General MacArthur, however badly treated, did propose a cease-fire argues powerfully that the present plan is the best settlement that can be had, given all the circumstances. The decision not to bomb beyond the Yalu may have been right or wrong, but the fact is that it was made, and the rest has followed inexorably. The United States has chosen for the first time in its history to fight a limited war. The result can only be a limited and stalemate peace.

The task ahead is to see that the sacrifices already made have not been made in vain. If the cease-fire offer is turned down, then there will be no option but to continue the war on a much wider scale. But if, as assumed here, something comes of it, then, too, an immense and intricate job faces us. If this be peace, then at least these things call for the doing.

The United States must not be cheated of ground so bloodily gained. Much has been made of the fact that in proposing a cease-fire, Russia made no mention of Formosa or admittance of Red China to the United Nations. But these are not necessarily primary Russian objectives. The primary Russian objective, it may be taken for granted, is to get American troops off the Korean peninsula. Yet it is hard to see how such withdrawal can be contemplated for months to come. To do so would be to invite the very conditions which brought on the conflict. The United States entered the war to draw a line against Communist expansion. Until South Korea is strong enough to hold its own, the line will have to be maintained.

The holding of South Korea should go hand-in-hand with the rapid build-up of Japan. The two, indeed, cannot be separated as the Japanese discovered long ago. Korea is the dagger pointing at Japan, and conversely must always be dependent on Japan for its defense. This joint defense will require an increase of American air power in Japan and Okinawa beyond its present strength.

Thanks to insistent political pressure against former views of the State Department, it is now recognized that Formosa as well as Japan is part of the perimeter chain of United States power in the Far East. There must be no let-up in the aid given to Chiang Kai-shek.

The Pacific Pact, including Australia and New Zealand, should be brought rapidly into being along with the pushing through of the Japanese treaty. Both would greatly strengthen the United States hand in dealing with Red China, which next to Russia has been the chief offender in Korea and which seems primed for new adventures. Such adventures can be rendered costly if not impossible provided, but only provided, that the United States in one way or another maintains and strengthens its Pacific position which the Korean war has shown is no less important than the Atlantic. Europe cannot be saved by scuttling in the Pacific. Rather, as General MacArthur argued before Congress, the problems of both are interlocked.

The final condition for preventing a cease-fire in Korea from becoming a step back rather than a step forward is, of course, the maintenance of armament production at home. At the moment administration spokesmen speak ominously of a let-down, but no such let-down, we believe, is likely to occur. Armament orders have now been given in such volume that immense output over the next 12 months could not be stopped even if anyone were so foolish as to want to stop it. What we may be spared if the Korean truce materializes is that plethora of controls so dear to the bureaucratic heart, but which have little if anything to do with the articulation of American economic strength and genius.

That strength and that genius depend on the diffusion, not the concentration, of power—economic and political. Yet in the twentieth century the United States has also discovered that in foreign affairs the exercise of power is essential—that if vacuums are left open, worse forces, not better, will move in. That is the ultimate lesson of Korea. If the lesson has been learned, then it may well be that a mean war, and a mean peace, if it comes, can still turn out to be a permanent victory.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As the personal representative of the President of the United States and 150,000,000 other American citizens I welcome you to this country. It is our sincerest hope that you will be happy here. The people of the United States of America offer freedom and opportunity for you and your fine family. We invite you to enjoy this new-found freedom. Volodymyr Holubiw, and to work with us to maintain it. I am sorry that my colleagues, Mr. Gibson and Mr. O'Connor are not present.

You are here today because many good people were eager to lend a helping hand—the Congress of the United States, the International Refugee Organization, the Displaced Persons Commission, and other United States Government agencies, the 35 State displaced persons committees appointed by governors, Church World Service, an arm of the National Council of the Churches of Christ, and one of the voluntary religious agencies which are part of the program, and a sponsor, a private citizen of Woodruff, Wis.

Your sponsor and these other friends made it possible for you to come to the United States because, as men and women who love freedom for themselves, they seek it also for others. This Nation's displaced persons program and our participation in the great work of the International Refugee Organization give practical and realistic demonstration of our adherence to fundamental human rights—freedom of movement, freedom of residence, and the right of asylum from persecution.

Our displaced persons program stems from our belief in the dignity, equality, and respect of men of good will, whatever their origin and wherever they may pursue their beliefs in freedom and democracy. The DP program reflects our faith in human beings and is a fundamental part of this Nation's arsenal of peace. It is part of our positive answer to the negations of totalitarianism—fear, persecution, and subjugation. We believe democracy offers hope, freedom, and unlimited personal opportunity.

I am proud that my country embarked on this bold humanitarian program to aid you and other stateless and homeless people, and to help relieve an almost impossible situation in already overcrowded areas of the world.

The people of my country are glad to welcome you. We can learn much from you and the thousands of other displaced persons whose lives have been stunted by the perverted use of power in the hands of ruthless men. And in the present crisis, we need your help in the fight which free men everywhere are compelled to wage against those who would enslave us.

You are beginning a new life in a land that is still young. A week ago, the United States celebrated its one hundred and seventy-fifth anniversary. And today, as it was in the beginning, we have—and that means you have—the right to worship as we please, the right to think as we please, and the right to voice our opinions. These rights are as precious to us as is the right to live.

Here the individual is important—more important than the state. This does not mean that each individual works only for himself, or that he goes his own selfish way. An individual here is freest when he is seeking freedom for others. This very DP program shows America at its best—private citizens, national and community organizations, local, State and Federal Governments all in a partnership to carry out a fundamental part of our domestic and foreign policy.

You know how precious freedom really is because you lost it. Now that you have found it again, I know that you will work

Welcome to the Two Hundred and Fifty Thousandth Displaced Person

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. LEHMAN. Mr. President, on Wednesday, July 11, there was held in New York City a ceremonial welcome for the two hundred and fifty thousandth displaced person to enter the United States. It was an occasion in which all Americans might well take pride. Mr. Harry N. Rosenfield, a member of the Displaced Persons Commission, represented President Truman at the ceremony. As one of the architects of the displaced persons program, and as an outstanding administrator of it, it was fitting that Mr. Rosenfield should be there in that capacity. He made some brief remarks, which I ask unanimous consent to be printed in the Appendix of the RECORD.

to maintain it for your fellow men. That is the American way, and I know it will be your way.

You are the two hundred and fifty thousandth person to enter the United States under the displaced-persons program, a program which is the fulfillment of the dreams of our forefathers, because it is the present-day application of those great ideals upon which the United States was founded. This program is an expression of faith—faith in humanity—faith in the democratic way of life—faith in God.

And as I welcome you formally to our shores, I have a little gift for you. It is a replica of the Statue of Liberty—a symbol of hope to all the world. Take it with you to your new home in Wisconsin. Cherish it as a reminder of this country's most valuable export—hope for the future. Hope which springs from an opportunity for you and your family to rise to your full stature as dignified human beings and as citizens of a great Nation founded on the inspiring declaration "That all men are created equal."

Price and Wage Controls or More Jobs for Bureaucrats?

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial from one of our outstanding newspapers, the Toledo Times, of July 3, 1951. The editorial appears under the heading "Price and wage controls or more jobs for bureaucrats."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRICE AND WAGE CONTROLS OR MORE JOBS FOR BUREAUCRATS?

Toledo's pride and joy, the learned politico-economist, Prof. Michael V. DiSalle, came home the other night to bestow some Washington eclat upon a CIO union's dinner party. That, of course, gave him an opportunity to harangue the assembled boosters about the evil-doers who oppose, not only giving Mr. Truman and him greater powers over the Nation's economy, but also the extension, for very long, of the general powers they now have.

Mike made the most of his opportunity by unpacking his mind of more transparent nonsense and pious piffle than he has had occasion to deliver for a long time. But he had a gaudy time bucking himself up by lambasting everyone who disagrees with him and his top boss, the famous inflation-promoter, Mr. Harry S. Truman, President of the Republic. When he shut down at last, he was precisely where he was at the start, to wit, without sensible or sound reason for extending price controls.

As matters stand today, the present controls have been extended for 31 days, so his job has at least another month to run. He finds his range of action limited, however, for Congress adopted two restrictive amendments to its stopgap bill continuing controls. One prevents him from putting ceilings on any manufactured item not now controlled. The other forbids roll-backs of prices.

The month's extension will give Congress time to complete work on the bills it is

considering. No one knows what it will do in the final bill, but it is quite clear by now that it will not give Mr. Truman the 2-year extension he asks. Neither will it give him the enlarged powers he demands as the only means of fighting inflation.

Why the controls should be extended at all is beyond comprehension, except to the eminentissimos of the administration, the planners who crave complete powers over the Nation's economy, and there is no competence in their premise. There was none in Mr. DiSalle's premise Saturday night. That was why he resorted to abuse.

He took credit, to be sure, for the price improvement that has occurred during the past few weeks, claiming that his controls had been more effective than he expected. The slight falling off in the wholesale index in the past few weeks, after holding a steady line for 4 months, was significant enough to alarm the enemies of price controls to a new frenzy of action against them.

It is all right with us, if it pleases Mr. DiSalle, to claim credit for market reactions which were set in train by normal economic factors. After all, a politico is entitled to a bit of self-puffing, but when it comes to arguing for new and greater powers over the economy, he should have more than specious reasoning and empty prattle if he is to convince the public and Congress.

It is true that there is a great apathy among the American people over the matter of price controls. There is an extremely good reason for it, too; namely, the people who know that they never can succeed as anti-inflation measures, since they attack the results, not the cause, of inflation. There is also the fact that prices are not rising, and haven't been for some time. Department stores are loaded up with goods, most of them bought during the panicky weeks following the outbreak of the Korean war, and they are being forced to cut prices. When the Supreme Court nullified the only effective provision of the Fair Trade Acts, so far as price maintenance goes, the boys with the heavy inventories were put in position to speed the turn-over by cutting prices. Since the first of the year retailers in most areas have been resorting to several schemes to wangle customers into their stores, and the process has begun all over again.

Commodity markets broke somewhat sharply a week ago on the heels of Malik's cease-fire proposal. Cotton dropped first. But the drop cannot be ascribed wholly to peace maneuvers. It was overdue, as the Government's reports of prospective cotton production have shown. The crop this year will go over 16,000,000 bales, it is estimated. There is also in prospect another bumper crop of wheat, particularly in the spring-wheat area, which is expected to set a record; not only that but be large enough to offset by a substantial volume the decline in winter-wheat yield.

In short, the situation is such that some good old price competition can take care of high prices much more effectively than any controls Mr. DiSalle can invoke. This is particularly true under conditions which are bringing about a better balance between demand and supply. The Government gave an example of this a few days ago. For a long time the price of rubber at Singapore has been 50 cents a pound, but the United States Government continued to peg it at 65 cents. It refused for weeks to believe that the Singapore price collapse meant anything, but finally it had to yield. It cut the price of rubber by 14 cents, whereupon the rubber industry canceled an average 5-cent increase in the price of tires and tubes.

Now, we are not maintaining that deflation has set in. There has been a set-back to the inflationary forces, but it must be remembered that the full impact of Government spending for mobilization on the economy

will not be felt until late in the fall. When that time comes, the beneficial effects of a Treasury surplus will be wiped out. Indeed, the surplus will be wiped out, and the Government will be engaged in deficit financing again. But if the administration could be forced to adopt sound and sane monetary and credit policies, the inflation could be defeated without price and wage controls.

Electoral College

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. GOSSETT. Mr. Speaker, 95 percent of the newspapers of America have, at some time or other during the last several years, written editorials pointing out the fundamental need for electoral reform. An excellent editorial has recently appeared in the Texarkana Gazette. I offer it for insertion in the RECORD, and commend its consideration to all Members of Congress:

THE WAY OUT

Looking forward to 1952, a great mass of the people of the United States find themselves in the position of having no confidence in either the Democrat or the Republican Parties as they are now constituted.

Many people who can't stomach the Fair Dealism of the leadership of the Democratic Party similarly have no stomach for the reactionary Republicans who want a few to have everything and the mass of the people nothing.

Surely there is a sound middle ground somewhere and we believe it lies in a coalition of true constitutional Democrats and true constitutional Republicans. A third party, made up of enemies of privilege and champions of State's rights and sound American government, seems to be the only way out inasmuch as demagoguery has become firmly entrenched in the leadership of the two major parties.

Such a third party, however, can be nothing but a glorious dream until individual citizens declare to themselves that they must abandon sectionalism, inheritance, or blind loyalty in their political thinking. It was unfortunate that the forces which broke away from the Democratic Party in the last general election were tagged with the name Dixiecrats. That name made it appear that the South was all alone in standing up for State's rights and constitutional government, whereas such principles are being demanded by people in every State—north, east, south, or west.

The New Orleans States, in a recent editorial, says the great obstacle to a breaking away from the established, unsound custom of voting Democratic or Republican merely because your father or grandfather so voted, is the present electoral unit rule in the presidential election machinery. Under that rule, the entire electoral vote of each State goes to the party winning a bare plurality in the State.

Hung up in a Senate committee is the Lodge-Gossett proposal for a constitutional change which would wipe out the unit rule. Instead, the electoral vote would be made to reflect directly the popular vote. Minority parties in traditional one-party States would then have an incentive to get out a maximum vote.

The first step then in the way out would seem to entail the jarring loose of the Lodge-Gossett proposal. Meanwhile, all American citizens who believe in constitutional government, should begin getting together to make their plans for 1952.

Mr. Pearson and Tidelands

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. GOSSETT. Mr. Speaker, the able and distinguished attorney general of the State of Texas has labored long and well in behalf of tidelands legislation. False propaganda and spurious writings concerning the real issues in this controversy have agitated our attorney general greatly. Mr. Drew Pearson wrote a most unfair and untrue article concerning tidelands in his column on July 9. It was my purpose to ignore Mr. Pearson's propaganda on behalf of Federal ownership of our natural resources and the destruction of States' rights. However, Attorney General Price Daniel elected to write Mr. Pearson a letter, on July 10, concerning the aforesaid column. Such letter is factual, newsworthy, and informative, and should be made a part of the public record. I, therefore, offer it for insertion at this point:

Hon. DREW PEARSON,
Washington, D. C.

DEAR MR. PEARSON: Your column of July 9 on tidelands legislation contains the most misleading and inaccurate information I have seen during my 3 years of acquaintance with this controversy. Your informants on this subject are giving you prejudicial propaganda which, if given the opportunity, I can and will prove to you to be false.

For instance, your column says that the Walter-Gossett bill would restore submerged lands to only 3 States. This is untrue. A mere reading of the bill will reveal that it restores ownership of lands beneath navigable waters within the respective State boundaries to each of the 48 States. Every State in the Union has thousands of acres of submerged lands, the revenues from which are being used for public education and other State functions. These lands and revenues, held and used by the States in good faith for over 100 years, would be taken by the Federal Government under the theory of the tidelands decisions, expressed in your own words as "the theory that . . . the navigable waters of the United States belong to the Federal Government, not the individual States."

For over 100 years the courts held to the contrary and said the lands belonged to the individual States.

Forty-four governors, forty-four attorneys general, and a majority of the Members of Congress from every State want these lands and revenues to be restored to or confirmed in the 48 individual States, and that is exactly what the Walter-Gossett bill would do. It applies to Minnesota and its iron ore and to Maine and its kelp and fish the same as it does to Texas and its oil. Any Congressman who votes against the bill is voting against continued State ownership of submerged lands within his own State. I have yet to find any State official so anxious to get a one-forty-eighth share of Texas' oil as to

surrender title to, and the revenues from, the submerged lands of his own State.

Again, your column would leave the impression that oil companies wrote and are sponsoring the Walter-Gossett bill, and that a vote for it is a vote for the oil companies. This is not true. Together with other State officials, I helped Congressmen Gossett and Walter prepare this bill, and I know that no oil company representative worked on it. In fact, the oil company representatives have stayed neutral ever since Federal officials promised to ratify their State leases in Federal legislation. The Attorney General of the United States told the Supreme Court this would be done as a matter of equity to good-faith purchasers. Every Federal control bill and every State ownership bill introduced in Congress during the past 3 years has provided for ratification of these leases. Therefore, the oil companies will not lose their leases regardless of which Government ends up with the land and the royalties.

That leaves the present issue solely between the Federal Government and the States (and their local subdivisions). I know of no oil company representative who is now working or lobbying for the Walter-Gossett bill. I do not believe you can find one. On the other hand, you will find that the real sponsors of State-ownership legislation are the following organizations, which I list and hope you will publish: The Council of State Governments, the Governors' Conference, National Association of Attorneys General, National Conference of Mayors, American Association of Port Authorities, American Municipal Association (representing 10,150 municipalities in 42 States), the American Bar Association, American Title Association, United States Chamber of Commerce, United States Junior Chamber of Commerce, National Reclamation Association, National Water Conservation Association, National Institute of Municipal Law Officers (representing 1,051 cities).

In all fairness, I do not believe you can call these groups an "oil lobby," and I know you will not find any oil lobbyists directly or indirectly influencing their actions on tidelands legislation.

A vote against State ownership of submerged lands by each of the 48 States is a vote against the views of these organizations, which have the interests of the people and their States at heart as much as anyone who advocates Federal nationalization of this property.

Your column supports Senator LISTER HILL's plan to divide tideland oil royalties among all the 48 States for Federal aid to education. You say those who vote for State ownership are against using the proceeds for education. This is not true. Texas devotes all of the revenues from its submerged lands to its public-school fund. Most of the other States make the same or similar use of the revenues from this type of property. It is to protect our educational system as well as the principles involved in this Federal land grab that we so vigorously support the Walter-Gossett bill.

Texas has collected a total of approximately \$7,000,000 from leases on the tidelands within its boundaries. That has meant a great deal to our school fund, but divided among 48 States it would have been a mere pittance of \$145,833 per State. I doubt that any State has collected less than that amount from its own submerged-land resources, whether they be iron ore, sand, gravel, fish, gas, coal, gold, or oil.

If these Texas leases (350,000 acres) had been leased under the present Federal Mineral Leasing Act, they would have brought only \$175,000 as compared with the \$7,000,000 under State leasing. This is because Texas has averaged \$20 per acre for leases under its sealed-bid system, while the Federal Gov-

ernment receives only 50 cents per acre from the first applicant. The States also receive higher rentals and royalties from their leases.

This brings us to the reason that some oil interests are opposed to State ownership and are now fighting against the Walter-Gossett bill. They are the 1,031 Federal lease applicants who have blanketed the coasts of California, Texas, and Louisiana with Federal applications at 25 cents per acre (the amount payable under Federal law before the 50-cent amendment). These applicants are listed at pages 1286-1294 of the joint hearings before the Committees on the Judiciary, Eightieth Congress, second session (1948), on S. 988 and similar House bills.

On the above list you will find the name of I. A. Smoot, of Salt Lake City, Utah, whom you mentioned in your column of April 18, 1949, as having complained to President Truman about the tidelands oil lobby. You described him as "Salt Lake City's dignified, white-haired postmaster," and said the result of his visit to the President was Mr. Truman's assurance that "as long as I am President I will never permit the submerged oil lands to go back to the States."

Did you know that Mr. Smoot was himself lobbying with the President of the United States in support of his own Federal oil lease application? Whether or not he forgot to tell you and the President about it, I. A. Smoot is an applicant for a Federal lease on 800 acres of land off the coast of Long Beach, Calif., which he hopes to get for \$200 under the 25-cent-per-acre Federal Leasing Act in effect when he filed. It is now worth \$1,000,000 according to the California Land Commission.

Former Senator Burton K. Wheeler and Mr. James A. Murray, son of Senator JAMES E. MURRAY, of Montana, are registered lobbyists and attorneys for some of the Federal lease applicants. They are doing all within their power against the State ownership bill, but you fail to mention their activities.

Actually, it was former Senator Wheeler, attorney for Federal lease applicants who expect to hit the jackpot if the States lose their fight, who first dug out the plan of dividing up the submerged land royalties for Federal aid to education. It was presented in 1948 through the then attorney general of Montana. It was later espoused by Harold Ickes, a firm friend and witness for the 25-cents-per-acre Federal lease applicants, and is now being advocated by Senator LISTER HILL and the others named in your column.

The plan for Federal aid to education through seizure of submerged lands of the States has been rejected by State officials and congressional committees every time it has been brought up. It will never be approved as long as the majority in Congress opposes dividing up the wealth of the States by placing everything under Federal ownership and control.

No one will deny that the States were believed to own the lands beneath navigable waters within their boundaries for over 100 years. They were in good faith in their ownership, possession, development, and improvement of these lands and in the use of the revenues therefrom for public purposes. It is only fair that this good faith ownership be restored and confirmed by Congress rather than implement Supreme Court decisions which take away these lands without compensation. This is especially true of Texas, which had a solemn contract with the United States by which it retained all its public domain. We get more from the property than the Federal Government would receive under present laws, and we use it all for public education.

If you really want to help the States shoulder their burden of educating their children, help us retain our property and present revenues rather than weakening our

local governments and making us wholly dependent upon the Federal Treasury.

Because of your powerful medium of expression to the people of the Nation, please present our side of the case along with the other side and distinguish honest and sincere State officials from the oil lobby which you write about. If you will give me the opportunity, I will present you the evidence in support of all statements made in this letter.

Sincerely yours,

PRICE DANIEL,
Attorney General of Texas.

Tidelands

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. GOSSETT. Mr. Speaker, Attorney General Price Daniel, of Texas, addressed the Texas State Bar convention on July 5. His speech was devoted largely to a report on the so-called tidelands controversy from the viewpoint of more than 7,000,000 Texans. His excellent address will certainly be of interest to thousands of people who had no chance to hear or read it. I, therefore, offer for the RECORD that part of our attorney general's speech pertaining to tidelands:

Mr. President, distinguished guests, and my fellow members of the Texas State Bar. As attorney general of Texas I appreciate more each year the splendid cooperation and assistance which our office receives from the Texas State Bar, its officers, and members. I thank each of you and hasten to add the sincere hope that you will always continue your interest in this office and your support in the great public issues which confront every State attorney general in this day when the powers of local government, and State and private property rights, are constantly assaulted by those who advocate total power and control in the National Government.

And now for a few remarks concerning *United States v. Texas*. At the time of my report to you in San Antonio last year, the Supreme Court of the United States, by a 4-to-3 opinion, had denied Texas the right to introduce evidence and decided that our property rights in the 2,608,000 acres of tidelands had merged with national political rights when Texas joined the Union. The Court had based its opinion upon a discarded and rejected "equal footing" clause which was never a part of the Annexation Agreement between the United States and the Republic of Texas. Our motion for rehearing was then pending. It was supported by a joint memorandum signed by 11 of the foremost authorities in the world on international law and agreements between nations. As you know, that motion was overruled, but the Court did amend its original opinion so as to remove all references to the Annexation Agreement and thereby ended up with an amended opinion which completely ignores the solemn contract by which the United States agreed that Texas should retain all lands lying within its limits.

The result is that we have an opinion by four members of the Supreme Court which recognizes that the Republic of Texas owned the so-called tideland belt before annexa-

tion and that Texas entered the United States upon an agreement with certain specific terms and conditions (including the retention of all our public domain), but without reason or explanation the Court refuses to apply or interpret that agreement or to hear evidence upon the intention of the contracting parties. Instead, the four members of the Court, through Mr. Justice Douglas, merely repeat the theory of the California tidelands case that "bare legal title" and "mere property ownership" must yield to the political needs of the Federal Government—and that without compensation.

Mr. Justice Black had already indicated in the California case that the old concepts of property law should not prevail when determining the rights of the Federal Government to resources needed in the discharge of its political functions. You may remember that Mr. Justice Black said the following to me during oral argument:

"Well, I don't know that it has been held that oil goes with the soil. Suppose they discovered something about 4 miles under the surface of the earth. Do you mean that the old property concept would have to apply to that even though it was something the Government desperately needed?"

In the California opinion Mr. Justice Black's careless regard for the terms "bare legal title" and "mere property ownership" and his subordination of title to the paramount governmental powers of the national sovereign, caused the State Bar of Texas, the American Bar, and the American Title Association to cry out with alarm that this new theory could destroy the fundamental concepts of all property ownership, both private and State.

The alarm was immeasurably increased by the words of Mr. Justice Douglas in the Texas case, which I quote:

"Property rights must then be so subordinated to political rights as in substance to coalesce and unite in the national sovereign."

As said recently by Dean Roscoe Pound, this is a startling doctrine for a country which has previously maintained careful separation between property rights and political rights.

As said by a distinguished Massachusetts lawyer, Nathan Bidwell, in an article in the Massachusetts Bar Bulletin of October 1950:

"The doctrine laid down in these decisions finds its parallel in the writings of Marx, Lenin and the platforms and principles of the National Socialist Party, in all of which it is provided that * * * property should be taken without compensation on the basis of 'need' for all the people regardless of the law of the land."

As I have insisted since I first addressed the bar on this subject in 1947, principles of government and principles of property law are involved in this conflict which are far more important than the land and the money involved. New and revolutionary principles of law have been written into the tidelands decisions which should never be allowed to stand as the law of this land.

Whether the four Justices of our highest Court intended it or not, these tidelands opinions chart the course for the trend of socialism in our own country. They point the way by which nationalization of oil and other natural resources can be accomplished in the United States, with greater ease than it was accomplished in Mexico, South America, England, Russia, and Iran. At least, in those countries the congress, the parliament, or the politburo adopted a national policy by which minerals under state and private lands were vested in the national government. In our country the Congress has been ignored by the executive officials who conceived this new theory and presented it to the Supreme Court in the name of the United States of America. In fact, Congress has been flouted by the national officials who went to court and

asserted Federal claims to these lands and minerals in spite of the fact that they had twice previously sought authority from Congress to file such suits, and on both occasions Congress had refused to grant the authority. Before the California case was tried and before the Texas case was filed, it was quite apparent from votes of both Houses on quit-claim bills that a substantial majority of the Members of Congress favored continued State ownership and opposed the attempted seizure of such property on behalf of the Federal Government. Because they have ignored Congress and proceeded contrary to the evident will of the majority of the policy-making branch of the Government, these executive officers have now produced the stalemate which has stopped development of additional resources from these lands. Congress has refused to enact the legislation which is necessary before Federal officials can lease or exploit these ill-gotten lands, because the majority of the Congress of the United States is still opposed to socialistic nationalization of property by our Federal Government.

President Truman is opposed to nationalization of oil in Iran but not in the United States. On one day our President protests to the little country of Iran and asks it to hold up on its nationalization of the British oil leases. On the next day our President asks Congress to approve the nationalization of oil and other resources which have belonged to Texas, California, and Louisiana since their entry into the Union.

How can the British, who have nationalized natural resources and basic industries in their own land, and the President of the United States, who led the tidelands nationalization in this country, persuade the people of Iran that it is wrong for them to follow the same pattern in their country? How can our country convince others that they should follow the principles of democracy, free enterprise, and integrity of contracts if our national leaders do not recognize and apply those principles here at home? That which is wrong with nationalization and the breaking of contracts in Iran is also wrong in America.

Actually, as wrong as Iran's nationalization may be, there are many features of the Truman tidelands nationalization which are worse. At least, in Iran, its Congress was consulted and permitted to determine the national policy, while in our country the Congress has been ignored and our national leaders have proceeded contrary to the expressed will of Congress in the tidelands nationalization. Iran proposes to pay compensation for the expropriated property, while our national leaders would take the tidelands without one penny of compensation to those who have held the property in good faith for over 100 years. Iran is expropriating and nationalizing the property of foreigners, while our Federal officials are seizing property from the sovereign States of our own Union.

There were some who lost all hope after the motions for rehearing were overruled in the Texas tidelands case. They sincerely thought it was time to surrender or compromise with those who violated our Annexation Agreement and perpetrated this act of confiscation. As you know, I have always opposed any compromise or surrender that would leave the principles or procedure of that decision as the law of the land. It has been said that a case is never decided until it is decided right. The obligations of our profession transcend even a decision of a court of last resort when a proper remedy lies within the power and justifies the action of the legislative branch of the Government. *United States v. Texas* is a case of that nature. Not only did the Supreme Court apply principles inimical to our system of Government and law and, for the first time

in the history of that Court, refuses to interpret or apply a solemn agreement between the United States and another nation, but the Court also, for the first time in its long history, refused to permit a State to introduce evidence in a contested lawsuit. That case, the largest land suit in the history of this country, was decided upon the pleadings alone. I exhibited to the Court two large boxes of diplomatic correspondence, maps, letters newspapers, and other evidence which would have convinced any court that the Congress of the United States and the Congress of the Republic of Texas by their solemn contract of annexation did not intend for this 2,608,000 acres of submerged land to merge with political powers of the national sovereign, but that they intended the property to remain with the State of Texas exactly as the contract on its face provided. I plead with the Court to hear the evidence or appoint a master in order that we might have a trial on the merits. This was denied by the 4-to-3 opinion of the Court. Under these circumstances, if you were in my place, would you accept the decision as final and call the controversy at an end? I doubt that any member of this bar would feel that his duty had been completed until he had presented that evidence to the Congress and tried in every honorable way to get that body, which admittedly has the final say in this matter, to again separate property from political power and restore this land to Texas. At least, that is what I have been doing and will continue to do as long as I am attorney general of this State.

Texans do not stand alone in their criticism of the principles and procedure followed by the Supreme Court in this case. Some of the Nation's greatest lawyers have used stronger language than anything I have said. For instance, Prof. James William Moore, of Yale, author of Moore's Federal Procedure, and this Nation's leading authority on Federal practice, wrote a leading article in the last *Baylor Law Review* entitled "Expropriation of the Texas Tidelands by Judicial Fiat." He quotes a sentence from the Supreme Court of the United States written in *Windsor v. McVeigh* in 1876, as follows:

"A sentence of court pronounced against a party without hearing him, or giving him an opportunity to be heard, is not a judicial determination of his rights, and is not entitled to respect in any other tribunal."

The president of the Massachusetts Bar Association, Hon. Richard Wait, in an article in the *Massachusetts Law Quarterly* of May 1951, says: "The road by which the Supreme Court arrived at its decision is one which no court should travel and it is important that the bar realize what has been done."

Forty-three articles in law reviews and legal periodicals in 20 States and England have considered the tidelands cases, and 40 of the 43 are critical of the principles and procedures followed by the Court. A typical comment is by Prof. John Hanna, of Columbia University, writing in the *Stanford Law Review*, as follows:

"Four men in the strategic position of members of the Supreme Court thus decided against Texas what may have been the greatest land case in history. Disregarding lawyers directly or indirectly concerned with litigation relating to submerged lands, this quartet of Justices in its opinion stands almost alone among the able lawyers who have studied this controversy."

No writer has yet defended the Court's disposition of the Texas case. Even Harold L. Ickes, the man who started this whole land grab, and Attorney General J. Howard McGrath find it necessary to bolster the Court's opinion by saying that the Texas annexation agreement was broken by our secession from the Union during the Civil War, and that the Court could have sustained its decision on that ground. Mr. McGrath made that argument last month to the House

Judiciary Committee. I replied to the argument by showing it was so unsound that Mr. McGrath and his assistants did not even mention it in their briefs or arguments in the Texas case. The truth is that the Civil War was waged and won to preserve the Union and to render the attempted secessions null and void. President Lincoln kept the stars of the Southern States in the Nation's flag throughout the Civil War, and when it was concluded the rebel States were not "readmitted." Their representation in the Congress was merely restored after their legislatures approved the fourteenth and fifteenth amendments to the Constitution.

I told the committee that it might grieve my grandfathers, who wore the Confederate gray, if they knew that I am now admitting that the acts of secession were void, but I am sure it would please them to know that the successful contentions of the Federal Government in the 1860's are now being used to prevent that Government from stealing the lands reserved by Texas in its annexation agreement.

The Supreme Court of the United States has in seven cases held that the Southern States were never legally out of the Union, and that therefore all legal rights between them and the Federal Government remained the same as before the attempted secessions. One of these, *Texas v. White* (7 Wall. 700), specifically applied to Texas. There the Court said the United States is "an indestructible Union composed of indestructible States," and added: "The ordinance of secession, and all acts of the legislature intended to give effect to that ordinance, were absolutely null. . . . The obligations of the State, as a citizen of the United States, remained perfect and unimpaired."

This Civil War testimony of Mr. McGrath, 90 years late and 100 percent inaccurate, is only another example of the ends to which the Federal officials have gone in their lack of respect and integrity in their dealings with Texas and the other sovereign States of this Union.

The House Judiciary Committee very promptly reported the Walters and Gossett bill restoring State ownership of submerged lands by a vote of 18 to 6. It is conceded that the House will pass this bill by more than a two-thirds vote. Thirty-five Senators are coauthors of a similar bill in the Senate, and a combined report from officials of other States indicates that we are only five or six votes short of a two-thirds majority, which would be necessary to override a threatened Presidential veto, in the Senate. An interim bill providing for State control of this property pending permanent legislation has a better chance in the Senate at the present time.

More work of an educational and informational nature needs to be done in other States. Your three State officials most directly concerned with this problem and all members of our congressional delegation are now united in the determination to fight for proper interim legislation and the ultimate full and complete restoration of this property and reenactment of the principles of law by which it has been possessed and owned by our State. It is in a few of the other States that we must spread the truth and the dangers implicit in the tidelands decisions, so that their congressional delegations will respond as those which already have the facts.

The Statewide Tidelands Committee, composed of representatives of the State bar, the State Teachers Association, the American Legion, VFW, and many other State-wide organizations, is planning a drive for funds to finance an educational program on this subject in other States. Each of you will have a chance to contribute to this program, and I believe most of you will welcome the opportunity. Every State in this Nation has submerged lands and other prop-

erty rights the title to which would be confirmed by the pending quit-claim legislation. All we need is to counteract the expensive Federal propaganda which seeks to limit the issue in the public mind to three oil-rich States and thereby divide and conquer us before proceeding to the subsequent victims. That type of propaganda has completely failed in most States and can be rendered ineffective everywhere by presentation of the true facts.

Lawyers have a greater responsibility in remedying this type of injustice and encroachment upon the rights and powers of the States because we can understand the situation better than the average layman. Our responsibility is greater in stopping the present socialistic trend in our Government, because we are equipped by our training to recognize and resist unwarranted usurpation of power. Most lawyers would agree with the statement of Woodrow Wilson that "the history of liberty is a history of the limitation of governmental power, not the increase of it."

Shakespeare's character, Jack Cade, in *Henry VI*, while planning the totalitarian welfare state over which he would rule, agreed with his coconspirator that to accomplish their purpose they must first "kill all the lawyers." Even then the legal profession was considered an obstacle to the unwarranted grab for power. So may it ever be.

The tidelands confiscation is but one of many indications of the lack of moral integrity which has resulted from a top-heavy concentration of power and politics in Washington. Those patriots who signed the Declaration of Independence 175 years ago yesterday, many of whom were lawyers, warned against the tyranny, confusion, and corruption which could result from a highly centralized and paternalistic Government.

Although late, there are signs that the people at the grass roots of this Nation are beginning to realize what has happened and are ready to do something about it.

Even in our generation the power of Government may be reclaimed by the people, freedom may become more important than security, public office again may become a public trust, faith may replace fear, private enterprise may be encouraged, and property rights may be respected. The outcome of these promising possibilities depends in a great measure upon what we, the lawyers of Texas and the lawyers of America are willing to do about it. Our challenge is great. May we meet it fully by living up to the responsibilities of our profession.

Federal Budget Data

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the Record, I include the second article appearing in the *Christian Science Monitor* on the budget data supplied by the Truman administration and proving that it is, to say the least, highly unreliable:

FEDERAL BUDGET DATA AROUSING SKEPTICISM
(By Harold Fleming)

NEW YORK.—Some students here of the Federal budget are inclined to view as a new high tide in alarmism Secretary of the Treasury John Snyder's recent statement

that the Treasury will have to borrow several billion dollars in the next 6 months, beginning immediately.

Secretary Snyder was urging the Senate Finance Committee to approve the administration's proposed \$10,000,000,000 tax increase.

How Secretary Snyder figures this is a mystery here for the following reasons:

1. During the past 6 months (January through June) the Treasury ran a book-keeping surplus of around \$3,000,000,000. This was at a rate of surplus never exceeded in Treasury history but once (in the fiscal year 1948). And on a net operating income basis the Treasury must have taken in well over \$4,000,000,000 more than it put into circulation, despite the growth of national defense outlays.

REVENUES STILL EXCEED EXPENDITURES

While national defense expenditures are now running about \$1,000,000,000 a month over a year ago, Federal revenues are up still further. Virtually all categories, including corporate and personal income taxes, payroll taxes, excise, manufacturers' sales, and stamp taxes, are showing sharp increases due to sharp increases in the flow of national income.

2. The working balance of the Treasury's general fund at the end of June was around \$8,000,000,000. Except for a period in March of this year, this puts it at the highest level since the end of World War II. If it were run off to half—which would bring it only slightly below the levels of previous postwar years—it would take care of 40 percent of the Treasury's own estimate of the deficit for the current fiscal year.

Most of that deficit—if there is a deficit—will occur in the second half, not the first. Mr. Snyder is in the position of a man with a wallet full of money, making money hand over fist, arguing that he will, nevertheless, need a lot more income in the next 6 months, beginning immediately.

It is this kind of calculation which makes observers here skeptical of administration estimates of outlays in future years.

ARE DEFENSE OUTLAYS PUT TOO HIGH?

These estimates, as spelled out recently to Congress by Assistant Director Staats, of the Budget Bureau, run as follows (in billions of dollars):

Fiscal year:	Estimated outlays
1952-----	\$68.4
1953-----	80-90
1954-----	78
After that to level off several years, per year-----	75

In general, the skepticism is based on the fact that the administration has not been able to figure at all closely within even 6 months and that its estimates have for some time been too high on outlays and too low on revenues.

Moreover, these estimates assume national defense outlays somewhat approaching those of the all-out effort of World War II. They assume, for instance, defense outlays in 1953 of between fifty-five and sixty-five billion dollars. This compares with maximum annual war expense during World War II of around \$90,000,000,000. Even after discounting for price increases, this comes to half as much outlay during peace as the country spent during an all-out global war. It contrasts with about \$20,000,000,000 this year and \$13,000,000,000 last year.

INCOME RISES AS FAST AS DEFENSE OUTLAYS

Another reason for skepticism about such figures is that it is hard to understand how this much can possibly be spent with wisdom on national defense in peacetime. It is understood that tanks cost two or three times as much and the average airplane, figured across the board from trainers to B-47's, costs five to ten times as much as during World War II. But during peace

there is no attrition. The planes and tanks would merely accumulate.

The United States Navy is already far the world's largest. Atomic-bomb outlays, though multiplying, are still figured in fractions of billions, while the above outlays are in tens of billions. Outlays on guided missiles, jets, radar screens, and so on are limited by available facilities. Research outlays are limited by the available research workers. The total proposed outlays are larger for peacetime than apparently Russia could afford in all-out war.

BUDGET ESTIMATES SEEM UNREALISTIC

Even if, however, these official guesses are taken at face value, some people here doubt that they will have the inevitable inflationary impact argued by the officials who coin them. They are not increasing any faster than the official estimates on gross national product and on national income, as the following figures roughly indicate.

(In billions of dollars)

Year	Defense costs	Gross national product	National income
1946-----	\$49.0	\$211.1	\$180.3
1947-----	16.8	233.3	198.7
1948-----	11.5	259.1	223.5
1949-----	12.2	255.6	216.8
1950—First quarter-----		263.3	216.9
Second quarter-----		271.6	229.1
Third quarter-----		283.9	244.6
Fourth quarter-----		300.3	256.2
Total-----	12.4		
1951 (estimate)-----	22.0	313.9	

These figures do not all jibe statistically. Those for defense costs are for fiscal years, the others for calendar years. But they do in general show that the magnitude of the national economy and the size of its postwar increases, even discounting for dollar devaluation, give ample elbow room for a very large increase in defense outlays. In 5 years the Nation's production and income have increased by from over \$80,000,000,000 to over \$100,000,000,000. And output figures for steel, power, fuel, chemical, and other basic capacities would tell a similar story.

In other words, the officially proposed defense costs for the next few years are as unimpressive compared with either the watt-hours or the voltage of the total national economy as they are overimpressive compared with what a peacetime economy can sensibly spend on armaments that quickly become obsolescent.

Statement to the American People on the MacArthur Investigation

EXTENSION OF REMARKS

OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. STENNIS. Mr. President, the recent statement to the American people, issued by the Senate Armed Services Committee and the Senate Foreign Relations Committee, and written by the able chairman of the Armed Services Committee, the junior Senator from Georgia [Mr. RUSSELL], is definitely a new landmark in the statement of American ideals in the history of our country, and is fast being recognized as such. I believe this statement represents the firm purposes and the hopes of the people of our Nation in the new era in which

we are living, and therefore represent the brightest hope on the horizon of world affairs today.

A recent editorial from the Detroit Free Press, under date of June 29, 1951, and a column in the same paper by Mr. Malcolm W. Bingay in his column, Good Morning, reflect worthy estimates of this statement of principles, and I ask that these articles be inserted in the Appendix of the RECORD.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

[From the Detroit Free Press of July 4, 1951]

GOOD MORNING

(By Malcolm W. Bingay)

A REBIRTH OF FAITH

This being the one hundred and seventy-fifth anniversary of the signing of the Declaration of Independence and because of the times in which we live, the American people seem to be more acutely aware of the spiritual significance of that document than ever before.

Thomas Jefferson gave to all mankind a great hope.

One hundred and seventy-five years later his vision has been justified by the creation of the greatest, most prosperous and most powerful Nation the world has ever known. It was not a thing of mundane law. The defiance of King George III did not give it its grandeur. It was its spiritual vision which stirred the souls of groping mankind everywhere.

But it is the second Declaration of Independence on which I would like to dwell.

That second declaration of freedom, as I feel sure it will be called in the generations to follow, came from the mind and hand of Senator RICHARD B. RUSSELL, of Georgia, chairman of the joint Senate committee investigating the charges and countercharges in the controversy over General MacArthur.

The dust of the ages will cover the 2,000,000 words of that testimony, unread and unsung while what RUSSELL wrote will shine forth in all its glory, comparable to Jefferson's famed "felicity of expression" and equal in historical importance to the Monroe Doctrine.

For exalted vision and exquisite English it is in keeping with the great state papers now preserved in our archives. It caught the spirit of the Jeffersonian declaration, as did Lincoln's Gettysburg Address.

It is as indigenous to our soil and as characteristically American as the yellow flag used by our colonial fathers with a picture of the rattlesnake coiled to strike with the warning: "Don't tread on me."

When Lincoln delivered his Gettysburg Address few people in the audience sensed the grandeur of his concept. Most of the newspapers either ignored it or merely recorded it as something of no consequence. Some of them said "The President made a few remarks." Others denounced it. Only a few sensed its glory.

Time alone brought out the shining luster of his words.

I like to believe that this is the case with the Russell proclamation—to the people of America and to the godless terror that is Russia.

The people were not prepared for it. Out of the long weeks of bitter bickering among mean and petty politicians, of which they had long grown weary, they were not looking for such a soul-stirring message. Nor did the editors. But, as with the Lincoln prayer, I firmly believe it will grow into the hearts and consciences of our people.

I will use the New York Times, that encyclopedia of current history, as an example. When RUSSELL made his declaration the

Times commented editorially upon it almost casually. That was on Thursday. But, by Sunday, there seemed to come a realization that something new had been added to the American tradition.

On Sunday there appeared another editorial, noting that "RUSSELL spoke for the heart of democracy. * * * This affirmation of the Nation's faith ought to be read and re-read by every American." And the Times reprinted it in full, properly typed and boxed to be preserved.

I believe that it will be in the textbooks of our children's children.

It tells the ruthless murderers and tyrants in the Kremlin, in calm, quiet language, not to kid themselves—as Hitler did—that the American people are not sholder to sholder against a common enemy.

"We will be united in our devotion to liberty and justice, be single-minded in our will to preserve our institutions. We hope they may be preserved in peace, but preserve them we shall. We will be together in the defense of our way of life against any alien aggressor."

Here was the old spirit of America undaunted with the sword of God in our hand, glad to live but not afraid to die to preserve the spiritual ideal of our beginnings.

Like the bursting forth of a forgotten sun, it recalled Americans to their old faith against the fogs and fears engendered by the strangely alien doctrine of timidity.

[From the Detroit Free Press of June 29, 1951]

ONE NATION, ONE PEOPLE AGAINST TYRANNY

It is not often that the American people are presented by their political leaders with a great and historic pronouncement of their principles.

From the Declaration of Independence and the Gettysburg Address of Lincoln our mileposts are marked by some inspired pen, a great state paper which explains in unequivocal terms the aspirations and the determinations of a united people; a manifesto behind which they can rally; an affirmation to the world of the hopes and ideals of freemen.

And now we can add to these national pronouncements, the paper addressed to the American people, issued Wednesday by the Senate committee investigating the MacArthur controversy.

For clarity of language, for its unmistakable purpose, this manifesto written by Senator RICHARD B. RUSSELL, of Georgia, and subscribed to by all of the members of the Senate Armed Services and Foreign Affairs Committees, should stand as one of our great state papers.

It is a testimonial from the hearts of the American people of their own unshaken faith in the principles upon which this country was established, and a notice to the world that those principles shall remain forever inviolate against aggressive tyranny.

For 7 weeks the United States has been engaged in heated debate, which occasionally rose to heights of bitter partisanship, acrimony and recrimination as a result of the removal from command of General MacArthur and the reexamination of our far-eastern policy.

But the debate, while open to all ears, was our debate.

The Russell paper did not in any way touch upon the controversial matters in the MacArthur hearing, or arrive at any decisions. Those may, or may not, come later.

But what it did do was to clear the air of all remaining elements of doubt that an irreparable cleavage exists in the hearts and minds of Americans.

"Such a hearing," wrote Senator RUSSELL, "involves risks, but it also involves rights, and it is the rights which have made the

risks inevitable. * * * Those who are still privileged to breathe the air of freedom utilize such discussion as a means to temper the steel of national determination and unity."

The free world, pinning its hopes on the continued vitality, integrity, and resolution of the United States to resist aggression, need have no cause for dismay, said RUSSELL with calm assurance. But for those who would think to fatten on our dissension, his warning was clarion clear:

"If those who threaten us take only a tyrant's lesson from differences among freemen and mistake the temper of our people, they can plunge the world into war. But it would be a war they could never win and which would bring them to ultimate destruction."

Many times before tyrants have mistaken our domestic controversies for disunity and weakness. If that is the interpretation Russia puts on the MacArthur hearing, she can learn otherwise to her advantage from history.

Kaiser Wilhelm, observing the apparent state of national confusion in the early administration of Woodrow Wilson, and misjudging our foreign policy from the ignorance and stupidity of its exponent, William Jennings Bryan, made the mistake of thinking we were on the verge of domestic collapse in 1917. A united America quickly taught him otherwise.

Internally torn by the effects of depression and split by the class struggle fomented by the New Dealers and Communists, Hitler thought we were on the verge of civil war.

He, too, learned, as all tyrants must, that America meets all external threats to her liberties in solid phalanx.

Russia is being shown the same thing. The signers of the Russell manifesto represent every shade of political thinking in this country. RUSSELL himself is a Georgia Democrat, but not an administration Democrat. His cosigners included Dixiecrats and Fair Dealers, liberal Republicans, and GOP standpatters.

It is trite, perhaps, to say that in our foreign policy, politics stop at the water's edge.

But it is equally true that in our domestic affairs, our politics do not go beyond our own shores.

The high vision of the Senate committee's address to the people transcends all the issues of Korea and Iran, of Asia and Europe and our own bitter domestic conflicts.

In these times of stress and uncertainty, freemen everywhere may read and take heart from the blazing words of Senator RUSSELL, who has raised the torch of liberty and dispelled the darkness of fear.

"We will be united in our devotion to liberty and justice, be single-minded in our will to preserve our institutions. We hope they may be preserved in peace, but preserve them we shall. We will be together in the defense of our way of life against any alien aggressor."

There stands a statesman in the best American tradition.

Controls

EXTENSION OF REMARKS OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in

the Appendix of the Record an address on the subject of controls, delivered by Elizabeth Clark Babbitt over television station WTOP, channel 9.

There being no objection, the address was ordered to be printed in the Record, as follows:

Fellow citizens, I wish to speak to you about price controls. I was a delegate to the Citizens Conference which met in Washington May 16 through 20. As you know, June 30 is the deadline for controls.

We know that a large group is in Washington now being trained for the carrying out of price control.

Our President, Mr. Truman, has told us there will be many controls. If controls are necessary, they must be well planned and well carried out, and there must be a close correlation between price and wage control, rent and food. There will be little advantage in putting controls on one and not on the other. If it is necessary to put on these controls, it follows that they must be rigidly enforced, not catering to any special group. If there is to be no set up, let's stop talking about it, and try to face things as they are (not as we would like to have them).

If a set-up is forced upon us, it is the business of the administration to see that a plan (so far as it is humanly possible) is set up which shall be fair to both producer and consumer. Unless this can be done, price controls had better be left off.

It is distressing to see people in the low income group come into a grocery store searching from counter to counter for adequate food for their families, at a price which they can afford.

In the old days, there were good American dishes—like corned beef and cabbage, meat or lamb stew with vegetables, baked beans, liver and bacon, not to mention kidneys. Many of you may remember that although father had a note due, mother had been to town on bargain day and bought beyond her budget. However, there was still left enough for food at the old prices. She could still buy sugar, flour, and bacon. She could still buy a gingham dress. This is not the case today. A hamburger steak is beyond her purse, to say nothing of liver and bacon.

Why could not some system be worked out where the basic foods could be sold at a reasonable price?

Group I: Green and yellow vegetables—some raw, some cooked, frozen or canned.

Group II: Oranges, tomatoes, grapefruit, raw cabbage or salad greens.

Group III: Potatoes and other vegetables and fruits—raw, dried, cooked, frozen or canned.

Group IV: Milk and milk products—fluid, evaporated, dried milk, or cheese.

Group V: Meat, poultry, fish or eggs or dried beans, peas, nuts, or peanut butter.

Group VI: Bread flour and cellulose, natural whole grain (first choice dark preferred; second choice enriched or restored).

Group VII: Butter and fortified margarine (with added vitamin A).

Also there should be sold at a reasonable price:

1. Two kinds of meat, different prices (chuck roast and lamb).

2. Two kinds of fish at different prices (cod, found in locality).

3. Two kinds of cheese (sharp and mild).

4. Two kinds of bread (preferably dark).

5. Two kinds of milk (skimmed or whole milk, not so high in butterfat).

This plan would enable a man to go to a store and buy with his earnings sufficient food for his family.

The President says sacrifice. For some this means doing without a little, for others little, but for many, nothing at all. What effect will this have on the health and growth of the American children?

The extra tax should be put on luxuries, not on the necessities of life.

Personally, I have a great faith in the future of America, and faith in our people. I believe that we can still do business based on the principles of fair play, cooperation, respect for the other fellow, based on the golden rule.

"When King and people understand each other past a doubt,
It takes a foe and more than a foe to knock that country out;
For the one will do what the other requires as soon as need is shown
And hand in hand they can make a stand that neither could make alone."

Unity will be achieved only when our country as a whole is convinced that careful, impartial, consistent and unimpetuous judgments are at work.

Defense is everybody's business and wage and price control is everybody's necessity or business, or what George Washington said:

"Let us raise our standards
To which the wise and prudent can repair.
The future rests in the hands of God."

Address by Hon. Joseph R. McCarthy, of Wisconsin, Before National Convention of Young Republicans in Boston, Mass.

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the national convention of Young Republicans at the Hotel Statler, Boston, on June 29, 1951, which was broadcast on a Nation-wide hook-up over the facilities of the Mutual Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, thank you very much for the opportunity to be with you tonight. There are almost an unlimited number of important issues which we might well discuss tonight—issues which should be discussed in every home in America.

We might well, for example, discuss high prices which each day are taking food from the table and clothes from the family of every workingman whose salary has remained the same over the past year in dollars and cents.

In discussing high prices, we could quote the Democrat chairman of the Banking and Currency Committee—the committee that handled the President's controls for him—perhaps quote what he said Monday of this week on page 7033 of the CONGRESSIONAL RECORD—and housewives might well listen to this.

Here is what he said: "The Congress of the United States wrote a wonderful law. If it had been administered properly there never would have been the slightest ill effects from inflation in this country. . . . The administration . . . apparently wished prices to rise so that increased taxes could be collected."

On the other hand, we might well discuss increasing taxes which will cause the pay check of every man in America to shrink.

We might also discuss the question of why we have had three major wars within the lifetime of some of you young people here tonight—the first time in the history of the world that three major wars have been fought by the same country and the same generation. In that connection we might discuss the fact that during this century no wars have been started while the Republicans were in power. The President says, however, "we who were in power when all those wars started are actually the peace party, but the Republicans who were not in control of the machinery of government when this century's wars were started—that party is the war party." Rather tortured reasoning. But maybe the President is right. Maybe the party out of power is the one that starts the war. So perhaps it might be a good idea to take care of that situation in 1952 so the President's party will be out of power and in a position to keep the peace.

Or we might discuss the dishonesty, graft, and corruption approved by the administration. We could talk about the multi-million-dollar fixed loans in the RFC political grab bag. We could talk about the mink coats, the deep freezers, the sale of Government jobs, the dishonest padding of Government payrolls with political hacks, the vote frauds—and all those things that daily become worse as a corrupt machine is kept in power.

Then again we might discuss the twin attempts to destroy this great Nation—one by the slow poison of socialism; the other by the dagger death of communism.

However, with your permission, I shall discuss the planned betrayal of 1951 and the reason why for the first time in the history of this great Nation we have lost a war. Let us together examine the recorded facts and together determine whether we lost because we are so weak or because it was planned that way.

In examining the record, it will be necessary to discuss the actions of certain individuals because history does not just happen. It is made by men—men with names and faces, and the only way that the course of history can be changed is by getting rid of the specific individuals who we find are bad for America.

I shall, therefore, discuss some of the men who have always been found at the time and place where disaster strikes America and success comes to Soviet Russia. Discussing men who are either traitors or dupes is not a pleasant task. But if a man who is picked by the people to man the watchtowers withers away in fear because he may be left a bit bloody—then he should be taken down from the watchtowers.

Korea did not start on the 26th of June. The seeds for today's disaster were sown at Yalta, carefully nurtured at Potsdam, cultivated to the budding stage during the Marshall mission to China, and brought almost to full bloom when the greatest military genius this country has ever known was first handcuffed in battle and finally fired because he refused to follow a strategy of defeat—because he refused to retreat from victory.

Yalta has been mentioned so often that many of us have forgotten exactly what was done at Yalta. Very simply stated, at Yalta we gave Russia control of Manchuria's railroads and her two ports of Dairen and Port Arthur. Control of the railroads and the ports, of course, gave the Communists complete control of Manchuria.

Let us see if this was blindly done. The facts about Yalta are no longer secret. The record is clear now—so clear that we can understand why it was kept secret so long. I have in my hand an intelligence summary prepared by 50 of the Army's top intelligence officers. The date of this is significant—April 21, 1945. It was prepared after the

sell-out of China was agreed upon at Yalta but 3 months before it was confirmed at Potsdam. It was still not too late because Truman could have repudiated at Potsdam what Roosevelt did at Yalta. It was submitted to George Catlett Marshall who was the military adviser at both Yalta and Potsdam. This intelligence report accurately predicted how much America would lose and the Communists gain if we followed the course which was followed at Yalta and endorsed down to the last letter by Truman at Potsdam.

Let me read from this intelligence report which was made part of the committee record by Senator BRIDGES. It was prepared not by 1 man but by 50 of the Army's top intelligence officers. And I ask you, my friends, to attend this well and remember it long.

Let me read from it:

"The entry of Soviet Russia into the Asiatic war would be a political event of world-shaking importance, the ill effect of which would be felt for decades to come. Its military significance at this stage of the war would be relatively unimportant. . . ."

"The entry of Soviet Russia into the Asiatic war would destroy America's position in Asia quite as effectively as our position is now destroyed in Europe east of the Elbe and beyond the Adriatic.

"If Russia enters the Asiatic war, China will certainly lose her independence to become the Poland of Asia; Korea the Asiatic Rumania; Manchuria the Soviet Bulgaria. Whether more than a nominal China will exist after the impact of the Russian armies is felt is very doubtful. Chiang may well have to depart and a Chinese Soviet government may be installed in Nanking which we would have to recognize.

"To take a line of action which would save few lives now, and only a little time—at an unpredictable cost in lives, treasure, and honor in the future—and simultaneously destroy our ally China, would be an act of treachery that would make the Atlantic Charter and our hopes for world peace a tragic farce.

"Under no circumstances should we pay the Soviet Union to destroy China. This would certainly injure the material and moral position of the United States in Asia."

This report was disregarded at Potsdam. When Senator RUSSELL wrote asking Marshall for the Pentagon's copy of this intelligence report, the answer was, "We can't find it. It was probably destroyed."

We next take up the administration's death blow to China—the disastrous Marshall mission. The instructions which he carried with him to China were secret for a long time but finally have become public. These secret directives were directly opposite to the recommendations of General Wedemeyer who had been sent to China to make a survey for the sole purpose of recommending a course of action which would keep China from passing behind the iron curtain. But what happened to Wedemeyer's report? Let me quote Marshall's testimony on page 22 of the Senate Armed Services Committee hearings, September 19, 1950. Marshall said: "I did not join in the suppression of the report. I personally suppressed it."

Without going into all of the details of Marshall's instructions, his task was principally to accomplish two things, which he did accomplish: (1) To cut off all arms and ammunition to our friends in China if they would not agree to take the Chinese Communists into a partnership government; (2) to open up Kalgan Mountain Pass with the end result that the Chinese Communists were put in direct contact with the Russians and then supplied by the Russians from the huge store of captured Japanese military equipment.

In view of the fact that in this document there was brought to full bloom the treason of Yalta and Potsdam; in view of the fact

that in this document there was signed into communistic, atheistic slavery 400,000,000 of our allies; in view of the fact that this document signed the death warrant of every American boy who has died in Korea since the 26th of June—the death warrant of every American boy who will die in the stinking jungles of Indochina tomorrow, on the sands of Iran the next day and on the streets of Berlin and Paris perhaps the day after that—in view of these facts it is most important that we know who drafted this infamous document.

The testimony under oath on this subject differed. Let me read it to you.

General Marshall before the Senate Armed Services Committee, September 19, 1950, said:

"The policy of the United States was being drawn up in the State Department, and that was issued while I was on the ocean going over there (China)."

Testifying before the Russell committee on May 10, 1951 (page 1201), Marshall said—some are saying "that I sat down in the State Department and drew up this policy. I did not."

Here is what Secretary Acheson, under oath, had to say about this same subject before the Russell committee, June 4, 1951:

"At the end of November 1945, Secretary Byrnes and General Marshall met. This was after General Marshall had been asked to go to China.

"Secretary Byrnes read him a memorandum suggesting the outline of instructions for him. General Marshall did not approve of it. General Marshall said he would wish to try his own hand, assisted by some of his associates, in drafting the instructions. This he did, and a draft was prepared by him * * *

And James Byrnes, who was Secretary of State at the time of the Marshall mission, has stated in his book, *Speaking Frankly*: "The President made no changes in those secret instructions except upon the recommendation of General Marshall or with his approval."

You decide who was telling the truth—whether Marshall spoke the truth when he said "I was on the ocean and had nothing to do with its drafting"; or whether Secretaries Byrnes and Acheson spoke the truth when they said Marshall drafted it and no changes were made unless he recommended or approved them.

Marshall came back from China to take over the job of Secretary of State, and the embargo was continued for months after his return. Not an ounce of gunpowder and not a single gun did we send to our friends in China despite the fact that we had full knowledge that the Chinese Communists were being armed and equipped by the Russians out of Manchuria. In fact, Dean Acheson went before the House Committee and asked that we arm Chinese Communist divisions. He did not say who he wanted them to fight—certainly not Communist Russia. Fortunately the House Committee turned him down cold on that one.

Thus was the tide which had been flowing toward victory for the Republic of China turned—thus was it reversed to provide victory for Communist China.

In giving the background of the Korean war it has been necessary for me to mention the name of George Catlett Marshall.

I recently prepared a documented history of Marshall—a documented history of his acts over the past 10 years. Some of my good friends urged that I not do that—and they have urged that I not talk about Marshall tonight—because, they say, it is politically unwise.

It reminds me of the advice I got 16 months ago when we started to bring out the facts on Dean Gooderham Acheson, and

some of the others who have been so bad for this country. Let me remind those well-meaning friends that the reason the world is in such a horrible condition today is because so many two-bit politicians do only those things they think are politically wise—only that which is safe for their own puny futures.

You young people here tonight will be running this country someday. I ask you in the name of western civilization not to follow the disastrous footsteps of those who say don't do anything that is politically unwise. If a task—unpleasant as it may be—must be done, do it. Otherwise, this Nation, this civilization will pass from the face of the earth as surely as did those other great empires of the past which were destroyed because of weak leadership which tolerated corruption, disloyalty, and dishonesty because that was the easier way to follow and perhaps to them the politically expedient course to follow.

I have been through this Nation much in the past year—from the Atlantic to the Pacific, from New Orleans to St. Paul. The American people are desperately searching, hoping, and praying for leadership. They are not looking for men who only do the things that are politically wise or those who measure every act in terms of the votes they can get.

If we of the Republican Party lack the moral courage to do what is right as God gives us to see the right, if we start doing only those things which are politically wise, then the Nation is lost—because while there are some fine Democrats, they have proven that in 20 years as a party they are incapable of doing the housecleaning in Washington that must be done if this Nation is to survive. There are vast numbers of honest loyal Democrats all over this Nation—especially in the South—upon whom I call tonight to join hands with us in the name of America before it is too late.

Let all loyal Democrats and Republicans join hands and call upon Truman tonight to get rid of the Yalta crowd that has brought so much agony and blood and tears to this Nation and which promises nothing but endless, limitless years of dreary war, death, and destruction. Mr. Truman, those men show no sign of reforming. They will not change any more than a leopard will change his spots. The momentum of their past acts carries them onward. Their plight is perhaps best described by Shakespeare in this fashion:

"I am in blood,
Stepped in so far, that should I wade
no more,
Returning were as tedious as go o'er."

Mr. Truman, you can still redeem yourself. Get rid of this entire Yalta crowd that has been so bad for America. Get rid of them lock, stock, and barrel. Get rid of them tomorrow or the next day, but tonight, Mr. Truman, so America can breathe fresh wholesome air and breathe easily.

But let's get back to the planned disaster in Korea. We have mentioned how we presented Manchuria to Russia at Yalta and Potsdam.

Now as you know, Manchuria has been playing a very important part in the Korean war. It is the gateway from China to Korea. The Chinese Communist troops that are killing our boys in Korea must be transported across Manchuria. And here is where the strategy of MacArthur and the Marshall-Acheson strategy came into sharp conflict.

As you know, much of Manchuria is a land of mountains, hills, and valleys. The roads and railroads over which those Communist troops had to be hauled into Korea pass through mountain tunnels and skirt the narrow rims of mountains, pass over bridges spanning deep gorges and wide rivers and through narrow mountain passes.

MacArthur's request was simply to let our planes destroy the railroads where they skirted the rims of the mountains, dump bombs on and close up the tunnels through which the Communists had to move their troops, destroy the bridges over the gorges and the rivers, close up the narrow mountain passes so the Chinese Communists could not go through to Korea—so that they would have to stay in their own country where they belong, and so that the Chinese Communists in Korea would be isolated and the Communist troops there would either starve or be forced to surrender.

Marshall and Acheson opposed this, urging that the Chinese Communists be allowed to roll into Korea. Once the Communists were in Korea, the Secretary of State and the Secretary of Defense announced our troops would not try to win but would indulge in a slaughtering contest until the flow of blood sickened the enemy. They forget or do not care that a killing contest is a two-way street.

While the slaughtering contest goes on in Korea the Seventh Fleet is operating under the most unbelievably fantastic orders that any of you have ever heard of in war or peace. Let's take a quick look at those orders.

At this moment, the Seventh Fleet is patrolling the waters between Formosa (upon which there are located the 600,000 troops of the Republic of China) and the mainland of China held by the Communists. There are two parts to this order. The first part of the order is that the Seventh Fleet prevent the Communists on the mainland from landing on Formosa. But according to the undisputed testimony before the Russell committee, there are no organized Communist army units in the area which would be capable of making any landings—so that that part of the order is meaningless.

Let's take a look at the real meat of the order now. It directs the Seventh Fleet to use whatever force is necessary to prevent our friends on Formosa from making any attacks on the mainland of China. If the Republic of China were to send planes to conduct reconnaissance over the mainland of China, under the Seventh Fleet's orders, it must shoot them down. If Chiang were to send a landing party to the China mainland, under the Seventh Fleet's orders it must sink those boats.

During all this time, the million and a half anti-Communist guerrillas on the mainland have been begging Chiang for some help. But the Seventh Fleet has orders to make sure that he sends not even a single man to the China coast either to give advice to the guerrillas on the mainland or even to pick up intelligence reports from his own people in China. Unbelievable, you say. Yes. Fantastic. Yes. But it is all a matter of cold record that cannot be denied.

And what are the Chinese Communists doing as our Seventh Fleet keeps the legal Government of China from even contacting the millions of loyal subjects still on the mainland? I will tell you what they are doing. They are settling the dust in the public squares of the cities and villages of China as they turn them into charnel houses, systematically rounding up and machine gunning those Chinese who are enemies of communism. You decide why the Secretary of Defense and the Secretary of State feel that order should be in existence tonight.

The other day when I heard Acheson testify before the House committee and say we had won a great victory if we do as Russia suggested and withdraw to the thirty-eighth parallel and turn over North Korea to the Communists, it made me sick way down deep inside.

Let's see what Acheson considers a great victory. The picture is clear; let's look at it. The war in Korea has resulted in over 150,000 American casualties, and in the words of

MacArthur, it "has almost destroyed that nation of 20,000,000 people." The armies have rolled back and forth across that unfortunate land, destroying every village, every city, and causing the slaughter of millions of women and children. As MacArthur said, "I have seen, I guess, as much blood and disaster as any living man, and it just curdled my stomach, the last time I was there. After I looked at that wreckage and those thousands of women and children and everything, I vomited."

But what have we accomplished by all of this agony and blood and tears? Acheson says, "Oh, we have taught Russia that aggression does not pay." He knows better than that. He knows we have taught Korea and every other nation threatened by communism that resistance does not pay. We have taught them that if you dare to resist Communist aggression, and dare to invite the United Nations to help you, your cities, your villages, your women and children will be wiped from the face of the earth. We say to every other nation, "If you resist, we will fight only in your land. We won't drop a single bomb in the land of the enemy." But Acheson says, "Oh, it is a great victory." And Truman says, "Look what we the peace party have accomplished."

There is nothing new about this strategy of conquest by terror—the strategy of making such a horrible example of anyone who resists that other nations will lose heart and give up without a fight. Genghis Khan was a past master at it. When early in the thirteenth century his Mongolian hordes swept through the mountain passes out onto the eastern plains, their orders were to cut down every living thing that stood above the hub of a wagon wheel in any town that dared to resist. Hitler attempted to annihilate the entire Jewish race because they resisted his madness. He tried to wipe Poland from the face of the earth as a lesson to every nation. But this time, we combine with Russia to do the same thing in Korea.

What more could Russia ask for in Korea? What better example could she set for those nations in Europe that lie in the path of Communist aggression? She has accomplished every purpose in Korea so far. But this is not all.

Acheson in testifying before the Russell committee gave the tip-off of the balance of the sell-out. He said, "Of course, now we oppose turning Formosa over to the Chinese Reds. Now we oppose seating Red China in the United Nations." But, he said, "We will discuss with Communist China what should be done with Formosa." And, says Acheson, "If the other members of the United Nations decide to seat Red China, we won't veto it."

When I listened to Acheson testify that he was a friend of the Republic of China and would, as he said, vigorously oppose turning it over to Red China, it recalled to my mind an article written by his adviser on far-eastern problems—a man who has been named under oath, incidentally, as a member of the Communist Party. Let me read to you what his adviser said:

He said the problem in China was to allow it to fall without it appearing that we pushed her. Then he says: "The thing to do is to let South Korea fall—but not to let it look as though we pushed it. Hence the parting grant of \$150,000,000." That, of course, was before the war in Korea stated. Then it was \$150,000,000 for the price of making it appear we didn't push Korea, now with the war under way, it is 150,000 American casualties and millions of Korean women and children.

When the Red Dean says now we are on Formosa's side, but we will still discuss whether Formosa should remain free, it carries me back to January, when Acheson instructed our delegate to the U. N. to vote to give Red China, Red Russia, England, and the United States the power to settle the fate of Formosa.

You will recall at that time he also said, "We will oppose turning Formosa over to Red China." But said he, "We will decide Formosa's fate by a majority vote of a stacked jury in which the vote will be 3 to 1 for betrayal of Formosa."

This fight to prevent the betrayal of 1951 should not be a fight between America's two political parties. Certainly the millions of people in my radio audience who voted the Democrat ticket love America just as much and fear Communist domination of the world just as much as the average Republican. Certainly any and every intelligent Democrat and Republican knows that if communism continues to roll over the world for the next 5 years at the same pace that it has been enveloping the world for the past 5 years, then there will be neither a Democrat nor a Republican Party. Unfortunately men of little minds have tried to make this a political fight. Unfortunately too many of faint heart, upon arriving in Washington to represent you, mistake the voice of the un-American left-wing Communist camp-following members of the press for the voice of this great land of ours. I can assure them they are wrong.

Republicans alone cannot clean house in Washington. They need the help of all the loyal Democrats of this Nation also. Democrats must at long last wake up and realize that they have no party in Washington. I am mightily encouraged as I meet and mingle with you young people here tonight and find that you, the young men and women of 1951 recognize what an awful mess the older people have made of this Nation and this world. This is your Nation. Yours is the task to bring order out of chaos. If all of the young people like those we have in this audience tonight decide here and now that they are going to work from now until the elections in 1952 to clean out the motley un-American crowd that have been leading us from disaster to disaster, then this Nation will be saved. The hopes of the world are upon your shoulders.

Little-Business Man, What Now?

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Little-Business Man, What Now?" published in the Oregonian of July 7, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LITTLE-BUSINESS MAN, WHAT NOW?

If you work in Portland or in Oregon, the chances are better than 99 to 1 that you work for what the Federal Government calls a little business; i. e., one with fewer than 500 employees. And the chances are even greater than you have a legitimate gripe against the operation of the defense program to the detriment of the little-business man, in general, and the Oregon little businessman, in particular.

Item: The General Metalware Co., of Portland, is forced to go to Maryland, Virginia, and Alabama for its steel. But, the Los Angeles Chamber of Commerce has discovered, much of the product of the West's

steel mills in California and Utah is allocated to bigger eastern manufacturers.

Item: Government bid invitations, mailed from Washington, D. C., often arrive in Portland days later and too late to submit a bid.

Item: Specifications on some war matériel for use in the Far East have called for delivery of the finished product to an eastern depot. A Portland manufacturer must, therefore, figure a big freight charge into his costs, and the Government, presumably, must then transport the goods across the country again before loading from a west coast port.

These and other complaints were aired Thursday before Representative MIKE MANSFIELD, who spent the day taking testimony for the House Subcommittee on Small Business, which he heads.

Small business also has woes stemming from action of the Supreme Court. Last January the High Court upheld good faith as an absolute defense against charges under the Robinson-Patman Act, the little-business man's bible. And only a few days ago the Court cut a big swath in fair-traded items.

We can shed no tears over the death of widespread price-fixing under fair trade laws, but the Robinson-Patman decision is something else again.

Surprisingly, Portland businessmen who testified Thursday did not mention the earlier Court ruling, which came as the result of a Standard Oil of Indiana challenge of a Federal Trade Commission order forbidding it to sell gasoline to jobber customers in Detroit at a lower price per gallon than to service station retailers in the same area. The Court held that a showing of good faith was a complete defense against any violation of the restrictions in the Robinson-Patman bill, which Congress had drawn to prohibit selective price cuts by a big wholesaler or retailer to undercut small-business competition in a specific area.

The bill does not prohibit price cuts, it merely requires that they be applied uniformly in all outlets of the big operator. But, in the Standard Oil case, the Court ruled that price-cutting need not be uniform if it is in good faith. It will be almost impossible, of course, for any neighborhood store to prove that his big competitor was not acting in good faith in cutting prices in his particular area.

So, unless the little-business man's voice is heard in Washington, D. C., even from so far away as Portland, he—and that means most of us—are in for some big-sized headaches. We hope MIKE MANSFIELD has the key to the aspirin.

Investigation of Loyalty of Employees of the State Department

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter from me to Mr. Hiram Bingham, Chairman of the Civil Service Loyalty Review Board, Civil Service Commission, dated July 13, 1951, making inquiry as to investigation of the loyalty of employees of the State Department.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 13, 1951.

Mr. HIRAM BINGHAM,
Chairman, Civil Service
Loyalty Review Board,
Civil Service Commission,
Washington, D. C.

DEAR MR BINGHAM: Yesterday the State Department, in belatedly announcing the June 27 suspension of two of its far-eastern experts, stated that the suspension was "automatic" when the Security Board recommended hearings on charges against them.

I would appreciate knowing whether this is true; and if so, why John Carter Vincent and Philip Jessup, whose cases are pending before the Loyalty Board, have not been suspended.

My records indicate that of all those cases which I gave to the Tydings committee, only 26 have been ordered reopened and are pending before the State Department's Loyalty Board, and that 23 of the 26, even though their cases are pending before the Loyalty Board, still have full access to secret and other classified material in the State Department. This would seem to be an extremely dangerous practice.

In view of the State Department's announcement of yesterday that suspension is automatic when a hearing is ordered, I would greatly appreciate knowing why the other 23 have not been suspended, or at least denied access to secret material.

Sincerely yours,

JOE MCCARTHY.

Resolutions of Nebraska Young Republicans Club

EXTENSION OF REMARKS OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. WHERRY. Mr. President, a typical cross section of the thinking of young men and women in the Midwest, and particularly in my own State of Nebraska, is contained in the resolutions recently adopted at the annual convention of the Nebraska Young Republicans Club at the Hotel Yancey in Grand Island, Nebr. In accordance with the permission granted me during the course of the Senate proceedings today, I present the resolutions for publication in the RECORD.

The resolutions are as follows:

RESOLUTIONS OF THE NEBRASKA YOUNG REPUBLICANS CLUB

I. FOREIGN POLICY

We believe that the United States should oppose international communism wherever found; that all measures short of total war should be used to the extent necessary to accomplish this purpose; that it should be made clear to all countries of the world, both our friends and those who are not our friends, that we do not seek war, but that if necessary to protect the free world, we will not shrink therefrom.

We further believe that the United States has no recognizable foreign policy at the present time; that this lack is directly at-

tributable to the present personnel of the State Department; and that Secretary of State, Dean Acheson, and all of his subordinates engaged in the making of policy, should be immediately replaced.

II AGRICULTURE

We feel that the ultimate objectives of a farm program should be:

1. The gradual and sure elimination of all subsidies and their resultant controls.
2. The greater utilization of farm products in industry, thus minimizing the necessity of price supports.
3. A minimum of regimentation, controls, and subsidies.
4. Unceasing economy in the use of public funds.

Be it resolved, That the ranching and cattle-raising industry be totally excluded from any Government program of regulations, controls, or subsidies, be it further

Resolved, That the administration's policy with respect to the Brannan plan, the socialization of the farming industry, and other related matters be condemned as contrary to the democratic principles of our country, and further that said Secretary of Agriculture Brannan be reprimanded and discharged for his wrongful expenditures of public funds to finance the propagation of his idiotic schemes.

III CIVIL RIGHTS

We believe that the Republican Party should continue to strive for and support better legislation to protect the rights of minorities. We believe that the right for equal opportunity to work to vote, to advance in life, and the right to equal protection under the law should never be limited in any way because of race, religion, color, or country of origin.

IV LABOR

We believe that labor-management disputes can be settled by collective bargaining under present law. Further legislative interference with present methods, which are workable, fair, and sufficient to safeguard the general interest of the public, is unwarranted. We again solicit the support of and extend an invitation to members of both labor and management who are in favor of sound Government based upon the philosophy of a republican form of government.

V. ECONOMY AND TAXES

We feel that the astronomical national debt should be systematically reduced; that any future domestic or defense measures should be scrutinized carefully and reduced to the minimum; that the tax program should produce the revenue necessary to create a pay-as-you-go program.

We further feel that the tax revenue should not be used by governmental agencies to compete with private industry and business; that strict economy must be practiced throughout all phases of governmental activity; and that the purchasing power of the dollar will be increased by the foregoing policies.

Federal taxes

We recommend the elimination of excess-profits tax, because of its inequity, its impracticability, and the complete confusion which has resulted from every past attempt to employ it.

State taxes

We recommend that the legislature of the State of Nebraska provide for a general revaluation of real estate for tax purposes not less often than every 10 years.

Hoover Commission Report

We strongly urge that the Congress of the United States adopt the remainder of the

Hoover Commission recommendations for economy and efficiency of the Federal Government, and that this important action be delayed no longer.

VI. INTERNAL SECURITY

We recommend that the Congress of the United States continue to conduct a thorough investigation into Communist activities in this country, and that those traitors among us who adhere to the vicious tenets of this organization be prosecuted under the laws now in effect or to be placed in effect by Congress.

VII. LEADERSHIP

We believe that if the Republican Party is to continue to function and perform its duty as a political party, it must provide leadership in international, national, and local areas.

The Republican Party today has an opportunity to furnish such leadership, now needed as never before. We therefore recommend that the Republican Party of the State of Nebraska, and of the United States, should immediately formulate a constructive program for the meeting of the challenges and dangers of the international crises with which we are now confronted, and for meeting the challenge of the socialistic state which is gradually encroaching upon our individual liberties, and we call upon all thoughtful Americans to aid in the development and propagation of these principles.

VIII COOPERATION WITH THE SENIOR ORGANIZATION

We commend the present State Republican Party leadership for its wise policy of placing young Republicans on the various committees at the recent preprimary convention. We feel that every element in the party should be represented on every committee so that many viewpoints may be brought into play in deciding matters of party policy.

We reaffirm our willingness to cooperate and assist the senior organization in any possible way in its efforts to achieve party harmony and political victory.

We suggest that it would be to the best interests of the entire organization if the senior organization would carry on with the plan suggested over 2 years ago, to hire a paid organizer for the purpose of strengthening the county organizations.

IX OPEN INVITATION

In conclusion, we, the Young Republicans of Nebraska, reiterate our invitation of 2 years ago to all young men and women of good will and high principles to join our ranks.

We invite the students of our universities who want a solvent nation in the years to come, who want a nation affording abundant and unrestricted opportunity—unaided by a paternalistic form of government.

We invite the young farmer who with his tax dollars supports subsidized market prices. We invite young businessmen who are tired of competing with the Government, hemmed in by unnecessary controls and taxed dry of legitimate profits. We invite all young laboring men who are denied the right to negotiate for work on their own behalf, and who believe that their right to work is as inalienable as their right to strike. We invite the average taxpayer who is paying the highest tax revenue in the history of the Nation, who faces under the present administration a demand for still more, the man who, having carefully balanced his own budget, fails to understand his Government's failure to do so. We invite all intelligent Democrats who are still puzzled by their party leadership, its promises and its failures. To all of you we say—join the party of the future. Join the Republican Party.

Communist Treachery**EXTENSION OF REMARKS**

OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter addressed to me by the American Hungarian Federation, and also a letter addressed to the Secretary of State, the Honorable Dean Acheson, by the American Hungarian Federation.

These letters typify the rule of the Kremlin behind the iron curtain and explain the gangster methods used by the Soviets. All Americans should keep uppermost in their minds the treacherous, unscrupulous actions of these Soviet officials, as to deal with them is like dealing with a confirmed gangster without any morals or conscience.

The Korean cease-fire order for a peaceful settlement of the conflict is to be carefully watched and studied before submitting to any agreements.

AMERICAN HUNGARIAN FEDERATION,
Washington, D. C., June 15, 1951

The Honorable JOHN LESINSKI, JR.,
House Office Building,
Washington, D. C.

DEAR MR. LESINSKI: The American Hungarian Federation, the central representative agency of American citizens of Hungarian origin addressed the enclosed letter to the Honorable Dean Acheson, Secretary of State.

This federation also submitted to the Office of Eastern European Affairs of the Department of State, carefully checked evidences substantiating the facts contained in our basic appeal. We requested the expression of our Government's firm objection against the atrocities to which the inhabitants of Hungary are presently subjected by the Soviet-ruled Communist Hungarian Government.

Irrespective of age, religion, family status or any other human consideration, the people of Hungary are condemned to mass internment, execution, kidnaping, and slavery. Names and addresses contained in our proof of evidences cannot be released because of retaliation and retribution directed against the victims of the Communist overlords.

We trust that the knowledge of this purposeful and planned genocide, which affects the lives of thousands of defenseless human beings, will bring about the just indignation of our legislators, church leaders, civic and patriotic representatives. The mass internment, wholesale arrests, execution of innocent human beings, and the transfer of thousands of Hungarians to Russian slave labor camps are outright violations of the Peace Treaty of 1946 concluded between the United States and Hungary. The Hungarian Government agreed in that peace treaty to safeguard the elementary human rights of the inhabitants of Hungary and guaranteed the physical well-being of every Hungarian.

In the name and in behalf of the hundreds of thousands of American citizens, we appeal to you to register openly your objection against the ruthlessness of the Communist dictatorship which created a horrible prison out of victimized Hungary. We, free citizens of these United States, cannot and must not condone any longer conditions under which untold thousands are doomed to everlasting fear and slavery.

The board of directors and the officers of this federation express their gratitude for your favorable action in this matter in advance.

Respectfully yours,

STEPHEN E. BALOGH,
Executive Secretary.

AMERICAN HUNGARIAN FEDERATION,

Washington, D. C., June 14, 1951.

Hon. DEAN ACHESON,

Secretary of State, Department
of State, Washington, D. C.

MY DEAR MR. SECRETARY: The above-named organization represents the overwhelming majority of the loyal American citizens of Hungarian extraction. Churches of the three major faiths; fraternal, civic, patriotic, institutions, and about half a million individual members of various citizen groups located throughout the United States appeal to you in this message through their federation.

The members of this federation join the board of directors in requesting your immediate sympathetic action by protesting against the forced dislocation of thousands of Hungarian citizens from Budapest and other larger Hungarian cities with the ultimate purpose of transporting the able-bodied to Russia for slave labor.

Simultaneously, we are submitting to the Office of Eastern European Affairs of your Department carefully checked evidences substantiating the facts that—

1. The Soviet-ruled Hungarian Government removed by force entire families from Budapest and from other Hungarian cities and interned them in designated rural concentration camps named and identified by authentic letters addressed to friends and relatives living in the United States.

2. Separated minor children from parents. The children to be exchanged for summer-camp training and the parents to serve in labor camps. Similar system during the Greek revolution resulted in mass kidnaping of children to Russia where they vanished forever;

3. Pregnant mothers, pensioned, sick, and aged persons of both sexes are similarly ordered to concentration camps and deprived of proper physical care. In consequence of this forced displacement, thousands of helpless persons become the victim of a planned, cruel genocide.

The substantiated and proven mass torture of the Soviet-ruled Hungarian Government is an outright violation of the peace treaty of 1946 concluded between the United States and Hungary.

It is respectfully urged that the Department of State express its firm objection and disapproval of these inhuman practices and bring these atrocities to the attention of the United Nations Assembly for the purpose of preventing further murderous attempts upon the inhabitants of Russian-enslaved Hungary.

Respectfully yours,

STEPHEN E. BALOGH,
Executive Secretary.

The Dire Need for Effective Controls**EXTENSION OF REMARKS**

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. SABATH. Mr. Speaker, realizing the short-sighted policy of the industrialists of the United States in this great emergency, the great president of the General Electric Co., Mr. Charles E. Wilson, having the interest of the country at

heart and being heart and soul in favor of all-out preparedness, thus demonstrating to Russia that we will not tolerate any more of her aggressive actions, resigned his position last December at the call of our President and is now aiding the Nation in every way possible as Director of the Office of Defense Mobilization.

Mr. Wilson, an American who dearly loves his country, is acutely aware of the great danger involved in the ever-increasing rise in prices and the imminent specter of inflation that now faces us. He strongly advocates effective controls which are necessary to save the Government as well as the American people billions upon billions while at the same time preserving our free enterprise economy.

Upon invitation, Mr. Wilson addressed a meeting of about 200 members of the House Thursday morning which I arranged, in which he reiterated his oft-repeated plea for the continuance and strengthening of controls. He expressed grave fears over the present trend toward weakening and emasculating the control program.

In order to fully acquaint every Member of this House with the hard-hitting facts left with the Members at this meeting by Mr. Wilson, I have requested permission to insert a summary of his remarks in the RECORD. They follow:

MORE EFFECTIVE CONTROLS TO AVOID INFLATION

Mr. WILSON. Ladies and gentlemen of the Congress, needless to say, I am deeply concerned over the trend toward weakening the controls provisions of the Defense Production Act. I appreciate this opportunity of appearing before you to discuss the dangerous situation we are confronted with if adequate controls are not provided.

My good friend, Mr. Carey, and other labor leaders have condemned me from one end of the country to the other as a representative of big business. I plead guilty to the charge, but I assure you, too, that I am proud of the fact that I have been connected with big business. I do not claim to be a politician or a bureaucrat, however. When the President declared the existence of a national emergency last December and called upon me to leave the comparative peace and quiet of private life, I readily responded to his command.

I have always been a firm believer in the doctrine of free enterprise, and that means that I am opposed to a controlled economy. The principles of a free economy were designed for times of peace. In wartime it has always been necessary to resort to governmental control. That is why I am before you today favoring and urging a strong Defense Production Act.

Last year Congress provided a strong Defense Production Act. A Nation-wide organization was set up to stabilize prices and wages. This organization, known as the Economic Stabilization Agency, is functioning effectively. You are now considering the extension of the law which expired June 30 and is now operating under a temporary 30-day extension. Unfortunately Congress has added amendments which will seriously cripple economic stabilization, which could mean substantial price boosts during the coming year. It might add from 12 to 14 billion dollars to the already high cost of living. The stage could readily be set for the disaster of runaway inflation.

Many families in America have already learned the difference between happiness

and misery, with their limited budgets and the constantly growing demands upon them. Surely this is appreciated by the millions who are living on fixed incomes such as pensions and insurance annuities, as well as by those whose wages and salaries have not kept pace with rising costs.

The charge has often been made in the debate on this bill in Congress, that the Government waited too long to use the powers granted under the act passed last year. My answer to these charges is this: That after the act was passed last year, the panic buying tapered off with our victories in Korea. When the Communists of China entered the war in November the scare buying resumed. It was not until then that the real need for controls was fully realized. This was followed by the declaration of an emergency by the President and the following month prices were frozen.

It is absurd to use the argument of delay as an excuse that stronger controls should not be voted now, or that present controls should be weakened. We are now concerned with the future—not with what we did or did not do in the past.

Our bitter experience since the Second World War has shown that we cannot relax in the struggle with Soviet Russia. If we are to "lick" the threat of communism, we must employ every weapon at our command.

Gentlemen, I am more worried than ever before in my life about America's safety—and in that life I have witnessed two world wars with all their tragedies, destruction, frustrations, and failures to provide real peace. I cannot believe that Soviet Russia, in coming out for a truce in Korea, has altered its long-term plans. To me it is but another maneuver in a continuing series of actions designed to weaken the free world. Let us consider these facts when we are inclined to lean back and relax as a result of a possible Korean truce. The battle against communism must be a relentless one, and I want to stress again that we must strengthen ourselves more than ever in history if we are to survive.

The American people are not quitters. I feel certain they understand the grave dangers that confront our country. They won't quit on a program designed to promote our military might, they are willing, as they have demonstrated on occasions in the past, to sacrifice for our security. They will wholeheartedly accept the controls they know are so necessary to insure the safety of the Nation.

I feel confident the Congress will not follow the dangerous course of weakening our efforts on the home front by amending the present bill into ineffectiveness. I strongly urge a more effective system of controls in order to ward off the dangerous trend toward inflation with which we are faced. This is your problem. I trust it will be dealt with wisely and well, and that you will give to our President and the American people legislation which will ensure the fulfillment of our goal to contain and thwart the spread of communism and insure thereby the preservation of the America we all love.

A Welcome Home to Miss Truman, a Fine American Girl

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. SIEMINSKI. Mr. Speaker, 6 weeks ago, Miss Margaret Truman, of

Washington, D. C., embarked on a visit to Europe. In her trip abroad, Miss Truman visited Great Britain, France, the Netherlands, Belgium, Luxemburg, and Italy. What the peoples of these countries she visited, saw, heard, and spoke with, was an attractive, kindly, gracious and charming American girl—friendly, willing, and interested in the problems of Europe and its people.

Surely, the young women in America today can be proud of the visit of the daughter of our President. Her conduct abroad was that of a young girl who was interested and wanted to see, firsthand, the conditions that existed in Europe.

As the daughter of the President of the United States, Miss Truman's trip was followed with close attention by the American reading public. Her presentation in Europe was that of a warm and friendly person. She was, first, a credit to her mother and father, and displayed those attributes and characteristics that come from a happy, loving, and devoted American family. The United States is proud of Margaret Truman. Her tact, poise, and engaging personality are indeed an excellent reflection on American womanhood.

The Judge and His God

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. McCORMACK. Mr. Speaker, it was my good fortune to read the speech delivered by Federal Judge Harold R. Medina at the annual dinner of the Church Club of New York. Judge Medina has set forth in a simple and humble way the larger aspects of Government service. He shows to all of us in all branches of Government, legislative and executive, as well as the judiciary, what great good can come from our service if we seek the aid of our God.

The speech follows:

THE JUDGE AND HIS GOD

(Speech delivered by Federal Judge Medina at the annual dinner of the Church Club of New York, February 5, 1951)

While there is much in the Bible about judges, I do not recall any occasion on which a judge has been called upon to discuss the impact of religion upon the performance of the judicial function. Perhaps this is because this is an intimate matter, thoughts about which one is likely to keep to oneself. In any event, I have chosen as my subject here tonight, *The Judge and His God*. If the subject has not been discussed before, it is high time that someone did so, for I rather suspect that my own experiences, which I am about to relate to you, are typical of those of most American judges, and doubtless of others, too.

As you will see, my address is divided into two parts. The first has to do with the subject of humility, and the second with the subject of prayer.

I suppose I am a more or less typical American. From boyhood I have had an implicit and unquestioning faith, which I

got when I attended the classes in the Episcopal Church at Ossining, N. Y., in preparation for my confirmation when I was a boy at preparatory school. Like most other people I know, I wanted to be a better Christian; but, as I look back over the years, I find that I did comparatively little to put this wishful thinking into effect. As a law student and as a lawyer I fought hard for what I thought was right, and I had a deep and almost passionate interest in the rules of law and the history of their development. They were the tools of my trade, and I worked hard with them.

It was not long after I became a judge that I began to feel a new sense of responsibility. It is something very difficult to explain. It was not simply that I wanted to be right and that I took my duties seriously. There came a feeling that everything I did, even the decision of nice questions of interpretation of mere rules of procedure, was in some way becoming a part of a huge fabric which, on the whole, was part and parcel of the moral law governing mankind and which must of necessity be of divine origin.

As I passed upon the credibility of witnesses, and as I wrote my opinions and formulated my judgments, I gradually came to realize that I was weaving my small part of this huge fabric, and I knew that I would not perform my task aright unless I was constantly mindful of the fact that all these matters, large and small, would be mere futility unless I tried to make each one fit into its proper place in the moral law which governed all.

Right here is the part that is difficult to explain. I was still reasoning as a lawyer. The fundamental principles of law were the same. I was still manipulating the techniques of my profession as before. But there was some subtle force, the impact of which was new to me, which was spiritual in quality. It was as though someone were always watching me and telling me to make very sure that my rulings and my decisions were fundamentally right and just.

You know we judges are the servants of the people, as are all government officials in our particular type of democracy. But I think it will not be difficult for you to see, from the things I have been telling you about, that it didn't take me very long to perceive that we judges are the servants of someone else, too. And I often think of that part of the twenty-second chapter of the Gospel according to St. Luke, which follows immediately after those verses which are so important a part of our Communion service. I refer to the following:

"And there was also a strife among them, which of them should be accounted the greatest."

"And He said unto them, the kings of the Gentiles exercise lordship over them; and they that exercise authority upon them are called benefactors."

"But ye shall not be so: but he that is greatest among you, let him be as the younger; and he that is chief, as he that doth serve."

"For whether is greater, he that sitteth at meat, or he that serveth? is not he that sitteth at meat? but I am among you as he that serveth."

Years ago I often heard Chief Judge Benjamin N. Cardozo, before he became an Associate Justice of the Supreme Court of the United States and while he was still chief judge of our New York State Court of Appeals, speak about humility. He was indeed a humble man. One could not fail to observe that. But the full impact of what he had to say about humility was not felt by me until I was myself a judge and found myself struggling with forces too great and too complicated for me to fathom. I saw in a new light the difficulties that beset one in the search for truth and justice.

This was particularly true when I suddenly found myself in the vortex of the trial of

the Communists, in the midst of the play of great forces upon which, for all I know, the destiny of the human race may hang. Later it suddenly dawned upon me that some queer turn in the wheel of fate had singled me out, for the moment, to feel the impact of America's love of justice. And the result was what must be inevitable under the circumstances, that I found myself to be a small, indeed a very small and insignificant, particle in the scheme of things. It has been an extraordinary experience. So much for the first part of what I have to say.

Now as to prayer. Fortunately for me, I was taught to pray from so early a time that I cannot remember going to bed at night without saying my prayers. And only once in all these years have I failed to do so. I remember that occasion very vividly. It was my first night in boarding school, when I was about 14 years old. And in all the excitement of my room at school and my new roommate, and in the general bewilderment, I forgot to say my prayers.

Well, in the course of time I became a judge. I need not tell you that the toughest part of the judge's work is sentencing the people who are convicted or who plead guilty to the various offenses. I had always wondered what I should do if at the time of sentence some prisoner was impudent to me. It seems so clear that in the stress of such an occasion the judge should not mete out a greater punishment from some feeling of personal pique.

One day this happened to me. Most of you probably do not know about it, but the fact is that, with these millions of Government checks that go out through the mail from day to day, many are placed in the mail boxes on the ground floor of walk-up apartment houses and tenements, and they furnish constant temptation to people in distress or people of naturally predatory instincts. Most of the time they get caught, and, as it is a Federal offense, they come before the judges of my court.

On this particular occasion a woman who, it was plainly to be seen, would soon become a mother, came before me, and I struggled away with the probation report and with questions and so on, to see what I should do. She suddenly burst out and gave me a tongue lashing that was a work of art. After reflecting for a moment or two, I made up my mind that it would not be right to sentence her that day, and so, over her resounding protests, I put the matter off for a week.

The following Sunday I was sitting in my pew at St. James Church when the rector, at a certain point in the services, said that he would pause for a moment or two so that every member of the congregation could make a silent prayer in connection with whatever matter was troubling him. I do not remember that having been done before, but I suppose it has. Anyway, I prayed for that woman just as hard and as fervently as I knew how; and a day or two later she was back there in court standing before me. I told her all about what I had been going through. I told her that I had prayed for her in church, just as I have been telling you. I shall not make a long story of it. But the outcome was that I gave her a suspended sentence, and I do not think there is very much chance that she will be in my court or any other court again.

I do not see why a judge should be ashamed to say that he prays for divine guidance and for strength to do his duty. Indeed, there came a time, not so long after the incident I have just described, when I did the most sincere and most fervent praying that I ever did in my life.

As I mentioned in passing, at the beginning of this address, I suddenly found myself in the midst of that trial of the Communists. It took me a long time to realize what they were trying to do to me. But

as I got weaker and weaker, and found the burden difficult to bear, I sought strength from the one source that never fails.

Let me be specific. There came a time when, doubtless due to previous planning, one of the defendants was on the stand and he refused to answer a question, pleading a supposed constitutional privilege which obviously had no application. I gave him time to consult with his counsel about it; I held the matter in abeyance overnight to make sure that I was making no misapplication of the law; and then the next day, Friday, June 3, of the year 1949, I sentenced him to prison for 30 days, unless he should sooner purge himself of contempt by answering the question.

Pandemonium broke loose. The other 10 defendants and their lawyers, and many of the spectators, rose to their feet; there was a great shouting and hullabaloo, and several of the defendants started toward the bench. In all that excitement, I felt just as calm as I do now when I speak to you. I did not raise my voice over the tone which you hear me use now; and I singled out several of those men, identified the language they were using, got it on the record, and sentenced each of them to imprisonment for the balance of the trial.

And I tell you, as I stand here, that my ungilded will alone and such self-control as I possess were unequal to this test. If ever a man felt the presence of someone beside him, strengthening his will and giving him aid and comfort, it was I on that day. And so it was later and toward the end of August, when I finally left the courtroom one day and went to lie down, thinking that perhaps I should never go back. But, after 10 or 15 minutes, I was refreshed and I did go back; and I gained in strength from that moment on to the end.

Perhaps someone will think it wrong for me to tell you these things. But I could not come to this gathering prepared to discuss the ordinary platitudes, or to hold forth on philosophy or international affairs, about which I know nothing. It seemed better, particularly in these trying, difficult times, when each of us is worried, and each of us is troubled over this great country of ours that we love so well, to sound a note of comfort.

After all is said and done, it is not we who pull the strings. We are not the masters, but the servants of our Master's will; and it is well that we should know it to be so.

remedy—a currency redeemable in gold on demand.

The editorial follows:

A RETURN TO GOLD COIN

A correspondent takes this newspaper to task for not having laid greater emphasis on the importance of this country's return to a currency convertible into gold coin. He argues that a restored right of the citizen to own gold coin would enable him, acting individually to protect himself against the worst consequences of a depreciating paper currency and so initiate a popular movement to stop governmental extravagance.

His argument is sound. An inconvertible paper currency is the ideal monetary instrument for a government that promises and attempts to do all things for all men and hang the expense. A people whose government sees a necessity to plunge into an enormously costly rearmament but no need to curtail its nonemergency spending is badly in need of just the curb on its rulers that a gold-convertible currency would provide.

But a return to gold coin in circulation requires congressional action. Now Congress could, if it would, use other means to avert the further depreciation of the dollar, means available to it in its almost routine work of making appropriations. So far, it shows no real will to use these ready-to-hand means of shoring up the exchange value of the dollar, despite the repeated warnings of House and Senate minorities against fiscal recklessness.

It looks very much as though a majority of the lawmakers either favored all-out Government spending or were afraid for political reasons to oppose it. A Congress unwilling to begin to practice fiscal prudence is not likely to put in the hands of the people as sharp a tool for compelling such action as gold-convertible currency. For that matter, the people appear to be unwilling to have that power thrust upon them.

We believe that some day the country will return to gold convertibility as a culmination of the continuing but now quiescent contest for sound money. Before that happen Congress and more particularly the voters at home will have to gain a fuller understanding of what a rotting currency has done and will do to them.

Shortage of Adequate Housing

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. LEHMAN. Mr. President, the current issue of the weekly publication the New Republic carries a very interesting article on housing. It analyzes the lack of adequate housing which still exists in our country. I ask unanimous consent that the article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

HOUSING: A VANISHING VISION

(By Harry Conn)

The 1950 census reveals what has been painfully evident to many an American family—for the second straight decade this country has failed to build sufficient homes to keep pace with the growth of new families.

Meanwhile, in Columbus, Ohio, Builder Walter J. Shapter has announced that he is

The Price-Control Struggle Is a Diversionary Battle: Gold-Redeemable Money Is the Genuine Remedy for Inflation

EXTENSION OF REMARKS OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 29, 1951

Mr. BUFFETT. Mr. Speaker, the sound and fury of the price-control debate is a mockery of the real issue.

We now have a rubber dollar, and no price-control measure can stabilize or preserve buying power for irredeemable money indefinitely.

Congress might equally well pass a statute decreeing that water will henceforth flow uphill so long as our currency is primarily fiat money.

A recent editorial in the Wall Street Journal calls attention to the genuine

cutting his schedule of three new-house starts a week to one and has given up plans for a new 150-home project.

John Hennessy, head of San Francisco's East Bay Builders' Association, has revealed that five San Francisco Bay housing projects, totaling more than 2,000 homes, are being abandoned.

In five counties outside Philadelphia, where 22,000 dwellings went up in 1950, 12,000 are planned this year.

In city after city the story is the same. Construction of new homes for America's families is dropping to a new low. The vision displayed in the inspiring goal held out by the Housing Act of 1949—"A decent home and a suitable living environment for every American family"—seems dismally out of touch with reality today.

"The consensus of those who have studied the housing situation closely," the Federal Housing and Home Finance Agency reported in 1949, "is that between 1,250,000 and 1,500,000 sound, acceptable dwellings need to be provided by new constructions, conversions, and rehabilitation each year for at least a decade to meet the current housing shortage and to begin making real progress in raising the housing standards in America."

Last year, with a record 1,400,000 units constructed, hopes rang high that America was on her way toward meeting the housing needs of the one-third of the Nation which the 1950 census clearly showed is still ill-housed.

In 1950, the Census Bureau reports, the United States had 39,400,000 nonfarm homes, including tar-paper shacks, trailers, skyscraper apartments, summer cottages, and even caves. This represented an increase of 9,700,000 units in the last 10 years, a record which the National Association of Real Estate Boards points to with particular pride. But the NAREB fails to mention, and most people are not aware, that between 2,500,000 and 3,000,000 of these added dwellings are reconstructions from larger units. Rent controls and building restrictions encouraged landlords to subdivide more houses during the 1940's than in any other period in our history.

The NAREB concludes that there has been no severe housing shortage because the census reports that there were 2,700,000 vacancies last year. The real estate men fail to add that only 689,000 of these are habitable and are nonseasonable.

For a Nation that prides itself on being one of the best housed in the world, the actual picture presented by the 35,000,000 nonfarm dwellings now occupied is rather sordid. Almost one-third of these units, 11,700,000, are classified by the census as dilapidated, lacking private indoor or flush toilets or baths, and are without hot and cold running water. The actual number of nonfarm homes with plumbing facilities increased by nearly 10,000,000 during the last 10 years, but the improvement came almost entirely in new constructions. The actual number of nonfarm homes lacking these facilities remains about the same as in 1940.

As discouraging as is the general housing picture, the conditions among nonwhites, who live mostly in segregated areas, are even more atrocious. A total of 27 percent of these people live in dilapidated dwellings; 40 percent have no bathing facilities, 50 percent have no hot or cold running water; 18 percent are overcrowded.

In spite of these facts, the NAREB still interprets the census findings as an answer to those who decry the housing shortage. "The 1950 census figures," the association proudly begins a press release, "reveals that Americans presently enjoy more and better housing than they did 10 years ago, with a wide range of vacancies from which to choose. * * *

Last year the real estate interests and builders enjoyed their greatest year of prosperity. The net profits of 15 major building-material companies in 1950 jumped 42 percent above 1949 levels. Between 1945 and

1951, building materials had skyrocketed 93 percent while wholesale commodity prices were going up 73 percent. The mortgage bankers were floating along nicely, getting 4 to 5 percent interest on loans, many of which the Government completely guaranteed. If all this meant homes, good homes at low cost, it would have been worth it. However, \$13,000 homes in the Chicago area jumped to \$15,500 between 1949 and 1950, with similar increases throughout the United States. For the 73 percent of America's families with an annual income of \$4,000 or less, it meant little or no housing.

The quality of many of the homes that were constructed left much to be desired. The dean of the Massachusetts Institute of Technology School of Architecture referred to many of them as "all skimp and omit." The magazine Architectural Forum warned that "FHA housing standards are already substandard," and expressed deep concern over the practice of builder and FHA collaboration to hold plans to the minimum.

High quantity and low quality of home production seems to be giving way to low quantity and low quality in 1951. Official plans call for between 800,000 and 850,000 new houses this year, a drop of some 40 percent. This spring, private builders are averaging less than 90,000 monthly starts compared with 120,000 in 1950. There are two reasons for this alarming decrease: (a) Regulation X and (b) the mortgage bankers' strike.

Regulation X was issued last October by the Federal Reserve Board and Housing Administrator Raymond Foley under authority of the Defense Production Act. It is designed to curb inflation by calling for a down payment on new homes ranging from 10 percent for a house costing \$5,000 or less to 50 percent for a house costing \$25,000 or more. What it has succeeded in doing is eliminating most of the low- and middle-income groups from the purchase of new houses.

The provisions of regulation X are not completely rigid. They can be relaxed in critical defense areas, military or industrial. The startling story, however, is that of more than 300 communities which have applied for a critical defense designation some 200 have withdrawn their applications while only 14 were approved by June 15, 1951. The joker is that Government procurement authorities are under instructions to avoid placing new contracts in these areas, and the regulation covers only specific permits. Therefore, these contracts are becoming choice political plums, and many a Congressman is playing the game all the way.

The second clause of the decrease in home building in 1951 is the mortgage bankers' strike. Just as wars today are often undeclared, so is this strike. But, to any home builder or contractor the strike is just as real as is war in Korea to an infantryman. The issue is money. The mortgage bankers want a higher interest rate on Federal Housing Administration and Veterans' Administration loans. On June 28, 1951, the Wall Street Journal reported the effect of the strike:

"Though the FHA hasn't given out the figures yet, the agency's loan insurance applications this month have dropped one-third from early May—and at a time of year when they're normally on the increase.

"Another Government agency, the Veterans' Administration, guarantees housing loans to veterans at only 4 percent. Its appraisal requests, signifying a builder's intention to build, are running at only about one-fourth of the year-ago pace."

The Journal reports a number of examples of the consequences of the strike. The experience of M. M. Robinson, president of Detroit's General Houses, Inc., is typical. Until March of this year he had planned on putting up about half as many homes as he built last year. Now, with the lack of

mortgage funds, he will have to scale down to one-third of the 1950 total.

In 1948 the mortgage bankers tried a similar strike when they boycotted VA loans but soon gave it up. In 1950, Congress authorized the VA to issue direct loans in any areas where veterans could not obtain loans at VA rates. A total of \$150,000,000 was provided for this purpose, and all but a small proportion used. Recently Congress continued this program, setting it up under a revolving fund. Apparently, many veterans are completely unaware of this benefit, however, and unquestionably many, after being turned down by their bankers, gave up the idea of building a house.

Just how long the mortgage bankers can continue or whether the Government will accede to their demands for a one-half percent increase in interest rates is a subject of considerable speculation. Robert M. Morgan, vice president in charge of real estate for the Boston Five Cents Savings Bank, recently told the Wall Street Journal that he believes the insurance companies, which he considers the backbone of the national mortgage market, will stay out of the market until the end of this year. Other bankers expect mortgage money to be tight the rest of this year.

How much interest rates figure in the total cost of a home is illustrated in an excellent booklet issued by the United Automobile Workers-CIO, entitled "Build Homes by Mass Production." Basing its estimates on distribution prices from 1940 to 1944, the UAW breaks down the costs of an average \$10,000 home as follows:

Materials	\$4, 570
Labor cost on the site	2, 950
Land costs	1, 250
Profits	1, 250
Interest charges (5 percent)	4, 500

The UAW booklet further points out that if the interest rates are four percent, the total interest charges are reduced to \$3,600, still a considerable sum.

Military housing is one of the very blackest sides of our dismal housing picture. The case of Sgt. Richard Price, of Fort Leonard Wood, Mo., is closer to the norm than many Congressmen would care to admit. Sergeant Price tramped the streets for 2 months before he was "fortunate" enough to find a two-room tourist cabin for his wife and two children. Out of his monthly pay of \$225, he pays \$100 for rent.

Former Secretary for Air W. Stuart Symington told a congressional committee in 1949 that poor housing is seriously impairing our military strength. He estimated that among trained technical experts, only 7 percent reenlisted from posts where there was poor housing and about 75 percent signed for another hitch when they had found good accommodations for their families. It cost \$27,000 to train a jet pilot, Symington observed, and poor housing can lose him to the service.

Air Force regulations entitle 18 percent of the top-rated personnel to quarters for their families. In 1949, 69,110 men fell into this classification, but only 17,934 housing units were available for them. Of these, only 6,397 were considered adequate. With the expansion of our Armed Forces the situation has worsened considerably. Throughout the services today, we are at least 250,000 family dwellings short.

The determination to keep Government out of the business of constructing houses, even for the Armed Forces, is largely responsible for this. The Wherry bill, introduced by the Senate minority leader, was passed in 1949 as an answer to this critical problem. It proposed giving builders 100-percent mortgage insurance for homes built around military bases. And Senator Wherry promised that this program would produce 100,000 new units a year. Now, after 2 years, as of March 1951, only 22,659 units have been

processed through FHA. The builders have been reluctant to meet all the requirements of doing business with the Government even with all the lush advantages offered.

Several months ago the mayor of a major defense center wired a congressional committee about the scarcity of defense housing: "Manpower requires houses. No houses—no manpower—no airplanes."

Briefly, concisely, this is the most complete analysis of a major obstacle to American mobilization. In Marietta, Ga., for example, 30,000 additional aircraft workers will be needed in the next 2 years, but on June 28 only three vacant houses were listed. The situation in Marietta could not be much worse. Rent controls were voted out of existence more than a year ago, and some workers are commuting from Atlanta, 40 miles away, and others from as far as 70 miles away. It is a flat impossibility for the aircraft industry to expand under such conditions. The story is the same in Tulsa, Wichita, Fort Worth, Los Angeles, and other aircraft centers.

On April 9, the Senate took the problem into its own hands and passed the defense housing bill. Minnesota's Senator HUBERT HUMPHREY protested that "this is a matter of getting into the Public Treasury, not with a teaspoon but with a scoop shovel. It is an effort on the part of certain persons . . . who have worried about the New Deal and the Fair Deal to give one of the rawest deals to the American taxpayer." The bill provides \$1,500,000,000 to underwrite private construction of rental housing in defense areas and appropriates \$60,000,000 for loans and grants for community facilities and services, but only after private, State, and local government units prove inability to meet the need. If any housing is constructed under this bill, rents are expected to be upward of \$100 a month, beyond the pocketbook of even a defense worker.

No sound, systematic program to meet the critical need for military, defense, and general housing through careful use of available materials and manpower is being seriously entertained by the present Congress. Federal guaranteeing of mortgages issued by private builders seems to be the pattern. And yet, mortgage bankers are demanding high interest rates, and builders want more bonanzas than they are presently receiving.

The best hope for decent, low-cost housing for many Americans is in public housing. What private enterprise either cannot or will not undertake the Government should. Since 1937, with the passage of the United States Housing Act, the Federal Government has been providing for permanent low-rent public housing through projects initiated, owned, and operated by local public agencies established in local communities pursuant to enabling laws enacted by the States.

After World War II the need for more such projects was evident. Even Senator TART, the conservative anchor in the upper Chamber, became convinced that public housing was essential and was a sponsor of the Taft-Elliender-Wagner public housing bill which 4 years later developed into the Housing Act of 1949.

This act was not all the public housing advocates could ask, but it did provide for the construction of 810,000 new homes over a 6-year period. It empowered the President to increase the total to 200,000 in any one year in an emergency. A total of 135,000 units were authorized for each of the first 2 years. A check with the Public Housing Administration reveals as of June 8, 1951, close to 2 years after enactment, only 1,480 of these have been completed and occupied under Public Law 170, and close to 1,100 of them are hold-overs from the 1937 act. Approximately 55,000 more units were approved just before the end of the fiscal year on June 30, but how many of those will actually be constructed is yet to be determined.

To those who look upon public housing as a solid answer to a fundamental need these figures will be a shock. Beneath them lies a story of powerful selfish-interest groups, of public-interest groups that are not effective, and of Government housing agencies that are complacent in the face of the growing power of the real-estate lobby. These stories will be developed in subsequent articles in this series.

Question of the Week

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1951

Mr. BENDER. Mr. Speaker, there have been rumors that Joe Stalin's health is very bad. We heard stories years ago that he was so sick that a double was taking his place in public. Anybody want to bet that he does not live to be 100?

Deplores Increase of United States Traitors

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1951

Mr. BENDER. Mr. Speaker, under leave previously granted me to extend my remarks in the RECORD, I should like to insert the following letter addressed to the editor of the Cleveland News by my good friend, Mr. J. Webb Saffold, of Cleveland, Ohio:

TO THE EDITOR OF THE NEWS:

SR: The most shocking fact about American life in the last decade seems to pass almost unnoticed by our people. During the first 150 years of the life of our Nation you could count the traitors to the United States on the fingers of one hand. But in the last decade there has appeared a new phenomenon in our America, undreamed of by the founding fathers. It is the mass production of traitors, treasonists, and well-trained political saboteurs whose only object is to destroy the initiative of the individual American, which is the motive of our free enterprise system, and make our people economic juveniles wholly dependent upon an all-powerful central government. Thus they would destroy our American way of life and reduce the United States from the great Nation which was the hope of the world to just another Soviet satellite.

These political and economic saboteurs are disguised as "Democrats," "planned economists," and phony "liberals." They never call themselves by their right name, "Socialists," but some of them refuse, under oath, to admit they are Communists for fear of incriminating themselves.

So insidious and seductive has been the everything-for-everybody-for-nothing propaganda of these Socialists that it has lulled the people into that very stupor of indifference, confusion, and frustration which the murderers of our way of life need to complete

the job they are doing on our America. And, now that the conspirators feel sure that they have the whole thing in the bag, they no longer care if the people find them out because these Socialists think it is too late for our people to stop them as these hangmen of our beloved land sit in the seats of power and they intend to stay there. Make no mistake about it, they are running every department of what you imagine is your Federal Government.

The "Snare Deal" administration is applying this Lenin plan strait-jacket to you through false promises, constant propaganda paid for by you, and all too familiar emergency squeezes, as the 12-percent jump in your income tax this year will convince even the most hypnotized stooge supporter of the "Snare Deal" system. You will be high pressured to betray yourself and your country again by voting to keep it in power over you in 1952; in fact, that campaign is already under way. Many thousands of payroll voters are being added to your tax bill weekly to insure victory. This is the "Snare Deal" method of fixing elections.

Over on the other side of the world Stalin drives his underpaid and underfed millions with a phony war scare against the United States, including the 17,000,000 slave laborers who get no wages and even less food. The fear motive is the stock weapon of the Lenin plan and history will record this as the double squeeze play on the American people and their 30-cent-dollar economy.

But if the spirit of Valley Forge is still alive in America, these terribly shrewd and clever Socialists can yet be defeated. They can be, but will they? The answer is up to you.

J. WEBB SAFFOLD.

The Armistice Conference in Kaesong, Korea

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Victors Dictate the Conditions," written by Constantine Brown, published in the Washington Evening Star of July 4, 1951. It deals with the cease-fire conference now being held in Korea.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VICTORS DICTATE THE CONDITIONS—UNITED STATES FOR FIRST TIME IN 175 YEARS GIVES APPEARANCE OF BOWING TO THE WISHES OF AN ENEMY

(By Constantine Brown)

For the first time in 175 years since the Declaration of Independence was signed by the fathers of the Republic, the United States gives the appearance of bowing to the wishes of an enemy.

While our forces in Korea could have won a spectacular victory which would have ended the present conflict, the political leaders have decided to accept terms which the enemy even now is exploiting as an indication of America's defeat.

The United States and the United Nations have ordered the supreme military commander in the Pacific to offer truce negotiations to the enemy at the suggestion of

the Soviet Government. Technically Russia is not an enemy. Factually, it was Moscow which ordered the offensive of its North Korean puppets 53 weeks ago, and it was Moscow also which ordered its Peiping stooges to enter the conflict, when its North Koreans were utterly defeated last November.

Gen. Matthew B. Ridgway, following instructions from Washington, offered the Communists a cease-fire. He wanted the discussions to take place at once, and indicated the port of Wonsan as the place for the discussions.

The Communists retorted with counter-proposals. They demanded a 10-day delay, obviously to reinforce their troops, which had suffered severe losses, and also indicated that the delegates should meet, not in North Korea but in a South Korean town, the last foothold they have in that area.

This obviously was intended to bolster their propaganda among hundreds of millions of Asiatics that it is they, the victors, who dictate conditions to the capitalist imperialists. This was to be expected as soon as the name of Gen. Peng Teh-hual appeared as a co-signatory of the message of the Communists in reply to General Ridgway's cable. General Peng, a fanatical Communist, is the same man who negotiated the phony truce when Gen. George C. Marshall ordered Chiang Kai-shek to accept a cease-fire while he was defeating the Communist armies. General Peng is as shrewd as he is unpromising.

If we were to deal with an honorable foe, who shared the ardent desire for peace which the western nations have, little importance would be attached to these preliminary fenceings. Peace is worth many sacrifices, provided it is real and lasting. But we must expect—and even our diplomats agree to that—some very tough conditions from the Moscow-sponsored Communists.

The Peiping radio already is talking about settlement of all Asiatic problems, a settlement in accordance with Moscow's way of thinking. And this would mean the eventual surrender of all Asia to the Kremlin's influence.

Normally, if our Government were free and unfettered in its diplomatic actions, any conditions which are not compatible with our national interests and honor would be bluntly rejected. This is the desire of the Nation as evidenced by the voice of its elected representatives in Congress. Democrats and Republicans alike have served notice to the administration that the desire of the Chinese Communists to enter the United Nations against our will and to take possession of Formosa, in one way or another, would not be approved by our legislators. But they do not have a voice in our diplomatic dealings unless a peace treaty is brought before the Senate.

That body will not have an opportunity to express itself since we are not officially at war with either North Korea or China. Congress has never been asked to declare war on the countries we were fighting, because there was no war in Korea. The administration declared it a "police action" decreed by the United Nations.

The fact that America spent the blood of more than 100,000 of its young men and nearly a billion dollars a week does not apparently give us a greater voice in the forthcoming negotiations than our allies, whose losses have been trivial.

South Korea itself, whose towns and countryside have been utterly devastated and whose population has suffered millions of casualties, probably will have nothing to say whatever.

The political leaders of the administration would, no doubt wish to follow the desires of the Nation. But they feel strongly that we are now one element. Important, it is true, but still only a cog—in the great international machinery.

The executive branch of our Government believes strongly that we must do nothing which may be frowned on by our allies or which will not meet their wholehearted approval. That they want a settlement at any price in Asia is beyond any doubt.

It took some very hard diplomatic work, for instance, to induce Britain to impose official restrictions on the export of strategic materials to China, in spite of the fact that a few of her own sons were fighting and dying in Korea. Although the Chinese Communists in large numbers were fighting United Nations troops, the British Government continued to recognize Mao Tze-tung's Peiping government.

The eagerness with which the United Nations received the phony olive branch from Moscow and the subsequent approval of our cease-fire demand is a clear indication that these same United Nations members who have been so successfully urging us to fight a limited war in Korea, will now insist that we do nothing which might upset the enemy and thus frustrate the political aims of our enemy.

This attitude can be justified, insofar as our allies in Europe are concerned. They do not have, like this country, a common frontier with the Asiatics. In the past the vast expanse of the Pacific provided a degree of safety for us. Today we are uncomfortably close to the Asiatic mainland.

Pay Increases for Government Employees

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. KING. Mr. Speaker, under unanimous consent to extend my remarks, I include therein a statement made by me today before the House Committee on Post Office and Civil Service with respect to pay increases for Government employees.

The statement follows:

STATEMENT BY CONGRESSMAN CECIL R. KING BEFORE THE HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE WITH RESPECT TO PAY INCREASES FOR GOVERNMENT EMPLOYEES

Mr. Chairman and members of the committee, I am pleased to appear before the committee today on behalf of pay increases for postal and other Federal employees.

The testimony before the committee during the past several weeks has established the fact that it would require between a 20 and 25 percent salary increase to bring the Federal employees up to the increased cost of living.

The Federal employees in my district, Los Angeles County, Calif., are consistently feeling the pressure of increased living costs and it is indeed difficult for them to furnish their families with the bare necessities of life. As the members know, it is necessary for many of such employees to seek outside employment in order to properly care for their wives and children.

From the letters I have received from my constituents, I am certain there are numerous hardship cases among our postal employees due to the present inadequate wage scales. Of course, this means that the lower-bracket employees are feeling the pressure the hardest.

There are many bills pending before the committee proposing various increases for

Federal employees, and I hope that the committee in its wisdom will decide on an adequate increase which will enable these employees to meet the necessary obligations and save something for the future. I am anxious to see them treated justly in this respect. I have always supported reasonable and just benefits to the employees of our Federal service.

We all know that the Post Office Department is losing employees to private industry where they secure wages more in line with the increased cost of living. The process of constantly training new employees does not increase the efficiency of the Postal Service.

It is an obligation of this committee and the Congress to approve adequate increases for all Federal employees.

One group of southern California postal employees made a survey recently, and out of 7,195 employees questioned, 804 had left the service. One out of every 4 postal employees have their wives working, and the debts of over 90 percent of the employees are far greater than they were last year. This survey also found that over 1,400 employees separated themselves from the Los Angeles Post Office since July 1, 1950. This is a turnover of approximately 16 percent in the past 10 months.

In spite of the hardships experienced by postal employees I know that they are loyal and place their faith in the Congress which I trust will not let them down.

In my judgment, a substantial pay raise is long overdue for these public employees and I trust the committee will favorably report a pay bill within a week providing increases of at least \$600 annually.

Representative Trimble Discusses Electric Power Problems of the Arkansas Valley

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, June 30, 1951

Mr. HAYS of Arkansas. Mr. Speaker, on June 26 our greatly respected colleague the gentleman from Arkansas [Mr. TRIMBLE] made a significant speech at Ozark, Ark., in the district which I have the honor to represent. Mr. TRIMBLE was addressing northwest Arkansas leaders in the rural electrification movement. No one could speak with greater authority on the problems of that area, for the gentleman from Arkansas was born in the Ozark country and he knows and loves its people. Among the timely utterances in this important address are those relating to the interrelationship of public power agencies, private utilities, and the rural cooperatives. It is Mr. TRIMBLE's conviction that there is a place in our economy for all, and he clearly defines the basis on which they can serve each other and the public. He refers to the gaps in Federal policy on electric power and he does it with a sympathetic understanding of the point of view of each of the groups. Neither advocates nor opponents of public power will agree fully with what he says but they will recog-

nize in him one who is eminently fair and well-informed. I trust that his suggestions will be carefully weighed by those who are in position to influence decisions on this important question. Under leave to extend my remarks, I include the address, as follows:

Mr. Chairman, it is good to be with you today in the Arkansas Valley. I come not as a stranger. I come as a neighbor since I live just north of you in Carroll County. My father, when he was a boy, worked in this valley for Jerry Cravens and others. Prairie View, Morrison's Bluff, Coal Hill, Hartman, Ozark, and Clarksville were familiar names to me from his conversations when I was a lad.

I am honored to be your guest. I am proud to be a friend of the REA cooperative movement. If I have contributed in any measure to the program which you represent, I have contributed to the happiness and well-being of the rural people of Arkansas. I favor the rural electrification program. I know about its long struggle for survival in our State.

I have a firm conviction that a strong rural electrification program working with a strong private power program is necessary for our continued growth as a State. However, to permit the private power companies to continue to be the only source of power for our rural electrification co-ops is as contrary to our idea of free, competitive enterprise as it would be to give the REA co-ops a monopoly over the distribution of power. If this reverse situation were true today, you would not find me here speaking in behalf of the co-ops. I would, on the contrary, be lending my voice to help break your monopoly. A monopoly even in your hands would not be good for Arkansas. Only a monopoly of good will serve the State.

The REA co-ops have the right to generate their own power as they need it. They have the right to contract with the private companies. They have the right to contract with Government agencies that have power to sell. They have the right to do these things with the same freedom of choice as the private power companies. These rights must be as complete for the REA co-ops as those granted to any other business.

The Arkansas Valley Cooperative is as American as Plymouth Rock itself; as purely free enterprise as any private power company which does business in this country. The co-op and the private company both operate under the law, they both pay taxes; and they both market electricity.

The private power company is owned by stockholders who invest their money in the organization to make more money. The profit motive is a motive of the finest order. We must protect it and encourage it. If the private power company does not make a reasonable profit, the stockholders who have invested their money in the enterprise lose. As an end result the whole economy suffers by reason of the failure.

The rural-electric cooperative is owned by the people who use the electricity which it furnishes. The organization is built around the service motive. This, too, is a motive of the purest order and must be protected and encouraged. These users of electricity are the sole owners of the co-op. They are in it to receive electric energy furnished by the co-op. The co-op is by the very nature of things locally owned. If the REA co-op cannot get the power to serve its customers at a rate which it can afford, it, too, fails; and the economy of the whole country likewise suffers.

Our forefathers bound themselves together at old Fort Necessity and a hundred other forts in our early history for protection; and, for services to each other in many ways. The rural people of Arkansas have bound themselves together in 18 different organizations in this State for service and protec-

tion in their quest for electricity for their homes and for their farms. This service which they need was denied them for many years by the private-power companies then doing business in Arkansas. The longing of rural people for the conveniences of electricity was denied them because it was not profitable for the private-power companies to serve them. We understand why the private companies hesitated to run their lines through the rural areas of the State. We sympathize with their reasons for not doing so since they are in the business for profit. The congested areas offer far greater opportunity for profit than do the thinly settled areas. There are only two or three users to the mile on present REA lines in many instances. Since our goal is complete area coverage, there may be even less than two or three users to the mile in the rural areas when our goal is reached. One can readily see that this does not lend to success under the profit system of the private-power companies, who are obligated to their stockholders for good stewardship of the money entrusted to them. If the REA co-ops were impelled by the profit motive, they could not exist because of the sparseness of users in the territory which has been assigned them to serve, the expense of reaching them with power lines, and serving them afterward.

The private companies contend they cannot make a profit from selling power to the co-ops at the present rate, for the reason that users of the co-op system are spread over such a wide area with attendant expense of service. The principal private-power company in Arkansas filed a petition with the Arkansas Public Service Commission in October 1948 asking permission to increase the rates to the REA co-ops for the power which it sells the co-ops. The argument was that they could not break even at the prevailing rate. For some reason the petition was not pressed and has not come up for hearing. Could it be that the political weather turned out bad in 1948? I cannot give you the answer. At any rate, this petition hangs over our heads like the sword of Damocles. If this petition is sound in its purpose, then the electric users in the cities and towns of Arkansas who are served by the private-power company are making up the difference in this loss by paying higher rates for the electricity which they use. In other words, the centers of density subsidize the sparse areas. In view of this, it becomes increasingly difficult for us to understand why the private-power companies oppose our right to generate our own electricity; why they fight the building of our steam plant tooth and nail. If we are permitted to generate our own power, more power will be released to the private companies for sale to their customers in the territory which they serve, where there is constant demand for it and where it is more profitable to the companies.

The rural people have a right to organize to secure electric service. They deserve to be protected in that right with the same zeal with which we protect the profit motive of the private-power companies. The one is organized for service; the other is organized for profit. The one serves the rural areas; the other the congested areas. Each brings to the people of Arkansas an essential need without which progress would be impeded as it has been in the past.

One of our problems in Arkansas is to keep our young people on the farms where they belong and where they are needed. To help do this, we must run power lines over the hills, down the valleys, and across the prairies to every farm home in the State. We must furnish these homes with all the power they need at prices which they can afford. This generating plant will help us do that.

One of the most hopeful developments in our rural economy is emerging right here in northwest Arkansas where . . . and I live.

Twenty years ago most of those who tilled our soil were tenants. We lost population because our people moved to other States where opportunities for employment were better. This trend is being reversed. Today most of those who till the soil own their own farms. Others are returning to resume the work which they left a few years ago. I like to think that the REA co-op program has contributed something to this happy condition. I believe it has. Lights, water, radio, refrigeration, washing machines, milking machines, and a hundred other conveniences in house and barn have come to the farm home by reason of the service which we have given to our farmers. They have been encouraged to own land, rear families, and help build a better Arkansas.

We have no quarrel with the private power companies or their right to generate their own power. We do not quarrel with their right to enter into contracts with sister companies or with Government agencies who have power to sell. In fact, we demand these rights for them. We contend, however, that the rural electric co-ops have the same rights. They have the right to generate their own power. They have the same right of contract as the private power companies because each is a free enterprise organization.

Some contend that the REA co-op movement is socialistic. This argument is used by those who do not want to meet the issue on its merits. It is not socialism for people to band themselves together for service and to borrow money with which to operate. Many of our businesses borrow money on which to operate, but that does not make socialists of them. Some say we are socialistic because we borrow money from the Government. Are our railroads, our air lines, our steamship lines, and a lot of other businesses, even some of the private power companies, socialistic when they, too, borrow money from the Government? The charge of socialism has an oppressive weight in these times when so many domestic and international troubles beset us. The opposition knows this and exploits it to the full. The issue is being raised to discourage you in the fight which you are waging for the chance to generate your own power in the Arkansas Valley. If you win this fight, and I hope with all my heart that you do, you will have done more to encourage farm ownership, small industry, and thereby give new life to the coal industry than anything which has happened in this section since the rural electrification program became a reality.

Continuing with this idea of socialism which the opposition to the steam plant and the Southwestern Power Administration like to use, let me quote a very pertinent statement made in an editorial in the Tulsa (Okla.) Tribune of March 1, 1947, when the editor said:

"There is no need for public ownership of an enterprise in which rates and prices are regulated by competition. This is socialism; but it is not socialism for a people to control an essential need of which there can be but one source of supply."

A few years ago when social security legislation was pending before the Congress, the same propaganda was hurled as that being used today against you. The country was going socialistic and already was past redemption, so the story went. The insurance companies fought with all their strength to kill the program. They thought they would be ruined for sure by the legislation; they could even see His Satanic Majesty perched on their front steps. When that program was up for extension by the Congress last year after 15 years of operation, the insurance companies supported it wholeheartedly. They had learned that instead of hurting their business, the legislation had made people insurance conscious, and their business as a result was better than before. The same thing occurred in soil conservation and insurance of bank deposits.

There is a great deal of misunderstanding concerning the position of the Southwestern Power Administration and the Department of the Interior in our section. Especially is this true in regard to the steam plant. Section Five of the Flood Control Act of 1944 places the responsibility of marketing all the surplus power from hydroelectric dams which are built by the Department of the Army in hands of the Secretary of the Interior. The Congress has complete control of the program.

For the southwest section of our country, the Secretary of the Interior has delegated this marketing responsibility to the Southwestern Power Administration. The purpose of the Southwestern Power Administration is to carry to the market centers the power generated at all Government hydroelectric projects. The private power companies want to back up to each dam separately and buy all the power produced. One can readily see that this would cut out all competition because reason tells us that no more than one utility company in its right mind is going to the expense of building a power line to each of these hydroelectric projects, even if inclined to do so. The cities which may be near enough do not have the money to build lines out to the dams. The REA co-ops do not have the money to build the lines. This leaves, therefore, the Federal Government the only independent agency which can build the lines and market the power by carrying it to the load centers.

I support the proposition that the dams now producing and those which are to be constructed belong to all the people instead of just a few, and that they should be tied together for economy's sake and for greater bargaining power.

Evidence before our committee in the Congress from the Corps of Engineers indicates that by tying two or more dams together in separate sections of the Southwest, the people benefit by a 15 percent to 21 percent average increase in revenue because of the stabilizing influence which the connections would effect in the power output of the dams. For instance, if one dam happened to be running low because of drought or for any other reason, a dam in another section of the Southwest would be up, thereby balancing out the low level in the other dam to the average extent of 15 to 21 percent. Quite a saving as you can see.

I have supported the tying together of the dams for another reason. If the dams are tied together, there will be a contact for bargaining purposes not with one private utility company only, as they desire, but with 11 separate utility companies who serve in the Southwest. In addition, there will be contacts with countless REA co-ops and municipalities in the area. We will have not only from 15 to 21 percent more electricity to sell, but we will have many more customers bidding in competition for the power generated at the dams. Socialism does not exist and cannot exist where there is competition.

If the Southwestern Power Administration is killed or crippled, there will be only one purchaser of the power generated at each of these dams, and that will be a private power company. The Government is not in the retail power business, and I do not want it in the retail field. I shall oppose that diligently. We do, however, want competition in the wholesale field, especially in marketing the power from the hydroelectric power projects which all of us build with our taxes. The Southwestern Power Administration guarantees us that competition in our section, and it deserves our full support.

It is my considered judgment that the power projects under the Southwestern Power Administration offer great advantages to all the people, including the private power companies and the REA co-ops. I am firmly

convinced that the people of Arkansas want the Federal Government to build these dams and to tie them together with a high voltage line with necessary feeder lines, where those lines do not exist, to take this power to the people at rates that are reasonable and competitive. We believe that such a policy will encourage the private companies and the REA co-ops to continue to grow and prosper. The program of the Federal Government will supplement the power of the private companies and the REA co-ops and aid in the rapid development of our region. We have abundant supplies of cheap fuel in the form of gas, oil, and coal. Private companies and REA co-ops will develop steam generating plants using these cheap fuels. The Government will develop the hydroelectric plants because it is unreasonable to expect the private utility companies or any private agency to build all the dams which will be needed to harness the potential water power in all our rivers. The proper balance and coordination of the hydro and the steam plants will produce the cheapest power and extend its use to every farm home and to the smallest industry.

The Government's program could materially aid private companies and REA co-ops by supplying them capacity for peaking purposes. Private companies and REA co-ops could aid the Government by selling it energy to firm up its capacities in the hydro plants. Teamwork could produce the best results in our region; and teamwork is what we want. Simple justice and fairness to both the private utility companies and the REA co-ops is all that we ask, in order that progress can keep her head high; and ultimately return to the people the money which they have invested in these projects. We must retain them for the use of posterity.

It is said by some that the REA co-ops pay no taxes. Millions of dollars are spent each year by certain organizations working in this country in an effort to convince the public that we are non-tax-paying organizations. Since we are talking about REA co-ops and private power companies today, let us see just what the facts are with reference to these two groups:

First, the REA co-ops and the private power companies pay the same rate of ad valorem taxes. By that, I mean that each is assessed upon the tax books of the counties and each pays the same rate of State, county, municipal, school, and road taxes. In fact, in many of the counties of Arkansas, the REA co-ops are actually the largest taxpayers.

Second, the private power companies are allowed to earn 6 percent profit on their capital investment above expense of operation, depreciation, and taxes; the REA co-ops, however, provide for their operating expenses, which include their tax expenses.

Third, the private power companies, after interest on debts is paid, distribute their 6-percent profit to their stockholders if they desire, the cooperatives, on any surplus which may be created by overpayment by their users of electricity, issue capital credit certificates on the division of the surplus to their users.

Fourth, this distribution of the profit on the part of the private power companies and the surplus on the part of the REA co-ops to their stockholders and users is subject to payment of income tax by both the stockholders of the private companies and the users of the REA co-ops.

In other words, the cooperatives operate under the laws governing partnerships since that is what they are. Private power companies are governed by the laws governing corporations since that is what they are.

To make a long story short, when it comes to the final analysis, there is not a great deal of difference in the pro rata taxes paid by the private companies and the REA co-ops on the profit basis. Each in reality acts as a tax-collecting agency. The taxes paid

by each group are paid by the users of electricity in each system, when all is said and done.

If one-tenth of the effort expended by those who complain that the REA co-ops pay no taxes were devoted to removing the complained-of inequities in their own taxes, if any, they would have my sympathy. Could it be that they are not so much interested in the tax business after all? Could it be that their prime interest is to convey to the general public the impression that REA co-ops pay no taxes in an effort to kill the REA co-ops altogether? Give the people the facts and they will make the right decisions. We are a locally-owned, business-managed, and taxpaying business. We ask no special favors, but we do want to be recognized for what we are—a sound and proud part of the economy of a great State.

Our people in all walks of life are called upon for extra sacrifices at this time because an ally of ours in World War II, who claimed to seek peace, misled us. When the United Nations was organized, we asked for the veto in order to veto war. We thought Russia wanted the veto for the same reason; but to our chagrin and dismay, she has used it many times in the past 5 years to veto peace.

Our basic strength is our spiritual strength. If our reserves of spiritual values are high enough, we will not fail. We must work more, drift less; pray more, talk less; and, as a result, we will love more, hate less. These spiritual reserves must be fortified by our will to win. They must be fortified by economic strength. It behooves us as a people, therefore, to do all we can to maintain these values.

While none of us at home can equal the sacrifice of our lads who fight, there must be equality of sacrifice for industry, labor, and agriculture if it is humanly possible to achieve it. In a complex system such as ours, this is a difficult thing to do. In trying to find what is best for the country, it is necessary that each of us call upon our spiritual reserves and do our utmost to understand all sides of every problem which presses for solution.

As a Member of the Congress, I get constant strength from a quotation from Daniel Webster which is inscribed on a marble plaque above the Speaker's dais in the hall of the House of Representatives where we work. It is a challenge to us all. I commend it to each of you in this troubled hour: I quote:

"Let us develop the resources of our land, call forth its powers, build up its institutions, promote all of its great interests, and see whether we also in our day and generation may not perform something worthy to be remembered."

What Price Peace?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1951

Mr. BENDER. Mr. Speaker, peace or appeasement, that is the question. International law or international anarchy? Korean armistice terms, leaving the basic problem unsolved, make for more rather than less tension in world affairs. Even in Korea, the division of the country into two nations, with the most artificial of boundary lines, means

the perpetuation of this area as a source of future difficulties. The stalemate predicted by Gen. Douglas MacArthur has come true.

An aggressor has pushed the world to the brink of a new world war, and, although his invasion was repelled, his punishment has been limited only to the destruction of war, a risk which he undertook voluntarily. Nothing has been done to punish North Korea. Nothing will be done to punish North Korea. Nothing will be done to punish Red China for her intercession in the conflict contrary to the desires of the United Nations.

They have gotten away with something, and the world is the poorer for their achievement. Other areas of the world are still troubled. Iran, Yugoslavia, Indochina, Burma, Berlin—all these are on the danger list. Meanwhile the Soviet orbit expands. Since the beginning of World War II, the Russian sphere of influence has grown by more than 4,000,000 square miles and some 550,000,000 people.

We have not achieved peace. We have simply contracted for another breather, a new waiting period. Let us not make the mistake of folding our tents or relaxing our vigilance. The enemy is silent. He is not departed.

The Truce Conference in Kaesong

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "In Ignorance and Indignity," published in the Wisconsin State Journal on July 11, 1951. It refers to the cease-fire talks now being held in Kaesong, Korea.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

IN IGNORANCE AND INDIGNITY

Americans—and their United Nations allies—don't know what's going on in Kaesong, the city of Korean cease-fire talks, because no American or U. N. correspondent has been permitted anywhere near it.

But the Red world is getting reams of the Communist version * * * and it is a version calculated to put U. N. conferees in the worst possible light, to paint them as the defeated humbling crawling to sue for peace.

Against this version there is no counteraction of truth * * * because the people who could tell it to the world get no chance to see it.

American correspondents have raised a storm of anger at General Ridgway's reneging on his promise to pass a representative group into Kaesong, and their anger is righteous, for it is in the name of the American people who have to pay the bill for what has happened and what may follow.

It is entirely possible that Dean Acheson's State Department has overruled General Ridgway's plan to permit correspondents to observe negotiations to conceal from Ameri-

cans exactly how badly American negotiators have been forced to suffer indignities at the scene—indignities which Communist correspondents, photographers, and newsreel cameramen have been on the scene to record.

Kaesong, picked by the Reds for the conferences, was supposed to have been a neutral city. By mutual agreement, there was to be no display of arms.

Yet when the American officers landed—unarmed, as per agreement—they were surrounded by heavily armed Red Chinese, forced to walk down a lane of armed guards * * * all without a whisper of protest from the Americans.

It makes a nice picture to convince the world that Uncle Sam is beaten, pleading for peace and that everybody had better stick close to Uncle Joe since Uncle Sam can't protect anybody.

The time is too soon, the secrets too dark yet to tell who has won, either the Korean war or the preliminaries, false or real, to its ending.

But it is plain so far that in the propaganda campaign—which Mr. Truman and Mr. Acheson keep telling us is an all-important phase of modern warfare—America has been made the sucker.

And it has been made that way through its own fault.

The Communists, of course, set it up that way.

They might certainly have been expected to.

Did Mr. Truman and Mr. Acheson realize they would, and yet do nothing about it?

They're doing nothing about it now when they continue to suffer duplicity and let the representatives upon whom the American people depend for information cool their heels in frustration and ignorance miles from the scene of a momentous action.

Congress on Trial

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. FORAND. Mr. Speaker, under leave granted me, I insert a part of my remarks in the following editorial entitled "Congress on Trial," which appeared in the New York Times of Saturday, July 7, 1951. The editorial follows:

CONGRESS ON TRIAL

In his second quarterly report to the Nation, Mobilization Chief Charles E. Wilson indicated clearly that he is less concerned about the problem of production than that of run-away prices. "The initial surge of post-Korea inflation," he said, "has been halted—at least temporarily. The crucial question is: How long will the present lull last, and can the line be held when heavy pressures appear?"

Present plans call for a boost in military spending in the next 12 months from the present rate of \$35,000,000,000 a year to approximately \$65,000,000,000. This will mean an enormous increase in spending power. But that spending power will not be offset by a corresponding increase in consumer goods. On the contrary, substantial cut-backs lie ahead for such key items as automobiles and other consumer durable goods. By next summer, according to Mr. Wilson's estimate, the inflation gap will amount to some \$20,000,000,000.

In spite of this ominous picture, reports from Washington indicate that Congress is still thinking in terms of relaxing, rather than strengthening, the present economic controls. It is showing little, if any, evidence that it is prepared to resist the pressure from interested groups for the elimination of the price roll-backs provided for under the original Defense Production Act. Yet, according to Economic Stabilizer Eric Johnston—who presented figures to support his conclusion—this alone could mean a rise of 5 to 7 percent in the cost of living over the next 12 months.

The time has come, it seems to us, to ask when Congress is going to cease merely reflecting the passing emotional moods of the public and begin acting like an adult and intelligent group of legislators. When the Korean war began at the end of June last year this country was in the midst of serious inflation—inflation that had nothing whatsoever to do with the international situation. It stemmed from the Government's overstimulated housing program and from rampant abuse of consumer credit. The administration itself failed, until Korea, to recognize the seriousness of this situation, but what was Congress doing at this juncture? It was busy overhauling the revenue law so as to grant sweeping relief from the prevailing excise taxes, although the Federal Government was even then running a deficit at the rate of \$5,000,000,000 a year.

Once the Korean war was under way the President outlined to Congress his plan for financing a new military effort on a pay-as-you-go basis and asked for certain limited powers in the way of conserving key materials and reducing the threat of further inflation. Now Congress, which had previously been in a deep sleep, suddenly came to life. It came to life, however, only to plunge from slumber into hysteria. Instead of acting on the carefully conceived proposals of the President with the promptness that was so important in the circumstances, it permitted itself to be swept off its feet by the public's mood of the moment, with its emphasis on profiteering and scare buying. For a time it was touch and go as to whether the legislators would succeed in forcing upon the President compulsory controls for which he had not asked, did not want, and, at that time, most certainly did not need. In the end calmer counsel prevailed, and Congress, while still insisting that the administration be vested with powers of over-all direct controls, compromised by placing these on a stand-by basis. But it spent so much time wrangling over the details of this program that it was nearly 2 months before the President obtained the limited powers for which he had asked.

Had the fighting in Korea continued to be a localized war there might never have been any need for invoking the stand-by direct controls. But as we now know, the fighting was not so contained. What completely altered the picture was the entrance of Communist China into the war in late November. That event brought to the United States and to the free nations as a whole a new perception of the dangers in store, not merely in Korea but everywhere, from the leaders of the Kremlin. It introduced new dimensions into our preparedness program, from a military and an economic standpoint, and a new imperative in terms of time.

History will be inclined, we think, to overlook the impetuous behavior of Congress a year ago when it insisted that a police action in Korea warranted the establishment of a sweeping system of direct controls. We doubt that it would regard as lightly the failure by that same body to give the President the powers he regards as imperative for dealing with a problem of the nature and proportions of that we have been facing since last November.

Psalm of the Bureaucrat**EXTENSION OF REMARKS**

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including the following which appeared in the Grace Church Bulletin of Savannah, Ga. It is timely and pertinent:

PSALM OF THE BUREAUCRAT

The Government is my shepherd, I shall not work. It alloweth me to lie down on good jobs; it leadeth me beside still factories. It destroyeth my initiative; it leadeth me in the paths of the parasite for politics' sake. Yea, though I walk through the valley of laziness and deficit spending, I will fear no evil; its doles and vote-getters they will comfort me. It prepareth an economic utopia for me by appropriating the earnings of my grandchildren. It filleth my head with bologna, my inefficiency runneth over. Verily the Government shall care for me all the days of my life and I shall dwell in a fool's paradise forever. Amen.

Hon. Joseph R. McCarthy's Address on General Marshall**EXTENSION OF REMARKS**

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by George Sokolsky, published in the Washington Times-Herald of Sunday, July 1, 1951. It deals with my address on Gen. George C. Marshall.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George Sokolsky)

Senator JOE MCCARTHY put together a study of Gen. George Marshall from the record made by his friends.

The immediate newspaper reports were based not upon the Senator's 60,000-word speech but on a supposition of what he might have said.

In current journalism, this is called "high lighting" and is generally inaccurate and distorted.

So I waited until I could get a full copy of the speech; read the whole 60,000 words and realized that the Senator had done a decent job of research and analysis.

To make the matter clear, this is a partial bibliography that Senator MCCARTHY used in connection with this speech:

Winston Churchill, *The Hinge of Fate*; Admiral Leahy, *I Was There*; Cordell Hull, *Memoirs of Cordell Hull*, vol. II; Henry L. Stimson, *On Active Service*; James F. Byrnes, *Speaking Frankly*; Sumner Wells, *Seven Decisions That Shaped History*; Edward Stettinius, Jr., *Roosevelt and the Russians*.

Also, Robert Sherwood, *Roosevelt and Hopkins*; Hanson Baldwin, *Great Mistakes of the War*; Gen. H. H. Arnold, *Global Mission*; Gen. Claire Chennault, *Way of a Fighter*;

Gen. Lucius Clay, *Decision in Germany*; Gen. Mark Clark, *Calculated Risk*; Gen. John R. Deane, *Strange Alliance*; Gen. Omar Bradley, *The War America Fought*, Life magazine, April 30, 1951.

Also, Edgar Ansel Mowrer, *The Nightmare of American Foreign Policy*; Jonathan Daniels, *The Man of Independence*; Freda Uteley, *The China Story*; Henry Wallace, *Soviet Asia Mission*; Robert Payne, *Mao Tse-tung—Ruler of Red China*.

This bibliography is important because it shows not a single enemy—personal or political—of General Marshall, unless it be Winston Churchill, with whom Marshall did not see eye-to-eye during phases of the war.

I do not propose here to indicate my own judgment of this speech; I shall do that at another time.

The point of this piece is to suggest that the speech ought to be read; ought to be taken seriously; and should be discussed.

It is apparent throughout that Senator MCCARTHY, while not approving of General Marshall, devotes most of his long speech not to his own views but to quotations from others. He says:

"There are various ways in which to arrive at an estimate of a wartime figure. It is helpful if he will write his own recollections, but that General Marshall has declined to do, giving, as I understand it, the explanation that to do so would injure certain reputations.

"If all public figures accepted that thesis, I may remark in passing, the public would be even less enlightened than it is at present.

"In pursuit of an estimate, one may also gain information from official records. The records of the Joint Chiefs of Staff and the Anglo-American combined chiefs of staff are not open to my perusal.

"In the end the inquirer will also find in the archives of the enemy, when they become available, evidence regarding the behavior of his own leaders.

"If the archives of the Kremlin are ever open to us, we shall have even deeper insight than we have today concerning the conduct of our current leaders.

"But as matters now stand, I have been forced to rely upon the memoirs and upon some other contemporary sources.

"I repeat that all these are friendly sources, and cannot be charged with attempts to injure General Marshall."

From that point on, Mr. MCCARTHY devotes himself to showing how General Marshall placed himself in posture to run the American participation in World War II, largely by quarreling with Winston Churchill over where the second front was to be and how it was to be managed.

It was Churchill versus Stalin, with Marshall on Stalin's side. Out of this particular decision, which Marshall finally won, Stalin gained mastery of Eastern Europe.

MCCARTHY then goes on to discuss Yalta, raising the issue for the 1952 campaign.

"It was Marshall who stood at Roosevelt's elbow at Yalta, urging the grim necessity of bribing Stalin to get into the war.

"It was Marshall who submitted intelligence reports to support his argument, suppressing more truthful estimates, according to Welles, in Hanson Baldwin's book on page 81, and keeping from the stricken Roosevelt knowledge that the Japanese were even then feeling for peace in acknowledgment of defeat."

It is interesting that some writers insist upon calling all this hindsight.

They forget that men like Herbert Hoover, Hugh Gibson, Arthur Bliss Lane, William C. Bullitt, Joseph P. Kennedy, and many others, including, if I may be so immodest, myself, had lots to say on this subject from 1938 until today.

As one lists such names, it would be most unjust not to include Charles Lindbergh, who was pilloried and destroyed as a public figure because he recognized early the truth of Russian imperialism.

Self-Denial?**EXTENSION OF REMARKS**

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. HAND. Mr. Speaker, if brevity is the soul of wit, the Ocean City (N. J.) Sentinel-Ledger has published a witty editorial, which follows:

GLASS-HOUSE DWELLER

President Truman, in a Fourth of July address, called upon the American people to exercise restraint and self-denial.

Huh!

Granting of Bail to Convicted Communists**EXTENSION OF REMARKS**

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. GARMATZ. Mr. Speaker, I think it was most unfortunate for the American people to read that Judge Learned Hand, of the United States court of appeals, restored the 15 Communists to bail. The reinstated bail was posted by the bail fund of the Civil Rights Congress of New York. This organization was described by Judge Sylvester J. Ryan as unworthy of trust.

I appreciate fully the line of demarcation which divides the executive, legislative, and judicial arms of Government. My work is legislative, and I have listened with great interest to the speeches made on the floor of Congress by my colleagues on the terribly menacing conditions to our Nation and the world, brought about by a scheming, cunning, conspiratorial group of Communists. They hatch their nefarious plans in Moscow, and their dupes in our own country follow out orders.

The information that I receive in Washington comes from the grass roots of our country, from the common people, the people that make up our country. It is the same sentiment which I hear expressed in my own district, from my constituents. I have never believed in witch hunting, but the time has come when American citizens must speak out. That time is now. Judges can do what they please within their own respective jurisdiction, but at the same time, sitting in their study cloisters, I think it would be good for them to know what the public sentiment is, not only in our own city of Baltimore but throughout the Nation. They should know that they must respect public sentiment and must not yield to the false blandishments of these clever Communists, who are determined to overthrow by force our Government and its free institutions.

While I hope there will be a ceasefire, as do all mothers and fathers of the boys who are engaging in the grim but useless struggle in Korea, the attitude of the Communists and their insidious propaganda shows that they are trying,

to make fools of General Ridgway's delegates and those of the United Nations. We must be on guard. Attempts are being made right here in the States by a group of Communists to tear down everything that we hold dear and precious in religion and in those ideals and precious values of a free Government. I certainly hope that our judges will be responsive and understanding. As I have said, I would not invade the judicial province, but I must protest the soft and spongy attitude of Judge Hand. I respect his learning and know that he is a great jurist, but I am afraid that he has been hoodwinked by the Communists, who talk one way and act another.

Discharge of Lt. (jg) William Henry Evans, Jr.

EXTENSION OF REMARKS OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain references taken from the files regarding the discharge of Lt. (jg) William Henry Evans, Jr., together with a letter from the Secretary of the Navy.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

EDGEWATER, MD., June 20, 1951.

From: William Henry Evans, Jr., ex-lieutenant (jg) USNR, 513024/1105.
To: The Chief of Naval Operations.

References: (1) Discharge Order to Lt. (jg) W. H. Evans, Jr.; (2) Navy General Order No. 16, (3) OPNAV 37-50; (4) oath signed on May 11, 1949; (5) Constitution of the United States and Bill of Rights.

Subject: Filing this correspondence in officer's jacket and immediate action to expedite money still owed to officer, plus his personal effects, etc., request for.

1. On May 11, 1949, I signed an oath to the effect "that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter: so help me God."

2. I have carried out this oath to defend my country against those domestic enemies of the United States who no longer believe in the Constitution of the United States with its Bill of Rights, who no longer wave the Stars and Stripes as the only flag that Americans should pay allegiance to, who desire to replace the American bald eagle symbol with the United Nations black widow spider symbol, or the Red Russian bear, and who always put the interests of the United Nations and Soviet Russia above those of the United States.

3. Regardless of the clever high-sounding propaganda to the contrary, the present administration is leading the United States to national suicide. The betrayals of Tehran, Yalta and Potsdam (and others less notable, but just as deadly) have put Soviet Russia into a position to make a bid for world

domination. The record of this treason speaks for itself; these traitors already have convicted themselves by their words and deeds.

4. For the unpardonable sin, in the eyes of the present administration, of putting the welfare of my country above the interests of the pro-Red United Nations and Soviet Russia, my commission as a lieutenant (junior grade) in the United States Naval Reserve was revoked, and I was discharged from the naval service under honorable conditions.

5. In spite of the fact that I was officially and repeatedly informed that I was being tried on whether or not I had violated naval general order No. 16 which states that anything authorized for publication must have advance clearance, my discharge order clearly indicates that I was discharged for the text of my letter and not the failure to obtain advance clearance.

6. Moreover, paragraph No. 3 of my attached discharge order also states that "your action was in violation of a directive of the Chief of Naval Operations, requiring advance clearance of statements concerning foreign policy by members of the naval service." This quotation from my discharge order is known as OPNAV 37-50, which was a continental dispatch sent out in December 1950. To clearly illustrate that my discharge was a political matter out of the hands of the Navy, I shall elaborate on the above quotation from my discharge.

(a) I never saw nor heard of OPNAV 37-50 until April 25, 1951, which was 26 days after my letter to Mr. Alfred Kohlberg was published and 40 days after I had written the letter.

(b) On April 25, 1951, upon the arrival of a dispatch to the United States Steamship *Rogers* in the Yellow Sea ordering me to proceed immediately to Tokyo, Japan, I was shown this confidential OPNAV 37-50 for the first time, whereupon I read and signed it as directed (on April 25, 1951).

(c) I informed the Naval Board of Inquiry at Sasebo, Japan; the Naval Disciplinary Hearing in Washington, D. C., and finally the Secretary of the Navy that I could not be held accountable for OPNAV 37-50 under the above circumstances. They all agreed with me on this obvious fact, since I had never seen OPNAV 37-50 until after the letter was written and was published.

(d) In connection with my letter I was continually informed that the text of my letter was not the issue, but the violation of Navy General Order 16. Nevertheless, the contents of the letter were argued with me by persons who had not qualified as competent to pass judgment on the text of the letter, or to discuss such matters objectively.

(e) Even though I could not be held accountable for OPNAV 37-50, Francis P. Matthews accused me of violating this directive and tried me for it, as my discharge order clearly shows. A naval officer is not supposed to keep himself informed of confidential directives (that he has never seen nor heard of) by mental telepathy direct from their sources.

7. A glance at paragraph 3 of my attached discharge order definitely proves that I was tried solely on what I said and not on anything else. I, therefore, demand an explanation as to why my discharge order included a violation of OPNAV 37-50, when no evidence could possibly hold me accountable for that directive, besides being informed that I would not be tried on it.

8. Not only was I convicted for my words against the present administration leaders, I also was tried and convicted for the crime, in the eyes of the pro-Red administration, of daring to expose their idol, Franklin D. Roosevelt, who made the world safe for communism through his betrayals.

It really is a mystery why the author of my discharge order did not convict me for

stating in my letter that Alger Hiss was in a key position at the Yalta betrayal.

In reference to Franklin D. Roosevelt, my discharge order states that my contemptuous words used constitute grave misconduct on the part of an officer of the naval service. Any attempt to inform the American people what really happened at the betrayals of Tehran, Yalta and Potsdam is classified as unsatisfactory performance of duty on the part of an officer whose first loyalty is to the United States of America.

9. The phrases used in paragraph three of my discharge order bear a striking resemblance, in my opinion, to the double talk so skillfully exploited by the Soviet Union.

10. Since the United States Navy was under orders, I was rushed around Japan and forced out of the Navy so fast that I was not able to obtain the following items which are due me:

(a) Personal effects: On May 5, 1951, I was ordered to proceed to Tokyo, Japan, from Sasebo, Japan, in a manner approaching indecent haste, to put it mildly. As my orders at that time still directed me to return to the U. S. S. *Rogers* and to resume my regular duties aboard ship, I naturally left most of my personal belongings aboard my ship. Moreover, as the result of being forced to rush under pressure, I also left some of my personal belongings aboard the U. S. S. *Prairie* (AD-15) which was in Sasebo, Japan, at that time.

Upon arrival in Tokyo on May 5, 1951, I was informed by the pro-American underground that a dispatch had been sent to Tokyo from Washington several days previous requesting Tokyo to originate a recommendation for the revocation of my commission. This was the dispatch which undoubtedly was the reason for my sudden and mysterious change from a defendant to a witness in the Naval Board of Inquiry at Sasebo, Japan.

There is more evidence that I have in this matter, which I shall release shortly, but the main purpose at this time is to show why I became separated from my personal effects.

Upon receiving orders to proceed to Washington, D. C., immediately, I inquired about my personal effects still aboard the ship. In spite of the fact that the ship was due back at Yokosuka on May 17, 1951, I was ordered to leave Japan on May 7, 1951. Now, if this had been a naval matter, the Navy would have let me remain in Japan for another 10 days to gather my personal effects. The orders from Washington stated that they wanted me back there as fast as possible.

(b) The United States Navy still owes me several hundred dollars which I should have received before I was separated from the naval service, plus 8 3/4 days' leave coming to me. For this leave I demand 8 3/4 days' full pay on my pay scale as of May 29, 1951. When I attempted to obtain all the money due me before I was separated, I was informed that I could not be paid one cent because my permanent pay record was not there.

The Navy forced me to become separated from my permanent pay record on May 2, 1951, and never gave me an opportunity to let it catch up to me. Before I left Tokyo, Japan, I pleaded with the officer who signed my orders directing me to Washington to allow me to wait several days in order that I could receive my permanent pay record which was following me up and down Japan. At that time I knew that I would have trouble later in getting paid. Regardless of my pleas, I was ordered to leave Tokyo on May 7, 1951, without my pay record.

In Washington, D. C., a temporary pay record was made out for me at great inconvenience to all concerned. When I requested my money, I was informed that I would not receive a cent until my permanent pay record arrived.

When I left Japan, the officer who signed my orders there promised that my pay record would be rushed to Washington via air mail. It is now June 20, 1951, and I still have not received any money from the United States Navy.

11. It is hereby demanded that the United States Navy expedite my personal effects to me as fast as they rushed me around Japan and forced me out of the Navy without paying me. Moreover, I shall go over to the Officers' Accounts Section in the Main Navy Building in Washington D. C., at 0900 on Tuesday, June 26, 1951, at which time I intend to go over my pay account with the proper authorities and settle this matter to our mutual satisfaction.

12. While holding no bitterness against the naval service, nor against any naval officer, my patience has been stretched considerably in the matter of my personal effects and money due me.

13 The American people realize, as well as I do, that the United States Navy was not responsible for my discharge from the naval service for expressing pro-American views and living up to my oath of allegiance.

WILLIAM HENRY EVANS, Jr.

(Senator John L. McClellan, Senator Ernest W. McFarland, Senator Walter George, Senator Paul Douglas, Senator Everett M. Dirksen, Senator Bourke B. Hickenlooper, Senator James O. Eastland, Senator Harry F. Byrd, Governor Theodore R. McKeldin, Congressman Edward T. Miller, Congressman James Devereux, Congressman Edward A. Garmatz, Congressman George H. Fallon, Congressman Lansdale G. Sasser, Congressman J. Glenn Beall, Congressman Dewey Short, Gen. Douglas MacArthur, Admiral Louis Denfeld, Captain Cronmellin, Mr. Guy George Gabrielson, Mr. Alfred Kohlberg, the Chicago Tribune, the Washington Times-Herald, the Washington Star, the Ashland (Wis.) Daily Press, the Annapolis Evening Capital, the Southern Maryland Times, the American Legion, the Freeman magazine, Common Sense newspaper, Associated Press, International News Service, United Press.)

MAY 28, 1951.

From: Secretary of the Navy.

To: Lt. (jg) William H. Evans, Jr., USNR, Bureau of Naval Personnel, Navy Department.

Via: Chief of Naval Personnel.

Subject: Revocation of Commission and Discharge from the United States Naval Reserve under honorable conditions.

Reference: (a) General Order No. 16; (b) Bu-Pers CL 207-49.

1. When directed by your commanding officer you will regard yourself detached from all duties which may have been assigned you. You will immediately report to the Commanding Officer, Naval Receiving Station, Washington, D. C., for temporary duty in connection with your separation processing in accordance with reference (b).

2. Upon completion of separation processing, and when directed by the commanding officer of the activity at which you are separated, you will regard yourself detached. By direction of the President, the revocation of your commission and discharge from the United States Naval Reserve under honorable conditions are effective at 2400 on the date of detachment.

3. This action is taken by reason of your action, while serving aboard the U. S. S. *Rogers* (DDR-876) on 16 March 1951, in addressing and mailing a letter, containing express permission for republication and to a person and under circumstances providing reasonable cause for belief that republication would be effected, which letter contained highly intemperate criticism of the foreign policy of the United States and impugned the motives and good faith of officials on the highest levels responsible for the formulation and implementation of that policy.

Your action in this respect is considered to have constituted unsatisfactory performance of duty, in that it had a foreseeable tendency to promote disunity and disaffection among other persons in and outside the Armed Forces, rather than singleness of aims and purpose in an hour of national peril. Your action was in violation of a directive of the Chief of Naval Operations, requiring advance clearance of statements concerning foreign policy by members of the Naval Service. Moreover, the contemptuous words used in your letter with reference to the present and a previous incumbent in the Office of President of the United States, and to the present Secretary of State, constitute grave misconduct on the part of an officer of the naval service.

4. Cost of travel is chargeable to subhead 18, MPN, current on date of detachment (1711463 for 1951, 1721463 for 1952), expenditure account 74110, object class 029.

FRANCIS P. MATTHEWS,

Secretary of the Navy.

Government at Halt

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. ANGELL. Mr. Speaker, pursuant to leave granted, I include as part of these remarks the lead editorial which appeared in the Oregonian in its issue of Sunday, July 8, 1951, entitled "Government at Halt."

GOVERNMENT AT HALT

The flow of war news and crime news from the Nation's Capital in recent months has been such as to obscure an important fact: The Federal Government is not accomplishing its real job, which is to govern.

This is made all too clear in the current box-score report of the bipartisan Citizens Committee for the Hoover Report, a group singularly unimpressed by the headlines about congressional labors on the Kefauver committee and in the MacArthur hearings. The report reveals:

1. Of the 20 Government reorganization proposals placed before the Eighty-second Congress, not one has received favorable approval. In fact, there have been hearings in both Houses on only one minor measure, no action at all on 19 measures in the House of Representatives and no action on 15 of the proposals pending in the Senate.

2. President Truman is still sitting on 51 reorganization plans submitted to him May 8. Not one proposal has been submitted to the Congress.

By contrast, the Eighty-first Congress passed a total of 34 Hoover report proposals constituting roughly half of the entire reorganization program.

And the record of action on the Hoover proposals is just one portion of the evidence of governmental stalemate. The first session of the current Congress, prior to June 20, had enacted only 51 laws, most of them in the category of Public Law 42, which gives each Congressman an increased allowance for telegram and telephone tolls. The busier Eighty-first Congress had passed 114 laws by June 20 of its first session in 1949, and 126 laws by the same date in its second session in 1950.

This poor showing of the Eighty-second Congress may be explained, in part, of course by the unprecedented time taken by the Kefauver and MacArthur hearings. Senators cannot listen to and pass judgment on

2,000,000 words of testimony and still give full time to their other legislative duties.

But there are other reasons for the stalemate, and an important one is the gulf that lies between the President and the Congress in almost all matters of major policy. So inhospitable is Congress to proposals of the administration that even such bipartisan humanitarian proposals as the measure for shipment of food to India meets rough going in the legislative branch.

While such a situation exists, the United States can be said, with some element of truth, to be without a functioning government.

Meanwhile, lying dormant are such Hoover Commission proposals as those for reorganization of the Veterans' Administration, for the reorganization of the post office and elimination of politics from postmaster appointments and for consolidation of Federal public works activities of the Army Corps of Engineers and the Bureau of Reclamation.

Enactment of these and other pending reorganization bills would not only save billions of dollars but would add immeasurably to the efficiency of the Federal Government.

Hon. Joseph R. McCarthy's Address on General Marshall

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "Senator McCarthy, of Wisconsin," published in the Colton (Calif.) Courier, and also an editorial entitled "What Senator McCarthy said About General Marshall," published in the Washington Times-Herald of June 24, 1951.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Colton (Calif.) Courier]

SENATOR MCCARTHY, OF WISCONSIN

Senator MCCARTHY, of Wisconsin, the stormraiser of the Republican Party, is as necessary on the American political scene as any man in Washington. If it weren't for the McCarthys, who are willing to court unpopularity by calling a spade a spade, the country would be in bad shape indeed.

His latest 60,000 word attack was directed at General Marshall and only incidentally at Dean Acheson.

Even editors who decry the efforts of McCarthy admit that the policies of the two above-mentioned gentlemen have brought the United States to the brink of a terrible war and even now to a war which is costing thousands of American lives.

Their mistakes in Asia have been enormous. Whether their intent was purposeful or not the net result was the same and if it takes a McCarthy, shouting at the top of his voice, to rid public life of these two men, we are for him.

Dean Acheson didn't even know that he had Communists working for him. He defended Alger Hiss to the last. On the other hand McCarthy flayed the Communists in Washington with everything at his disposal and succeeded in routing many from public office and putting many in prison.

Let us not be too hasty in condemning McCarthy. He is the one man in Washing-

ton who seems capable of doing something about a very bad situation.

[From the Washington Times-Herald of June 24, 1951]

WHAT SENATOR MCCARTHY SAID ABOUT GENERAL MARSHALL

Senator JOE MCCARTHY made a 60,000-word speech about General Marshall, on June 14. The kept columnists and newspaper errand boys of the Pendergast mobsters have been screeching the house down, ever since.

They have suggested the Senator is a skunk, traitor, mudslinger, faker of facts, and all-around candidate for horse-whipping. Are they right?

We don't see how anybody can possibly say unless and until after examining the evidence. And right here and now, we will place a small bet, Senator KEFAUVER notwithstanding, that not one of those who have been calling JOE MCCARTHY names since June 14, has actually done the basic homework job of reading the speech, itself. This especially means the editors and writers of the Washington Post.

The writer of this editorial has read MCCARTHY's speech and finds it is a challenge that will have to be met and dealt with, sooner or later.

And what did MCCARTHY say? He said that he had decided to find out what makes Marshall "the greatest living American" and "master of global strategy," as the Truman propaganda has it.

Marshall himself has very carefully avoided giving any direct testimony on the subject.

At the end of World War II, the other principals on the supposedly winning side of the venture who were not still on active duty sat down to give an accounting.

It was their public duty to do so, not to mention a natural act of pride in work supposedly well done.

Secretary of State Cordell Hull, Secretary of War Stimson, Generals Eisenhower and Bradley, Winston Churchill and Admiral William Leahy, Roosevelt's Chief of Staff, are examples of those willing to utter.

Roosevelt, as everybody knows, was carefully saving his papers for his own purposes and since his death whole armies of interpreters have used them.

Secretary of Defense Forrestal was driven to suicide before he could get his own case on the record.

Gen Douglas MacArthur has been on constant foreign service until now and so has not been in a position until this year to begin his own accounting, but he has not hesitated to do so at the opportunity given.

MARSHALL STAYS UNDER COVER

But Marshall? At the end of the war when he retired to Leesburg, Va., Marshall said that he would never tell what he had been doing because he would either have to lie or to wreck reputations with the truth. It was a cryptic and mysterious line that has kept many an inquirer after the facts on the alert ever since.

At any rate, Marshall has kept under cover at all times, both on duty and in retirement, so that any researcher of his career has to look to others for testimony about his behavior.

In preparing his survey of the mysterious general, MCCARTHY said:

"I have drawn on the written record; on the memoirs of the principal actors in the great events of the last 10 years; I have drawn heavily from the books out of which the history of these times will be written for the next 500 years.

"I have drawn from the pens of Admiral Leahy, Winston Churchill, Mark Clark, Robert Sherwood speaking for Harry Hopkins, Henry L. Stimson, James F. Byrnes, Edward R. Stettinius, Jr., Sumner Welles, Cordell Hull, General Arnold, General Deane, General Chennault, and Jonathan Daniels.

"No one of them alone was trying to or did give anything remotely approaching a complete record of Marshall. The picture emerges, however, as we piece together their recollection of the events in which he figures—oftentimes fragmentary, never directly uncomplimentary, but when fitted together, pointing unerringly to one conclusion.

"It is from these sources, plus the State Department's own files, that the picture becomes generally complete."

And what is the picture? In the war against Germany, Marshall forced on Roosevelt and Churchill the strategy that has resulted in Stalin's grip on Europe. Once, to win his way, he even threatened that he would have Eisenhower resign command of the invasion army.

Read the evidence in the recorded sources above listed, if you doubt that Marshall made the strategy that has made Stalin in Europe.

Was the result a good thing?

The same sources tell how Marshall forced his own judgment in the policy on Asia that has put Stalin in possession of China and now has the United States bloodily involved in a Korean war that has no recognizable end.

Was that a good thing?

Marshall is the publicly proclaimed author of still another policy, the prodigal spending of United States taxpayer's dollars in Europe since the war that has brought us such remarkable gains as the Socialist dictatorship of Britain, the limber-legged French and other continental blackmailers and a soaring cost of living here in the United States.

Marshall's career as "the greatest living American" and master of global strategy has cost this Republic a fearful price. The full amount is not yet known.

God save us from any more of it.

Above and Beyond the Call of Duty

EXTENSION OF REMARKS OF

HON. JOHN A. WHITAKER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. WHITAKER. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial entitled "Above and Beyond the Call of Duty," appearing in the Sunday Star, Washington, D. C., on Sunday, July 8:

It is right that the Pentagon should guard jealously the high prestige of the Medal of Honor. The highest decoration which the Government awards for bravery against an enemy should not be lightly bestowed. But the concern which some Army officers are reported to have expressed privately over the number of medals awarded so far in the Korean war does not seem to be well founded.

The number of medals awarded within a given period of combat does not necessarily have any bearing on the justification for the awards. The decoration traditionally goes only to those few soldiers who have displayed conspicuous gallantry in action above and beyond the call of duty. The act of heroism must be attested by at least two eyewitnesses and must be confirmed by careful official investigation. Pentagon officials assert that these standards for the award have been rigidly maintained since the outbreak of war in Korea. It follows, then, that the award of the Medal of Honor to 28 valiant fighting men is indicative only of a type of action in Korea that sets the stage for frequent acts of extreme heroism. It

does not mean that our soldiers in Korea are, as individuals, any braver than those of other wars, or that the Armed Forces are any more liberal than in the past in handing out the medals.

The best proof that the Korean medals have been well earned is the tragic fact that only 7 of the 28 Americans who have won the coveted honor have actually received the award. The others are dead or missing.

Statement of the Wage Stabilization Board on Proposal To Change the Tripartite Character of the Board

EXTENSION OF REMARKS OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. O'BRIEN of Michigan. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement of the Wage Stabilization Board on proposal to change the tripartite character of the Board:

The Congress is now considering a proposal to alter the tripartite character of the Wage Stabilization Board, now composed of equal members representative of labor, management, and the general public. The proposal is for a preponderance of public members whose votes would exceed the combined votes of the members representative of labor and management. This proposal is serious enough, in our opinion, to warrant public concern, even if considered only in relation to the operations of the present Board. It is much more serious, however, when considered in the light of its effect on our system of tripartite action in the long run, where Government is a participant in labor-management relations, and its effect on the democratic values which a tripartite system seeks to preserve. The issues are so important that we would feel remiss in our duty if we were to remain silent. Hence this statement.

Wage stabilization affects millions of employees and their employers. It is only one phase of stabilization of industrial relations in an emergency. Any time groups of employees are involved, their problems must be handled (a) by individual action (b) by collective bargaining or (c) by Government intervention and control. When employees wish to be organized the principles of democracy, confirmed repeatedly by Congress, endorse collective bargaining as a means of solving those problems. One of the great strengths of the American way of life is the proven ability of labor and management to solve their problems with the cooperation, rather than the domination, of Government.

When, as in the present emergency, it is necessary in the public interest to take the power of final decision out of the hands of the parties, the Government must make every effort to preserve for the future the basic values of self-determination, including collective bargaining. During such an emergency, the Government is truly the custodian of the liberties of the parties. It is essential, therefore, that Government act in such a way that those liberties may be returned to the parties at the end of the emergency, with a minimum of damage. This is the objective of the tripartite approach, as it has been practiced traditionally by the Government in emergencies similar to the present. Thus, in the structure of the present Wage Stabilization Board, the members representative of labor, of management, and of the general

public have equal power and equal responsibility, reflected in their equal numbers and their equal voting rights. Decisions are made after discussion among equals. They are reached through the exercise of persuasion rather than the exercise of a dominant voting power by any particular segment of the Board. Only through participation by equals can real cooperation be achieved in reaching decisions affecting millions of employees and their employers. Only in this way can those employees and employers be assured that Government is fully aware of their problems, their needs, and their desires.

The Post Office Is Big Business

EXTENSION OF REMARKS OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wayne Township Record of July 6, 1951:

THE POST OFFICE IS BIG BUSINESS

A revealing article on the weird workings of bureaucracy appeared in the June issue of Harper's magazine. Written by C. Lester Walker, it deals with the amazing case of the United States postal service.

The post office is big business, with a capital B. It also enjoys a total monopoly in its field, which is true of no other business, big or little. Its annual revenues run around \$1,670,000,000. It has 500,000 employees, 42,000 branch offices, and 10,000 vehicles. Yet some months ago people in various parts of the country complained of sharp declines in the standards of postal service. All kinds of mail—air, first-class, special delivery, parcel post—was taking longer and longer to reach its destination. In some instances the delays seemed incredible. Mr. Walker writes, "Mail from London, England, was being received in Radio City as soon as mail posted at the same date and hour in the Bronx."

This was the results of cuts in service which were ordered in April 1950. And the reason for the cuts, according to the Postmaster General, was that the Department would have a deficit of about \$530,000,000 for the fiscal year, and something drastic had to be done.

Is it necessary for the post office to lose money—and huge sums of money at that? Mr. Walker does not think so. The British Post Office has made a profit in almost every year since 1711. The Canadian Post Office is also a profit-making enterprise. What, then, is the trouble with the United States postal service?

Mr. Walker quotes a telling sentence from a Hoover Commission report which said the Department has "a creaky, overcentralized organizational structure; outmoded methods and equipment; cumbersome budgeting and accounting systems, a maze of tangled regulations and restrictions." One of these faults, excessive centralization, may be the worst of all. The whole tendency of modern industry has been to decentralize, in the interest of economy, efficiency, and better service to customers. Mr. Walker cites as one example of this a chain-store system with 1,612 stores, each of which has been given almost complete managerial autonomy. In the Post Office Department, by contrast, Washington runs everything. No decision of consequence can be made without per-

mission from headquarters—and this often takes endless, time-bearing correspondence to get.

Mr. Walker finds that the Post Office has been about 100-percent opposed to mechanical handling and sorting methods which are used both in private business and in the postal services of some other countries. It seems to be a case of what was good enough for grandpa is good enough for sonny.

Going on, Mr. Walker believes that the Post Office personnel system is impossible and inefficient. The postmasters themselves are political appointees—they are at the heart of the patronage system. And post-office accounting methods, which are laid down by the all-powerful General Accounting Office, seem to be as archaic as the bow and arrow.

Mr. Walker goes into details in his article, and some of his revelations are staggering. At the end, he summarizes a plan which, in his opinion, would eliminate all or practically all of the Department's huge deficits. In essence, this plan would simply have the Post Office operate along standard business lines—something which, apparently, Government businesses never do. It remains to be seen if they ever will.

The State Department and Communists

EXTENSION OF REMARKS OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Comments by Crump," which appeared in the Cambridge News, of Madison, Wis., on July 5, 1951. It deals with Communists and the State Department.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMENTS BY CRUMP

The State Department's continuous coddling of the Red Communists and the Red North Koreans is enough to drive even the liberals in this country into hysterics. This recent peace move was almost the straw that broke the camel's back as far as some Americans are concerned. There was a time in American history when we could say "Submit to our terms or be defeated" but that era ended with the crowning of Dean Acheson. Is peace so dear that we are willing to sell our souls to those rotten bunch of Commies and kiss the principles, to which 12,000 men died so bravely, good-by? That is exactly what we are intending to do in Korea at the present time.

I would hate to look any of those dead men in the face and say, "Brother you were the biggest sucker who ever died in defense of his country." You who fought to pass the thirty-eighth parallel with the belief that you were doing it as a contribution to the free world and now for the sake of at best a temporary truce, they are giving back everything that you fought and died for. I wonder what Dean Acheson would say if he had to face just one of these men.

Times have changed since World War II when a commander could say, "Unconditional surrender or die." Now we say we want peace any time at any price and it cost us just a few billion and only 160,000

casualties and we are right where we started from with Mr. Acheson still at the helm. How much longer can this stupidity go on? What people forget is that democracy is not an infallible system of government and even the democracy of Athens fell after some incompetent people got into control. Give enough people like Dean Acheson reins in the Government and God help us all.

Will General Eisenhower Be a Candidate?

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John O'Donnell in the Washington Daily News of July 12, 1951:

CAPITOL STUFF

(By John O'Donnell)

WASHINGTON, D. C., July 11.—The big question among the professional politicians in this Capital is whether Gen. Dwight D. Eisenhower will or will not be the White House candidate of either the Republican or the Democratic Party in 1952.

As of today, Eisenhower couldn't get the nomination.

One thing is certain in regard to Eisenhower. If he ever gets the nomination the voters can be sure that on the record he will hold a tight censoring hand on the information which is permitted to reach the eyes and ears of the American people.

Eisenhower, from the day he got supreme command in Europe, thanks to his sponsor, then Chief of Staff, Gen. George C. Marshall, and the late Franklin D. Roosevelt, down to the present moment, has consciously or unconsciously, followed the thought that the facts of the Nation's life are much too good for the common people.

On the eve of July 4, he was the top speaker before that hoity-toity starchy assembly gathered in swanky Grosvenor House, Park Lane, London, under the auspices of the English-Speaking Union. The audience, of course, had been talking about the uproar and the sessions of the Senate committee which heard the testimony of our Republic's military leaders on the firing of General MacArthur—no friend of Eisenhower's.

Eisenhower, if words mean anything, tried to put across the idea that his London audience shouldn't be concerned by the MacArthur issue and that he himself deplored it.

Said Eisenhower the American to his audience of Britons:

"This unity of ours is an international fact. Yet it . . . has been obscured in my own country by concern with trifles and small disputes fanned into the flames of senseless antagonisms. Serious differences in convictions . . . scarcely need to be dragged into the public forum in the petty hope of capturing a fleeting local acclaim."

With this smug denunciation of the MacArthur hearings Eisenhower then smilingly observed that he had, during World War II, arguments with some of the British notables present and roundly proclaimed:

"Had these been headlined in the press of our two countries they could have created public bitterness. . . . Decisions were reached because those at odds did not find it necessary to seek justification in a public hue and cry."

FACTS CONCERN EVERY TAXPAYER

In other words, according to Eisenhower today, the facts of direct concern to every American voter and taxpayer, which should have been given through the newspapers and radio so that they could judge the ability of such persons as Eisenhower, Roosevelt, Marshall, and Harry Hopkins, were deliberately withheld and, in his opinion, should continue to be.

Well, all that goes back to that important date of May 6, 1945, when the Germans signed the surrender papers in Reims, ending the shooting in Europe, and Eisenhower held out against allowing the American newspapermen to spread the glad tidings to the American fathers and mothers because of a deal with Stalin.

On May 7, the day after the formal surrender, and 24 hours before Eisenhower wanted to release the news out of respect for the feelings of Stalin, there took place the famous telephone conversation, now released for publication, between Churchill in London and Truman's spokesman, Admiral William D. Leahy, over the secret wire to the highly guarded room in the Pentagon.

Here's how the famous conversation went, according to the official transcript:

"CHURCHILL. It is me, the Prime Minister."

CAN'T ACT WITHOUT UNCLE JOE'S O. K.

"LEAHY. I can convey the following message to you: In view of the agreements already made (by Eisenhower), my Chief (President Truman) asks me to tell you that he cannot act without the approval of Uncle Joe (Stalin). Do you understand me?"

"CHURCHILL. Hello. The German Prime Minister has given out an hour ago, on the radio, an address stating that they have declared unconditional surrender for German troops.

"LEAHY. We know that.

"CHURCHILL. What's the use of me and the President looking to be the only two people in the world who don't know what is going on? The whole of this thing is leaking out in England and America

"LEAHY. My Chief told me that he was unable to agree on an earlier announcement without the approval of Uncle Joe and he asked me to transmit that to you. * * * The rumors will be out in all the papers but the official announcement cannot be made here until we get the approval of the third party.

"CHURCHILL. Of the third party?

"LEAHY. Of Uncle Joe; yes, sir.

"CHURCHILL. The whole world knows it and I don't see why we should put our news off—it's an idiotic position.

"LEAHY. Well, I don't see it, either, being right frank."

An hour later, Churchill called the secret phone in the Pentagon again to report that the victory-flushed crowds in London were getting out of control and demanding the appearance and statements of the King and Churchill.

Leahy replied: "We have communicated with Eisenhower. He says no announcement has been made from his headquarters and that no announcement will be made until after the announcements are made in London, Moscow, and the United States * * * President Truman, in the event of information from Stalin, would make the announcement tomorrow."

"CHURCHILL. Do you really mean that I cannot make the announcement? I cannot do that. You know my difficulties.

"LEAHY. I know. * * * But the President said he would make no announcement until he heard from Stalin."

Ithuriel's Hour

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from Barron's of June 11, 1951:

ITHURIEL'S HOUR—SECRETARY ACHESON HIMSELF DISCLOSES WHY HE MUST BE REPLACED

(By Felix Morley)

Ithuriel, legend tells us, was the Archangel whose spear had the magic property of revealing the true nature of everyone whom it touched. And all men at some time experience Ithuriel's hour when, in the words of Kipling's poem:

"* * * the sum of all our past,
Act, habit, thought and passion shall
be cast

In one addition, be it more or less,
And as that reading runs so shall we do."

Last week Ithuriel's hour struck for Secretary of State Acheson, a man who for sheer mental ability is outstanding in public life today. Morning and afternoon, day after day, Mr. Acheson faced a score of Senators, answering innumerable questions on every conceivable aspect of our far eastern policy.

From study of the testimony, and talk with the participants in this great political drama, two over-all impressions emerge. One is the technical competence, up to a point, of Mr. Acheson. He was, of course, well prepared for this ordeal, aided by counsel and fortified by masses of documentation. But these props would have helped the Secretary little except for his alert mind, his adroitness in fencing and his unflinching courtesy toward the inquisitors. By every legal criterion, Mr. Acheson was an ideal witness.

The second general conclusion, forced by the evidence, is the great value of the congressional committee, when conducted on the high plane maintained throughout by these joint meetings of the Senate Foreign Affairs and Military Services Committees. Much of the credit for the quality of the inquiry goes to Senator RICHARD B. RUSSELL, of Georgia, whose scrupulously impartial chairmanship stands as a model. But every member also rose to the occasion. Questions were uniformly polite, even when sharply pointed. And thus it was that the witness gradually but revealingly exposed his inner thinking, in response to the probing touch of Ithuriel's spear.

It was on a seemingly minor point that the Secretary first gave himself away. He stumbled badly over the State Department's now famous special guidance paper No. 28, dated December 23, 1949, and circulated to all our diplomatic missions abroad. This was the document written to counter the false impressions that (1) Formosa's retention would save the Chinese Government; (2) The United States has a special interest in * * * Formosa; (3) Its loss would seriously damage the interests of * * * the United States; (4) The United States is * * * committed in any way to act to save Formosa.

Of this confidential document, called by Senator KNOWLAND "a basic revelation of defeatist attitude," 456 copies were distributed. So it is not surprising that the guidance paper was soon picked up by an alert newspaperman and its contents revealed, with

substantial accuracy, early last year. By a committee vote of 15 to 9 the whole has now been published, unquestionably with damage to State Department prestige.

This special guidance paper, Mr. Acheson explained, was designed to discount in advance the anticipated capture of Formosa by the Chinese Communists. It gave the party line to be followed by the Voice of America and other State Department agencies if, as, and when Formosa fell. What got Mr. Acheson into difficulties, in this matter, was his argument that while it was not really State Department policy to be indifferent about Formosa, it was nevertheless smart diplomacy to pretend to be indifferent. This thesis was badly punctured when Senator CAIN wondered whether the State Department habitually orders the Voice of America to broadcast what the Secretary does not himself endorse. At that point Senator BREWSTER cuttingly observed: "Socrates said that the penalty of being a liar was not to be believed when you told the truth."

Ithuriel's spear drew blood a second time when Mr. Acheson refused to admit that the constitutional power of Congress to declare war has reality under present-day conditions. If there had been "a lot of time," he said, it "might possibly have been desirable" to let the representatives of the people vote on the issue of sending our boys to fight in Korea. But the Secretary of State made plain that in his opinion the Executive should decide, and the Congress merely endorse, whether the battleground is Korea, Iran, or any other area that diplomats and generals deem vital to American interests.

Several Senators, not all Republicans, are saying privately that the Acheson hearings were protracted in part because of this casual attitude toward the Constitution. "We decided to show the Secretary," says one, "that if he can usurp the power to make war, we still have the authority to hold him to strict accountability."

The arrogance that underlies Mr. Acheson's quick intelligence, and seems inseparable from it, was further and almost flamboyantly demonstrated when the subject of Yalta arose in the hearings.

It was not even superficially advantageous for the present director of our foreign policy to defend this highly dubious "secret deal with Russia," as Senator ALEXANDER SMITH defines it. When Roosevelt, Churchill, and Stalin signed the Yalta agreement, on February 11, 1945, Mr. Acheson was only an Assistant Secretary of State. It was kept secret from him, as well as from the Chinese whose territory was then awarded to the Soviet. But the Acheson belief that the Executive is above criticism made him attempt to defend an action that was and is morally indefensible. So the Secretary of State attempted to argue, almost in one breath, that it was wholly proper to give control over Manchuria to Soviet Russia even though "our policy is to keep China from being threatened by the efforts of the Soviet Union."

For the casual newspaper reader the net effect of these revelations of Mr. Acheson's indifference to moral principles has been obscured. The three instances cited, and others such as equivocation on our attitude toward admitting Communist China to U. N., must be patiently unearthed from masses of less significant testimony. But those who closely followed the Acheson evidence last week realize that the policy of the present Secretary of State is fundamentally opportunistic. He has himself made clear that his guiding light is not what is morally imperative, but rather what he can get away with at any particular moment, in any given circumstance.

That, of course, is to imitate the philosophy of the Kremlin and thereby to sacrifice the very basis of principles more valuable

than atom bombs in the struggle against Communist imperialism. And it is because Mr. Acheson does not see the vital importance of principle, and even glories in this blind spot, that he will have to be replaced.

Amid the enormous global responsibilities to which we stand committed, the formulation of foreign policy must be in the hands of one who, in Ithuriel's hour, comes clean on a higher ethical plane than that of Machiavelli.

Lithuania

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following:

AMERICAN LITHUANIAN
COUNCIL OF BOSTON,
July 11, 1951.

DEAR CONGRESSMAN: The Lithuanian American people throughout the United States, as well as those Lithuanians privileged to reside in the free countries of the world, commemorated the eleventh anniversary of the resubjugation of Lithuania and the decennial of the first horrible deportations from Lithuania to Siberia on June 16, 1951.

In Boston we observed this occasion with appropriate ceremonies, at which a resolution was adopted concerning the plight of our dear motherland, Lithuania. We enclose a copy of this resolution and sincerely hope that you will find time to read it.

We earnestly hope that you will continue to fight the cause of freedom and do all in your power to help Lithuania and other oppressed nations of the world regain their freedom and liberty.

Yours respectfully,

ALEXANDER J. CHAPLIK,
President.

Resolution unanimously adopted at a mass meeting held under the auspices of the American Lithuanian Council, Boston chapter, in protest and commemoration of the following tragedies which have befallen Lithuania and its people: (1) Eleventh anniversary of the resubjugation of Lithuania and (2) decennial of the first horrible deportations from Lithuania, when, during one night, the Bolshevik secret police—NKVD—arrested and carried off to the frigid wastes of Siberia 40,000 innocent Lithuanians:

"Whereas the Soviet Union, relying upon the spurious Ribbentrop-Molotov pact of August 23, 1939, and in disregard of all treaties and agreements with Lithuania, including the peace treaty of 1920, the nonaggression pact of 1926, and the mutual-assistance pact of 1939, did occupy Lithuania by most brutal means and did subject Lithuania to a most cruel oppression; and

"Whereas the Soviet Union, in furtherance of its designs to implant communism in Lithuania and throughout the world, and being unable to bend the resistance of Lithuania to its will, has embarked upon a relentless and unprecedented policy to eradicate the Lithuanian nation, as attested by the fact that it has already deported or annihilated 800,000 Lithuanians, which constitutes over 30 percent of the entire Lithuanian people: Now, therefore, be it

"Resolved, That said resubjugation and genocide being practiced in Lithuania is sorely protested, decried, and deplored; and further be it

"Resolved, That the attention of the United Nations, and of the whole cultured world be directed to the plight of blood-soaked Lithuania, and all effective means be solicited to block the ravisher of Lithuania and to expose him to the nations of the world; and further be it

"Resolved, That copies of this resolution be forwarded to the President of the United States, to all Congressmen and Senators of the United States, to the representatives in Washington, D. C., of the governments of Great Britain, France, Italy, Poland, Estonia, Latvia, Finland, Norway, Sweden, Denmark, Spain, Portugal, Belgium, and to the press."

AMERICAN-LITHUANIAN COUNCIL,
BOSTON CHAPTER,

By ALEXANDER J. CHAPLIK, Chairman.
J. JANUSKIS, Secretary.

Year of No Decision

EXTENSION OF REMARKS OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. ANGELL. Mr. Speaker, our Nation, as part of the United Nations, has now been participating in the tragic Korean conflict for over a year. In the June 30, 1951, issue of Collier's is a most timely editorial entitled "Year of No Decision," which I include as part of these remarks, as follows:

YEAR OF NO DECISION

The undeclared war in Korea, a war the like of which the world has never seen, is now a year old. It began with a courageous and unprecedented action in defense of a noble ideal. For the first time in history, soldiers of 15 nations fought beneath a common flag as representatives of an international organization whose purpose is the preservation of peace. At the end of the year the ideal is still noble. The flag is still there. So are the soldiers. They have fought with an unsurpassed bravery to the point where, at this writing, there are indications that at least an informal cessation of hostilities is possible.

We should like to hope that by the time you read this the United Nations original goal of an independent, united, democratic Korea might be in sight. But the prospects at the moment are bleak. For, in its first year, the Korean conflict has developed certain aspects which, while also unprecedented, are considerably less noble and more confusing than the ideal itself. This situation applies particularly to the United States, which has assumed the United Nations command and provided the great majority of non-Korean troops, and which is the center of the turmoil over strategy and leadership. So let us look back at some of these unprecedented developments from an American point of view.

The Korean war is a war in which our civilian and military leaders can give a clear picture of what defeat would be like, but cannot describe the pattern of victory.

It is a war fought under a new set of rules. It has become a fight in which the U. N. is restricted to counterpunching. It is not the U. N.'s purpose to pursue the enemy and destroy him.

It is a war in which no sizable reinforcements of the U. N. forces are apparently contemplated, whatever the fortunes of battle.

It is a war from which the United States has excluded the trained and accessible sol-

diers of a potential ally (Nationalist China) even though the potential ally is willing to participate and is a member of the world organization under whose banner the other allies are fighting.

It is a war in which some of those other allies have fought the enemy and at the same time traded with him, providing him with the materials which eventually aid him in killing their own soldiers. And the war was almost a year old before the combined goadings of Winston Churchill and the United States Congress prompted those allies to take steps toward ending this practice.

It is a war in which, as the result of a general's dismissal, the country's war councils have become an open forum, with many details of military planning and many bitter differences aired for all the world to hear.

It is a war in which the basic American, and hence United Nations, strategy is built on the shifting foundations of fear and uncertainty, and in which there is no attempt on the part of our leaders to conceal or minimize those emotions. The result of that strategy has led to an ironical situation in which the U. N. is afraid to win the war for fear of making its actual and potential enemies angry.

These unique military aspects have been set down here, of course, without regard for diplomatic and political considerations. Those considerations are highly important. Their ultimate purpose, the prevention of a general war involving Russia, is well known. And it may be that they have inevitably dictated some of the unorthodox strategy in Washington.

But there is one paramount aspect of this unorthodox strategy which is of deep concern to many Americans, including the editors of this magazine. That is the seemingly endless continuation of the slaughter-and-be-slaughtered policy which Mr. Truman and his advisers have decided is the only possible policy in Korea if the third world war is to be avoided. It has already cost some 70,000 American casualties. It has caused suffering, destitution, and a staggering loss of life among Korean civilians. All this, of course, is the inevitable toll of war. But in this case the U. N. forces, unless they are driven into the sea, seem committed to fight indefinitely up and down the Korean peninsula (within certain limits) in a minor-league war—for the enemy's lack of air-and-fire power makes it just that—and try to bleed that numerically superior enemy until he is so weak that he surrenders.

This policy is also of deep concern to General MacArthur, and that concern seems to be one of the things that cost him his command. We have considerable to say about the general on our weekly editorial page in this issue. But it might be pointed out here that one factor in his disagreement with the administration was his desire to fight the war along sound, proven military lines, and fight it to win with the least cost of lives. This concern for the cost of lives brought General MacArthur a rebuke from Secretary of Defense Marshall.

In his testimony before the Senate foreign policy inquiry, Secretary Marshall said, "I am disturbed and I should think you would be disturbed at the effect that will sweep through that force (in Korea) of a situation in which their commander has stated his views which accentuate the casualties that they are suffering and in effect that it is without justified purpose."

It is quite possible that the soldiers in Korea do not need to have their former commander "accentuate" the casualties they are suffering or point out to them the inhibited and frustrating aspects of the campaign in which they are engaged. It is also possible that they might be disturbed by some other testimony by Secretary Marshall,

as well as by General Bradley, before the same Senate committees. For, though they disagreed with General MacArthur on many things, the Defense Secretary and the chairman of the Joint Chiefs of Staff did confirm his opinion that the slaughter-and-be-slaughtered policy carries no guaranty of victory.

General MacArthur told Congress that "the position of the command from the military standpoint forbade victory." Secretary Marshall said to the Senators, "I should say that if the Chinese Communist continue in force in North Korea with the potential of additional reinforcements that might be made available, and with our situation where we visualize no considerable reinforcement of the United Nations Army, that they could not be driven out of North Korea." And when a Senator asked General Bradley if the present program in Korea would bring decisive results, he replied, "I am not too sure we will get them under our present methods * * *. I don't believe anyone is going to promise you or the country that we are going to get decisive results under what we are doing."

In spite of this, the President and his advisers see no alternative policy that would not in their opinion bring on general war. Their adherents seem satisfied with that policy and only slightly dismayed by the casualties incurred in the indecisive conflict. One of these adherents, Professor Arthur Schlesinger, Jr., the Harvard historian and a sort of unofficial spokesman for the administration, had this to say. "MacArthur says * * * the American people simply cannot take any longer our 'staggering' and 'progressively mounting' losses." Mr. Schlesinger asked, "What have these losses been?" Then he answered himself thus: "MacArthur himself said that 13,000 Americans had been killed in Korea since last June. This is a terrible and tragic thing. But it seems hardly an intolerable loss for a Nation which killed 31,500 people in 1949 by automobile accidents."

The families of those 13,000 dead, among others, will not share Professor Schlesinger's callous view. They will take his snide quotation marks away from the general's description of the casualties and agree that in a war of vacillating policy, a war whose most hopeful outcome now is the status quo ante bellum, the continuing losses are indeed staggering.

Some of the occurrences that followed General MacArthur's dismissal give reason why the Government's present policy may aptly be called vacillating. (They are discussed more fully on this issue's regular editorial page.) The general proposed certain actions which were stated as contributing causes to his being fired. Now the administration has either adopted them or is contemplating their adoption.

No one outside the iron curtain can accurately say whether General MacArthur's adopted or discarded policies would provoke Russia to open attack. But it is our opinion that some of the people who have disagreed with him most bitterly have made more provocative statements than the former U. N. commander ever did.

President Truman, Secretary Marshall, General Bradley and others high in Government have told Russia and the world that the United States is not ready for war with the Soviets. Mobilization Director Wilson was even more specific. He said the country wouldn't be ready for 2 years. Now, isn't that provoking Russia—or rather, isn't it enticing Russia into war and inviting attack? If Russia is ready for war, would the Kremlin need any more provocation than this open admission of weakness, plus a hot war already going in Korea? Would bombs in Manchuria or a naval blockade of the China coast give the final tip to the scales which

already are so heavily weighted to our disadvantage?

No one, we repeat, can be sure of the answers to those questions. But it does seem that if the men in the Kremlin want war and are prepared for it now, they have ample excuse to get into it. And it also seems that the best guess is still the familiar speculation that Russia has its own timetable, and that if there is to be a general war it will begin when Russia is ready and not before.

So all the arguments and disagreements over Korean policy and strategy boils down to this: the only over-all American policy is the passive policy of waiting to see what Russia is going to do next. Generals may be fired and replaced, but Stalin still calls the turn.

The EDITORS.

Red Double Cross

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following newspaper article:

RED DOUBLE CROSS
(By Ludwell Denny)

The Korean armistice negotiations have run true to form. In almost all Allied-Red conferences, our negotiators have to learn the hard way. They are saved—if ever—only when Stalin overplays his hand.

Gen. Matthew Ridgway and his chief negotiator, Vice Adm. Turner Joy, are the latest—but probably not the last—of a long list of capable and forewarned American representatives who still could not be careful enough in dealing with the double-crossing Reds.

When the Reds substituted Kaesong in noman's land, for the original Ridgway proposal of a Danish hospital ship as a meeting place, we apparently accepted Kaesong on the assumption that it would be neutral unarmed territory and that the two parties would be equal.

Instead, the Reds reoccupied Kaesong with troops and armed guards. Admiral Joy's delegation were photographed along with the guards as Red propaganda fodder to make it appear that they were the defeated, begging cease-fire from the victorious Communists.

The fact that the third-day break came over Red action in turning back a U. N. convoy including newsmen, was merely a belated Ridgway protest against denial of equal status and failure of neutrality observance of which the Reds had been guilty from the beginning.

The net result probably is all to the good, whether these negotiations are to be resumed as the Allied authorities seem to expect, or will be delayed indefinitely until Allied military victory. General Ridgway and his associates hereafter certainly will be sterner in their diplomatic and military dealings with the enemy.

In fairness to General Ridgway and Admiral Joy and their brilliant battle records, it must be remembered that their profession is fighting rather than dickering.

If Stalin repeatedly outsmarted such political aces as Churchill and Roosevelt, if President Truman had to learn that the Red dictator was hardly the good fellow he appeared at conferences, if such canny negotiators as Cordell Hull, James Byrnes, and Ernie Bevin had to learn the hard way, and

such crack military brains as Marshall, Eisenhower, Clark, and Clay were not tough enough in dealing with the Reds at first, it is not surprising that our present negotiators have been jolted a bit.

In most of these cases, whether American or British, Allied negotiators who acted in good faith and were tricked, came out wiser and more effective representatives. In almost every case, however, they did not react sufficiently until Stalin had repeated the double-cross and overplayed his hand.

Perhaps one explanation of Stalin's ability to fool Allied negotiators at first is that the western mind, however hard in actual military warfare, is incapable of being equally ruthless in conference.

To the democratic mind, treachery is not the purpose. It is the Communist purpose in peace as in war, because to Stalin peace is simply a camouflaged form of war to destroy the democratic enemy.

Therefore every Red conference is a trap, and the best agreement is only a temporary ruse to be broken whenever Stalin thinks he can get away with it.

Ethics of the Federal Government

EXTENSION OF REMARKS OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Must Lift Government From Moral Morass, Senator BYRD Says," an Associated Press article which appeared recently in the Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MUST LIFT GOVERNMENT FROM MORAL MORASS,
SENATOR BYRD SAYS

The ethics of the Federal Government have sunk so low, says Senator BYRD, Democrat, of Virginia, that Congress is considering rewriting the Ten Commandments into a special code for Government officials.

Senator BYRD called it a shameful fact "that the situation in the Federal Government has reached such a point" that it was necessary "to raise the Government from the moral morass."

His remarks about the ethics of Government officials were made in a statement on Government expenditures which Senator BYRD said have been climbing steadily since World War II without any effort by President Truman to check them.

Replying to a statement by Elmer B Staats, Assistant Director of the Federal Budget, that "there is no valid basis for the assertion that vast sums of money can be saved by eliminating waste and duplications in the Federal bureaucracy," Senator BYRD cited the following examples of what he called waste:

Government publicity, \$105,000,000 a year; Armed Forces advertising, \$5,500,000; the Government operates 190,000 nonmilitary motor vehicles more than a billion miles a year; the Air Force is paying civil service salaries plus tuition to send pupils to business schools to learn typing; and Agriculture Department sells surplus butter to Italy at 15 cents a pound while the Army buys oleo at 25½ cents a pound; and the Air Force is planning to buy \$2,500,000 worth of refuse trucks at \$12,109 apiece as compared with \$6,000 trucks used in Washington.

Know Your Adversary and Be Alert

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. MARTIN of Iowa. Mr. Speaker, pursuant to permission given in the House of Representatives, I include the speech I delivered at West Branch, Iowa, at the opening of their centennial celebration last night, Thursday evening, July 12.

The West Branch centennial pageant was one of the most interesting and most colorful centennial pageants I have ever seen, as it portrayed the founding and development of President Herbert Hoover's home community and included several important incidents in his family's history and his own childhood as well as the more recent history leading to his election as President. It was indeed an honor and a privilege to attend and to take part in this ceremony.

The program and the pageant were based upon historical and patriotic motifs. My own address follows:

KNOW YOUR ADVERSARY AND BE ALERT

There have been growing up in this world over the past 150 years two great rival nations—Russia and America. Notwithstanding developments in the middle 50 years of this period that obscured their basic rivalry we need to be especially alert today to its existence. This rivalry was recognized by world diplomats, historians, and military leaders soon after the pronouncement of the Monroe Doctrine in 1823. It is worth our while briefly to look back to the writings of the period immediately following the pronouncement of the Monroe Doctrine because it may help us to understand some of the cross currents in world affairs of today.

Alexis de Tocqueville, of France, in 1831, visited the United States to inquire into what was then hailed as the great experiment in constitutional liberty. Coming to North America shortly after the pronouncement of the Monroe Doctrine, de Tocqueville was acquainted with the major currents of national developments in Europe which, in view of subsequent events, be described with remarkable precision.

Writing about 1835 in his *Democracy in America*, he summarized his views with unusual clarity:

"There are, at the present time, two great nations in the world which seem to tend toward the same end, although they started from different points: I allude to the Russians and the Americans. Both of them have grown up unnoticed; and whilst the attention of mankind was directed elsewhere, they have suddenly assumed a most prominent place among the nations; and the world learned their existence and their greatness at almost the same time.

"All other nations seem to have nearly reached their natural limits, and only to be charged with the maintenance of their power; but these are still in the act of growth; all the others are stopped, or continue to advance with extreme difficulty; these are proceeding with ease and with celerity along a path to which the human eye can assign no term. The American struggles against the natural obstacles which oppose him; the adversaries of the Russian are men; the former combats the wilderness and savage life; the latter, civiliza-

tion with all its weapons and its arts; the conquests of the one are, therefore, gained by the plowshare; those of the other by the sword.

"The Anglo-American relies upon personal interest to accomplish his ends, and gives free scope to the unguided exertions and common sense of the citizens, the Russian centers all the authority of society in a single arm; the principal instrument of the former is freedom; of the latter, servitude. Their starting point is different, and their courses are not the same, yet each of them seems to be marked out by the will of heaven to sway the destinies of half the globe."

Just before the outbreak of the Crimean War in 1853 between France and England on the one hand and Russia on the other, Lord Palmerston, British Foreign Minister for many years and Prime Minister for nearly 10 years, spoke of the czarism and its methods as follows.

"The policy and practice of the Russian Government has always been to push forward its encroachments as fast and as far as the apathy or want of firmness of other governments would allow it, but always to stop and retire when it was met with decided resistance. In furtherance of this policy, the Russian Government has always had two strings to its bow, moderate language and disinterested professions at St. Petersburg and London, active aggression by its agents on the scene of operations."

During his famous Asiatic cruise Commodore Perry not only visited the Japanese Empire and other islands of that region but also the mainland of eastern Asia. He was thus able to interpret realistically the movements he discerned.

Commodore Perry presented a paper before the American Geographical and Statistical Society, at a meeting held March 6, 1856, in New York City, from which I quote as follows.

"It requires no sage to predict events so strongly foreshadowed to us all; still westward will the course of empire take its way. But the last act in the drama is yet to be unfolded, and notwithstanding the reasoning of political empires—westward, northward, and southward—to me it seems that the people of America will, in some form or other, extend their dominion and their power until they shall have brought within their mighty embrace multitudes of the islands of the great Pacific, and placed the Saxon race upon the eastern shores of Asia; and I think, too, that eastward and southward will her great rival of future aggrandizement—Russia—stretch forth her power to the coast of China and Siam, and thus the Saxon and the Cossack will meet once more, in strife or in friendship, on another field. Will it be in friendship? I fear not. The antagonistic exponents of freedom and absolutism must thus meet at last, and then will be fought that mighty battle on which the world will look with breathless interest, for on its issue will depend the freedom or the slavery of the world—despotism or rational liberty must be the fate of civilized man. I think I see in the distance the giants that are growing up for that fierce and final encounter; in the progress of events that battle must sooner or later inevitably be fought."

It is my sincere hope that we can avoid this fierce and final encounter between Russia and America that was predicted so definitely by Commodore Perry in 1856. To do so we must know and understand our adversary and we must know our own strength and our own weaknesses. Then we must build a sound economy and develop to the utmost the sinews of our country. In doing this we must rely on the understanding and sound judgment of the American people themselves.

In natural resources Russia and America are the two great "have" nations on this

earth. No small part of our strength lies in our natural supply of strategic and critical materials. Both Russia and America are today vigorously locating, producing, and developing these materials.

Another great factor is industrial production and inventive genius. In that field America has developed overwhelming superiority.

A third great factor is the general development of our economic strength and trained manpower to maintain our agricultural and industrial production.

Another great factor is preparedness. Developments over the past 6 years in Russia give us ample warning of Russia's determination to build her military might to the utmost in preparation for any possible future war. This warning should cause us sufficient concern to build our defenses strong enough to discourage Russia from attacking us and to maintain our position in the family of nations. In doing this we must zealously guard against plunging headlong into militarism and against destroying our own fiscal stability.

Our fiscal strength is the fifth great factor, but here our Federal budget does not give us much ground for optimism unless we quickly reduce wasteful and extravagant Federal spending.

The sixth and greatest factor in building our Nation is our spiritual strength. It is in this field that America shines out in the family of nations in contrast to the godless despotism of Russia.

Russia and America have provided very different roles of government within their lands. The Russian Government promotes despotism and degrades the individual to serfdom. America, on the other hand, places supreme power in the individual.

The strength of our Nation in the family of nations in comparison with Russia will depend on our ability to maintain the six great factors I have briefly discussed. Weakness in any one of these factors can quickly undermine our strength to the point that Russia may decide she can successfully challenge us in that fierce and final encounter predicted by Commodore Perry.

One of the greatest threats to our strength is decay and collapse from within through the loss of interest by the people in maintaining the six great factors on which our strength depends. The infiltration within our own land of Communists and fellow travelers recruited from our own people and directed from Moscow within the past 20 years is a dire warning to us.

At almost the same time President Monroe proclaimed the Monroe Doctrine, Daniel Webster gave us a charge of responsibility that still rings true to this day. In his address at the laying of the cornerstone of the Bunker Hill Monument in 1825, Daniel Webster called out:

"Let the sacred obligations which have devolved on this generation, and on us, sink deep into our hearts. * * * There remains to us a great duty of defense and preservation, and there is opened to us, also, a noble pursuit, to which the spirit of the times strongly invites us. Our proper business is improvement. Let our age be the age of improvement. In a day of peace, let us advance the arts of peace and the works of peace. Let us develop the resources of our land, call forth its powers, build up its institutions, promote all its great interests, and see whether we also, in our day and generation, may not perform something worthy to be remembered."

You will be interested to know that Daniel Webster's last sentence in that statement is the only quotation engraved on the walls of the Chamber of the House of Representatives of the Nation's Capitol. I repeat it: "Let us develop the resources of our land, call forth its powers, build up its institutions, promote all its great interests, and see

whether we also, in our day and generation, may not perform something worthy to be remembered."

Our forefathers in their wisdom built for us a great Nation founded on sound principles and they charged us as their successors with the great responsibility of preserving our great Nation. In such service we will perform something worthy to be remembered.

Controls Battle

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat of July 10, 1951:

CONTROLS BATTLE

The administration is throwing all its economic guns into a last-ditch fight for retention of inflation curbs. The show has the look of an offensive with its arsenal of argument, propaganda and plea; actually it is a desperate defensive in which the Government seems to have a slim chance of success.

Yet if controls are scrapped, even materially stripped down, the country is headed straight for a new inflation crisis which will probably strike in the fall or next winter.

Nobody likes Federal regulation over prices, credit, wages, supply, rents or profits. We don't like Washington dictation, which obviously has been mushrooming year after year. We are suspicious that national bureaucracy seizes on one factor after another to announce a "crisis", that it manufactures "crises" to keep extending its influence increasingly over our lives.

There has been far too much truth in these apprehensions. But the tendency to expanding Federal domination must not blind us to the hard facts of economics. We are in a period of major defense production, which soon will take some \$4,000,000,000 out of American production for armament. This will mean a tremendous impetus for new inflation.

Economic Stabilizer Eric Johnston declared yesterday that the Nation can look for a much cheapened dollar, worth 30 to 40 cents of its 1939 buying power, if controls are dumped. Mr. Johnston is the Government's chief lieutenant on the firing line to secure passage of controls legislation in Congress. His boss, Mobilization Director Charles E. Wilson, gave similar warnings last night. The President has repeatedly asked extension and strengthening of controls.

Stabilizer Johnston asserted that if Congress voted extension of present controls "we can hold prices for the rest of the year." That is probably an exaggeration. We don't believe that would result. But realistic curbs can brake the pressure of new inflation trends materially—and new inflation stresses are certainly going to strike.

What the administration is seeking to do is not politically popular. Just now there is a leveling off in prices, and the prospect of truce in Korea inclines the public to discard controls. Congress knows and responds to this sentiment.

The Senate after bitter debate refused most of the changes the President asked, and weakened present authority by barring future roll-backs. Now the House is debating its bill, which prohibits roll-backs on farm products and may do so on all prices. The

Senate bill has virtually been rewritten by amendments.

Strong blocs are at work to destroy the curb laws, particularly agriculture groups which want to be kept free from controls, although this is discriminatory and food prices are the major hazard in the inflation picture.

For all the red tape, agency bumbling and hateful restrictions inherent in economic controls, unless we keep and enforce reasonable curbs during the peak of defense production, the Nation is heading into an inflation peril with throttle wide open.

Let's Call Things by Their Real Names

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1951

Mr. SHAFER. Mr. Speaker, it is time that we started calling things by their real names in this country and in this House.

The issues raised in the current debate over price control and other proposed amendments to the Defense Production Act underscore the Nation's desperate need for a new honesty.

I suggest that the Members of the other body who are making a study of ethics—or lack of ethics—in Government might profitably direct some earnest attention to the prevailing sin of political euphemism.

The dictionary defines euphemism as follows:

The substitution of an inoffensive or mild expression for one that may offend or suggest something unpleasant.

Of the sins of omission and commission of which the Truman administration is guilty—and they are many and varied—there is none more prominent, more insidious, or more dangerous than this sin of euphemism.

Under the guise of high-sounding terminology and newfangled, bureaucratic gobbledygook, Mr. Truman is exploiting all of the old-time political medicine-man's bag of tricks on a scale that would have made the old-timer green with envy and dizzy with power. And, Mr. Truman has added a few new tricks of his own.

As a modern political alchemist, Mr. Truman has solved the age-old problem of turning lead into gold—political gold for himself and his henchmen. He does it by the simple process of calling lead gold.

Again I say, Mr. Speaker, it is time that we started calling things by their real names. That is the basic honesty, just as the sin of euphemism is the most basic form of dishonesty.

For example, we have today what is euphemistically termed "Government procurement" and "Government subsidies."

An earlier, more forthright, more accurate generation had another name for such governmental activities.

They called them "pork barrel."

The dictionary defines pork barrel as "appropriations from the Federal Treasury, regarded as appropriated more for local political patronage than for really necessary improvements."

Mr. Truman and his associates have achieved the ultimate in pork-barrel politics. Of course they should not claim full credit for this dubious achievement. They have had unprecedented resources with which to work—voted by the Congress. They have had pork barrel resources beyond the wildest imaginings of old-time politicians—billions for foreign aid, billions for the defense program, billions in subsidies, billions in Federal aid for States and local communities, billions in RFC funds.

The revenues collected by the Federal Government during the Truman administration to date exceed the total revenues collected by all previous administrations combined. What a super-duper pork barrel. How picayunish, by comparison, were the paltry post offices, rivers-and-harbors improvements, and veterans hospitals dispensed by earlier administrations.

And do not think that Mr. Truman, as an old Pendergast politician, does not recognize this pork barrel for what it really is. He and his associates cannot help betraying their enthusiasm for it, even though they have substituted a milder and more polite name for the more honest and offensive one.

Mr. Truman knows the political value of a pork-barrel prosperity. Did he not boast, prior to the 1948 election, that no incumbent administration is turned out in prosperous times?

Did Mr. Truman not say, in a 1950 campaign speech, apropos of the pork-barrel-farm subsidies, that any farmer who did not vote for him and the Fair Dealers "ought to have his head examined"?

Foreign aid, of course, has opened vast new vistas of pork-barrel activity. And the Fair Dealers brag about it. Consider this statement in an ECA booklet prepared at the taxpayers' expense for distribution in one politically strategic State:

Nearly 34,000 Pennsylvania workers can attribute their pay checks to business created by Marshall plan orders. In a typical 4-month period, firms in 97 Pennsylvania cities and towns received nearly \$32,000,000 in direct order for goods furnished under the Marshall plan.

Talk about pork barrels.

The ultimate in Fair Deal government will be achieved when the administration can claim credit for a pork barrel for every American. And these are the same people who like to poke fun at Mr. Hoover's modest proposal of "two chickens in every pot"—to be provided, under Mr. Hoover's quaint, pre-New Deal philosophy, not by Government but by private enterprise.

Of course, the Truman administration which brags of its pork-barrel accomplishments—naturally in more polite terms—does not tell you that the profligate Government spending, the wasteful Defense Department purchases, the Marshall plan pork barreling, and the rest of the "squandermania," are all fuel

for the inflation fires which they profess to be fighting so zealously.

Let us take another familiar euphemism of the Truman bureaucracy—manpower mobilization.

That is an impressive term.

An earlier, more forthright, more accurate generation had another name for it.

They called it the "spoils system."

The dictionary defines the spoils system as follows:

The practice of regarding public offices and their emoluments as plunder to be distributed to members of the victorious party.

Here again, Mr. Truman has had unprecedented resources—almost unlimited plunder in the form of political jobs. And under the refined guise of manpower mobilization for an ever-present emergency—would it not be pleasant to wake up some morning and find that there was no emergency? Mr. Truman has added a few tricks of his own.

Mr. Truman is a great admirer of Andrew Jackson. But he has made a piker out of his hero. Jackson believed that "to the victor belongs the spoils." Mr. Truman believes that spoils are the key to perennial victory.

Manpower mobilization? Yes, indeed. And how they are mobilizing for 1952? There were 315,000 more civilian employees of the Federal payroll in April of this year than in April of a year ago. The number of civilian employees jumped 224,000 in 4 months ending April 30.

Under Mr. Truman's spoils system they do not merely reward the faithful with jobs—they recruit new faithfuls that way.

And in recruiting these thousands of additional spoils men they add to the cost of Government and they transfer needed manpower from productive activities to nonproductive paper-shuffling jobs in Washington. By both acts they add fuel to the fires of the inflation the Fair Dealers profess to be fighting so zealously.

Turn now to another euphemism of Mr. Truman and associates—in some respects the most insidious and dishonest of all.

I refer to the so-called nonpartisan, bipartisan, or unpartisan appeal.

Whenever Mr. Truman wants something he knows he cannot get any other way, or whenever Mr. Truman's sins of omission or commission catch up with him and he needs to wiggle out of a tight spot, he invokes the nonpartisan, bipartisan, unpartisan appeal.

A harder generation shunned such euphemisms.

A harder generation of politicians undertook, with whatever shortcomings and sins, to serve the Nation through the medium of partisan politics—and offered no apologies for doing so.

At least that way the voters had an opportunity to choose. They could take it or turn it down—and out.

At least this system had the virtue of candor, forthrightness, and elemental integrity.

At least this system did not place the dissent in the false light of unpatriotic activity.

At least this system did not use the hypocritical cloak of lofty nonpartisanship, bipartisanship or unpartisanship to conceal its cheap, self-serving partisan activities and objectives.

Mr. Truman's lofty professions on this score do not keep his partisan slip from showing every once in a while.

It is showing in this present alleged fight against inflation.

You remember Mr. Truman's radio address to the Nation on June 15. In that address, Mr. Truman said, speaking of the problem of inflation:

It's up to us, not as Democrats or Republicans, but as Americans concerned with our welfare and our country's welfare. This fight we have to make is not a partisan fight. Inflation is not partisan.

That is the familiar line.

Yet the very next day Mr. Truman's Mr. Boyle, the Democratic national chairman, sent out a letter to Democratic Party leaders and precinct workers throughout the Nation, charging falsely and brazenly that hearings on the Defense Production Act "show that the Republican Party is still the inflation party." That is how nonpartisan, unpartisan, bipartisan the administration's approach to the inflation problem really is.

And because the letter obviously did not rally the support for Mr. Truman's anti-inflation schemes which was hoped for, Mr. Truman's Mr. Boyle last week sent out a second appeal—this time a frantic telegram. It was addressed to all Democratic National Committee members and to all Democratic State chairmen and vice chairmen, instructing them to put the heat on local officials and local civic leaders to put the heat on Members of Congress to get behind Mr. Truman's program. And on what is this latest appeal based? Just this: "President Truman and the Democratic congressional leadership are entitled to full support in this fight."

Of course it is partisan politics. The former Economic Stabilization Director, Dr. Alan Valentine, summed it up in one sentence when he said that the administration has infused the stabilization program with a "ward-heeler, city hall" type of politics. That is how bipartisan, unpartisan, nonpartisan it really is.

The American people want real anti-inflation measures—they want economy in government, they want a halt in soaring taxes, they want an end to the administration's spoils system waste of manpower, they want an end to pork-barrel squandering of the Nation's economic substance, they want an end to devalued, printing-press dollars.

They do not need Mr. Truman's Mr. Boyle to pressure them, through party channels, into support of these real anti-inflationary measures.

That, of course, is most fortunate—because Mr. Boyle has no intention of dispatching frantic telegrams down through the Democratic line of command demanding that the party faithful get behind such measures.

Let it be noted, in this connection that when Congress voted price and wage control powers to Mr. Truman last September it was done without benefit of

telegrams from Mr. Truman's Mr. Boyle to the party hierarchy.

And let it be noted, also, that in the 4 months—the four do-nothing months—which intervened between adoption of those measures last September and the administration's first attempts to use those powers in January—Mr. Truman's Mr. Boyle was not sending any frantic telegrams down the line to put the heat on the people to put the heat on the administration to use the authority it already possessed.

No; Mr. Truman's Mr. Boyle was busy, for at least 2 of those 4 months, with more urgent campaign-year activities.

Make no mistake about this: No anti-inflation measures which merely deal with the symptoms instead of with fundamental causes are going to be effective. Congress cannot possibly write a control bill which will please Truman. More inflation is as certain as the sunset, and Mr. Truman knows it. And Mr. Truman, who is playing partisan politics every minute regardless of his pious professions, is going to blame Congress in general and the Republicans in particular, for the consequences.

It is time to forego our denunciations of partisan politics—played openly, honestly, and frankly.

Let us direct our denunciations, rather, to the kind of cheap politics which cloaks itself in the self-righteous, hypocritical garb of bipartisan, unpartisan, nonpartisan appeals.

I come, finally, Mr. Speaker, to the prize euphemism of them all.

I refer to the concept of economic stabilization as embodied in the administration's Defense Production Act proposals now before this House.

It is nothing new for politicians to make a target of business—and I use the term "business" to embrace the broad field of industry, finance, commerce, and trade.

In bygone days it was customary, in such political sharpshooting, to identify business by the geographical and symbolic designation Wall Street.

As a symbol of big business and vested interests, Wall Street provided the ideal target for political indignation, both justified and demagogic. As a symbol of entrenched evil, Wall Street was useful both in accomplishing needed reforms and in adding color and fervor to campaign oratory.

But it is doubtful whether the most rabid castigators of Wall Street, in those bygone days, ever envisioned, even in their most violent denunciations, the sort of minute regimentation of the most detailed operations of all business, big and small, or the sort of life-and-death powers over all business, big and small, involved in the administration's proposed amendments to the Defense Production Act.

And it may be taken pretty much for granted that these sturdy Americans would have recoiled in horror at such fantastic proposals—because they were equally intolerant of big government, equally fearful of vested political interests, and equally hostile to bureaucratic concentrations of power.

The target of attack has shifted today.

Instead of the big business of Wall Street, the target is Main Street and every merchant on every Main Street in every city in America.

Instead of the big business of Wall Street, the target is Factory Avenue and every industrial concern—big or small—on every Factory Avenue in every city in America.

And the weapon of attack thus directed against every businessman and every merchant—big and small—is not campaign oratory.

It is a real gun—a loaded gun.

The weapon is the full statutory and police power of the mighty Federal Government.

It is power in the hands of a well-heeled, deeply entrenched, authority-drunk bureaucracy, with all of the apparatus and paraphernalia of bureaucracy; the complex, legalistic, constantly revised directives, having the force of law, the endless, time-consuming, labor-wasting forms, schedules, and reports; the overshadowing threat of penalties for violations however unintentional; the complicated computations, in accordance with OPS formulas, which yield as the end-product the price you are permitted to charge your customer, with or without any remaining profit.

And on top of all that, the ceaseless prospect and threat of more powers of Government, including the incredible power to license business, to suspend licenses, and so the power of life-and-death over business.

And, as a crowning insult, as a badge of compulsory acquiescence to bureaucratic regimentation there is the placard which, by law, must be prominently displayed in the place of business:

The prices of merchandise in this store are no higher than the OPS ceiling prices of the articles

Remember, all this is not campaign oratory directed against Wall Street.

This is economic stabilization. This is the law—present and proposed. This is the American businessman of today required by bureaucratic regulation to publicly advertise that he is not a law-breaker, that he is not a criminal.

And all this in the futile attempt to control some 9,000,000 different prices in the Nation's economy. All this in the absurd pretense that 9,000,000 different prices can be set, by bureaucratic directive, in proper relationship to each other. All this in the even more farcical pretense that regulations governing these prices can be changed fast enough and accurately enough to keep abreast of changing economic conditions. All this fantastic invasion of Main Street and Factory Avenue by the Federal Government, when a free market does this immense job automatically. All this when the Federal Government neglects and spurns the obvious and legitimate measures to control and prevent inflation.

An earlier, more forthright, more accurate generation would not have been deceived by the euphemism—"economic stabilization."

It would have recognized all this for what it is—and it would have called it by its real names—regimentation, the anteroom to socialism, tyranny.

We cannot afford, in the name of liberty and in the name of integrity, to do any less with all of these clever euphemisms by which the administration pilfers us of our wealth, ensnares us in red tape, engages in unprecedented practices of pork barreling and spoils, wastes our economic substance, and deceives us with lofty professions.

I close, Mr. Speaker, as I began.

It is time that we started calling things by their real names in this country and in this House.

Carrying Coals to California

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. HINSHAW. Mr. Speaker, I am informed that in the building of certain temporary barracks in southern California in World War II, the heating units specified and installed were found to be coal-burning stoves. The nearest coal is over 1,000 miles away in Colorado. Then in the design of certain post-office structures for construction in California it seems inevitable that we find coal bins built into their basements. Now comes the Defense Transport Administration advising us to lay in our stocks of coal during the summer months.

Mr. Speaker, when will the Washington bureaucrats come to realize that we burn oil and gas in California because we have plenty of both, and no coal.

DEFENSE TRANSPORT ADMINISTRATION,
Washington, D. C., July 9, 1951

HON. CARL HINSHAW,
House of Representatives,
Washington, D. C.

DEAR MR. HINSHAW: The citizens of this country can do much to relieve the anticipated unprecedented burden upon transportation this coming fall and winter and insure themselves against physical discomfort and inconvenience if they will lay in the winter's supply of fuel now during the summer months.

The suggestion is made in the attached copy of our Information Release, No. 101, issued May 29.

It will be exceedingly helpful if you will pass the suggestion, with your "blessing" on to your constituency through your radio talks and the other media of communication you employ.

Sincerely yours,
JAMES K. KNUDSEN,
Administrator.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 11, 1951.

Mr. JAMES K. KNUDSEN,
Administrator, Defense Transport Administration, Washington, D. C.

MY DEAR MR. KNUDSEN: I am in receipt of your letter of July 9 suggesting that I might assist the people in my home district by suggesting that they lay in their supply of winter's fuel during the summer months.

The thoughtfulness of your suggestion is appreciated, but coming from California, as I do, I am sure you realize that my constituents all burn gas or use electricity for heat-

ing purposes, and it would be a bit difficult for them to acquire these items and store them in the summer time against winter's need.

Sincerely yours,
CARL HINSHAW,
Member of Congress.

South Carolina Peach Crop

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. BRYSON. Mr. Speaker, I very proudly and yet humbly present the attached excerpt from the Spartanburg (S. C.) Herald for Thursday, July 12, 1951. South Carolina is very proud of the fact that she has come to be certainly one of the largest fresh-fruit-producing States in the Nation. Spartanburg County is said to be the leading peach-producing county in the country. Believing that the statistics given by the United States Department of Agriculture in the enclosed clipping will be of interest to you, my colleagues, and to the country generally, under unanimous consent, I enclose same in the Appendix of the RECORD:

USDA ESTIMATES 1951 PEACH CROP AT
6,630,000 BUSHEL

The United States Department of Agriculture Wednesday estimated the South Carolina peach crop at 6,630,000 bushels, which would equal approximately, the record-breaking 1947 crop.

The increase estimate was based on conditions July 1

The 6,630,000 figure is 390,000 higher than the Department's forecast of 6,240,000, issued last month based on conditions June 1. It was only about 1 percent under the May forecast of a record-breaking 6,708,000 bushels.

Shippers of fresh peaches here pointed out that the USDA estimate is a total production estimate—not an estimate of the commercial crop.

The market Wednesday held about steady for the third straight day, with 2-inch-up fruit moving at \$3 a bushel, f. o. b.

R. E. Wintrey, local representative of the Federal-State Market News Service, said inquiry for peaches was good, though shipments were still light.

Some smaller fruit—Burnett Elbertas 1½ to 2 inches, U. S. No. 1, was moving at \$1.75 and \$2 bushel, f. o. b., Mr. Wintrey said.

South Carolina came close to being the Nation's No. 1 peach-shipping State Tuesday

Palmetto peachmen shipped 96 carloads, but were nosed out by Californians who rolled 97 carloads.

Georgia was in third place with 75 carloads. The harvest in that State has subsided recently, but is now moving into regular Elbertas which today furnished encouraging prices for this section's many growers of this variety, topping the deal and scheduled to start moving around July 17.

These are Wednesday's New York basis (not f. o. b.) per bushel prices on Georgia regular Elbertas as reported here by United States Market News Service:

Two inches up, some fair color, \$4-\$4.50; same size, good color, \$4.75-\$5; ordinary fair color, \$3-\$3.75; 1½ inches, \$4-\$4.50, same

size, fine, \$5; 1½ minimum, \$3.50-4; poor color, same size, \$3-\$3.25; wasty, same size, \$2-\$2.50.

The New York wholesale market report was better Wednesday—slightly stronger on best large stock, all good fruit sold out well, dull on others, but with trading generally slow at midmorning.

New York terminal received 40 carloads and 24 truckloads Wednesday morning.

Lightest shippers reported for Tuesday were North Carolina with two carloads and Arkansas, heavily weather-cut, six carloads.

Wednesday's New York basis per bushel prices for South Carolina peaches included:

Hileys, 2 inches up, \$2.25-\$3, mostly \$2 50-\$3; 1½ inches up, \$2.25-\$3; 1½ inches minimum, \$2; 1¼ inches, \$2 50-\$3.

Burnett Elbertas, 2 inches up, \$2.75-\$3; 1½ inches, \$2.25.

Dixigems, 1½ inches up, \$2.75.

Jubilees, winding up, 2 inches up, \$2; 1½ inches, \$1.50.

Golden East, a new variety for this section and largely coming from Greer and Cherokee area orchards, 2 inches up, \$3 62; 1½ inches, \$2.

Stockpile Warning Given 3 Years Ago

EXTENSION OF REMARKS OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1951

Mr. SHAFER. Mr. Speaker, a recent report by a subcommittee of the Armed Services Committee of the other body discloses that "the United States and the free world stand on the verge of tungsten starvation."

The report charges that, as a result of "bureaucratic blindness" on the part of the Army Department and the Munitions Board, there has been a grave failure in the program of tungsten stockpiling. The subcommittee further states that by the time these two agencies woke up to the situation and began working together, China and other principal sources of tungsten in the Far East had fallen behind the Communist iron curtain. As a result, this Nation's tungsten position is described as "little short of desperate."

In connection with these shocking disclosures, I should like to call attention to warnings regarding even more general lags and breakdowns in the vital defense stockpiling program, which I gave in a speech on the floor of this House on February 24, 1948—nearly 3½ years ago. In this speech I said:

As chairman of a subcommittee of the House Armed Services Committee, I am in a position to know that the administration has fallen down on one of the most important bases of a strong and prepared America—stockpiling of strategic materials.

I pointed out at that time that 3 years earlier Congress passed a stockpiling law, and provided ample funds to start this program. I commented on the effrontery of the administration in proposing other national defense measures while failing to see that the stockpiling legislation works.

Summing up the situation as I found it in February 1948, I told the House:

Of something more than 65 strategic materials included in the stockpiling program, only two or three are in full supply in this Nation. On several of the acquisition programs, the stockpile is as big as the program contemplates for this time, in other words, up to schedule. But in more than 60 strategic metals, minerals, and materials we are not up to schedule on our stockpiling.

I asked this question after citing these sorry facts:

What good would it do to have millions of men under arms, or trained to fight, Mr. Speaker, when the minerals and metals and materials needed to supply these men were not available through poor administration of a law passed by Congress?

The question, it is obvious, is even more pertinent and more urgent today than it was then. It is equally obvious that the answer, in terms of administrative performance, still falls desperately short of the critical imperatives of the situation.

The NAM Puts the Finger on Charley and Eric

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. MULTER. Mr. Speaker, permit me to direct the attention of my colleagues to the following editorial which appeared in the New York Post on Thursday, July 12, 1951:

THE NAM PUTS THE FINGER ON CHARLEY AND ERIC

It looks as though Mobilization Director Charles E. Wilson and Stabilization Administrator Eric Johnston have been expelled from the club. The National Association of Manufacturers has officially announced that they are undermining the American way of life.

That seems to be the substance of the NAM's comment on the valiant efforts of Messrs. Wilson and Johnston to achieve a decent anti-inflation law. They have committed the final heresy, they have stood up and fought for controls over prices and profits as well as wages. This is obviously conduct unbecoming a tycoon and all NAM clients are solemnly admonished to look the other way if they see Charley and Eric walking down the street.

In the latest edition of its news letter the NAM tries to explain what happened to the two fallen idols. Once upon a time both were known as responsible, respectable businessmen. One of them headed General Electric; the other had corporate affiliations too numerous to mention. Yet July 1951 finds them waging a desperate battle for effective home-front controls.

What happened to Charley and Eric? The NAM says the answer is simple. They have become prisoners of their subordinates, the bright slide-rule and figure boys who get up the charts, interpret the statistics and feed them the data on which their thinking is based. Needless to say, these bright boys are New Dealers.

In advancing this explanation of a treason apparently as great as any committed

since Franklin D. Roosevelt deserted Groton, the NAM gazette tries hard to be charitable. It obviously feels that the suggestion that Wilson and Johnston have been duped by their aides is more generous than the allegation that they know what they are doing. Actually we can think of no more abusive remark. We question whether Wilson and Johnston will be relieved to learn that they are stupid rather than sinister.

We rise for the defense. We think the two accused characters have simply managed to achieve larger dimensions than the motley mob of special-privilege lobbyists now swarming triumphantly over Washington. Both men have stated their case eloquently. They have bluntly warned that the future of this country—and of the free world—is menaced by the cynical grab for special privilege now taking place in the capital.

Their stand has inevitably embarrassed all the boodleboys engaged in the great summer offensive against controls. It is palpably difficult for righteous Republicans and Dixiecrat demagogues to picture the President's anti-inflation program as a Socialist plot when Wilson and Johnston are leading the fight for its enactment. So the NAM has felt compelled to tell all. Charley and Eric may be nice guys but they are weak-minded fellows who have fallen into bad company and succumbed to bad counsel; they know not what they do and every upstanding, right-thinking, profit-grabbing patriot is hereby warned to stay away from them.

Seaway Project Endorsed by VFW at State Convention

EXTENSION OF REMARKS OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. POTTER. Mr. Speaker, under leave to extend my remarks, I wish to include a very fine editorial which appeared on June 18, 1951, in one of northern Michigan's leading daily newspapers, the Escanaba Daily Press. This editorial cites the benefits to be derived from the construction of the St. Lawrence seaway:

SEAWAY PROJECT ENDORSED BY VFW AT STATE CONVENTION

The Veterans of Foreign Wars, Department of Michigan, took a cue from Auditor General Martin here Saturday to adopt a resolution advocating the construction of the Great Lakes-St. Lawrence waterway in the interests of national defense.

Martin brought the matter before the convention with a very convincing argument that a complete relocation of heavy industry, including defense production, would be necessitated in the future unless the seaway was constructed to assure an adequate supply of iron ore for the Midwest smelters.

The seaway has been under steady and constant attack for years but primarily by selfish interests unconcerned with the Nation's welfare. The port cities of the East are particularly active in carrying on a program of vilification of the seaway project.

We are happy that the veterans of Michigan as represented by the VFW, have recognized the importance of the seaway project and have placed the weight of its organization behind the proposal.

The Middle West particularly would be benefited by the St. Lawrence project but the

entire country would share in those benefits, not only because of cheaper transportation but also because of the volume of power that the seaway development would produce.

The time is at hand for action on this project that has been stymied by selfish groups for many, many years.

Interior Department's Disregard of Congress

EXTENSION OF REMARKS OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. POULSON. Mr. Speaker, there has come to my attention another instance of the Department of the Interior's utter disregard of the intent of Congress. In this case the Department has used its administrative authority, covering the use of critical materials, to further its unwarranted expansion of transmission facilities, while at the same time placing every possible road-block in the way of essential efforts of private utilities.

In January of this year the Bonneville Power Administration announced an invitation for bids in March for the construction of 45 miles of 230 kilovolt wood-pole, 11-frame structures involving a 230-kilovolt line between Pendleton and La Grange, Oreg. It has also recently announced that bids will be invited this month for a 20,000-kilovolt-amperes substation to be installed at La Grande.

The city of La Grande, as well as all of Union and Baker Counties, was then and is now being adequately served by the California-Pacific Utilities Co. Therefore, there appeared to be no justification for using critical materials in the construction of this wholly unnecessary line, and what is more, no use for the line even if constructed. Furthermore, a news release by the Federal Power Commission on January 9 included a statement to the effect that because of the power shortage in the Northwest, Bonneville would not have sufficient power to satisfy full requirements of the five companies it serves; and that, therefore, "Bonneville will not guarantee deliveries of power at any time."

If Bonneville was not in a position to supply the requirements of its existing customers, there certainly was little justification in extending its transmission facilities into new areas, and particularly areas where private power supply is adequate.

On January 30 a protest was sent to Mr. Clifford B. McManus, the Deputy Administrator of the Defense Power Administration in Washington, by Mr. George M. Gadsby, the regional member of Mr. Chapman's NPA Committee. This letter was not even acknowledged.

Then, in the CONGRESSIONAL RECORD, of May 1, 1951, there appeared a statement by Congressman JACKSON, of Washington, as follows:

Early in April of 1950-51, the Idaho Power Co. and the California Pacific Power Co. op-

posed the allotment of materials by the Defense Electric Power Administration to the McNary-La Grande line, on the basis that this will be a wasteful use of such critical materials. On April 16, 1951, after study of the circumstances and justifications for the line, the Defense Electric Power Administration approved the use of materials for this construction, thereby rejecting the power company's objections.

This statement was called to the attention of Mr. McManus by Mr. Gadsby on May 14. In his letter Mr. Gadsby stated that—

The local people familiar with this project and the power situation in the area affected, are convinced that building the line at this time is an unnecessary waste of critical materials, and have urgently requested me to make some further inquiry as to the consideration given it by the Defense Electric Power Administration, and the reason for approval of the line as alleged by Congressman JACKSON.

One month later, on June 15, Mr. Whitaker, Deputy Administrator for DEPA, replied to Mr. Gadsby's January 30 and May 14 letters, with the following statement:

Defense Electric Power Administration, upon receipt of your earlier communication, reviewed the request submitted by the Bonneville Power Administration for the additional materials requested for the construction of this transmission line. Approval of their request was made on the basis that the major part of the material had already been purchased and a considerable amount of Federal funds expended as authorized by Congress. It was our further understanding that this controversial subject was thoroughly considered by the Congress prior to their making appropriations available to the Federal agency.

I am sure my colleagues will agree with me that the basis upon which this request was granted, to wit: "that the major part of the material had already been purchased and assembled," is scarcely tenable, as the materials in question are those most urgently needed for service in areas where the transmission lines are really needed, and transshipment would have involved no loss and little expense.

My colleagues will further agree with me, I think, that it was never the intention of Congress to give the Department of the Interior authority to use critical materials to wipe out private industry by building power lines to areas which are now adequately supplied by private power, and at the same time neglecting territory where public power is the only source, and is short at that.

The St. Lawrence Seaway Is Not a Vital Part of the National Defense Blueprint

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. VAN ZANDT. Mr. Speaker, the St. Lawrence seaway is not a vital part of our national defense blueprint, ac-

cording to the June 22, 1951, edition of the Lowell (Mass.) Sun.

The following editorial stresses the fact that most of the New England delegation in Congress is opposed to the St. Lawrence seaway.

The editorial follows:

THE ST. LAWRENCE SEAWAY

Opinions have not changed on the St. Lawrence seaway proposition; they are still just as firmly established as they were 3 years ago when this project was in the spotlight on Capitol Hill.

Put once again there is a drive afoot to put through this development, in spite of the objections of most of the New England delegation in Congress. Making the most of the national defense effort, sponsors of the project are talking loudly about the relationship of the seaway to security, declaring that this will permit the largest ships to move to inland waters in the event of trouble on the coastal area of the Atlantic.

What is overlooked by these proponents is the finding made by Senator HENRY CABOT LODGE, JR., of Massachusetts, that the waterway would be frozen solid for several months each winter and no shipping could move at all during that period. That in itself is a fact that should suffice to discourage the most enthusiastic supporter since it most thoroughly refutes the argument that the seaway would be a vital part of the national defense blueprint.

An Amendment to the Defense Production Act To Provide for the Automatic Suspension of Price Ceilings

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. POAGE. Mr. Speaker, in order that the membership of the House might have an opportunity to thoroughly familiarize themselves with the amendment which I propose to offer to the Defense Production Act, I am inserting in the RECORD the text of this proposed amendment, and an explanation of its effect. I want this amendment thoroughly considered. I have nothing to conceal in connection with its purpose or its effect. I hope the Members will take advantage of this opportunity to familiarize themselves with the amendment and its objectives before it is presented to the House.

The proposed amendment reads as follows:

SEC 411. If ceiling prices applicable to producers, manufacturers, or processors, or their raw-material suppliers have been or are hereafter established for any material they shall be suspended whenever it is shown to the Director of Price Stabilization that the average price of such material for a period of the preceding 60 days is 2 percent or more below the ceiling price so established for such material and no ceiling shall be re-established or maintained for such material unless or until the Director of Price Stabilization determines that the average price equals or exceeds for a period of the preceding 60 days, or exceeds by more than 5 percent for any one day, the ceiling price previously established, and if and when such

ceiling price is so reestablished it shall be (except in those cases where uniform industry-wide ceiling prices are established in lieu of individual ceiling prices) at not less than the ceiling price previously established: *Provided*, That whenever the ceiling price for any material has been suspended under the authority of this paragraph, the Director of Price Stabilization may require any seller of such material to report any sales made above the ceiling price in effect at the time such ceiling price was suspended.

(Page 23, after line 22, insert the following: "Title IV of the Defense Production Act of 1950 is hereby amended by adding at the end thereof a new section reading as above.")

The Defense Production Act provides that when price ceilings are established generally they shall be established across the board. It occurs to me that there has been little effort to establish the coordinated program of across-the-board controls of wages as well as prices which the Congress intended when it passed the present bill. Be that as it may, however. Certainly nobody contends that any ceiling should be maintained where it is not necessary to effectuate the stabilization purposes of the act. We all want as few controls as possible.

We are now concerned with the necessity of devising some formula for the suspension of controls which have ceased to serve any useful purposes. That is what this amendment attempts to supply.

There is a decontrol section in the present act. Section 402 (f) authorizing administrative exemption where ceilings are unnecessary to effectuate the purposes of this title which is to stabilize prices. But we know that controls are never relinquished or abolished willingly. Businessmen know that. The public knows that, and Congress knows it. I think the Congress should expand the present decontrol section of this act by providing a definite procedure for taking commodities out from under control when the ceilings are no longer necessary. Certainly our objective should be to have as few controls as possible.

I think we should establish an orderly system for decontrol which would encourage producers and manufacturers to increase their production and lower their prices and thus answer the inflation problem in the fundamental way. Unless we establish a definite decontrol system and direct the administration to take price ceilings off where they are not needed we may find our economy plagued with unnecessary controls for years. For instance, at the present time although prices in some commodities have dropped way below ceiling levels there has been no movement to decontrol them. Although there are hundreds of commodities which have no conceivable relation to the cost of living, they are under control. The only things that I know that have been decontrolled are dead horses and rattlesnake meat.

The greatest benefit from this amendment should be derived by the consumers in the form of cheaper prices.

The incentive to increase production is provided by allowing producers and manufacturers to get out from under and stay out from under ceilings if they hold their prices below the ceiling level. The OPS controls are so onerous and irksome that I am sure producers and

manufacturers will do everything in their power to hold their prices down if they can escape controls by doing so.

The number of records and reports which are required are not only extremely complicated requiring the time of many lawyers and accountants but they are especially detailed and burdensome. I have heard of numerous cases where relatively small manufacturers have had to employ as many as 100 people just to fill out the forms required by OPS. In one case a manufacturer had filled out over 3,000 forms, then found out OPS had issued a new interpretation which required that they all be done over again. Another manufacturer said he had spent over 1,000 man-hours on making calculations required by unofficial instructions of OPS officials, then an official interpretation was finally issued weeks later which required all the work be done over. OPS changes interpretations continually and will no doubt continue to do so in the future. This time-consuming process of calculating and recalculating and reporting will probably continue as long as an industry is under ceiling.

Even more objectionable than the reports, are the changes that OPS makes in its regulations. As long as an industry is under control that industry continues to live in mortal fear of a change in the OPS regulations which will affect their contracts and their way of doing business as well as their prices. One of the largest industries of this country had had five different orders since the 26th of January. All of them tended to supersede the previous orders and most of them cut across contracts and required new calculations. This fear and uncertainty creates an almost impossible situation for manufacturers and greatly discourages them from increasing production and selling ahead as they normally do. In one major industry I am told forward sales recently have been 65 percent below normal, primarily because of the inability to price their goods under the extremely complicated formula and because of the uncertainty of what subsequent orders would do to contracts made in the interval. Buyers sensing the situation have been out of the market, hoping for a new order and a lower price. Thus a means of getting out from under ceilings by lowering prices should provide tremendous incentive to increase production and lower prices.

In those fields where the seller does not fix his price, as in agricultural products, the rigid ceilings now in effect tend to discourage business. The very existence of the ceiling and the fear of punishment for exceeding the ceiling has the effect of restricting business and forcing prices far below ceiling levels. This is particularly true in agricultural commodities which have quoted markets where prices are fixed on a bid-and-ask basis. Flexibility is absolutely necessary in many commodities which have a very complicated marketing system.

There are a number of commodities like cotton sold on call where the contract provides the premium or discount but where the base price is left open to be fixed at a later time on the buyer's

call in relation to the futures market. In this case the seller has no control over the final price which is determined by the level of the market. Suppose the buyer ordered the price to be fixed on a certain day. If the price happens to be fixed on that day at a time when there has been an upward flurry in the market, the seller may be liable or his contract may become invalid through no fault of his own. The flexibility of this proposed decontrol system would permit normal trade practices to continue.

Let me further illustrate the necessity for flexibility. Poultry, eggs, and dairy products are below parity and under law ceilings are not imposed. There are a lot of others, these are only a few for illustration. These are seasonal commodities on which prices fluctuate, sometimes widely in 30 to 60 days. If in the fluctuation the price reached parity one month, a ceiling could be imposed through all the rest of the year the price was below the ceiling. Because of having touched parity one time, these products would be subject to all the regulations, the record keeping, reports, and uncertainties of controls; and unnecessarily. Under this proposal, if ceilings were established they would be suspended when the prices averaged 2 percent below and would not be reimposed unless and until the preceding 60-day average price equaled or exceeded the authorized ceiling, or unless there was an upward surge which carried the price as much as 5 percent above the old ceiling. Should this occur the public is protected and ceilings could be reimposed.

In most commodities there is a natural fluctuation in prices, especially in seasonal agricultural commodities which producers cannot entirely control. However, these flurries often subside with no damage having been done to the economy. This amendment would permit some flexibility which is absolutely necessary in all commodities the prices of which are fixed on a bid-and-ask basis in established commodity markets.

Let us take a hypothetical example. Say the price ceiling on refrigerators is \$250. If the manufacturer of the refrigerator can hold his price for a period of 60 days to an average of 2 percent below this figure, or \$245, the ceiling would be suspended. I think many manufacturers would make a real effort to increase their production and reduce their cost so they could get out on this basis. Now after the ceiling is suspended it may be reimposed if the price of the refrigerators goes up to a level which averages or exceeds the \$250 ceiling in any preceding 60-day period. If the price of the refrigerator went up 5 percent, or \$12.50, on one single day, the ceiling could be reimposed. Certainly the public would be amply protected against a gouge.

Now, some people have said that the job of policing would be too difficult; that this would be an administrative impossibility to tell when a commodity ceiling should be suspended and when it should be reimposed. It is no more difficult than the present system. At the present time there are very few product ceilings on which each manufacturer has

the same price. In most cases every manufacturer has a different ceiling price at the present time. Every manufacturer calculates his own ceiling on everything he makes. Therefore, the job for OPS would be no more difficult than it is at the present time in checking prices. In fact, it should be a great deal easier, because many commodities have quoted markets where the price level can be easily established.

This amendment carries out the intention of Congress enunciated in the declaration of policy in the Defense Production Act of 1950 which states that the program shall be administered insofar as practicable within the framework of the American system of competitive enterprise.

The procedure would set up an orderly movement back to a free economy under which the Government could gradually reduce controls.

This would provide an incentive to producers and manufacturers to increase their production and reduce their cost in order to avoid the burdensome and irksome features of control and especially in order to be relieved of the constant fear that OPS would change the regulations in such a way as to cancel their contracts and force them to change their way of doing business.

It would also have the further advantage of much needed flexibility in the marketing system and it would escape the damaging and disruptive rigidity of fixed price ceilings.

The amendment is limited to producers, manufacturers, or processors or their raw material suppliers and specifically excludes the ordinary retailers and the other groups that are not directly engaged in production. The amendment is drawn this way because the objective is to provide an incentive to production and also because the problem of price ceilings in the retailing industry is considerably involved—too complicated to handle in this manner.

The history of controls, the world over, indicates that they are never relinquished voluntarily. The "emergency" never ends. There is always some new excuse, and then there are a great many people who unthinkingly embrace the glittering delusion that all that is necessary to change prices and even costs is to pass a law. The planned-economy group has fixed its grasp on all the countries behind the iron curtain. In fact it is this group that designed and built that curtain. The same idea that the governmental planners know better what is good for the people than the people themselves know, strongly influences most of the governments of Europe. We have in the last few years seen it take over in Britain, long looked upon as a bastion of free enterprise. Nowhere has this continuation of controls been able to improve living standards. It has only been able to keep a lot of jobholders on the public payroll, and to give a lot of politicians an issue on which they could stay in power.

This amendment puts the issue squarely before us. Do we want controls only for the purpose of checking prices, or do we want controls for the sake of regl-

menting our economy? The choice is that simple.

The amendment does not in any way weaken the power of the OPS to establish and maintain price ceilings where it feels that they are necessary to protect the public from excessive prices. It only requires the suspension of ceilings when they have ceased to have any effect on prices. Surely there can be no reason for retaining ceiling prices under such circumstances except for the purpose of substituting a regimented economy for our historical free price system.

Nothing Should Be Spared To Render the Strategic Air Arm All-Powerful

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. PRICE. Mr. Speaker, to my mind, there is no scourge or tribulation visited upon the human family comparable to war. I shall never forget the mixed emotions which gripped me when I learned 1 year ago that our country was again going to war with a foreign power—for the third time in my life—not to mention the many, many other times when United States troops have been landed on foreign soil.

Equally well do I recall the emotions which engulfed me when I realized that this was a war that would be fought not alone by our Nation but by a concert of world nations—solely to put an end to bloody warfare.

I remember, too, my exultations as to what I regarded as the superb courage required on the part of President Truman to put United States troops into active battle—to stop aggression—and in that manner stave off, if not altogether prevent, the coming of another world-wide global conflict. I said to myself—if the President's action would, with God's help, bear fruit, the name of President Harry Truman would ring down through the ages.

I am not unmindful of the great measure of criticism that has been leveled at various officials of our Government in these last several years—some of which was well-founded. A portion of this criticism, however, represented—to my way of thinking—the most devilish type hatchet-work that could possibly be done to chop the character and the reputations of splendid public officials virtually to shreds.

Regardless of all that we heard about certain of those in public life, the fact remains that this Nation today is being served by some of the finest American citizens to which our country has ever given birth.

Hundreds of great business executives, leaders of agriculture, labor, industry, commerce, finance, and trade, those engaged in the healing arts, engineers, scientists, lawyers, bankers, and other acknowledged leaders in their crafts or

professions are today, at the request of President Truman, serving this Government at tremendous personal sacrifice. They are doing this solely to insure our continued national existence in a world of peace, tranquillity, and abundance.

On the Meet the Press program telecast by the National Broadcasting Co. on July 8, the guest of the evening was the Honorable Thomas K. Finletter, Secretary of the United States Air Force, and the interviewers on that particular evening were undoubtedly the most representative and interesting cross section of newspapermen that we have ever seen assembled on such a panel.

There was not the least vestige of political complexion evident on the Sunday night program, and I can well imagine that the millions of persons listening sat taut and tense as they heard the questions posed by the newsmen, and listened to the answers made by our great Secretary of the Air Force.

There is probably no man in Government who enjoys the confidence of this body more, or who, in these last 12 months, has grown greater in stature than Thomas K. Finletter.

After his appearance before the Armed Services Committee, in one of the discussions among our members, I heard him described as being one of the most able men in Government today.

I well recall the remarks of my respected colleague, the Honorable LEO E. ALLEN, ranking minority member of the powerful Rules Committee of the House, who, in discussing the value of the USAF B-36 and the atom bomb in containing Russian aggression, spoke as follows:

Mr. Speaker, the name of Thomas K. Finletter is not a new name to the Members of the Congress and others concerned with Government here in Washington. At a great personal sacrifice to himself, Tom Finletter has given unstintingly of his time and largess to the solution of some of the most vexatious problems that have ever confronted our Government and country in the last decade.

We who know him know that America has no finer citizen, or, indeed, one possessed of a more logical and judicial mind than Thomas Knight Finletter, eminent soldier diplomat, barrister, lecturer, teacher, author, a man of tremendous vision, and one, who by his proven executive abilities in the handling of our Air Force, has marked himself preeminent in administration of one of the principal departments of Government.

It is indeed fortunate that we have such as Tom Finletter to head up the forces and the destinies of our great Department of the Air Force at a time when it is being called upon to spend billions of dollars.

Such was the recognition paid to one great American by another.

Discussions relative to a military armistice are now under way in Korea. How quickly political discussions may follow, no man knows. The political discussions will comprehend, among others, recognition of Communist China, the admission of the Russian Chinese to the United Nations Council, the culmination of peace with Japan, the disposition of Formosa, together with questions pertinent to Indochina, the Malayan Peninsula, as well as Thailand.

There are few, if any, men in these United States who have greater knowledge of the political as well as military implication of these problems than does Thomas K. Finletter. He is fully cognizant of the many aspects of all questions dealing with the Far East—and, certainly, his interview of Sunday night, last, showed conclusively that he had no illusions whatever as to what constitutes both the danger and the remedial measures which must be taken to insure enduring peace to our own Nation in all of its relations to the questions of the Far East.

Mr. Speaker, due strictly to the exigencies of these times and to our collective need for a full understanding and the formulation of constructive policies with respect to national affairs, I am asking the consent of my colleagues to extend my remarks and include therein the full transcription of the interview given by Thomas K. Finletter on the televised program, *Meet the Press*, presented on July 8.

Meet the Press—America's well-known press conference of the air—is an unrehearsed press conference. Present were four of America's top reporters: Mr. Marquis Childs, *United Features*; Mr. Lloyd Norman, *Chicago Tribune*; Mr. Fletcher Knebel, *Cowles publications*; and Mr. Lawrence Spivak, *Mercury publications*. It is well to remember that their questions do not necessarily reveal their point of view—the manner in which they are framed is simply their way of getting a story for you.

The program was as follows:

MEET THE PRESS

ANNOUNCER. Our guest of the evening, ladies and gentlemen, will be Mr. Thomas K. Finletter, Secretary of the Air Force, who has recently returned from Japan and Korea.

Miss ROUNTREE. Good evening, ladies and gentlemen, members of the press, and Secretary Finletter. Now, Mr. Secretary, if you are all set there I see Mr. Childs has the first question.

Mr. CHILDS. Mr. Secretary, you recently disclosed that the Communists in Manchuria and Korea have built up a new air force of more than a thousand planes. Don't you think that if the advice of General MacArthur had been followed and there had been bombing in Manchuria, that force could never have been built up?

Mr. FINLETTER. No; I doubt that very much, Mr. Childs. It's always possible to build a force in various bases. I don't think anything would have stopped the building up of that force.

Mr. CHILDS. Well, doesn't the fact that that force on those new airfields and that additional build-up of the ground forces give us something of an advantage—disadvantage—now with this truce negotiation going on?

Mr. FINLETTER. I don't know what you mean by disadvantage. Certainly the addition of power on the other side is not to our advantage.

Mr. CHILDS. And you believe that could not have been prevented by any tactics?

Mr. FINLETTER. No; I don't think it could have.

Mr. SPIVAK. Mr. Secretary, on January 16, Gen. Hoyt Vandenberg said from Korea: "The Air Forces are in good shape. American planes have superiority over the best the Reds can put in the air," and on January 29 you said, "Strategic air power is the greatest deterrent to an attack on us and the rest of the world." But recently, Gen-

eral Vandenberg, in his testimony before the MacArthur committee, said, "Our Air Force was a shoe-string air force." Now what are we to believe?

Mr. FINLETTER. Mr. Spivak, I think that that statement about the shoe-string Air Force is taken a little bit out of context in your quotation. As I remember it what General Vandenberg said was that if the Air Force had to do four or five different jobs at once, had to fight say in Korea and other places and be prepared to carry out its basic missions that then it was a "shoe-string air force." But I want to make it entirely clear that we've got a very good Air Force. It is not as good as I hope it's going to be but it's a first-rate force.

Mr. SPIVAK. Well, now along that line in 1948, you asked for a 70-group Air Force, and now I understand you ask for a 95-group air force, and General Spaatz, the former Chief of Staff for Air, said early this year that we need a 250-group Air Force. Now what do we need?

Mr. FINLETTER. This numbers business you know, Mr. Spivak, is a little confusing. Let's see what we do need. What we're working toward, now, is a 95-wing air force and we now have about 87 wings, and we will have 95 wings at the end of the fiscal year 1952, namely on June 30, 1952. On the other hand, that force will not be all equipped with the kind of planes we want it equipped with. It will be well into the end of the year before it is equipped with what we might call the modern type of plane. As for what we need for the future, the Air Staff has under constant study our requirements, and specifically I think that we are going to come up with recommendations for more than the 95 wings.

Let's take the strategic air arm first. The requirements that are on the strategic air arm are increasing daily. We are going to have more bombs to deliver, we are running up against better defenses on the part of possible enemies, and also we are running up against a greater military preparedness on their part. You said something to the effect that, in my opinion the strategic air force was the greatest deterrent to war that there is. I want to subscribe to that. I believe that the strategic air arm is the single most important part of the armed services and I don't think that there should be anything spared which will make that the most powerful force there is. The Air Force will certainly recommend that the strategic air arm be kept up so that it can render the most devastating possible attack that can be made. I could elaborate more on the other branches of the Air Force.

Mr. SPIVAK. Well, Mr. Secretary, on that strategic air arm, you recently said that it was vital for us to get bases, foreign bases, and that seems to be a change in positions, and I wondered whether that change has come about because of what has been happening in Korea.

Mr. FINLETTER. No, there's no change in that, Mr. Spivak. As you know, our strategic air arm is composed of two types of bombers, the inter-continental bomber and the medium bomber. Now, the medium bomber at the present time requires bases outside the continental United States, and that's what I meant by that statement. On the other hand, we are at the minute working on other techniques, such as refueling, which is extending the range of the planes. I want to point out one thing—it is that the move to jet planes to a certain extent restricts the range of our aircraft because the jet range while gradually increasing is not as long as say the B-36 which is essentially a conventional piston prop job.

Mr. SPIVAK. Well, has the success of the MIG's against our 29's had any effect upon your thinking as regards bases, I mean haven't they been knocking out quite a number of our intermediary planes?

Mr. FINLETTER. No; the only thing that the success of the MIG's against the B-29 has done to my thinking is to reaffirm my determination that we're going to have the best kind of planes and the proper numbers of them for this all important strategic air arm.

Mr. NORMAN. Mr. Finletter, you said something about asking for additional wings. There are rumors around the Pentagon that the Air Force may be planning on a 160 air combat wings with a total force of men of 1,900,000—which is larger than anything the Army plans to have.

Mr. FINLETTER. I can't talk about any specific figure that we're thinking of. Fact is, I think this talking about figures confuses the issue. I think you have to talk in terms of what the three fighting branches of the Air Force are, and you've got to see to it that those three fighting branches are ready to do their job.

We now have something, I understand, in the order of 19,000 planes. The 70-group program contemplated 6,889 first line planes and a reserve of 8,100 planes which gave you 14,000 roughly, or 15,000. If you're going to 160 or 150 you will have an Air Force that nobody ever dreamed of.

Mr. NORMAN. That may be.

Mr. FINLETTER. I'm not saying that that is the figure, you understand, but you're certainly going to need more planes if you have more wings.

Mr. NORMAN. Well, can you explain why we would need those many wings?

Mr. FINLETTER. I can explain to you why, in my opinion, we will need over 95 wings. You've got to look at the three functions that the Air Force will have to carry out. I've given some indications of how seriously I regard the strategic air arm. I believe that it has to have the quality and the quantity of planes that will enable it to do the job and that will have to be more planes than are presently in it. Now the same thing is true, although I don't place the same emphasis on it, of the air defense system. We need more air-defense planes in order that this country may be spared the horrors of bombing to the maximum extent possible. And then, too, as the plans for the North Atlantic Treaty Army and Air Force develop, it may very well be that there will be an additional requirement. Back of all that, you have the transport planes that support all of these things. That's the reason for the need for a very powerful air force.

Mr. NORMAN. Well, at this rate that the Air Force is moving along, and I understand that this plan that you are working toward will cost \$30,000,000,000 a year or—

Mr. FINLETTER. I don't know where you got those figures.

Mr. NORMAN. I read it in the week-end papers.

Mr. FINLETTER. If it was in the papers, it must be accurate. But I don't know anything about that.

Mr. NORMAN. If it is that high, and it seems to me very likely, that 160 groups, if that is the figure and it will cost that much, you're practically eliminating the Army and Navy from any funds.

Mr. FINLETTER. I don't think that's quite accurate, evidently you assume figures, Mr. Norman, which I don't accept. The President's request for fiscal 1952 was for a 60-billion-dollar budget.

Mr. NORMAN. Well, Mr. Secretary, can you build a 150 air group with the 19 billions that they're allotting to you for 1952?

Mr. FINLETTER. No; you cannot.

Mr. NORMAN. Well, how much do you—

Mr. FINLETTER. The figure, by the way, is around 22 billion. The 22 billion will support the 95 wing force.

Mr. KNEBEL. Mr. Secretary, what is the truth about bases in France? You hear all kinds of stories; what do we want in France? There's been some wild story there that we

want to tear up the farmers' fields and put down 50 bases. Is that true?

Mr. FINLETTER. In the first place we have made arrangements for strategic bases in Morocco, I assume you include those. And then it's also quite obvious that as a part of the North Atlantic Treaty Organization it's going to be necessary to have a NATO air force, and it's obvious that a NATO air force is going to require bases, and that is the need for bases. It's really a NATO need, and not a need of the United States of America. You speak, Mr. Knebel, as though the United States were alone concerned with the defense of Western Europe. That isn't true at all. It's a NATO job that is being done. Now, of course, there will have to be wings over there in support of the divisions of the United States which are going over.

Mr. KNEBEL. Well, transfer just a little bit south—how about Spain?

Mr. FINLETTER. What about Spain?

Mr. KNEBEL. Well, do we want bases there, and do we have any assurance from Franco that we will have any?

Mr. FINLETTER. We have no assurance that I am aware of. Of course, we would like bases everywhere we could get them, where they would be useful operationally. Our plan was to have a very wide base structure. I want to make this point if I may. I think it's worth making and that is that the air base structure of the Air Force is not up to where it should be. We are starting in a sense from scratch, not quite from scratch but these new demands on the Air Force are new since the end of the war and it's quite a long build-up job to get your proper bases.

Mr. CHILDS. There's been a lot of talk, and some here this afternoon about the inadequacy of the Air Force. Do you think our Strategic Air Force is sufficiently strong to deliver a retaliatory blow to the Soviet Union if we should be attacked? A paralyzing blow?

Mr. FINLETTER. You said two things there, Mr. Childs. A retaliatory blow and a paralyzing blow. First of all, the Air Force is capable of delivering a very powerful strategic counterattack, a very powerful one. Now when you get into your word "paralyzing," I'll have to digress a moment. No nation has ever been subjected to an atomic attack of the kind of which the United States is now capable and will be capable and of which other nations are also capable and will be capable. Therefore, any prognostication as to the effect of this gets you into a realm of uncertainty. All I can say is that it's a terrible thing. It's the most powerful weapon that man has ever had in his hands and its effect might well be paralyzing, especially in the future, as this power grows on both sides.

Mr. CHILDS. Could you express a ratio, Mr. Secretary, as between the heaviest attacks of World War II and this kind of strategic weapon?

Mr. FINLETTER. It's a totally different sort of thing, Mr. Childs. In the aggregate, the effect of high explosives and incendiary bombing over a long period of time creates terrible damage, but the thing about the kind of attack which is now in the hands of those who have atomic weapons must be measured also by the time factor, because the devastation of this attack can be delivered within a relatively short period of time.

Mr. CHILDS. And as a corollary to this, could the Russians deliver tonight to American cities an atomic attack?

Mr. FINLETTER. They could.

Mr. CHILDS. Or tomorrow?

Mr. FINLETTER. They could.

Mr. CHILDS. When will we be able to say that that is impossible?

Mr. FINLETTER. I doubt if you'll ever be able to say that that's impossible, Mr. Childs, until some new development of science, some miracle comes in. At the present time we only have the orthodox type of air defense

with which you're entirely familiar. We still use the radar that picks up the enemy planes where they are, and reports back, and the interceptors that go up and try to intercept them, and the antiaircraft artillery which tries to knock them down, which is somewhat like the old World War II system. It's more efficient than it was in World War II, but it's nothing like what you're suggesting as a complete guaranty against an attack.

Mr. NORMAN. There are some people, Mr. Finletter, who disagree with your basic thinking on this air strategy. Admiral Gisdle, of the Navy, who is considered a leading naval air strategist, has said that the only way that we can stop an enemy in Europe, besides having foot soldiers on the ground, is to have a large tactical air force, that a strategic bombing force of the kind that you are talking about will not do the job, and he says we are spending too much money. He says that the current funds allocated to strategic air establishments should be turned into tactical air force, that we're spending too much money on strategic bombers, and that strategic air forces, as currently conceived and constituted, do not pull their weight in a specific war situation with which we are faced.

Mr. FINLETTER. Now, Mr. Norman, you'll forgive me, Miss Roundtree, but I want a chance to answer that one. In the first place I completely disagree; let's make that entirely clear. There must be a tactical air force, to be sure, which will work with the ground troops, and please don't think what I'm saying now is that tactical air is not necessary. But any idea that the strategic air force is not predominantly necessary is absolutely wrong. The strategic air arm is the greatest deterrent to attack by an enemy at this time that exists, and it will continue to be such if we put the proper effort in it. I cannot overemphasize the value of the strategic air arm to the defense of this country as well as to that of Europe. I want to repeat and make it entirely clear that nothing should be spared to render that air arm all powerful.

Mr. NORMAN. However, in your report, Survival in the Air Age, which was prepared by the Finletter committee and which you wrote sometime in 1947, you said the commission—that's this air policy commission—does not subscribe to the proposition that armaments are a guaranty of peace. History does not assure us that a strong armament policy by a peacefully inclined nation is certain of fighting off aggressive and totalitarian governments. An aggressor may calculate it can arm better and faster than the nation that it is choosing as its victim, and that if it hits hard enough and with no warning it can conquer.

Indeed a totalitarian government may seek war for war's sake, or to divert attention from its internal troubles even though it may not be certain it will win, so that a strategic air force may not be the deterrent that you say it is.

Mr. FINLETTER. I don't subscribe to the implication of the way you're interpreting that, Mr. Norman.

I stand back of that statement. I believe that today. The point I want to make is that the strategic air arm is the greatest deterrent that there is to war. I didn't say it was an absolute deterrent. Somebody might make a mistake and decide to take it on.

Mr. NORMAN. Are you referring to the Chinese Communists in Korea?

Mr. FINLETTER. Just 1 minute before we get to the Chinese Communists in Korea. To have this strategic air arm available as a deterrent will give us the time; it will be a shield back of which we can work for peace. That is what I was saying—

Mr. NORMAN. You should talk about a quickie war—

Mr. FINLETTER. I didn't talk about a quickie war.

Mr. NORMAN. You say we can devastate in a very short time, paralyze in a very short time.

Mr. FINLETTER. I hope that we can. I thought I prefaced that by saying that one could not be certain about these things. I don't want to repeat what I said before on that.

Mr. KNEBEL. I want to get a little different view, Mr. Secretary. You used the word, I think, in testimony Friday up on the Hill. The money you're asking for now for the bases is an authority program. If I were a Congressman and called you up tomorrow and said I'd like to fly to Venezuela, would you fly me there in a bomber?

Mr. FINLETTER. No; I probably wouldn't. Not unless—

Mr. NORMAN. If I were Chairman VINSON, of the Armed Services Committee?

Mr. FINLETTER. Not unless there was a certificate that it was in the interest of the Air Force.

Mr. NORMAN. Is that the policy.

Mr. FINLETTER. That's the policy.

Mr. NORMAN. Well, how about these foreign relations fellows that just flew to Europe?

Mr. FINLETTER. I don't know about the n. They must have had the proper certificate. I can see high value in having members of the foreign relations committees go to Europe to study things on the spot.

Mr. SPIVAK. Mr. Secretary, are you satisfied that you're getting the fair proportion of the defense budget today?

Mr. FINLETTER. I don't get into proportions, Mr. Spivak. What I am interested in is seeing whether I'm getting enough for the Air Force.

Mr. SPIVAK. Well, now, I can understand that, but you can only get enough if there is so much of the defense budget, you can only get enough if you get a fair slice of it.

Mr. FINLETTER. Not necessarily. We might get more in the budget.

Mr. SPIVAK. Well, now, you said a minute ago, I believe, that the amount in 1952 for 95 wings you expected to get \$22,000,000,000. Now you're aiming for 150 wings. Now that's going to cost you at least \$30,000,000,000.

Mr. FINLETTER. I don't know about those figures, but I do want to point out one thing and that is that in this build-up to 15 wings there is a capitol investment in there. This doesn't mean that if you were going to level off at 95 wings that you would have to keep that rate of spending. You bought some of the capital goods. These figures I'm not familiar with.

Mr. SPIVAK. Well, Mr. Secretary, let me switch a moment. I have before me—

Miss ROUNDTREE. Before we switch, Mr. Childs, did you want to follow up that question? Then go ahead, Mr. Spivak.

Mr. SPIVAK. I have before me a magazine called Air Force which states from official sources that in the Korean war, air power has accounted for 81 percent of all enemy trucks destroyed. This is of March 1950. Seventy-five percent of all enemy tanks destroyed, 72 percent of all enemy artillery destroyed, 47 percent of all enemy troops destroyed. Now, since the Army casualties were over 75,000 and the Air Force casualties under 2,000, doesn't that strongly suggest that we ought to put more of our military budget in air power, rather than in other things.

Mr. FINLETTER. You've got me on a double question here. In the first place, I don't think that those statistics are quite fair to the Army. I personally have been very surprised at the high percentage of casualties that have been produced through the air. But, on the other hand, you would not have held Korea if you hadn't had ground troops in the battle, and American ground troops in the battle.

Mr. SPIVAK. There are some differences of opinion on that, aren't there?

Mr. FINLETTER. I don't know, I am just giving my own view.

Mr. SPIVAK. In regard to O'Donnell who said that he thought he could have taken Korea in 3 months if he had been—

Mr. FINLETTER. I don't know what General O'Donnell said but I rather like these Air Force officers that seem to think they can take anybody single-handed. That is the spirit I like.

Mr. CHILDS. I want to ask you a question, Mr. Secretary. Our Air Force officers have suggested that a preventive strike with an atomic bomb would be important against Russia to prevent a Pearl Harbor here. Do you think that view is widespread in the Air Force and what is your opinion of it?

Mr. FINLETTER. I will give you my opinion of it. I can't tell you how widespread it is in the Air Force, but I will hand you my opinion and it is a very personal one and is one that one makes up in his own individual mind because it is a matter of philosophy and morality.

I think that the United States has to play this the tough way. I think to go the way every other nation in its history for 6,000 years has gone to start a war to stop one is the easier way. I think we have to try to prevent war by this difficult course that we are pursuing, and, I am opposed to a preventive war.

Mr. CHILDS. Your policy on the Air Force is to prevent expressions contrary to that.

Mr. FINLETTER. We don't—the problem does not arise, I don't know who said that in the Air Force.

Mr. CHILDS. General Anderson did for one down at that—

Mr. FINLETTER. He is no longer with the Air Force.

Mr. NORMAN. We were talking a little earlier about the MIG-15 engine and the fact that it was superior to a Saber jet engine, I would like to know first, sir, whether we have captured a MIG-15 so that we could determine that. I notice that the New York Times, this morning, bluntly indicated that General Vandenberg had said that we had captured a MIG-15 either on the ground or otherwise and so determined the superiority of this engine and, secondly, what is the reason for the superiority of these Russian engines over ours?

Mr. FINLETTER. Let me answer the first question. The statements that have been made about the MIG-15 engine are based on sound evidence. They are not just wild guess work, and that is as far as I will go in answering that question. I will not say whether or not we captured the MIG-15. The second part of your question was, Why have they got an engine superior to ours? In the first place, what I think that General Vandenberg said was and what the fact is, that it is believed that that engine is superior to the engines we have in our planes in Korea does not mean it is superior to all of them.

But I think this teaches us a lesson which I would like to emphasize, and that is not to underestimate the engineering and scientific capacity of other nations. We have a tendency to do that too much. This ought to be a lesson.

Mr. SPIVAK. Mr. Secretary, last week on this program, Mr. David Lilienthal, former head of the Atomic Energy Commission, said reliance on the atomic bomb resulted in starving of our Army and Navy and the fact that we had no tactical Air Force and we put all our eggs in one basket—the A-bomb basket. Since the A-bomb and our strategic Air Force are all tied together, I want to ask you, is it true that the other services were starved at the expense of the A-bomb basket?

Mr. FINLETTER. No; it is not true and I want to deny flatly the implication of that

statement. There is nothing gadgety about this A-bomb. When I am talking strategic air force, I am talking about the airplanes that carry the atomic bomb.

Mr. SPIVAK. The H-bomb, too?

Mr. FINLETTER. Yes; and the H-bomb, when it is developed, and I want to make it entirely clear, although I have said it three times, that I consider this very far from a guess and I consider it the basic defense of the United States and of Europe.

Mr. SPIVAK. Can you deliver the H-bombs in the planes you now have or will you need special planes?

Mr. FINLETTER. I don't feel that I should answer that question, Mr. Spivak.

Mr. SPIVAK. I am sorry, sir.

Mr. KNEBEL. Mr. Secretary, why is it, when we had, I think, over 1,000 Air Force bases during the war that you now have to ask for 77 more? Why can't we fix up the old ones?

Mr. FINLETTER. For the reason that we demobilized our base structure. I don't want to give the impression we are building all these bases new. We are, in fact, only building six bases new in the United States. All the rest are being recaptured, and those six are being built new for special reasons. Don't let's get the idea now that we are getting wasteful in our base structure.

Miss ROUNDTREE. I am sorry to interrupt, gentlemen, but our time is now coming to a close. I want to take this opportunity of thanking you, Mr. Childs, Mr. Spivak, Mr. Norman, Mr. Knebel, and you, Secretary Finletter, for being with us on this program of Meet the Press today.

Why Overtax the American People?

EXTENSION OF REMARKS OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. JENKINS. Mr. Speaker, the matter of taxes has gotten to be a very important one with all of the taxpayers of the country. The last tax bill passed by the House of Representatives called for a larger amount of taxes than any other bill ever passed by the House of Representatives. That bill raised the personal-income tax to a terrifically high limit, and also the same was true with reference to corporate taxes. That bill also raised excise taxes in many instances and added many additional commodities to the tax list.

The impact of the tax laws on the economy of the Nation has been described very thoroughly in a recent article published by Dr. Julius Hirsch, one of America's great economists.

Dr. Hirsch is a thorough student of finance and economics, and he has written many very instructive articles on these subjects.

Under leave to extend my remarks, I am submitting for printing in the RECORD the following article which I think will be found to be interesting and instructive by many of the readers of the CONGRESSIONAL RECORD:

WHY OVERTAX THE AMERICAN PEOPLE?—CONGRESS COMMITTEE HAS VOTED MORE TAXES THAN NEEDED FOR FISCAL 1952

For 5 years our Government in Washington has consistently underestimated the Federal revenue, and done so to a startling

degree. Now it claims a \$10,000,000,000 boost in taxes is going to be needed to balance the budget in the fiscal year which has just begun.

The administration's present claim for fiscal 1952 ought to be suspect simply on the basis of its record for erroneous forecasts. In addition, analysis of available figures suggests that the cash budget in the new fiscal year will be balanced without any new taxes at all. If Congress yields to the Executive's pressure and passes tax increases, they will simply produce a surplus.

Let us look at a few examples of past underestimates:

THE SINS OF THE PAST

For fiscal 1947—year to June 30, 1947—the President forecast a deficit of \$4,500,000,000. The fiscal year yielded a surplus of \$800,000,000. Miscalculation was \$5,300,000,000. Even though expenditures were greater than forecast by \$6,500,000,000.

For fiscal 1948 the President estimated a balanced budget \$200,000,000 surplus.

I was able to estimate as early as January 1947 a surplus of 7 or 8 billion.

In August of 1947 the President estimated the surplus would be \$4,600,000,000, and we had an actual surplus of \$8,400,000,000 (miscalculation \$8,200,000,000).

For fiscal 1951 President Truman estimated in the budget message of January 1950 a deficit of \$5,133,000,000, and changed this in January 1951, based on new taxes passed in 1950, to a deficit of \$3,100,000,000. We now have a surplus of \$3,500,000,000. Miscalculation, \$6,600,000,000.

Thus, the inflationary pressure which we experienced in the first 9 months of fiscal 1951, was certainly not due to a budget deficit. We will also have, as the figures now stand, no cash deficit in fiscal 1952 even without a penny in new taxes.

NO CASH DEFICIT IN FISCAL 1952 EVEN WITHOUT NEW TAXES

Looking forward, the 1951 surplus amount of \$3,500,000,000 can be carried over into fiscal 1952. This will immediately improve the cash situation—which will be even more favorable since the trust funds (social security, etc.) have also yielded a surplus in 1951, as we had during that fiscal year very small payments, e.g. for unemployment.

NATIONAL INCOME AGAIN UNDERESTIMATED

Furthermore, it has been evident for some time that the national income, on which the budget revenue estimate for 1952 was based, was again forecast at too low a level. Inflation and rising prices boost tax revenues. The enormous expansion of production since Korea—probably about 11 to 12 percent at an annual rate—has increased personal income and taxes.

Total personal income increased by \$25,000,000,000 from July 1950 to April 1951, inclusive, that is from an annual rate of \$220,700,000,000 to \$245,200,000,000. The first budget forecast for 1952, however, was based on a total personal income estimate of \$231,100,000,000 a year which was the figure when the forecast was made in October 1950.

In view of the obvious rise in income, the Treasury itself raised its estimate of tax receipts. As personal income at the beginning of April had reached \$245,200,000,000 on an annual basis, the Treasury forecast that this would also be the average of calendar year 1951, and consequently upped its forecast of revenue by \$3,400,000,000.

Accordingly the administration reduced its claim for \$16,500,000,000 in new taxation to \$10,000,000,000.

Some weeks later, when it was clear that national income had risen again, the Joint Congressional Committee for Internal Revenue upped the Government forecast of total personal income for 1951 to \$255,000,000,000 and arrived at a tax income for fiscal 1952,

on the basis of the present rate, or \$60,-900,000,000.

On June 28, 1951 Secretary of the Treasury Snyder announced that the Government had revised its expenditure figure for fiscal 1952 downward by \$3,200,000,000. Contemplated outlay is now reduced from \$71,600,000,000 to \$68,400,000,000.

Instead of a forecast deficit, he has the second highest surplus in all history for fiscal 1951, namely \$3,520,000,000.

Did Mr. Snyder now at least reduce his claim for \$10,000,000,000 new taxation for fiscal 1952? Did he allow for the better forecast of the Committee of Internal Revenue adding \$2,500,000,000 to tax income; for the fat tax surplus from social-security taxes? Even omitting this last element his deficit would have been reduced to less than \$4,000,000,000.

Far from it.

Sticking to his antiquated income forecast, Mr. Snyder nevertheless still claims that he needs \$10,000,000,000 in new taxes.

I think that it is easy to show that all expenditures for fiscal 1952 can be met without new taxes because—

1. In all probability the national income will be very considerably higher in fiscal 1952 than its rate in April 1951. Forecasts by non-Government experts point to total personal income not of \$245,000,000,000 as last anticipated by Secretary Snyder, not of \$255,000,000,000 as last anticipated by the Joint Committee on Internal Revenue Taxation in April, but of about 265 to 270 billion dollars as the average for fiscal 1952.

2. The Snyder forecast anticipates that not the slightest cut in the expenditures as proposed by the administration will be made—while Senator BYRD claimed a \$7,000,000,000 cut and Senator DOUGLAS at least a \$3,000,000,000 cut.

3. Even under the assumption that no reduction of expenditures as proposed by the administration would be made, the cash budget for 1952 would look as follows based on present tax rates:

	Snyder proposal	Joint committee proposal	Our estimate
Based on personal income in fiscal 1952 of.....	\$245 billion	\$255 billion	\$265 to \$270 billion
Would yield a tax income of.....	Billions \$58.4	Billions \$60.9	Billions \$62.1-\$63.1
Budget surplus of 1951 carried forward at least.....	3.5	3.5	3.5
Cash surplus of Federal funds.....	3.0	3.0	3.0
Cash supply available for fiscal year 1952.....	64.9	67.4	68.6-69.6

WHY HIGHER INCOME IN FISCAL 1952?

Total personal income is composed of labor income, dividends, and proprietors' income. These were \$165,000,000,000, \$19,700,000,000, and \$48,300,000,000, respectively, when the Snyder forecast was made in April.

Since the April forecast was made, labor income has already increased somewhat. It rose by \$1,900,000,000 from February to March, it rose by \$2,000,000,000 from March to April, and this rise must have continued and will further do so after many hundred wage-raising agreements waiting on the Wage Stabilization Board's desk will be agreed upon, let alone the relaxation in the wage ceilings.

As during the next year the labor force will certainly not decrease but probably increase somewhat; as, moreover, wages are bound to increase some (Senator TAFT thinks more than 10 percent), we consider it to be a modest assumption to put the average wage and salary bill for fiscal 1952 at a rate

of somewhere around \$178,000,000,000. Professor Slichter estimates that it will lie between one hundred and eighty-three and one hundred and ninety billion dollars at the end of the period. As salaries and wages amount to 65 percent of personal income, in the average of a year's period, correspondingly, total personal income should be about two hundred and sixty-nine to two hundred and seventy-five billion dollars, or rather modestly figured between two hundred and sixty-five and two hundred and seventy billion dollars on an average.

Consequently, we would have, with an expenditure of \$68,400,000,000, under the assumption of the Internal Revenue Committee, a cash deficit of \$1,200,000,000, under an assumption of \$270,000,000,000 personal income, no deficit, to a cash surplus of \$1,200,000,000.

But the House of Representatives, as a result of the erroneous assumptions of the administration, has voted no less than \$7,-200,000,000 in new taxes, partly extremely burdensome for an economy experiencing a lull completely unforeseen by official experts.

If the \$7,200,000,000 in new taxes would be enacted, we would have, under the assumption of the internal revenue committee, \$6,000,000,000 surplus; under an assumption of \$270,000,000,000 personal income, seven and four-tenths to eight and one-fourth billion dollars surplus, and this without one penny cut in the administration spending proposals.

To make Congress adopt this huge budget which evidently will yield a near-record surplus, if taxes are increased, the administration announced that in fiscal 1953 expenditures would run to eighty to ninety billion dollars. At the same time, however, it was announced that the military budget for fiscal 1953 might run up to \$55,000,000,000. Based on present standards, this would actually mean that the total budget then might perhaps read \$75,000,000,000—not \$80,000,000,000 and certainly not \$90,000,000,000. Thus, when Snyder testified, he justified his new tax program less by the needs of fiscal 1952 than by the blown-up needs of fiscal 1953.

Hereupon, these questions seem to be justified:

1. Should the end of the bloody fighting in Korea bring no reduction at all in the scheduled expenses?

2. Or should someone within the administration be thinking of using the defense production of our Nation as a political WPA in favor of superemployment during the election campaign of 1952? Or do they just want a big surplus to boast about?

3. If some budget savings were to be brought about by Congress—even if they would not come up fully to the \$7,000,000,000 proposed by Senator BYRD, let alone the \$20,-000,000,000 cut proposed by Senator TAFT, but only the modest \$3,000,000,000 of Senator PAUL DOUGLAS—why does Congress prematurely hand out ten to eleven billion dollars more than needed?

Extension of Federal Rent Control

EXTENSION OF REMARKS

OF

HON. JOHN A. McGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. McGUIRE. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following resolution adopted by the Board of Aldermen of the

City of New Haven and approved by the Honorable William C. Celentano, mayor, on July 6, 1951, in favor of the extension of Federal rent control for 1 year:

Whereas knowing that rent control is being extended only to July 31: Be it

Resolved, That this Board of Aldermen of the City of New Haven go on record as in favor of extending rent control 1 year, and that this recommendation be sent to all Congressmen and Senators from Connecticut, also to the Honorable BRENT SPENCE, chairman of the House Banking and Currency Committee, and to the Honorable BURNETT R. MAYBANK, chairman of the Senate Banking and Currency Committee.

The Fabulous Fourth District of Nebraska

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. MILLER of Nebraska. Mr. Speaker, I desire to insert in the Appendix of the RECORD an article by Frank R. Wilson, of the Bureau of the Census. It relates to the Fourth Congressional District in Nebraska.

I am sure I will be pardoned for bragging just a little bit. I believe it would be helpful if other Members would give us information about their congressional districts.

The article follows:

THE FABULOUS FOURTH DISTRICT OF NEBRASKA

WASHINGTON, D. C.—The Census Bureau, after looking over its 1950 statistics concerning the 38 counties in the Fourth Congressional District of Nebraska, has come up with the opinion that this district is one of the most unique in the Nation.

To illustrate the giant size of nearly everything in this district the Census Bureau says that if every Member of the House of Representatives represented as many acres of farmland as ARTHUR LAWIS MILLER, who represents the Fourth Nebraska District, the United States would have to absorb other nations because, if that were true, nearly 21,000,000,000 acres of farm land would be needed. This would be 20 times the acreage of all farms now in the United States.

Also, the Census Bureau says that if every Member of the lower House represented as many cattle as Dr. MILLER does there would be 844,318,470 cattle in the United States—10 times as many as there are now—and porterhouse steaks would be 10 cents a dozen.

The principal factor that makes the Fourth District unique is the relation between its economic importance as a producer of the Nation's food and its number of people. In the whole 38 counties of this district census enumerators in 1950 found only 315,795. They found very few cities of any size, Grand Island with 22,835 being the largest. The others which exceeded 10,000 population were North Platte, Scottsbluff, and Kearney. All of these cities had high rates of increase in population, but the rural areas showed large decreases. Why? For one thing, the census enumerators found 38,892 tractors on the farms of this area, 20,617 motortrucks, and 83,969 automobiles. Between 1945 and 1950 the tractors increased in number by 11,532 and motortrucks by 7,035. Thus, as the

large farms and ranches are mechanized, there is less demand for manpower and vastly increased production.

Nearly everything in the Fourth District is of giant proportions. The entire 38 counties had only 30,637 farms or ranches—a reduction of 2,000 in the 5 years prior to the census. The farms and ranches of these 38 counties are made up of 47,824,357 acres. Thus, the average size of farm tracts is 1,561 acres. Of the 30,637 farms and ranches, 20,533 are electrified. The average monthly electric bill was \$8.03.

In a single year—1949—these 30,637 farms marketed farm products to the amount of \$266,526,335. Thus, this vast district had a farm income per acre of \$5.57, and these farms attained a total value of nearly 1,000,000,000—to be exact, \$826,490,350. The average value of farms and ranches between 1945 and 1950 increased from \$17,325 and \$35,241.

On the farms and ranches of this district in 1950 the census enumerators found 1,940,962 cattle, 427,124 hogs, and nearly 200,000 sheep.

Most of the farm revenue of this fabulous area was obtained through the marketing of livestock and livestock products. For this the revenue was \$202,393,609, of which \$16,699,226 was dairy products. Crop products sold had a value of \$94,551,941.

The large-scale farm and ranch operations in this district are indicated by the fact that there were 1,788 units that had product sales of more than \$25,000; there were 5,540 which had product sales of between \$10,000 and \$25,000; and 8,138 that had product sales between \$5,000 and \$10,000.

After each census of agriculture, the Census Bureau publishes an interesting booklet called *Ranking Agriculture Counties*. In it are shown the 100 leading counties in the United States in all principal elements of agriculture. Needless to say, many of the 38 counties in this district are entered in these honor lists. Cherry County in this district has for several censuses been the No. 1 cattle county in the country. In 1950 it had 268,456 cattle. All of the 1950 county comparisons have not been made, but in the 1945 census, Elko County, Nev., was second, with 181,608, and Weld County, Colo., third, with 176,751. Cherry County was the first county in the United States in the production of hay; third in the number of horses; and other Fourth District counties which appear frequently in these ranking lists include Custer, Holt, Lincoln, Sheridan, Garden, Dawson, Buffalo, Rock, and Scotts Bluff. In the 1945 census, Scotts Bluff was twelfth in the number of sheep, with more than 260,000, but the 1950 count dropped to a little more than 60,000. The great blizzard, during which flocks were kept alive with hay dropped from airplanes, plus the difficulty of obtaining sheep herders, have combined to greatly reduce the sheep population of the plains area. There were 1,600,000 fewer sheep in Wyoming in 1950 than in 1945.

The Fourth District represents a most interesting evolution from the old grass range toward modern agricultural production. Alfalfa is gaining on the native grass and in 1949 the 453,857 acres of alfalfa produced 917,970 tons, or 2.02 tons to the acre.

The census figures show that the profits of these farms and ranches are being converted to land investments. The ratio of tenancy in this district in 1945 was 39.4 but in 1950 only 29.5, a reduction of 9.9 percent.

The expenditures made by these Fourth District farms and ranches illustrate the growing importance of this area market-wise. For the purchase of livestock and poultry they spent \$48,624,491 in 1949. For purchased feed for livestock and poultry they spent \$28,832,308 and gasoline and petroleum fuel and oil for these highly mechanized units cost \$16,339,720 in a year.

Hired labor earned \$17,550,308 and machine hire cost \$6,793,536.

Grant County had the largest average-sized operations with 10,711 acres with an average value of \$157,692. Arthur County's average value per farm was \$60,023, and Cherry County with an average-sized farm of 4,084 acres had average unit values of \$61,443.

Dr. Roy V. Peel, Director of the Census, says the evolution of the Fourth Nebraska District from its pioneer state of 50 years ago to its present agricultural efficiency provides a significant example of what is going on throughout the West to give the Nation a better balanced economy.

An Amendment to the Defense Production Act To Provide a Ceiling Price Standard

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. POAGE. Mr. Speaker, that there may be every possible opportunity for Members of the House to have the widest advance knowledge concerning my proposed amendment, I am inserting in the RECORD the text of the amendment which I propose to offer at the appropriate time which will provide a standard, or yardstick, against which a ceiling price on commodities processed from agricultural products, can be measured. I believe it is a fair yardstick. I believe it will result in a much greater production of goods than could be hoped for without it. I want everyone to have an opportunity to understand this matter before it reaches the floor. I hope the Members will avail themselves of this opportunity to study this proposed amendment.

The proposed amendment reads as follows.

It shall be unlawful to establish or maintain any ceiling price applicable to manufacturers or processors for any item of material derived in whole or in substantial part from an agricultural commodity if such ceiling price for any such item of material is fixed and maintained at less than the sum of the following:

(1) The current cost of the material used therein computed on a delivered basis (except that the cost of any agricultural commodity used therein shall be computed on the basis of the current cost or the price specified in section 402 (d) (3), of the commodity delivered to the manufacturer or processor, whichever is greater);

(2) All costs currently incurred in the processing or manufacturing operation and distribution of such item, including an allowance for such indirect costs as may reasonably be attributable to such item or material.

(3) A reasonable profit (which for each unit of such item shall be not less than 85 percent of the average profit earned on an equivalent unit of such item during the three most profitable years of the period 1946 to 1949, both inclusive); *Provided*, That if specific dollars and cents ceilings applicable to manufacturers or processors are established for any such item of material and made generally applicable, the costs and

profits referred to in paragraphs (1), (2), and (3) of this subsection, for each item of such material shall be computed by using a weighted average of such costs and profits of the individual processors or manufacturers of such item.

(P. 18, after line 4, insert the following: "() Sec. 402 of the Defense Production Act of 1950 is hereby amended by adding at the end thereof a new subsection reading as above.")

This amendment follows the pattern established by the so-called Bankhead-Brown amendment to the Price Stabilization Act of 1944.

That amendment was sponsored in the Senate by the late Senator Bankhead, of Alabama, one of the best friends the farmers ever had in the Congress, and in this body by the distinguished Representative from Georgia—Hon. PAUL BROWN.

The original Bankhead-Brown amendment applied to cotton and was designed to remedy a situation caused by the failure of OPA administrators to recognize some very obvious facts of economic life.

Under the original Stabilization Act of 1942, ceiling prices placed on items made from agricultural products were supposed to be high enough to enable the processors of these products to pay farmers parity prices. In other words, the ceilings were supposed to reflect parity, but OPA had established ceilings on cotton goods which reflected only the 1942 material and processing costs. It thus became impossible for the price of raw cotton to advance.

Not only was it impossible for the price of cotton to reach the parity figure which the act contemplated, but it soon became impossible for the mills to break even on their low-priced items like duck and denim. When this situation arises in any line, it simply means that the goods will not be produced. Cotton consumption dropped from approximately 45,000 bales of cotton per day in 1942 to around 30,000 bales per day in 1944. It is estimated that the country lost the production of at least 4,000,000,000 yards of cotton goods—the farms lost a market for 4,000,000 bales of cotton—all at a time when the people needed the cotton goods and when farmers needed the market. The cotton was not exported. It was simply purchased by the Government and stored.

In 1944 the cotton industry asked OPA to allow a price increase on those low-priced items for which there was such a strong demand, and on which there was not enough margin to secure their production. OPA replied that the profits of the cotton textile industry, taken as a whole, were as high as in the base period, 1936-39, and that, therefore, no adjustments were necessary.

At last Senator Bankhead and Congressman Brown passed their first amendment which was attacked just as are the amendments which are being offered here at this time. OPA opposed any effort to encourage production by making sure that the producer could earn enough to cover his costs of material, his labor costs, and a profit. Apparently, many of the spokesmen for OPS are now following the same line,

yet neither OPA nor OPS has ever made the slightest effort to show that it is possible to get production any other way.

The effort of OPA to control profits instead of costs, an effort which is apparently to be followed by OPS, stifled production in 1944, and it will always stifle it. If price control is to have any goods on which to apply a price program, it must allow a profit. This amendment tries to set up a fair standard of profit. It gives no protection to the processor who is making more than 85 percent of the average profit for his best 3 years in the 1946 to 1949 base period. This is the period used by the excess-profits tax laws.

I think it is clear that Congress must itself assume the responsibility to lay down plain and fair rules.

Here, in brief, is the effect of the proposed amendment:

First. This amendment tries to make certain that the provisions of the Defense Production Act designed to protect producers of agricultural commodities will not be circumvented and the prices of agricultural commodities depressed below the minimum levels specified in the act indirectly through the squeeze of margins of processors and manufacturers of agricultural commodities to a point where their ceilings do not cover their raw material costs, costs of processing, and a reasonable profit.

Second. This amendment merely requires that any price ceiling applicable to manufacturers and processors established for any item of material derived in whole or substantial part from an agricultural commodity, shall be fixed and maintained so as to cover:

(a) The current delivered cost of the material;

(b) The current processing and distributing costs, including labor;

(c) A reasonable profit.

Stripped of the technical language, this amendment simply requires that the ceiling price applicable to manufacturers and processors of agricultural commodities at least equal the sum of the cost of the raw material plus the cost of processing or manufacturing plus a reasonable profit.

Third. Unless ceiling prices permit a manufacturer or processor of agricultural commodities to recover costs plus a reasonable profit one of two things is bound to result:

(a) The price to the producer of the agricultural commodities used in the processing or manufacturing operation will be reduced to offset the losses; or

(b) Production of the commodity will be curtailed.

Fourth. Congress in enacting the Defense Production Act of 1950 did not intend for agricultural commodities selling below parity to be subjected directly or indirectly to ceiling prices lower than the minima specified in section 402 (d) (3) of the act—parity or the highest price during May 24 to June 24, 1950.

Section 402 (d) (3) provides that no ceiling shall be established or maintained for any agricultural commodity below the parity price or the highest price received by producers from May 24 to June 24, 1950. It also provides that no ceiling

shall be established or maintained for any commodity processed or manufactured in whole or substantial part from any agricultural commodity below a price which will reflect to producers of such agricultural commodity the parity price. In order to help assure this result the act went on and further provided that in establishing ceilings on products manufactured or processed from agricultural commodities that a generally fair and equitable margin should be allowed for such processing.

That language of the act is clear and I am certain it was clear to every Member of this House when it was adopted. In short, it says: (a) That you cannot impose a ceiling on an agricultural commodity below parity, (b) that you cannot impose a ceiling on a processed agricultural commodity that will not return parity to the producer, and (c) that processors and manufacturers of products composed in whole or substantial part of agricultural commodities shall receive a generally fair and equitable return for the function of processing.

Fifth. These provisions of the Defense Production Act of 1950 are being circumvented.

Unfortunately these provisions of the Defense Production Act employed some general terms such as "a price which will reflect parity to producers" and "a generally fair and equitable margin shall be allowed for such processing." This gave the Price Administrator an opportunity to place a different interpretation upon the act than was intended by the Congress. An examination of the manner in which this language has been interpreted and the orders which have been issued under it demonstrate clearly the need for this amendment.

SUBSTANCE OF ORDERS AND REGULATIONS ISSUED BY OFFICE OF PRICE STABILIZATION WHICH CIRCUMVENT THE PROVISIONS OF THE ACT

(a) On January 26, 1951, OPS issued the General Ceiling Price Regulation which froze prices at all levels beyond the producer even though the prices of most agricultural commodities were well below parity. A device called a pass-through was invented apparently to give lip service to the provision of the act which prohibited the establishment of price ceilings on commodities processed in whole or substantial part from agricultural commodities which did not reflect parity to producers. The only purpose or effect of this provision was indirectly to subject agricultural commodities to ceilings even though they were selling below parity. Although this action was effectuated through indirection it is as effective as if it were done directly. Under the General Ceiling Price Regulation a manufacturer or processor of agricultural commodities may not pass through in his selling price any increase paid to the agricultural producer until the manufacturer or processor has disposed of all inventory on hand. The manufacturer or processor may not include this increased cost until he has notified the Office of Price Stabilization and submitted a great amount of detailed information. The processor is then permitted to increase his price to reflect the increased raw material cost but he must

make the increase in his price at his own peril because it is provided in section 11 (g) of the general ceiling price regulation that "if in the judgment of the Director of Price Stabilization the increase is deemed unreasonable, excessive, or otherwise improper, he may disapprove the price and restore the old ceiling price or establish a new ceiling price and may apply it retroactively."

(b) Under Manufacturers General Ceiling Price Regulation 22, if the commodity being processed or manufactured is a nonfood product and is made from a product processed from an agricultural commodity which is below parity, no increase in the price of the processed agricultural commodity which occurred after March 15, 1951, may be included in computing the ceiling price.

(c) Under Manufacturers General Ceiling Price Regulation 22 increases in labor costs in processing agricultural commodities occurring after March 15, 1951, are disallowed.

(d) The Office of Price Stabilization has developed what it calls the 85 percent earning standard. This so-called earning standard provides that no increase in ceilings shall be permitted if the average return or net worth before taxes in the industry is below 85 percent of the average for the industry for the three best years during 1946-49. In the fact sheet issued by OPS with respect to this standard it is stated that this standard is a yardstick for determining the extent to which whole industries can be expected and required to absorb future cost increases.

(e) These various regulations referred to above show clearly the various methods and devices that have been employed and which necessarily result in depressing prices to producers of agricultural commodities and preventing the producers from achieving parity. These regulations also stifle production because they prevent processors and manufacturers from recovering all their costs incurred in the processing operation and prevent the earning of a normal profit.

Sixth. The first year's experience under OPS is a repeat performance of the experience under OPA. It became apparent under OPA that language had to be found if producers of agricultural commodities were to be protected and if production was not to be curtailed which would make it impossible for the Price Administrator by indirection to impose ceilings on agricultural commodities selling below parity or to achieve that result by preventing processors of agricultural commodities from recovering their cost plus a reasonable profit for such processing.

Language which would accomplish this objective was finally devised by a very distinguished Member of this House, PAUL BROWN, of Georgia. This language was enacted into law and became known as the Bankhead-Brown amendment. At that time the amendment was limited to cotton and wool. The amendment which I am offering today is the 1951 version of the Bankhead-Brown amendment. The principal difference being that this amendment applies to all agricultural commodities and products

thereof instead of its being limited to wool and cotton.

This amendment is absolutely necessary if we are to protect producers and not stifle production. It does little good to provide that no ceilings be placed on agricultural commodities below parity if a ceiling may be imposed on the processor or manufacturer of agricultural commodities which make it impossible for such processors to pay parity to producers. The Congress found it necessary in 1944-45 and twice in 1946 to enact the Bankhead-Brown amendment with respect to cotton and wool. The amendment worked well then and it is the only thing that has worked. It works because it is fair.

Seventh. The need for appropriate provisions assuring processors and manufacturers of agricultural commodities of ceilings which will cover their cost of operation plus a reasonable profit was recognized very clearly by the chief legal officer of the War Food Administration. Writing for the Michigan Law Review in February 1945, and referring to the various provisions of the Price Control Act relating to the establishment of ceiling prices with respect to agricultural commodities, the chief legal officer said:

All of these major provisions of law relating to the establishment of maximum prices with respect to agricultural commodities would, as a practical matter, have been ineffective without the comparable provisions which the Congress made applicable to maximum prices with respect to commodities processed or manufactured in whole or substantial part from agricultural commodities.

Unless this amendment is adopted everything that has been done so far in the Defense Production Act of 1950 to protect prices to producers of agricultural commodities will be ineffective because such provisions can be circumvented through orders and regulations of the type referred to above.

ILLUSTRATIONS

First. Under OPA prior to the enactment of the Bankhead-Brown amendment as a result of the squeeze on the cotton textile mills cotton consumption fell off 33 percent. After the enactment of the Bankhead-Brown amendment production of textiles turned up sharply and continued up during the rest of the emergency period.

Second. Under the existing orders issued by OPS prices of peanuts to the shellers were frozen well below parity on the basis of 1950 crop prices which were at the support level. Large quantities of 1950 crop peanuts are still in the hands of shellers who have incurred storage costs in handling these peanuts. Because of an increase in parity the support price for the 1951 crop of peanuts will be higher than the support price on the 1950 crop. Under existing orders peanut shellers will be unable to increase their prices until their entire inventory is moved. They are also not permitted to increase their prices to reflect storage costs. The effect of these orders will be to preclude the peanut shellers from purchasing peanuts from the 1951 crop until all the inventory has moved. As a consequence the Commodity Credit Corporation will probably be the only mar-

ket available to producers for the 1951 crop. This is a clear illustration of the manner in which ceiling prices at the processor level may be used to depress the price or destroy the market for agricultural producers.

Third. Processors of seasonally produced commodities such as poultry and eggs are not permitted under the general ceiling price regulation to increase their base period ceiling prices to reflect the costs of storage. The provision not permitting the addition of storage costs will discourage processors from placing poultry and eggs in storage during the heavy period of production which in turn will result in a shortage of these commodities during the light-production season.

CONCLUSION

I believe further illustrations are unnecessary. The amendment rests on the basic principle of the profit system. There must be an opportunity to make a profit on every item of production or the unprofitable items simply will not be produced. I believe the American people want and have a right to demand production.

Newton B. Drury, a Great Conservationist

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks, I include a statement by myself concerning Newton B. Drury, and comments by others. I wish every nature lover and conservationist in our country could read these remarks, so they would know how fortunate we were in having this great conservationist as our National Park Director for 10 years.

NEWTON B. DRURY, A GREAT CONSERVATIONIST

A few weeks ago, Newton B. Drury, the Director of the National Park Service in the Department of the Interior since August 1940, resigned and returned to his home in California. Gov. Earl Warren promptly appointed Mr. Drury chief of the division of beaches and parks, an important bureau of California's Department of Natural Resources. What was a serious loss to the National Government has been a great gain to my State of California.

Conservationists in all parts of the Nation have been disturbed by Director Drury's withdrawal from the Federal Service, and there has been much discussion of it in many councils, conferences, and association board meetings. Protests have been filed with the President and with the Secretary of the Interior. There has been a general understanding that Director Drury was maneuvered into a situation where he had to resign from the position he had held so long and filled so creditably.

Conservationists were disturbed because if Director Drury did not leave his post voluntarily, pressure of some kind might have been exercised contrary to the intent of the organic act of Congress establishing the National Park Service which provided for appointments of its executive officers under the laws, and under rules, and regulations of

the United States Civil Service Commission which meant that when once qualified and appointed within the classified civil-service officials were to be immune to removal except on preferment of charges and judgment thereon after submission of ample proof of incompetence or inefficiency.

No charges were preferred against Mr. Drury, and apparently none were ever under consideration or even thought of. Apparently, the Secretary of the Interior, Oscar L. Chapman, who as a career man himself had known and worked with Director Drury for over 10 years, held him in high esteem.

It seems that Secretary Chapman indicated his desire, yes, his determination, to appoint Director Drury to a position in his own office with the title of Special Assistant to the Secretary, to engage in certain important liaison activities dealing with interbureau plans and policies where conflicts had appeared, and in other directions to aid the Department head. Director Drury preferred to keep the position he had and which he had held for over 10 years. The Director realized, however, that under a recent statute making effective one of the recommendations of the Hoover Commission, the Secretary had the power to move agencies or men at will within his Department, and that he probably had no choice but to accept the new job, which, incidentally, carried compensation lower than that of a bureau chief, or resign.

It seems also that in assigning Mr. Drury to his own office as Special Assistant the Secretary had stated his desire to appoint as Director of the National Park Service Associate Director Arthur E. Demaray in order that he might enjoy the prestige of heading the Bureau until his retirement in the early future, after nearly 50 years of service in the Federal Government. The Secretary also frankly stated he expected to appoint Assistant Director Conrad L. Wirth as Director when Mr. Demaray should retire.

Director Drury concluded that he would submit his resignation rather than take the place offered by the Secretary, which he felt was likely to be temporary and which he did not think presented opportunities for the use of his talents and experience in the field of conservation in which he was especially interested.

The resignation was submitted, and accepted by the Secretary with ample time granted in which the Director could complete work on which he was engaged.

Conservationists in their protests charged that the reasons for proposing to transfer Mr. Drury were not convincing and that there were others having to do perhaps with projects for exploiting national park resources, particularly their waters and reservoir sites; or that other political considerations governed the proposal. They pointed to Secretary Chapman's approval of the dams proposed to be built in the Dinosaur National Monument, Utah, which would, if constructed, flood large areas in the watersheds of both the Green and Yampa Canyons. I have inserted in the RECORD much useful material showing that these dams are not necessary to the conservation of the waters of those streams.

Both the Secretary and Director Drury have had little to say. Director Drury submitted his resignation and Secretary Chapman accepted it with the following felicitous statement:

"During your 10 years as Director, you have been devoted to the cause of the national parks. The National Park Service is a fine organization and I think you can well be proud of its accomplishments. Since you have reached the decision that you should resign from the Department I must, of course, accede to your wishes. In doing so I wish to express my appreciation of our long and pleasant association and to extend to you every good wish for the future."

The Secretary has also explained his offer of a transfer as being in furtherance of a plan he made after he thought he had been told by Director Drury that he (Drury) had an opportunity outside the Federal Government service, and that on this plan he had made commitments regarding appointments of Associate Director Demaray and Assistant Director Wirth.

The Washington Evening Star of April 3, 1951, in reporting the installation of Director Demaray under the following headline:

"Chapman denies Drury ouster as Demaray takes top park post," said this about an interview with Secretary Chapman regarding Mr. Drury's retirement:

"Mr. Chapman explained what he called a misunderstanding in the Drury case.

"Last June, he said, Mr. Drury came to him to say he had received a very good offer of a job and was thinking of resigning.

"That was the first I heard about it," Mr. Chapman added. He said he had urged the park director to stay on."

The Secretary has also pointed out that he has adhered strictly to long-established policy in advancing Messrs. Demaray and Wirth to Director and Associate Director, respectively, and in appointing Dr. Ronald F. Lee as Assistant Director succeeding Mr. Wirth. Furthermore, the Secretary has made no new commitments regarding the Dinosaur Monument dams, and we will continue to hope that he has been convinced that they will not be necessary in the orderly development of the Colorado River watershed. He has been in the Department of the Interior for 18 years as Assistant Secretary, Undersecretary, and Secretary, and in that time has had the National Park Service under his general jurisdiction almost constantly. It seems reasonable to believe that he will not want to take any permanent, irrevocable position that will affect adversely his long record as a protector of national parks and as a faithful supporter of the policies that have been followed for 35 years in compliance with the National Park Service Act of August 25, 1916 which says that "The service thus established shall promote and regulate the use of the Federal areas known as national parks, monuments, and reservations hereinafter specified by such means and measures as conform to the fundamental purpose of the said parks, monuments, and reservations, which purpose is to conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

So much for Director Drury's withdrawal. His place here has been filled by his chief associate and he has been appointed to head the California State Park and Beach System. The National Park Service is in good hands and so is the California State Park Service.

My object in making this statement to the Congress is to emphasize the fact that Newton B. Drury is a great conservationist and a great public servant, and that his stature is increased by the strength of character and nobility with which he met a strange situation, perhaps just as difficult for his chief, the Secretary, as it was for himself.

I have known Mr. Drury since 1912, when he and I found ourselves fellow graduate students in the Law School of the University of California at Berkeley. In undergraduate days he had been prominent in extracurricular affairs. He had won the Carnot Medal, highest debating award, for which the debaters of Stanford University and the University of California competed. He had been elected president of the Associated Students, highest office within the gift of the student body, and served in this position during his senior year.

On completion of his college course he joined the university faculty as an instructor

in English, later becoming assistant professor of forensics and secretary to the president. In World War I he was a lieutenant in the Air Service of the Army, an observer in the Balloon Corps.

Back in civilian life with his brother he organized and successfully operated a public-relations and advertising business in San Francisco. About this time the Save-the-Redwoods League was organized to conduct campaigns for funds to acquire outstanding groves of the Coast Redwood (*Sequoia sempervirens*) which were threatened with destruction. Mr. Drury became the executive secretary of this conservation association and managed its affairs with great success for over 20 years.

As funds became available from private sources the State matched them with appropriations by the legislature. A State park commission was authorized, and it engaged Mr. Drury to direct its purchasing programs, which covered, in addition to redwood groves along the coast, the Calaveras North Grove of giant sequoia trees, beaches, and scenic and historic areas in all parts of California.

When a State park survey was authorized to develop a comprehensive plan for a system of beach, desert, mountain, and historic parks, Mr. Drury was the liaison officer with the famous landscape architect, Frederick Law Olmsted, who was engaged to make the survey and prepare the report.

As a result of the activities of the State park commission and the Save-the-Redwoods League, California has one of the finest park systems in the Nation. Mr. Drury's direction of affairs as the responsible executive throughout the formative period of this development brought him national recognition as an outstanding conservationist and leader in park establishment.

This story, incidentally, of the Save-the-Redwoods League, as well as the whole story of the dramatic development of the National Park Service, is fascinatingly related in a book, *Steve Mather of the National Parks*, by Robert Shankland, published a few months ago by Alfred A. Knopf, Inc., 501 Madison Avenue, New York 22, N. Y.

In July 1933, when Director Horace M. Albright, of the National Park Service, advised Secretary Harold L. Ickes that he wished to resign, the Secretary asked Albright and the Advisory Committee of the Service, headed by the late Dr. H. C. Bumpus, and a few other men prominent in national park affairs, including Frederick A. Delano, Chairman of the National Capital Park and Planning Commission, Dr. J. C. Merriam, president of the Carnegie Institution, and J. Horace McFarland, long the president of the American Civic Association, to recommend a successor to the retiring director. These men recommended Newton B. Drury, and the appointment was offered to him by Secretary Ickes with President Roosevelt's approval. Drury, however, felt that he could not at that time withdraw from State activities and so declined the invitation to come to Washington. Arno B. Cammerer, the Associate Director, was then recommended and appointed, serving with distinction until his health broke in 1940. Then Secretary Ickes again offered Drury the directorship and this time he accepted it. He took office August 20, 1940. In announcing the appointment Secretary Ickes on August 19 said:

"The Park Service is fortunate in having secured the acceptance of Newton B. Drury for the post of Director. Mr. Drury is outstanding in the field of conservation occupied by the National Park Service and is a nationally recognized authority on park affairs. He has been intimate with the work of the National Park Service and in his post as executive head of the Save-the-Redwoods League of California, has already been of great assistance to the Park Service."

Mr. Drury's years as Director (1940-51) were the years of the war and its aftermath. Exiled to Chicago for 4 years the National

Park Service with other agencies of the Department carried on its activities as best it could with small appropriations and its administrative, protective, and technical staffs badly broken up by men departing to serve in the Armed Forces. There were numerous insistent proposals for utilization of the resources of the national parks by private enterprises on the pretext that these resources—timber, minerals, pasturage, etc.—were required in the war effort. With the unfailing support of Secretary Ickes, Drury resisted these proposals. At the same time, the service and the concessioners in many parks rendered great aid to the Armed Forces by making facilities in the parks available for rest and rehabilitation of soldiers and sailors returned from the battlefronts.

It would be reiterating statements of others if I set forth in detail more of Director Drury's achievements. They may be found in the last chapter, "Mather's Men Garry On," of the book, *Steve Mather of the National Parks*, already mentioned. They are also detailed as part of statements made on Mr. Drury's retirement.

The oldest supporter of the National Park Service, and the organization most influential in securing the establishment of the Service in 1916, is the American Planning and Civic Association, now headed by Maj. Gen. U. S. Grant 3d, ably assisted by the executive secretary, Miss Harlean James. In the April-June 1951 issue of this association's quarterly, *Planning and Civic Comment*, there appears the following comment on Director Drury's service:

"THE SERVICE OF NEWTON B. DRURY TO CONSERVATION"

"When Newton B. Drury graduated from the University of California in 1912 he was already recognized as a young man of promise, for he became successively in the next 6 years, instructor of English, assistant professor of forensics, and secretary to the president. In later years this facility in the persuasive use of the English language was to stand him in good stead.

"After his war service in the Air Force he entered upon his career in conservation. It was in 1919 that he became secretary to the Save-the-Redwoods League, which has been one of the most successful conservation organizations in the history of the United States. In 1940, when he was appointed Director of the National Park Service, his brother Aubrey succeeded him as the Secretary of the Save-the-Redwoods League. The State of California and the Nation at large have reason to be grateful to the Drury brothers for bringing into protected ownership the groves of coast redwoods along the now famous Redwood Highway extending from the Bay Region to the Oregon line—a heritage of priceless value which once lost could never be replaced. If Newton Drury had accomplished nothing more than saving the coast redwoods from destruction his name would go down in history as a revered benefactor of the State and Nation.

"But in 1929, following the pioneer, epoch-making report of Frederick Law Olmsted, which recommended an extensive State park system, it was Newton Drury who was appointed by the Governor of California to take charge of the acquisition program as the executive of the State Park Commission. Thus the redwood groves and the State parks of California are living tributes to the ideals, industry, and devotion of Newton B. Drury.

"There was to be another chapter. In 1940, Newton B. Drury was appointed Director of the National Park Service to follow two other Californians—Stephen T. Mather and Horace M. Albright, and Arno Cammerer who had grown up in the Mather tradition. From 1940 to 1951, under the directorship of Mr. Drury, the National Park Service has a fine record of achievement in the growth of the system, the maintenance of conservation standards, the protection of the parks and

monuments from unrelated encroachments and in the fine working relationships with other Federal agencies.

"And now Newton Drury has returned to California where he is now the director of the State parks and again, with his brother, serving the Save-the-Redwoods League. He has already been honored by the conservation award of the Trustees of Public Reservations in Boston; by the Hutchinson medal of the Garden Club of America, and by two Pugsley medals of the American Scenic and Historic Preservation Society, but the redwood groves and State parks of California will survive as perpetual monuments to Newton B. Drury. And when the record is examined, his constructive leadership in national park policies during his decade in Washington will be clearly demonstrated.

"The American Planning and Civic Association salutes Newton Drury, valued member and effective friend of conservation."

The American Nature Association has always supported the National Park Service. It has a large membership and publishes an excellent monthly journal, *Nature Magazine*. In its April 1951 issue, this magazine contained the following editorial by Richard W. Westward, president and editor:

"CONTENTS NOTED"

"Resignation of Newton B. Drury as Director of the National Park Service has been received with regret and alarm by many conservationists, ourselves included. There is regret at the loss of a fine public servant who for nearly 11 years has been devoted to the integrity of the areas that it has been his responsibility to administer. There is alarm because Mr. Drury's resignation was not voluntary, and because there is increasing evidence that the current policy of the Department of the Interior is weighted on the side of exploitation and development. We are certain, of course, that Arthur E. Demaray, his successor, is devoted to National Park ideals, and that he and his staff will defend these ideals. We offer any aid within our power in the face of a departmental trend that we regard as dangerous and shortsighted, however, politically expedient it may seem on the surface.

"It was in 1924 that we first met Newton Drury. He was then the fighting executive secretary of the Save-the-Redwoods League, working to preserve representative and substantial stands of the incomparable California redwoods from the ax and saw. We roamed the redwoods of Bull Creek Flat and points north with him, and have always treasured that experience. When Horace Albright resigned as Director of the National Park Service to enter private business, the then Secretary of the Interior, Harold L. Ickes, asked the National Parks Advisory Board to recommend the man in its opinion most competent to head the Service. The unanimous choice was Newton B. Drury. He declined because of the challenge then facing him in the redwood problem and the California-parks program. Later, when the office of director again became vacant Mr. Drury was once more urged by Mr. Ickes to accept the appointment. This time Mr. Drury accepted, after being convinced by the persuasive Mr. Ickes that it was a public duty.

"Since August 1940, Newton Drury has served the American people well as chief trustee of incomparable parts of the American outdoors that are the peoples' property. He saw the parks through the war period with wisdom, enjoying Mr. Ickes' cordial collaboration in so doing, and these areas emerged from this trying time virtually unimpaired. He successfully led the fight against subsequent attempts to encroach upon the parks. Most recently he was called upon to present, at a hearing called by Oscar L. Chapman, Secretary of the Interior, the case against the proposed invasion of Dinosaur National Monument by the construction of Echo Park and Split Mountain Dams.

It was a strong case, ably presented, but was opposed by an impressive parade of western Members of the Congress. Later Mr. Chapman decided against the National Park Service and in favor of the Bureau of Reclamation.

"Whether Mr. Chapman expected his decision on the Dinosaur National Monument to settle the matter we do not know. So far as conservationists are concerned, it certainly did not. So far as the National Park Service is concerned, it did. The decision of the Secretary established departmental policy, and we can testify personally that Mr. Drury and his staff were most punctilious in this regard. But conservation organizations were not affected by any such bureaucratic gag rule, and publicity against the Dinosaur dams increased. Whether Mr. Chapman laid this at Mr. Drury's door we do not know, but we would like to make the record clear.

"It is to us significant that the official release announcing Dr. Drury's resignation was innocent of the usual expression of appreciation by his superior for distinguished service. Mr. Chapman is apparently not a hypocrite, but the absence of any such sentiment is ample substantiation—if any were needed—of the involuntary character of the resignation. The Director of the National Park Service had been offered a nebulous and ill-defined position as special assistant to the Secretary, at a lesser salary. Decision was asked immediately, otherwise his resignation would be accepted as of January 15. More often than not these "special assistant" posts are equivalent to moving the official's desk right next to the front door so that he can be eased out quickly when the time comes. We have heard this device described as "Potomac fever," and at least it is an insidious and debilitating malady. Nobody seems to attain an immunity to it, and Mr. Drury did not elect to expose himself to the unfilerable virus that causes the illness.

"While we are keeping the record clear, and in view of national publicity, we must also say that Mr. Drury had no knowledge of the fact that conservationists had carried the case to the President. The Director had gone to California for the Christmas holidays when this initiative was taken, and he was dismayed when he returned to find out what had been done. In taking this step it was realized that it would not alter matters so far as the Secretary of the Interior was concerned. It was, however, felt that Mr. Drury was entitled to conclude his term of office with somewhat more leisure than apparently had been the desire on high. This, at least, appears to have been accomplished. Mr. Drury, of course, has distinct distaste for being placed in the position of a martyr, and we hope that championship of him personally will not be so regarded. Quite likely he will enjoy release from bureaucratic responsibilities, and welcome an opportunity to return to his beloved California. We will miss him, and we wish him well.

"R. W. W."

The most comprehensive review of Director Drury's official career was made by Dr. Waldo G. Leland who for many years was a member, and for 4 years, chairman of the Advisory Board on National Parks, Historical Sites, Buildings, and Monuments of the Department of the Interior. This was printed in the April-June 1951 issue of the *National Parks Magazine*, published by the National Parks Association, of which Dr. Leland is a trustee and Mr. William P. Wharton is president and Fred M. Packard is secretary. The article follows:

"NEWTON BISHOP DRURY"

"(By Waldo Gifford Leland, member, board of trustees, National Parks Association)

"The members of the National Parks Association, and indeed all friends of the national parks, have been surprised to learn

that Newton B. Drury has presented his resignation as Director of the National Park Service. They have been profoundly shocked as they have learned the circumstances which brought about this unanticipated action.

"The termination of Mr. Drury's 10 years of service is not a pleasant story, and nature conservationists throughout the country have every reason to be perplexed and indignant and anxious.

"Without any intimation of dissatisfaction with his administration, but, on the contrary, after repeated expressions of satisfaction and approval, Secretary of Interior Oscar L. Chapman offered to Mr. Drury, early in December, a position of substantially lower grade as special assistant to the Secretary of the Interior, with only advisory functions, the task of which would be to correlate, at an early stage, the plans and projects of the Department's various agencies. This proposal was followed, within hours, by a preemptory ultimatum that Mr. Drury accept the position, or resign as of January 15, 1951. It was only too clear that the proposed assistantship was nothing more than the usual device for disposing of officials whose dismissal is difficult to justify.

"A member of the National Park Service Advisory Board, Charles G. Woodbury, acting on his personal initiative, had long interviews with Assistant Secretary Doty and Secretary Chapman, and elicited the assertion that the only reason for removing Mr. Drury was the desire, which the Secretary acknowledged to be founded on sentiment, to reward Associate Director Arthur E. Demaray, whose long and distinguished services are gratefully recognized by all, by promotion for a short period to the position of Director. The haste to make this promotion was declared to be due to Mr. Demaray's request, of June 26, 1950, to be retired as of November 30, 1950. Assistant Director Conrad L. Wirth would be moved up to fill the position of Associate Director. It was reported elsewhere, and not denied, that upon the retirement of Mr. Demaray the post of director would be filled by Mr. Wirth. The competence of Mr. Demaray and Mr. Wirth are not in question, but these officials have been placed in an uncomfortable position by this procedure.

"On January 10, 1951, Mr. Drury formally declined the position which had been proposed to him and, on offering to state his reasons was told that that was unnecessary. On January 19, he presented his resignation, 'with regret,' to take effect on April 1.

"These are the bald facts of the dismissal of a public servant of the finest type, in the prime of physical and mental vigor, at a time when President Truman complains of the difficulty of inducing first-class men to accept positions of responsibility in the Federal Government, and at a time, furthermore, when an increasing emergency is threatening the national parks with the same dangers which Mr. Drury so successfully overcame in 1941-45.

"In mid-January, as soon as the matter became known, such organizations as the Committee on Regional Development and Conservation of the CIO, the Izaak Walton League, the Wilderness Society, the American Nature Association, and the National Parks Association, addressed letters of protest to the President. It is understood that these letters have been referred to the Secretary of the Interior with instructions to reply to the writers.

"The Advisory Board, whose predecessor, upon being consulted by Secretary Ickes, had recommended Newton B. Drury as the best man in the United States for the post of Director, was not consulted by Secretary Chapman, although the latter met with the Board in November, at which time he had undoubtedly decided upon the course he was about to follow, and talked with apparent

frankness about various problems and especially about the great danger confronting the parks, resulting from pressures by commercial interests. In a matter of such vital importance to the fundamental policies of the National Park Service as a change in the directorship, it would have been appropriate, at least, for the Secretary to consult with the body which had been created by law to advise him. If the present writer, after long association with the members of the Advisory Board, can judge the reactions of the latter, he believes it probable that their collective views will find suitable expression in due time.

"Mr. Drury was appointed Director of the Park Service in 1940.

"In May 1933 Secretary of the Interior Harold L. Ickes convened the Advisory Committee on Education of the National Park Service in his office for special consultation. There were present, as the writer recalls, the chairman, Herman C. Bumpus, former Director of the American Museum of Natural History and former president of Tufts University, long devoted to the development of a program of education and interpretation for the national parks; W. W. Campbell, president emeritus of the University of California; Isaiah Bowman, director of the American Geographical Society, later to become president of the Johns Hopkins University; Wallace W. Atwood, president of Clark University; Clark Wissler of the American Museum of Natural History; Dr. Frank Oastler, of New York, noted nature lover and friend of the national parks, and the writer, who is now the sole survivor of the group. There was also present the late John C. Merriam, then president of the Carnegie Institution of Washington, who had been the first chairman of the Advisory Committee.

"Secretary Ickes, with the then Director of the National Park Service, Horace M. Albright present, informed the committee that, to his great regret, the post of Director of the National Park Service would shortly become vacant because of Mr. Albright's resignation to accept an important and attractive position in private business. Accordingly, he called upon the Advisory Committee to recommend for the post the person best qualified to fill it. The Secretary insisted that the committee make its recommendation without regard to any other consideration than the outstanding qualifications of the candidate.

"The committee withdrew and after a canvass of numerous possibilities, unanimously and with enthusiasm agreed to recommend Newton B. Drury, of California, a recommendation which the Secretary accepted.

"Who was Newton B. Drury? Since 1919, he had been the executive secretary of the Save-the-Redwoods League and, since 1929, he had also served as executive officer of the California State Park Commission. He was born in San Francisco in 1889, the older son of the pioneer editor, Wells Drury, whose book, *An editor on the Comstock Lode*, is a revealing picture of life in Virginia City and other bonanza towns of the seventies and eighties. Newton graduated from the University of California in 1912, and spent the next 6 years, except for war service in the Balloon Corps, at the University, where he was instructor in English, assistant to professor of forensics, and assistant to the president. Later, in 1947, his alma mater was to confer on him the honorary degree of doctor of laws as a 'leader in the preservation and development of valuable recreational areas . . . a conservationist who has applied rational imagination and boundless industry to the public service of his State and Nation.'

"In 1933, Mr. Drury had already achieved a national reputation by his success in preserving thousands of acres of giant redwoods along the California coast, a task which included not only the administration of State

funds, but also the raising of matching funds from private sources for the acquisition of forest lands. He was known as a forceful and eloquent writer and speaker, a man of the highest ideals, combined with sound practical sense, and an executive of solid accomplishments.

"To the disappointment of Secretary Ickes and the Advisory Committee, however, Mr. Drury did not feel at that time that he could ask to be released from his duties in California, and thus, after further consultation with the committee, the Secretary promoted Associate Director Arno B. Cammerer to the post of director.

"This arrangement did not work out as well as had been hoped. There was some incompatibility of personalities, and there was also a serious decline in Cammerer's health, with the result that he was more and more bypassed by the Secretary's office in its relations with the National Park Service. The inevitable consequence of this situation was a lowering of the morale of the service, especially at headquarters, and a growing sense of frustration, because of uncertain leadership and remote control.

"In 1940, Mr. Cammerer requested to be transferred to a position of less responsibility and so, in May of that year, Secretary Ickes again invited Mr. Drury to accept appointment as Director. In his correspondence with the Secretary Mr. Drury discussed the considerations which would influence his decision. Among these he put first the concurrence of the present Director, Mr. Cammerer. He was confident that he could secure release by his present employers, the Save-the-Redwoods League and the State of California, at least for a period long enough for him to make such contribution as he could to the national task. He asked for assurance that he would be left free to concentrate upon the concerns of the National Park Service without being drawn off on departmental tasks only remotely related to the former. He also asked for assurance of freedom to bring to bear upon the problems of the National Park Service the most competent knowledge and the best judgment that could be obtained. Finally he indicated his expectation that the Department would seek and consider, on their merits, the recommendations of the National Park Service on major matters of policy and organization.

"Even with assurance on these points, the decision was not an easy one. Other positions were offered to Mr. Drury, and he had to consider them. One of these was a high administrative post in a great university; another was an important position in a leading institution of scientific research. He felt, however, that his experience and his personal aptitudes should make it possible for him to contribute, at the national level, to the realization of his dearest ideals and purposes. He therefore accepted appointment to directorship of the National Park Service. This he did, not as a job, but as an opportunity for service; and he entered upon his duties on August 20, 1940.

"Between 1933 and 1940, Secretary Ickes had brought about a great enlargement of the scope of the National Park Service, by the transfer of 48 areas from the War Department to the Department of the Interior; by the passage of the Historic Sites Act of 1935; by the passage of the act of 1936, for the study of creational area programs; and by the transfer of all the projects of the Resettlement Administration to the National Park Service, not to mention the passage of the act of 1940, 'to encourage travel in the United States.' Thus Mr. Drury became the head of a multiple-service agency, with duties as its Director which went far beyond those contemplated in the act of 1916, creating the National Park Service.

"Furthermore, the National Park Service was entering upon the most critical period of its history. The Second World War had

already begun to involve the United States, and for the next 5 years, the chief task of the Service was to defend the areas under its jurisdiction and, at the same time, to assure their maximum appropriate contribution to the military and moral strength of the Nation. This task had to be performed under adverse circumstances: the personnel of the Service was rapidly and drastically reduced; the great parks had to be administered on a bare custodial basis; the demands of numerous war agencies, which were frequently supported with insistence by private interests for nonwar purposes, had to be resisted, unless they fulfilled unmistakable war needs not obtainable elsewhere, and which would not cause irreparable damage to the areas. The situation was made the more difficult because of the ill-advised and unnecessary removal of the Service's headquarters staff from Washington to Chicago. This seriously hindered the Service by making administration difficult, and liaison with other branches of Government impossible. Yet, contact with the Army, Navy and Congress became more than ever imperative because of the demands being made upon the Service in connection with the war effort.

"The wartime uses of the various areas were exceedingly diversified. Some of them were essentially military and included the occupation of buildings and land for headquarters, installations and training; but such uses as would have done irreparable damage were, in almost all cases, avoided. Beneficent, or at least less harmful uses were for hospitalization, rest and recreation camps, care of convalescents, and so forth, and were numerous and widely distributed. They enabled hundred of thousands of American soldiers and airmen to visit for the first time the great scenic and historic monuments of their country, and contributed greatly to their morale and welfare.

"Dangerous and persistent were the demands for exploitation of the natural material resources of the parks by logging, mining, grazing, and agriculture. These were resisted with almost complete success by the firm positions taken by Director Drury and his staff, and supported by Secretary Ickes. In the case, for example, of the demands of the War Production Board for the cutting of Sitka spruce in Olympic National Park and its Quetz Corridor and Ocean Strip, the Director formulated the position of the Service in his memorandum of November 18, 1941, addressed to the First Assistant Secretary of the Interior, to the effect that selected cutting might be authorized as a last resort, if immediate public necessity is shown, but that this would be a distinct sacrifice of park values in the interest of national defense and would largely destroy the qualities for which the lands were being acquired. He insisted that any legislation that might be introduced to permit cutting in Olympic National Park itself should be resisted, and he further insisted that all possible supplies of the needed timber elsewhere should be exhausted before using that in the park. He had already started a comprehensive survey by the forestry branch of the National Park Service of all available spruce in the Northwest, and this speedily demonstrated that there were important supplies in Alaska, Oregon, western Washington, and British Columbia. The pressure became such, however, that in December 1942, on the basis of a special report by an assistant in the office of the Secretary, the latter secured the authorization of the President for the sale of spruce in the Quetz Corridor and the Ocean Strip, although Mr. Drury was not convinced that this move was absolutely necessary. The cutting was not of large extent, and although there was further pressure for cutting, the forest in the park itself was saved. By September 1943, estimates of needs were revised, and there were no further requests from the War Production Board for cutting spruce.

"The story of the National Parks in wartime was presented by Mr. Drury in the August 1943 issue of *American Forests*. In the concluding paragraph Mr. Drury expresses his philosophy:

"The wisdom of the Nation in preserving areas of the type represented by the national parks and monuments is clearly evidenced on the American Continent today as increased demands upon our natural resources are invading and forever changing the native landscape. As long as the basic law that created them endures, we are assured of at least these few places in the world where forests continue to evolve normally, where animal life remains in harmonious relationship to its environment, and where the ways of nature and its works may still be studied in the original design."

"The greatest and most persistent danger to which the national parks are subjected results from the plans of other agencies of the Government, such as the Bureau of Reclamation of the Department of the Interior, for the construction of an infinite number of multiple-purpose dams for the control and utilization of water resources. In view of the relatively small aggregate area of the holdings of the National Park Service, it seems extraordinary that so many of these plans should impinge upon these areas. The projects are too well known to nature conservationists and especially to the readers of the *National Parks* magazine to require enumeration and description in this article. The case of the proposed dams in Dinosaur National Monument is at this moment very much in the minds of all friends of the national parks, and their disappointment and concern at the decision of Secretary Chapman to recommend the construction of the dams, over the opposition of Mr. Drury and the entire staff of the National Park Service, and the protests of nature conservationists is not relieved by the assurance of the Secretary in his Annual Report, 1950 (p. XXI), that 'if the projects are authorized as recommended, extraordinary efforts and diligence will be exercised so that the pristine beauty [sic] of this area will be preserved'."

"The essential thing to be noted in this connection is that Director Drury and his staff and the advisory board have consistently and unceasingly opposed public works which would violate the mandate of the Congress, expressed in its act of 1916, 'to conserve the scenery and the natural and historic objects and the wildlife—of the parks and monuments—and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations'."

"The Advisory Board, in the course of its meeting of April 1950, communicated its views to the Secretary in these words:

"The Advisory Board believes that the Congress expressed unequivocally and categorically a permanent policy of complete preservation and protection of the areas under consideration, for all time. * * * The advisory board believes that in all cases where departure from this policy is urged in the name of the general welfare it will be found either that the welfare is not in fact general, that it is not national, or that it could be assured through the adoption of some alternate plan. The Advisory Board is convinced that undeviating adherence to this policy as established by the Congress and maintained through the years by the Department of the Interior is the only way to protect the national park system."

"An important aspect of Newton Drury's administration has had to do with recreation. This is a very broad term, ordinarily associated with sports, games, camping and playgrounds. For the National Park Service, however, it means much more, and its chief functions are deemed to be educational and inspirational. In his annual report, 1949 (pp. 307-313), Mr. Drury has expounded his

philosophy under the heading 'The educational function of the National Park Service':

"The essential task * * * of the Service is to see to it that the American people shall have the opportunity to obtain the maximum beneficial use and enjoyment of the kinds which derive from the character of the park area themselves; enjoyment which at the same time involves the minimum of change in the natural or historic scene which the Service is required to conserve."

"To meet that responsibility * * * involves more than satisfaction to the physical senses. * * * It places on the Service the obligation to contribute to a deeper understanding of natural processes and historical events about which any intelligent human being has a natural and legitimate curiosity."

"Within the limits imposed by very inadequate appropriations, the National Park Service has developed recreation of this sort to a remarkable extent. The ideals and devotion of the naturalists, historians, and rangers of the staff have sought realization in their endeavors to make the visits of millions of Americans opportunities for greater understanding and appreciation of their land and of the history of their country."

"However, the act of 1936 greatly enlarged the role of the National Park Service, with respect to recreation, and made it the chief agency of the Government for planning and advising on recreational uses of all kinds of areas, notably on areas created by impounding water, on behalf of other Federal agencies and of the States and their subdivisions. In the opinion of the Advisory Board this responsibility has been well carried."

"The problem as to what extent the Service should exercise this responsibility for areas over which it does not have jurisdiction, and which are used chiefly as regional playgrounds is under consideration. A carefully thought-out report by the Advisory Board has been approved by the Secretary of the Interior and may be supposed to represent the present policy of the Service. It would undoubtedly be the opinion of nature conservationists that this function is secondary as compared with the primary function of protecting and interpreting, at the national level, our unique and most notable places."

"The decade of Mr. Drury's directorship has been one of many other major services. He has reestablished friendly cooperation with the Forest Service of the Department of Agriculture with which, in earlier years, there had been a not-too-friendly rivalry. He has, in this last year, with the aid and advice of a special committee, worked out a revision of the policies and practices of the Service with respect to concessions and concessioners, which promises to be beneficial to all concerned, including the millions of visitors who must depend on the concessioners for food and shelter and transportation. He has had to deal with the delicate problem of maintaining the wildlife of the great parks in reasonable ecologic balance, and while experts often disagree with each other as to the methods employed, his approach to the problem has been scientific and he has endeavored to secure the most competent advice."

"Mr. Drury's greatest service has been the complete dedication of himself to his task. He has expressed his ideals in inspiring words in his reports, and in public utterances and writings, and he has justified his faith by his works. He has identified himself with his staff so that together they have seemed to have one voice. He has been a leader among equals, but he has not been their boss. He has inspired the loyalty of the staff to the ideals that they have held in common, but he has never demanded a personal loyalty to himself. He has been eager to obtain the best possible judgment on all problems, and his deci-

sions have been reached after conscientious consultation and mature deliberation. He has not dramatized himself or his position; he has not been spectacular and he has avoided personal publicity. He has had to say "No" far more often than "Yes," and he has said it quietly, but as many times as were necessary to make it stick. He has not pounded the desk or made the rafters ring or broadcast epithets to the front pages of the noneditors."

"This is the sort of public servant that Newton B. Drury has been."

"The dismissal of Newton B. Drury, in the manner described and for the reason alleged, raises many questions which nature conservationists and their organizations are bound to ask. They have had confidence in Mr. Drury, even on the infrequent occasions when not all of them have agreed with him. They have looked upon him as a stalwart defender, within the Government, of the integrity of the national parks. They have recognized his honesty, his singleness of purpose, his reasonableness, and his devotion to the ideals which they themselves hold. They ask whether his successor or successors, whoever he or they may be, will be equally strong to defend and to resist, or will they be more compliant in the face of what may seem to be considerations of expediency? Will they be able to defend the Service from undue interference, already manifesting itself, from "upstairs"? Will they have the vital spark of leadership that will reinforce the devotion of the Service to the great purposes which it has so well served since its creation and that will maintain the morale for which it is justly renowned? Will they be able to command the moral support of the nature conservationists and their organizations across the country, which they will so greatly and sometimes so desperately need? No mistake could be more unfortunate than to underestimate the value of such support or its influence upon public opinion."

"Nature conservationists will realize that now, and in the immediate future, they must be more than ever on the alert. They have not forgotten Hetch-Hetchy; if the destruction of Dinosaur, which has been conclusively shown to be unnecessary, is consummated, and if Mr. Drury is succeeded by directors less determined to defend, without exception, the great heritage of countless generations of Americans, the friends of the national parks will resort to all means in their power to create such defenses in public opinion as cannot be broken down."

Dr. Leland has made this special comment on his article:

"It was my intention, in writing my article on Newton Bishop Drury, for the *National Parks* magazine, to present a factual statement constructive in tone and character, which would, in itself, be the most effective refutation of so-called charges that Mr. Drury had not been aggressive in the defense of the National Parks during the last war, specifically in the matter of cutting Sitka spruce, that he had acquiesced in the construction of dams in Dinosaur National Monument, and that he had opposed the recreational activities of the National Park Service on behalf of areas not included in the National Parks system. These charges have never been made by any responsible official of the Department of the Interior, and nothing that Secretary Chapman has said, to my knowledge, has indicated dissatisfaction with Mr. Drury's administration. Furthermore, my own study of the pertinent documents as well as my personal knowledge of these matters, which were fully and frequently considered by the advisory board in its meetings, demonstrated that the charges were completely contrary to the facts. It did not seem worth while to deal with such charges in any formal way. It was clear that they had not affected confidence in Mr. Drury on the part of conservationists for these were too well acquainted with his

character and integrity, as a man and as a public official, and with his whole career as a defender of our great endowments by nature, to give any credence to them."

Before Director Drury's resignation became effective, representatives of 19 national conservation organizations tendered a cocktail party to the Director and Mrs. Drury at the Cosmos Club here in Washington. At this affair many tributes were paid to the guests of honor. A press release dated March 28, 1951, describes a testimonial presented to the retiring Director and part of it is quoted here:

"You have deserved well of the Republic," declared representatives of 19 national conservation organizations in a testimonial presented to Newton B. Drury, retiring Director of the National Park Service, at a cocktail party in his honor at the Cosmos Club today.

"In signing the testimonial, representatives of these groups recorded their appreciation of Mr. Drury's 'distinguished services' as Park Service Director for more than 18 years, and expressed 'sincere regret that those services should now come to an end.' The statement asserted: 'We feel that our confidence in you, when you entered upon your duties, and our high hopes for your administration have been justified, completely and abundantly.'

"You have been," the testimonial continues, 'the chief custodian of our country's greatest treasures, unique and irreplaceable, the superlative works of nature upon our land and the monuments of the history of our people. You have guarded these treasures with devotion and with courage as a sacred trust on behalf of countless generations to come, and you have known how to draw from them inspiration and enjoyment for the generations of the present. You have held high the ideals of a branch of the public service which has been notable for its ideals and its loyalty to them, and you have maintained and enhanced its great tradition.'

"Signers of the testimonial did so 'on behalf of those millions of our fellow citizens whose lives are enriched and whose love of country is stirred by the experiences which you and your associates of the National Park Service make possible for them.'

"Organizations represented at the gathering and signing the scroll were American Scenic and Historic Preservation Society, American Forestry Association, American Museum of Natural History, American Nature Association, American Planning and Civic Association, Boone and Crockett Club, General Federation of Women's Clubs, Izaak Walton League of America, National Audubon Society, National Parks Association, National Wildlife Federation, Save-the-Redwoods League, Smithsonian Institution, Society of American Foresters, Conservation Foundation, Nature Conservancy, Sierra Club, Wilderness Society, Wildlife Management Institute."

The Advisory Board on National Parks, Historic Sites, Buildings, and Monuments is now composed of the following men. Mr. Charles G. Sauers (chairman), 536 North Harlem Avenue, River Forest, Ill.; Dr. Theodore C. Blegen (vice chairman), University of Minnesota, Minneapolis, Minn.; Dr. Frank M. Setzler (secretary), National Museum, Smithsonian Institution, Washington, D. C.; Dr. Harold E. Anthony, American Museum of Natural History, New York, N. Y.; Dr. Herbert E. Bolton, University of California, Berkeley, Calif.; Dr. Ralph W. Chaney, University of California, Berkeley, Calif.; Mr. Bernard DeVoto, 8 Berkeley Street, Cambridge, Mass.; Dr. Fiske Kimball, Philadelphia Museum of Art, Fairmount, Philadelphia, Pa.; Mr. Tom Wallace, Louisville Times, Louisville, Ky.; Mr. Alfred A. Knopf, 501 Madison Avenue, New York, N. Y.; Mr. Charles G. Woodbury, 1801 Hogan Place NW, Washington, D. C.

On April 26, 1951, after Director Drury had returned to California the Advisory Board met in Washington, D. C. All members were present except Dr. Bolton and Dr. Kimball. The Board reviewed all the circumstances relating to Dr. Drury's retirement, and adopted a resolution which was at once dispatched to Drury by wire:

"Resolved, That the Advisory Board record its profound regret that the National Park Service should lose the services of its Director, Newton B. Drury, who, for more than 10 years, has directed the activities of the Service and guided its policies with the greatest competence and distinction, maintaining its high standards and defending the Nation's parks and monuments against encroachments and the impairment of their values, and, that the Advisory Board address to former Director Newton B. Drury the expression of its gratitude and appreciation.

CHARLES G. SAUERS,
Chairman, Advisory Board on National Parks, Historic Sites, Buildings, and Monuments."

The Izaak Walton League is a powerful organization of conservationists, for the most part fishermen, but men who ever keep watchful eyes on the National Park Service. Its executive director, William Voigt, Jr., had this statement to make to Director Drury on hearing of his resignation:

"He told me of your intention to leave the Service—at your chosen time and in your chosen manner, and I will not attempt to dissuade you if you are committed to that course. I will simply express my deep regret that you could not continue until retirement or the close of your active career. My dealings with the Service do not extend back beyond your incumbency and I cannot compare your administration with that of others, nor do I desire to do so. I simply wish to say, from the heart, that I have enjoyed working with you. You have been cooperative and understanding of our views, you have been in sympathy with the majority of the things we have proposed in what we considered the public interest, and I am convinced yours has been a constructive administration, devoted to the ideals and the spirit of the Park Service.

"When you leave we will join lots of others in saying Godspeed. When you go off the Federal staff, you actually may be in a position to be more vigorous and outspoken in defense of the resources of the park system (and similar or related areas) than is now the case. I hope that as you cast about you to choose the vehicles for spare time utilization of your energies, you will think of the league and consult with the league's leadership. We need and want men of your experience and caliber to counsel and advise us, and I hope you will give this expression from me your consideration when the time comes for you to make such decisions."

On the day Mr. Drury's resignation was announced, the only living former Director of the National Park Service, Horace M. Albright, who was at the head of the Bureau from January 1929 to August 1933, was interviewed at Carlsbad, N. Mex., by a reporter of the Carlsbad Current-Argus and made this statement on February 8, 1951:

"I have heard with keenest regret that Newton B. Drury has resigned as Director of the National Park Service. He has served as the head of this important Government bureau since August 1940, and has been an efficient and successful administrator in a very critical period of national park history.

"Mr. Drury is one of the outstanding conservationists of the country. As the executive director of the Save-the-Redwoods League, he deservedly received the major share of the credit for the success of that organization's campaign to purchase and preserve over 50,000 acres of the best stands of California coast redwoods.

"He was also the leader of the group responsible for the establishment of California's State park system, one of the best in the Nation. It was on the basis of this record that Mr. Drury was offered the post of Director of the National Park Service. In wartime it was his duty to oppose all efforts to invade national parks and movements for exploitation of their resources. This he did, yielding only in one of two cases where it was clearly proven that the war effort would have suffered had he not permitted certain limited operations within park reservation boundaries.

"The National Park system was expanded during his administration, Big Bend in Texas and Everglades National Park in Florida being added. Several national parks were enlarged in area and many new national monuments and historic sites were given the protection of his bureau. All in all, Director Drury's many achievements were of great importance and of lasting benefits to the Nation."

As I related in the early part of this statement, Gov. Earl Warren appointed Newton Drury, chief of the division of beaches and parks of California. This appointment was a most popular one, and already Drury is at work on the unfinished business of the State park commission which includes such projects as the preservation of the South Calaveras Grove of Big Trees and adjacent tracts of sugar-pine forests.

Space does not permit quotation of California tributes to Newton Drury but the views of two influential conservation organizations deserve quotation. The Sierra Club which has 7,100 members expresses itself through its board of directors and on February 17 the board unanimously adopted the following resolutions:

"Resolved, That the board of directors of the Sierra Club desires to express to Newton B. Drury its appreciation of the distinguished service he has rendered as Director of the National Park Service during the past 10 years, and that it welcomes his continued participation in the councils of the club in his capacity as honorary vice president.

"Resolved, That the board of directors of the Sierra Club congratulates Arthur E. Demaray upon his appointment to the position of Director of the National Park Service following his many years of devoted service in other capacities in that Service, and pledges to him its cooperation and support."

And in April 1951, the Tamalpais Conservation Club in its magazine said:

"Newton B. Drury is the new chief of the California Division of Parks and Beaches. Mr. Drury recently stepped out as Director of the National Park Service, a post he had held for more than 10 years.

"Newton Drury has a long and distinguished record as conservationist and administrator. Graduate of the University of California in 1912 he was given honorary degree LL. D. in 1947. He was an executive of California State Park Commission 1929-40; secretary, Save the Redwoods League, 1919-40, and has received many honors and awards from various organizations and institutions as a conservationist.

"We congratulate Governor Warren in his prompt appointment of such an able administrator and distinguished conservationist as Newton B. Drury to head our California State park system.

"To Mr. Drury the TCC extends a welcoming hand, with our pledge of cooperation and best wishes for a long and successful career."

So Newton Drury is at home in his native hills and forests and among old friends, but wherever conservationists gather, whether their interests be in parks, forests, historic sites, wildlife soils, or waters, his achievements as Director of the National Park Service will be recalled with appreciation and great respect.

Major Problems and Dangers of Inadequate Manpower Mobilization

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include a statement filed by Francis V. Keesling, Jr., formerly chief liaison and legislative officer, national headquarters, Selective Service System, with Senate House Committee on Armed Services and Senate and House Committees on Expenditures in Executive Departments and House Committee on Education and Labor:

SOME OF THE MAJOR PROBLEMS AND DANGERS OF INADEQUATE MANPOWER MOBILIZATION

From personal experiences at Washington during World War II, I have good reason to be greatly alarmed over the serious consequences which could result from failure to provide a completely adequate manpower program for use during the next major mobilization.

Failure to put into effect a completely adequate manpower program during World War II was one of the major causes of the postwar inflation which since then has been floundering and reflationing.

Such failure also impeded our war effort and jeopardized our national economy and security. Unless preventive measures are taken now, even greater mistakes may be made next time which could cause the entire mobilization structure to collapse, both the military and war production.

Let me tell you how and why manpower mobilization could collapse in whole or in part and cause great and possibly irreparable injury to our war effort and our economy.

First of all, if during full-scale mobilization, the Selective Service System ever became suspected of granting deferments on a political or any other unfair basis, it would not be long before registrants and their families might not abide by its decisions. Also, the morale of those already in the fighting forces would be disrupted. Therefore, it is imperative to avoid even the slightest suspicion of political or other bias. Experience has disclosed that to avoid such suspicion the Selective Service System must be an independent agency at the Washington level and must not be under the domination of any department having either a special interest in inductions or in deferments. Consequently, various proposals during past years to have selective service transferred to the Department of Defense, or to the Department of Labor, or elsewhere, have been turned down as potentially dangerous. Also, every suggestion to place the local selective service boards under the control of any agency such as the United States Employment Service at the local levels, have likewise been properly set aside and defeated. Such proposals must continue to be defeated, as history has proven that there is no better substitute for an independent Selective Service System operating with uncompensated local board members. No substitute can assure the same effectiveness and the same impartiality, or be assured of the same wholehearted acceptance by millions of registrants, their families, and employers.

During World War II it became necessary for me to prevent other agencies from taking over some or all of the selective-service functions. I mention this as an illustration of

how major matters can slide by at Washington unless someone steps in to prevent it. Unless preventive measures are taken, pending legislation (S. 1142, H. R. 3315 and H. R. 3681) proposing to transfer the Selective Service System to the Department of Labor could be enacted by default. I am convinced that the Senators and Congressmen who introduced the bills were not made aware of all of the facts. During the past 3 weeks I have taken the initiative at Washington to see to it that they will be apprized of the true facts. When they have considered them, and when they are asked the same questions I shall now ask you, I feel reasonably sure that the proper answers and solutions will be forthcoming. Do you believe that the Department of Labor which is charged with being the special advocate and guardian angel of labor should control selective-service policies and operations? Do you believe that paid Government employees of local United States Employment Service offices operating under directives from the Department of Labor should supersede the unpaid members of selective-service local boards and make the all-important decisions as to which men go to war and which are deferred? Do you believe that deferred registrants and others on the home front would rather have the selective service local boards administer home front war production manpower controls instead of having such controls administered by local United States Employment Service offices? If you were a registrant, what would be your choice?

During World War II strenuous attempts were made to take occupational deferment determinations away from the Selective Service System and turn them over to the United States Employment Service local offices. Other attempts were also made to take over control of the entire system from top to bottom. These attempts and then partial, but short-lived success, made our regular duties and functions much more difficult.

Also, when consideration was being given to the imposition of controls on war production manpower, the same persons tried to have those controls exercised by the United States Employment Service rather than by Selective Service local boards.

It has always been my position that the uncompensated local board members at the lower levels should make the decisions not only as to which men should go into the Armed Forces and which ones should be deferred, but should also make the decisions with respect to the stabilization and transfer of war workers. Broad manpower policies must, of course, be made by some overall national board of directors, such as the Office of War Mobilization in World War II, the NSRB or DPA. Obviously there is a very important part for the Department of Labor and the local United States Employment Service offices to take along with all the other special interest departments in the over-all manpower mobilization program. They, of course, have expert information and data which should be made available to the Selective Service System by way of advice, both at the national and local levels. There are also other agencies at the national and local levels which must make their expert advice and data available so that Selective Service decisions can be properly formulated and made only after consideration of such expert evidence. That is exactly the way the Selective Service System operated in World War II in connection with its military induction and deferment processes. It continually received and utilized all of the data and advice made available by the various Government departments having particular expert knowledge and data with respect to war manpower matters in their particular fields. However, during World War II certain Government officials working in close conjunction with special interest

groups prevented use of adequate war production manpower controls by the Selective Service System.

During the first years of World War II, President Roosevelt and some of his top officials failed to take a definite position on manpower controls. Those who took a definite position did not do all they could have to get proper action. When the situation became critical because of lack of an adequate program, President Roosevelt belatedly requested the enactment of legislation. Under such legislation, Selective Service would have administered the manpower controls. However, certain persons flagrantly violated the President's official directives (see appendix A) when they pressured to have the United States Employment Service handle it under different legislation from that which the President requested. This action resulted in such confusion that the legislation requested by the President became deadlocked in the Senate after having passed the House of Representatives.

On a previous occasion President Roosevelt, upon receiving a proposed national service bill from Grenville Clark, instructed the WMC to study the subject and recommend a bill for use when and if the President decided manpower controls would be required. After weeks of hard work a WMC special committee completed its draft of the legislation calling for controls to be administered by Selective Service. Can you believe that such legislation, though prepared by representatives of member agencies of the Commission, was arbitrarily pigeon-holed, and that a substitute prepared by the staff of the WMC was submitted to the President in its place? The substitute provided for USES as the operating arm, and followed in substance a bill prepared in the Social Security Agency before Pearl Harbor.

On another occasion a speech I planned to present before the Commonwealth Club of California was ordered canceled the day before the speech in the President's and Justice Byrnes' absence from Washington, although it had been cleared with General Hershey and was on all fours with the legislation requested by the President. I ought to know, because I drafted that legislation, and prepared the speech in explanation and support of its provisions. For those interested in this point, I am including in the Appendix a copy of the "best speech I never made" (See appendix B.)

As a very poor and unworkable substitute for adequate manpower controls during World War II an attempt was made to control war production manpower through the United States Employment Service offices operating under the so-called War Manpower Commission. The record conclusively shows that this failed for two reasons: (1) insufficient teeth to enforce controls, and (2) the fact that local United States Employment Service offices were unable to hold the line against the pressure and requests for permission to transfer, and hence issued "certificates of availability" in large volume. On the other hand, you and I know that the local selective-service boards in a fair and impartial manner could have held that line by making forthright decisions and sticking to them, for they had become experienced in withstanding all of the pressures to which they were subjected in the course of their induction and deferment procedures. In addition, you will realize that during a major mobilization, local boards will already have a close relationship with millions of deferred registrants in the course of classifying them for induction or deferment.

The Boards will have full and complete data as to occupational skills, financial status, dependency, physical and mental condition, and so forth. Having deferred these registrants, the Boards are also in a much better position than any other agency

to deal with them and have them abide by war production manpower directives. Also, why waste money and scarce manpower in creating or expanding many new agencies and offices which under any objective consideration could not possibly do the job as well. In fact, there are many who believe that there is grave danger of complete breakdown if new and untested machinery were utilized in operating the type of legislation proposed by the staff of the War Manpower Commission and the United States Employment Service during World War II. Unfortunately, many took the comparatively smooth operation of the Selective Service system during World War II for granted without realizing the years of planning and preparation that made that possible. Thank God we had that planning and preparation for we thereby avoided the pitfalls of prior mobilizations. Let's not start off from scratch with any untested machinery and plans as substitutes for tried and successful machinery and procedures.

And now let me explain why it is necessary to have adequate war manpower controls during a major mobilization.

Early in World War II and at a time when we had taken only a comparatively small number of men into the Armed Forces, we were already faced with war production manpower problems. Demands for manpower were increasing while supplies were decreasing. Gradually there was a noticeable shift from lower paid, less attractive jobs to higher paid, more attractive jobs. Then there began the ebb and flow—the shifting and re-shifting—even among the higher paid jobs. You will all recall the tremendous manpower turn-over and absentee problems of war industries, and the resultant great losses of man-hours. The multiple and compounding impacts of turn-over, including burdening transportation, housing, community facilities, and the expense and confusion of continual recruiting have been stated by me many times in congressional testimony on my numerous appearances on manpower matters.

As time went on and more and more millions of men were taken into the Armed Forces, the situation became more and more acute. Anyone stopping to think for a moment will realize that we cannot take millions of men out of the labor force without creating manpower shortages and hence greater pressures for increased wages in order to compete for personnel. That is exactly what happened in the absence of selective service being given the authority to require deferred IV-F's and other war workers to stay at their jobs. Management pressured the then War Labor Board for wage increases in order to be able to engage in competitive wage wars solely for the purpose of competing for manpower and without regard to what was fair pay for any particular job. As Uncle Sam was paying the way under cost-plus contracts, prices remained fairly well stabilized, but the seeds of postwar inflation were being sown.

Runaway wages, together with loss of man-hours from continuous job shifting and absenteeism greatly adds to the shortage of manpower and necessarily aggravates the problems of both war effort and non-war effort activities. Then on top of that come all the other impacts of inflation.

During the next major mobilization the situation will be even worse unless adequate war production manpower stabilization and utilization controls are imposed under a fair and impartial program operated by the selective service local boards which have such a close and psychological relationship with the millions of IV-F's and other deferred registrants. Because of this relationship, registrants will more readily comply with the requests of selective service boards than those of any other company.

A glance at the following figures conclusively shows the much greater impact mobilization will have next time.

	1939	1944	1950
Total labor force.....	55,450,000	65,890,000	64,590,000
Civilian.....	55,240,000	54,630,000	63,000,000
Employed.....	45,750,000	53,960,000	59,957,000
Unemployed.....	9,490,000	670,000	3,142,000
Armed Forces.....	220,000	11,260,000	1,500,000

You will note that in 1950 there was no large reserve of unemployed such as existed in 1939. Also you will note that although we had a much smaller number in the Armed Forces in 1950 than in 1944, there were more persons in the labor market in 1950, including those in the Armed Forces, than were in the labor market in 1944 at the height of the war. Consequently, each man inducted or ordered into the Armed Forces at this time causes a greater impact than was caused in 1944 when war production was at full peak and our Armed Forces almost at full strength. Obviously, therefore, any major mobilization in the near future will have a greater impact and will necessarily require adequate war production manpower controls to prevent wage pressures leading to inflation, and to prevent other impacts on our war effort and our economy.

In addition to the ravages caused by war-induced inflation resulting in part from inadequate manpower controls on the home front, the same lack of controls during large-scale mobilization prevents a smooth and proper operation of selective-service induction and deferment processes. That in turn causes dissatisfaction among registrants and inductees, together with their families, as well as causing much unnecessary disruption of war plants. Here is what happens: A selective-service local board in your industrial area works out a deferment schedule with a war plant based on fair estimates of the time it should take for that plant to recruit and train replacements for the vulnerable draft-age workers. But without manpower controls, even though the plant is able to get replacements, it finds that it loses other workers to other jobs in ever-increasing rates of turn-over. It also finds that the loss of manpower from job shifting, coupled with the loss of man-hours from absenteeism, induced in part by higher wages, requires the plant management to ask selective service for extension of the deferments of their draft eligible men, and so on and on, ad infinitum. When such repeated requests for extension of deferments are sought, selective service then has the very difficult choice, which used to be called our "operation dilemma," of either inducting the workers anyway and causing a disruption of war plants, or of deferring those most vulnerable men and inducting other registrants from higher priority categories, such as veterans, fathers, older registrants, etc.

Of course morale questions are raised if Selective Service continues to defer young single men for unreasonably long periods of time while inducting men from higher priority categories. If during a major mobilization Selective Service could require IV-F's and others to remain at war jobs, and to the extent necessary, to shift from nonwar work to war work, then Selective Service could induct the young single men according to reasonable deferment schedules worked out with plant management. Under such a system, the military would get the best qualified manpower for its purposes, industry would receive reasonable deferments under businesslike replacement schedules permitting them to obtain replacements before their essential men were inducted, and

war plants would be able to keep their IV-F's and other higher priority registrants, and to obtain additional war workers from among other deferred registrants with which to carry on essential war production satisfactorily. Under such a program, the pressures for increasing wages as one of the most unworkable and dangerous stopgap methods of obtaining and stabilizing manpower would be nonexistent.

Such a manpower program can be worked out with the full participation and cooperation of labor and management so as to insure a minimum of controls and the maximum protection of the usual processes of labor and management. On the other hand, if management and labor who have everything at stake in preserving our national economy and security, and in the very survival of our country itself, do not acquaint themselves with this subject and see to it that proper plans are made and carried out, there is grave danger that improper programs will be pushed through by certain perhaps well-intentioned but impractical Washington planners or by some organized minority having selfish motives, or by a combination of the two. We must be prepared to defeat any wishy-washy stopgap sort of program containing inadequate controls, while at the same time we must be prepared to defeat any program which contains any unnecessary degree of control or regimentation. And in any event, we must be prepared to defeat any plan proposing to have the controls administered by any agency or machinery that would not assure the same impartiality and effectiveness as the Selective Service System operating through its local boards composed of unpaid civilian neighbors.

Let us not forget that Joe Stalin is vitally interested in having us adopt inadequate and unworkable manpower plans. A manpower mobilization breakdown would be one of his most effective weapons. On the other hand, a proper manpower program is one of our most effective weapons, an inadequate one may prove to be our Achilles heel. We must, therefore, continually be on the alert against the activities of enemy agents who through subtle propaganda and other means may attempt to cause confusion and a breakdown in our manpower mobilization during any major effort. In this regard all interested parties must see to it that Washington officials have all of the facts, and that they face them objectively.

I am very pleased to state that during my many relationships with the Congress and with its committees, they usually came through with flying colors when they had the benefit of all the facts on national defense subjects.

But we must be sure the true facts are presented to expose any untrue propagandized facts and conclusions based thereon. Beware of convincing-sounding statements coming sometimes from persons in high places without first checking the basis for such statements, as sometimes they are statements of conclusion and not of fact. During World War II some persons in high places stated that selective service was not equipped to handle this function or that function, or that manpower controls if handled by the United States Employment Service would be the voluntary method as distinguished from the slave-labor method, and so forth. Actually an examination would have revealed that the so-called USES voluntary way involved much more real danger of slave labor and regimentation than the selective service way which would in fact involve the maximum of voluntary cooperation and the barest minimum of compulsion, and then only on a selective, fair and impartial basis. The situation was so bad that two leading private officials, one representing a large national association of businessmen, and the other an important

union, testified against an essential manpower bill as involving slave labor while at the same time advocating in their testimony a program providing for exactly the same machinery and procedures as was set forth in the bill. It turned out that neither of them had read the bill; the only explanation is that they had been the victims of effective propaganda. As a matter of fact these two men turned out to be the best witnesses for the bill although they technically had vehemently opposed it. (See appendix C.)

When the House committee and the House of Representatives were given all the facts, they voted down all attempts to substitute other machinery for the Selective Service System, by overwhelming votes, and the bill itself finally passed the House on February 1, 1945. In view of my efforts I was given the gavel used in the House that day by Speaker SAM RAYBURN.

Many outstanding Americans such as Bernard M. Baruch, Grenville Clark, the Secretaries of War and Navy, the Chairman of the War Production Board, the Chairman of the War Shipping Administration, Hon. Warren Austin, and many outstanding Members of Congress recognized the need for effective manpower controls and the use of effective machinery, but unfortunately some of the Government officials didn't do all they should have to bring about those controls. As an illustration of the prevalent views in the House committee and in the House debate, I am inserting in the Appendix excerpts from the debate. (See appendix D.) The entire debate will be found in the CONGRESSIONAL RECORD for February 1, 1945, and preceding days. The committee hearings will be found in connection with H. R. 1119, Seventy-ninth Congress.

In spite of President Roosevelt's request to have the bill passed without bringing up controversial amendments, such amendments were introduced though definitely known to be controversial, and the record discloses that the sponsors were aided and abetted by staff members of the War Manpower Commission.

That our war effort in World War II was jeopardized by not having adequate manpower controls is conclusively proved by the report of the Sparkman committee made within two weeks of VJ-day. That report shows the serious manpower failure in west coast installations at that time and the failure of liaison to and from the west coast and of proper coordination at Washington. (Copy of the report is in appendix E.)

We must wake up to the realization that enemy agents are not merely there in the direct employ of enemy governments, but that the most effective agents are those "do-gooders" and those nonpractical theorists both in and out of Government who, from lack of practical experience, may vehemently sponsor unworkable and impracticable highly theoretical programs and plans, or who have as their goals socialism or other isms, via social and economic revolutions in the course of the operation or failure of a manpower program. Such persons, though probably for the most part sincere and patriotic Americans, propose their impractical programs and oppose practical programs, either on their own initiative or as a result of unknowingly adopting logical-sounding propaganda skillfully prepared and disseminated by paid enemy agents. Such unpaid and unintentional enemy agents are even more effective than the paid agent, for those who are bona fide Americans can openly and perpetually fight for their unworkable programs while dynamiting feasible proposals. Workable plans were sabotaged in World War II, and so in formulating any future war effort programs, we must guard against any similar sabotage, no matter how well intentioned.

Now, how about universal military training (UMT)? I have said that Congress usually comes up with the proper action on

national defense legislation provided it is given all the facts. In this regard, I am convinced that if Congress is shown the need for having X numbers of competent trained reserves available at all times in addition to those in the standing Armed Forces, it will act wisely and properly. Once the need is explained, simply and clearly, then the method of taking care of that need, in this case providing for the procurement and training of the required numbers of men, can be readily determined and agreed upon. In my opinion any supersales attempt to "sell" Congress the method without first disclosing the facts proving the need, is putting the cart before the horse, and is entirely the wrong approach. In the first place, if the need is there and the project is meritorious, any supersalesmanship does more harm than good. Congress won't swallow any medicine called UMT merely because of an all-out advertising campaign using the slogan, "Congress should use UMT." No; the reason why it must use something is the first step. When it is convinced that there must be X numbers of trained reserves, it is obvious that it must use something to provide them.

In other words the means isn't what justifies the end. And so there can be no mistake concerning my views, I am convinced we must have a certain number of competent reserves available at all times. I am also convinced that whether it is decided to train all or only a portion of each age group, there must always be a Selective Service System to process and procure manpower during any major mobilization. Anyone who says that we can abolish selective service forever if we have UMT or train all of our young men by some other means doesn't know what he or she is talking about (see appendix F), and isn't familiar with the gross mistakes made in the long history of many manpower mobilizations. You all know the problems which have occurred when the armed services attempted to select limited numbers of reservists for active duty during the present emergency. Let's assume that we had trained all of our men before they reached 21 years of age and that 24 years elapsed. Will anyone dare say that the armed services could effectively process on a selective basis more than 30,000,000 men between 21 and 45 years of age, and make the decisions as to which of them should be called to active duty and which should be deferred? The answer is obvious. Consequently, there must always be selective service planning, and in connection therewith the Selective Service System could be used in the procurement of men for any UMT program.

A look at the Washington situation discloses a vital need for private officials and industries to intervene. An objective appraisal of the Washington picture shows too much confusion in the Federal Government. Many avoidable mistakes, serious ones, were made during World War II and continue to be made. Private officials and industries are partly to blame because they have not intervened and participated sufficiently and insisted on the formulation and execution of proper policies.

Among other things, private officials should insist that the Government departments be streamlined. Unnecessary expense and resultant inflation are only a part of it. Great confusion and red tape exist when and if there is an overloading and duplication of personnel both within and among agencies. Also, there is the problem of quality as well as quantity of personnel. Too much unnecessary personnel costs tremendous sums. Too much duplicating and overloading of personnel causes innumerable jurisdictional conflicts within and among agencies resulting in the red tape of countless clearances and buck passings. The expense of having a lot of personnel cluttering up an agency is bad enough. Trying to get important projects cleared through all the titles and by

innumerable officials is even worse. Both businessmen and worth-while Government officials trip over the deadwood and red tape.

Also, when there is too much personnel and red tape within individual agencies, and when you multiply that by too many bureaus, superbureaus, and super-super-bureaus, meritorious and essential projects get lost in the mass of confusion unless almost superhuman, sustained efforts are used.

During World War II there was an unbelievable deficiency in liaison between Washington and the various parts of the country concerning the problems of those engaged in war effort or related activities. Even when facts would get through to Washington, often no proper solutions to the problems were formulated because they got lost in the vast shuffle. (See appendix, last part of D.) Part of the trouble was that very successful deterrent to progress known as the inter-agency meeting. Properly set up and handled, it is excellent, but so often it consisted of getting a large group of Washington planners together who would sit around and dream up what they thought the facts were or should be in the outlying sections of the country, and would then try to formulate policies, directives, memoranda, releases, orders, and so on.

General Hershey quite successfully broke up some of these meetings when he'd inject some realism at the appropriate time by asking, "Now tell me, just how is this going to work in Angola, Ind.?"

I had to do likewise or use other methods to defeat improper proposals or get proper action on vital projects soon enough to be effective.

Situations continue to occur disclosing poor liaison, and the jumping to conclusions and the taking of action without first obtaining and considering the true facts, and then exercising sound judgment and proper public relations with respect to whatever action is taken.

Under the circumstances, I respectfully submit that every patriotic Government official, every citizen and every business has an interest, and should intervene insofar as possible, by insisting that the Government departments be streamlined and properly staffed, and that there be proper liaison to and from Washington and the outlying parts of the country and then proper coordination and operations at the Washington level. Efforts along such lines by commissions and congressional committees should be supported.

With respect to the Nation's fight against inflation, I recommend that it be not confined solely to removing duplication, waste and nonessential expenditures in the non-military departments of the Federal Government, but should extend that effort to include the military as well. The vast bulk of our Federal taxes and expenditures are going into national defense. There is no reason to give the military and other defense agencies blank checks and hold them completely unaccountable. We must subscribe to the slogan "Billions for the essentials of national defense, but not a penny for waste or duplication either in or out of the military." Without adequate safeguards and continued vigilance by Congress and all interested parties, including the top military leaders themselves, duplication and unnecessary waste can occur in the Military Establishment and other defense agencies as well as elsewhere.

In seeking to curtail expenditures both in the nondefense and in the defense programs we must guard against false economy. There must not be a curtailment of the essential activities of the civilian agencies or of any of the essential activities of the defense agencies. We must not blindly urge blanket rule-of-thumb budget cuts, but must see to it that the requests for funds are analyzed in sufficient detail so that unnecessary or

deferable items will be eliminated or deferred while at the same time assuring that projects which must be undertaken or completed without delay are provided funds. In this connection it may be necessary to increase the staff of congressional appropriations and expenditures in executive department committees and other pertinent committees and of the Bureau of the Budget. It may also be necessary to supplement the activities of Congress, congressional committees, and the Bureau of the Budget by creating a permanent budget commission with lifetime members and stringent qualification requirements for membership, together with career-men staffs, in order to assure completely fearless and objective action.

World War II and the period since then have created many problems which are becoming more and more complex. It is imperative that all of us, jointly and severally, recognize that we have a vital interest and responsibility in helping solve those problems. Our survival, literally and figuratively, may depend on how much we do.

An Amendment to the Defense Production Act To Provide for the Coordination of Ceilings on Both Prices and Wages

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. POAGE. Mr. Speaker, that there might be the maximum understanding of the amendment which I propose to offer to the bill now under consideration—the Defense Production Act—I am inserting in the RECORD the text of the proposed amendment, and an explanation of its effect. I have nothing to conceal in regard to the amendment. In fact, I want it to be considered in a "goldfish bowl." I hope the Members will familiarize themselves with this amendment and its objectives.

The proposed amendment reads as follows:

"(5) Whenever an increase in wages is specifically authorized or approved by any regulation or order issued under this title, such regulation or order containing such authorization or approval shall be accompanied by an order or regulation increasing the ceiling price of the applicable material or service to the extent necessary to cover the actual increases in wages unless the President finds and determines that the profit margin for each unit of such material or service will not be reduced below 85 percent of the average profit earned on an equivalent unit of such material or service during the three most profitable years of the period of 1946-1949, both inclusive."

(P. 40, line 22, amend sec. 104, par. (5) of subsec. (b) of sec 402, is amended by striking out par. (5) in its entirety and inserting in lieu thereof a new paragraph reading as above.)

THE NECESSITY FOR LINKING PRICE CONTROL WITH WAGE CONTROL

If our economic situation is sufficiently critical to call for general price controls, controls over wages are also a necessity. We cannot have effective price control without effective wage control. I pointed this out at the time we first considered the Defense Production Act last August.

At that time the House adopted my amendment to accomplish this result.

Let me refresh your memory by quoting from the report of the committee on conference as found in the CONGRESSIONAL RECORD, volume 96, part 10, page 14130, as follows:

The House bill authorized the President, in exercising price and wage controls, at the same time both to establish price ceilings and to establish wage ceilings, and, except when deemed necessary to prevent gross inequity or to effectuate the purposes of the act, required the establishment of wage ceilings whenever an increase in wages would require increases in price ceilings or impose an undue burden on a seller operating under a price ceiling. The corresponding provision of the Senate amendment provided that whenever price ceilings were established (and they could be established only with respect to materials and services generally) wages should be established, and contained a similar provision for exceptions necessary to prevent gross inequities or to effectuate the purposes of the act. The House bill also required that wages be stabilized generally whenever price ceilings have been established on materials and services comprising a substantial part of all sales at retail and materially affecting the cost of living. The corresponding provision of the Senate amendment provided for general stabilization of wages whenever price ceilings have been established on materials and services generally. The provisions of the House bill and the Senate amendment were rewritten in conference and are found in section 402 (b) of the conference substitute. It provides that when the President establishes price ceilings, he shall stabilize wages at the same time in accordance with the following principles. Whenever a price ceiling is established for a particular material or service, wages shall be stabilized in the industry or business producing the material or performing the service. In stabilizing wages under this provision the President shall prohibit wage increases which he deems would require an increase in the price ceiling or impose hardships or inequities on sellers operating under the price ceiling. When price ceilings have been established for materials and services comprising a substantial part of all sales at retail and materially affecting the cost of living the President shall impose price ceilings generally and stabilize wages generally.

REQUIREMENTS OF PRESENT LAW

As it now stands, the Defense Production Act requires, in section 402 (b), that—

Whenever a ceiling has been imposed with respect to a particular material, or service, the President shall stabilize wages, salaries, and other compensation in the industry or business producing the material or performing the service.

Clearly, Congress recognized that wages and prices are inexorably linked together. As will be seen in the CONGRESSIONAL RECORD, volume 96, part 9, page 12123, I offered an amendment which was adopted by a vote of 146 to 71, which proposed to use the same wording in regard to both prices and wages. The bill at that time provided, as does the present law, that ceilings should be imposed on prices and that wages should be stabilized. I proposed that the House should say that when ceilings were applied to prices that ceilings should be applied to wages. The RECORD of August 9, 1950, shows that a member of the Banking and Currency Committee, Mr. BROWN of Georgia, sought to give the House assurance that

there is no difference in the meaning of the wording "establishing a ceiling" and "be stabilized." I quote from the CONGRESSIONAL RECORD, volume 96, part 9, page 12117:

Mr. POAGE. The gentleman just stated that he believes when we have price control we should also have wage control, and I agree with him. Does the gentleman understand that this bill provides for wage controls when we have price controls?

Mr. BROWN of Georgia. This bill does provide for it in this way: The second formula is selective control.

Mr. BROWN of Georgia. If the President thinks that when he places a ceiling upon selective commodities, the conditions appear to him that wages will have to be raised, then in that instance it is his duty under this bill to put wages under control.

Mr. POAGE. Will the gentleman explain why the difference in the language then? The Spence amendment provides on page 4 that the President may issue regulations and orders "establishing a ceiling or ceilings on the price, rental, commission, margin, rate, fee," and so forth, but when it comes to wages and salaries, on page 5 the amendment states, "Wages, salaries, and other compensation shall be stabilized generally." In other words, it states that prices shall be placed under ceilings but wages shall be stabilized.

Mr. BROWN of Georgia. That is the third formula. When he undertakes to put it on over all, if he puts it on a majority of the commodities he then has to stabilize wages by placing a ceiling on wages.

Mr. POAGE. Does the gentleman interpret the word "stabilize" to mean the same thing as to impose ceilings?

Mr. BROWN of Georgia. Absolutely. You stabilize by putting ceilings on them.

Mr. POAGE. Is it not a fact that in World War II we did place a ceiling upon prices, and that we stabilized wages at 15 percent above the figure that existed at the time we put the ceiling on prices? That was the Little Steel formula, was it not?

Mr. BROWN of Georgia. The President under authority given him now is not supposed to wait until a 15-percent rise. When a rise is threatened, it is his duty under this amendment to stabilize wages immediately by putting ceilings on wages at that particular time.

I am sure the distinguished gentleman from Georgia believed that the OPS would interpret this language as he suggested to the House. I am sure that it was this belief that induced the gentleman from Georgia, and other gentlemen who represented this House on the committee of the conference, to agree to accept the Senate language. Unfortunately, we have seen an entirely different construction given to the words. I know of no way of getting the regulatory bodies to give the meaning that the House so clearly intended, except to spell out that intent in language that no longer can circumvent.

The Wage Stabilization Board itself seems to recognize the necessity of applying ceilings to both wages and prices at the same time. In a recent appearance before the Labor Committee of this House, Dr. George W. Taylor, Chairman of the Board stated:

Price control is difficult, if not impossible without wage controls. Congress has already abundantly demonstrated its awareness of this interrelationship.

Of course, Congress thought that we had done just what the gentleman from Georgia thought we had done. We

thought we had firmly tied wage and price movements together, but we were to soon discover that we had done no such thing. True, the power had been granted, but it has never been exercised. The term "to stabilize" has been construed just as it was by the OPA, to mean "increase." Thus, we find during the week of May 20 the OPS rolling back the price of beef by 10 percent, and at the same time the Wage Stabilization Board was "stabilizing" the wages of packinghouse workers with a 9-percent increase.

Here we have one of the clearest illustrations of the fact that the price effects of the wage award were not considered. Mr. Eric Johnston, Economic Stabilization Administrator, affirmed this fact in his appearance before the Lucas subcommittee, when he said:

In this meat case, there is an illustration. I appointed a board to investigate the facts in this meat case, and although they made no recommendation to me, nevertheless, written in between every line was a recommendation of approval, and I do not think consideration was necessarily taken by this panel in connection with the price program, and I do not know that they ever asked the price stabilization authority as to whether a wage increase in this field would account for a price increase. I don't think that there was any desire to get in touch with them. I don't think that they felt that that was their business.

This is not critical of them at all, and in fact, I am very praiseworthy of them. I am simply saying that I do not think that they felt any responsibility to inquire as to price effects of their wage action.

While testifying before the Agriculture Committee on May 25, 1951, Mr. Johnston stated about the same thing. Here is the record from page 456 of the committee hearings:

The CHAIRMAN. * * * After this roll-back order on beef prices was issued, a wage increase in the wages of the workers in the packing plants has been approved. And now the answer we want to know is whether this order was issued in contemplation of an increase in wages or will it be necessary to change the order so as to compensate for the increase in wages, or will the packers be forced to absorb the increase in wages?

If the packer is forced to absorb the increase in wages, then it seems to me that you have nullified the effect of the roll-back.

Mr. JOHNSTON. Well, of course, prices and wages are not exactly related in this particular case, any more than parity and escalator clause are related. They are both symbols, but they are not exactly related.

In this particular wage case—and I am delighted that you have asked me the question—management and labor agreed on a wage increase that broke the ceiling formula.

I appointed a fact-finding board in Chicago headed by Dr. Edwin E. Witte, an eminent gentleman in the field of labor-management relations, to make a study of the case and to report the facts to me.

This committee met and studied the situation for some time, and did report to me. And although I did not ask them for a recommendation, I could read in between every line of their report a recommendation that the wage increase be granted. As a matter of fact, the chairman came and personally tried to tell me that it should be granted. I did not grant it, however.

I referred the matter to the reconstituted Wage Stabilization Board. The Wage Stabilization Board heard the matter and reported

by an 8-to-4 decision—a majority decision—in favor of the increase.

They favored it under the law which says that hardship and inequity cases must be taken care of.

That is in the Defense Production Act of 1950.

They approved the increase under that act, thinking that there were inequities in this particular case; in other words, the assumption would be, therefore, Mr. Chairman, that wages were too low in this particular industry.

Now whether that will eventually reflect itself in a price increase, I cannot answer you. I do not know the facts.

A few days earlier Mr. DiSalle had testified before the same committee as follows:

Mr. DiSALLE. * * * I am not a member of that Board (Wage Stabilization Board), nor am I entrusted with the responsibility of its operation (p. 4 of the hearings).

Further on page 332 of the hearings Mr. DiSalle stated:

The CHAIRMAN. It is rather strange that your roll-back is 10 percent and this increase in wages (to workers in the meat industry) is 10 percent. I am wondering if the demand for wages in any degree influenced your decision in the roll-back.

Mr. DiSALLE. No it did not.

The CHAIRMAN. So the roll-back was not made in contemplation of a possible increase in wages?

Mr. DiSALLE. No, it was not.

The CHAIRMAN. It was purely coincidental if it happened I suppose?

Mr. DiSALLE. We gave it no consideration whatsoever.

The CHAIRMAN. Would not this increase in wages have the effect of just nullifying the order rolling back 10 percent of the margins of the processors?

Mr. DiSALLE. I would not know what effect the increase in wages would have.

Mr. ABERNETHY. On that point, Mr. DiSalle, you stated a moment ago that the eventual result of these orders would be to create a fair relationship between the producer and the processor and the packer and the retailer, and so on, and you have just stated that these orders were entered without regard to the increase in wages.

Assuming what you say is true, and in using the word "assuming" I hope you will not misunderstand me, but assuming what you say is correct, that your orders have created a fair relationship, when this new wage ceiling goes into effect, then you must concede that it must be added to the various portions of the dollar that go to the packer, processor, and retailer?

Mr. DiSALLE. We certainly had no way of knowing what the Wage Board was going to do in this particular case.

Mr. ABERNETHY. * * * I am simply trying to find out if they do get the raise, which they are going to get, whether or not it is going to be reflected in the price of the meat.

Mr. DiSALLE. I could not give you that answer because I do not know.

Certainly no further evidence should be needed to convince the most skeptical that as presently operated the right hand of the Defense Production Administration does not know what its left hand does, proposes to do, nor the effect of its actions after they are taken. Yet, it is equally clear that there is a very close relationship between wages and prices. A relationship so close that as Dr. Taylor himself stated, makes it most

difficult if not impossible to control prices without control of wages.

We must recognize, if we are seeking to stabilize the economy, that no price level can be held if the wage level is permitted to continue to rise. Permitting those in charge of wage stabilization to issue wage awards without consideration of their effect on the price level is simply adding fuel to the fires of inflation.

The close relationship of the purchasing power of wages and salaries to inflation can be seen by studying the share of the national income which goes to employees. In 1950, according to United States Department of Commerce statistics, compensation of employees amounted to 64.3 percent of the national income. This was \$152,200,000,000 out of the national income of \$236,600,000,000. Thus it will be seen that any change in the general wage level, however slight, will have an immediate effect on our national income, and, of course, on the amount of purchasing power in the hands of our citizens. This is bound to be inflationary if there is no corresponding increase in productivity.

Wages in the United States in manufacturing industries already bear a very favorable relationship with prices. The data of the United States Bureau of Labor Statistics indicates that average hourly earnings in manufacturing have been ahead of consumer prices by a considerable margin ever since 1939, when 1939 is used as the base point. When 1946 is used as the base for wage-price calculations, BLS data shows that average hourly earnings in manufacturing have been ahead of consumer prices ever since February of 1948.

This shows us the recent actions of the Wage Stabilization Board in approving both the cost-of-living escalator type of wage agreement and the annual increment type of agreement, both negotiated before January 25, 1950, as a strong inflationary effect. In many cases, such increases may have to form the basis for price increases. Even if such action is not taken, these additional wage payments will tend to force up the general price level since more money is put into circulation to compete with the same amount or a lesser amount of goods and services. In addition, our wage earners are working increased amounts of overtime. The effect of these additional wage payments upon the statutory requirement of time and a half for overtime will add additional amounts of money into the purchasing stream and thus breed additional unhealthy economic effects.

CONCLUSION

I am convinced that we must take action legislatively to affirm the close relationship of wages and prices during the defense emergency. We tried to take it last August. We have, however, seen that the present law is not all that it should be in this respect, since those in charge of wage stabilization seem to be able to grant wage increases whenever it is expedient to do so, and without regard to the effect on prices. If we are to have any kind of effective price control, we must exercise the same degree of diligence over wages.

The amendment I propose would not prevent wage increases. It would not even require a price increase every time there was an increase in wages in the industry affected. Where there were unreasonable profits, as so many have charged are being made by some industries, the wage increases could be granted with no adjustment of ceiling prices. All that would be required would be a finding that the profit margin would not be reduced below 1946-49 levels. Surely, no one can fairly object to this. As heretofore pointed out, the present law provides that in stabilizing wages the President shall prohibit wage increases which he deems would require an increase in the price ceiling or impose hardships or inequities on sellers operating under the price ceiling. I think this clearly contemplates the same basic treatment required under the amendment.

The vital fact is that the amendment spells out what constitutes a hardship or an inequity, and it requires the President to make a finding or determination which can be challenged if unreasonable. Under the present law the President's judgment cannot be questioned. For practical purposes it is a grant of unlimited discretion to those individuals who serve as Price Administrators and as the Wage Stabilization Board. They are not presently required to coordinate their findings. I think we should provide fair and reasonable guides for their actions. That is all the amendment does. I submit that it is reasonable. That it is fair. That it is necessary.

Labor Peace

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 20, 1951

Mr. JAVITS. Mr. Speaker, the appended article about a distinguished New Yorker, Harry Uviller, impartial chairman of New York's great dress industry, deserves the study of every Member as a first-rate object lesson in labor-management relations:

[From Nation's Business of July 1951]

HE MAKES STRIKES LOOK FOOLISH

(By Irwin Ross)

Twice within 3 months the girl had an epileptic fit in the plant. Other women promptly fainted, the shop was thrown into an uproar and production was disrupted. When the boss fired the unfortunate worker, her indignant shopmates threatened a strike.

At this point the dispute came for arbitration before Harry Uviller, the impartial chairman of New York's dress industry. Union representatives argued that it was inhuman to victimize a worker because of illness. The boss loudly defended his action. Uviller quieted the disputants, questioned the discharged worker. Yes, she could usually tell any morning whether an attack was impending. But she could hardly afford to stay home.

Uviller nodded sympathetically, and then said, "Suppose you stay out any day when you suspect an attack—and the boss agrees not to dock your pay." The woman was de-

lighted. To the employer, Uviller argued that the good will of the entire shop would justify the additional expense. In 5 minutes he was persuaded and the strike threat was over.

Uviller, who has handled 25,000 such disputes in the past 15 years, generally is ranked as the country's leading labor arbitrator. He has kept peace by dint of great flexibility and imagination, much of his work involving the small, pesky disputes which, if unresolved, grow into major conflicts.

At 54, Uviller is a thin, ashen-skinned, cadaverous man with a solemn face and a body as tense as a coiled spring. Chewing fiercely on long cigars, firing questions at witnesses in a rasping voice, he lacks any trace of judicial demeanor. His impartiality, however, is legendary.

"It would be hard to imagine a more fair-minded man—or one more painstaking," says Isidore Agree of the National Dress Manufacturers Association.

And union leader, Luigi Antonini, adds, "Nothing is harder than to satisfy everybody. * * * Chosen first by unanimous consent, the average umpire winds up being fired also by unanimous consent. But Harry Uviller is an exception to the rule. He really is endowed with exceptional gifts."

With Manhattan's Seventh Avenue as its center, the New York dress industry sprawls from Massachusetts to Pennsylvania. Its 80,000 workers are spread among a vast number of employers—some 2,500. The employers are a highly individualistic, fiercely competitive breed, constantly agitated over the swings of seasonal demand and the vagaries of style.

In the dress business, a fortune can be made one season—and lost the next. So frenetic is the atmosphere that endless disagreements are inevitable. Each year more cases are filed with Uviller's office than all the arbitrations in General Motors, Chrysler, Ford, and United States Steel combined.

"There are no longer crises in Uviller's business," a friend says, "only a series of disagreements." In the 1920's and early 1930's, the crises led to endless strikes, lock-outs, and court litigation. By contrast, there hasn't been a major work stoppage in all the years that Uviller has been in office. This boon costs the International Ladies' Garment Workers' Union and the five employer's associations but \$125,000 a year for Uviller's 20-man staff—eight deputies, two chief deputies, and a clerical force. Uviller himself gets \$25,000.

Labor and management have endowed him with vast powers. All strikes and lockouts are illegal during the life of the collective-bargaining agreement; Uviller arbitrates all disputes—including those about wages. In other industries, disagreements arising under wage-reopening clauses have frequently led to strikes. But in 1946, when crippling strikes occurred in other industries, Uviller's dressmakers received their "first-round" wage increase without once leaving their machines.

Peaceably settling such industry-wide disputes is only part of Uviller's problem. The general wage rates have to be translated into specific "piece rates" for each of the 100,000 dress style, annually produced. Determining 100,000 separate rates is a monumental task.

Bargaining starts in the shop, where 90 percent of the rates are settled amicably; disagreements can be appealed up through two tribunals of deputy impartial chairmen until they reach Uviller. He hears the arguments, dissects the dress—and every Friday renders his decisions. It is a back-breaking chore, but it pays off in uninterrupted production.

Many of the arbitrations that Uviller conducts involve more ticklish matters—discharges, discriminatory transfers, illegal stoppages—which come to him directly from

the factory. Hearings, scheduled within 24 hours if necessary, are held in a plain, green-walled conference room. The parties are grouped around a long table, at the head of which Uviller sits, attentively listening under a cloud of cigar smoke. He keeps legal procedure to a minimum. Witnesses often interrupt each other. When the exchanges become acrimonious, Uviller wags a bony finger and warns the disputants to mind their manners.

Some of the cases are fairly clear-cut. A duplicate-maker was discharged for taking a dress pattern with her when she left the shop. The union demanded her reinstatement. The boss testified that she had been warned not to remove dress patterns—a sensitive point in an industry so vulnerable to style piracy.

On the day in question the woman was seen heading for an elevator with an object concealed under her coat. When she was stopped, she threw the pattern—and several epithets—at the boss. The next day he fired her. Her defense was simple: She was not planning to betray trade secrets, but merely to make a dress for herself at home. "No excuse," said Uviller, and she remained fired.

Most cases are more complex. "One of my abiding principles," says Uviller, "is that the human facts in a case are as important as the material facts."

In one case, an operator was fired for tardiness. She told a pathetic story. She lived on the outskirts of town; before leaving for work each morning she had to take care of her paralytic mother and prepare meals for her brood of kids; then, if she missed her bus, she was a half hour late at the shop.

"I sympathize with her," the boss said. "But now everybody in the shop is coming in late, saying, why should Sally get away with murder?" Uviller called in the entire shop during their lunch hour and told them that their shortsightedness was victimizing a fellow worker who already had enough misery. They should be ashamed of themselves. They visibly were, the woman went back to work and group tardiness disappeared.

More than sentimentality is involved in such pacification. Uviller is always guided by what he calls the "over-all interest of the shop." A case came before him where a designer asserted that the firm's sample maker was inefficient; either the sample maker would be fired or the designer would resign—at the height of the season.

Examining the sample maker's work, Uviller felt satisfied that she was not inefficient. It was apparent that the two women hated each other. Simple justice demanded that the decision favor the sample maker, but by that action the firm—and all the workers in it—would suffer a grievous financial blow. Uviller asked the sample maker whether she thought she could get a job elsewhere. Indeed, she knew she could—she merely wanted the satisfaction of besting her adversary.

Uviller explained the situation to her, conferred with the employer, and in the end came up with a solution that satisfied everybody: The sample maker would leave, but with 4 weeks' pay; she also had the privilege of returning to the firm's employ whenever the designer left. Because the turnover among designers is notoriously high, the woman was virtually assured of eventually returning to her old job.

Uviller places equal emphasis on the "public interest of the industry" in determining the merits of a specific controversy. Oftentimes, the parties are unaware of the far-reaching implications of a simple dispute.

A famous instance occurred when a cutter refused to use a new spreading machine—a contraption that unrolls the bolts of cloth before they are cut—At first sight, it was a simple case of insubordination. At

second view, the precedent laid down would affect employment in every cutting department in the industry. The issue was adjusted by an agreement that the new machine could be used when all the cutters in a shop were employed.

Introduced indiscriminately, the machine would have caused unemployment for 10 percent of the cutters in the industry. Introduced gradually, the displacement of workers kept pace with the retirement of old cutters.

Uviller is all for technological innovation, but he insists that the human beings involved be taken care of.

Uviller's sympathy with the worker is no second-hand acquisition. He was born in the poor Brownsville section of Brooklyn, N. Y., in 1897. His parents, who had emigrated from Warsaw a few years before, supported five children by running a grocery store. Harry, a spindly lad who loved to read history books, worked at the store every afternoon.

When he made deliveries he often tarried in the customers' kitchens soaking up the hard-luck stories of the housewives. "Harry was a born confidant," an old friend recalls. "He never had any trouble getting people to unburden themselves. It's been a useful talent ever since."

After attending Boys High School he clerked in a law office for \$5 a week and spent his nights studying law at New York University. After 6 months, however, he had to leave the law firm. Illness had forced his parents to give up their grocery store and Harry was obliged to contribute more generously to their support. He got a job in a coat-and-suit factory at \$13 a week, where he worked simultaneously as book-keeper, assistant foreman, and, at times, shipping clerk. He continued at the law school, being graduated in 1918. But he never got around to practicing his profession, for a better opportunity intervened.

Early in 1919 the International Ladies' Garment Workers' Union threatened a strike over the coat-and-suit industry's demand for a weekwork instead of a piecework system. The large manufacturers had an association which could deal with the union but the hundreds of small employers had no spokesman.

At 22, Uviller set out to organize a new trade group. He began in February and by May had 750 members in the American Cloak and Suit Manufacturers Association. After extended negotiations, he came to favorable terms with the union.

A rudimentary grievance procedure was set up under the collective bargaining agreement. Uviller was supposed to meet with his opposite number in the union—one Saul Metz—to thrash out specific disputes.

Uviller had tough sledding, for Metz was a Socialist firebrand who preferred to meet the bosses at the barricades rather than the conference table.

At their first session, six disputes were up for settlement. Metz wouldn't concede a single point. Uviller pointed out that the only alternative, under the contract, was arbitration. Metz intimated that while they were haggling over the selection of an arbitrator he would have all the shops tied up by walk-outs.

Uviller suddenly took another tack: He suggested they put the dispute before Morris Sigman, then vice president of the union. Metz was incredulous at the proposal, but couldn't refuse such a proposition.

Uviller's gamble was well rewarded: Sigman decided more than half the cases in his favor. And Uviller absorbed a lesson: "An unexpected appeal to fair play often pays off."

Six months after his first collision with Metz, he had another run-in with him. Once again they wrangled to no avail over some 10 disputes. Uviller amiably took his de-

parture; 2 days later he invited Metz to lunch. It was a fine spring day. After lunch they strolled in Central Park. Uviller avoided any discussion of business; instead he drew Metz out on the history of the workers' movement, life in the old country, and sundry sentimental tangents.

After 2 hours of uninterrupted conversation, Uviller casually mentioned the matter of their unfortunate dispute. Fifteen minutes later they had reached agreement on all 10 cases. The moral? Uviller says, "Never meet a tough problem head on."

Through the next 15 years Uviller labored to build an equitable working relationship with the union. One of his proudest achievements was the manner in which the pressing machine was introduced into the coat-and-suit industry.

The union stubbornly resisted the machine, for it meant considerable unemployment. Uviller broke the deadlock by proposing that a weekly tax be paid on each pressing machine used by the employer.

The tax—set at \$8 a week—went into a union-administered fund to support unemployed pressers. This program lasted 4 years, by which time the machine had been effortlessly assimilated into the industry.

Although Uviller always was friendly to the union, he had no compunction about fighting strenuously against demands which he considered unreasonable. At one bargaining session, the union representative reproached him sadly. "Harry," he said, "I can't understand your attitude. I always thought you were on the side of the oppressed."

"I still am," Uviller snapped. "My manufacturers are the new oppressed."

At another conference, in 1933, Uviller was hostile to a cherished union proposal relating to the continuance of the pressers' unemployment fund when it was no longer necessary. The argument grew quite heated. At its climax Uviller was denounced by the usually genial ILGWU president, David Dubinsky.

"Uviller," Dubinsky boomed, "you'll regret your position. Your wings will be clipped yet." But 3 years later, when a permanent arbitrator had to be chosen for the dress industry, Dubinsky wanted Uviller. The employers were equally enthusiastic. For Uviller, a man who had spent 16 years as an employers' representative in the coat-and-suit industry, there could have been no greater tribute.

Since that day in 1936 he has labored with fierce dedication at his task. He arrives at his office around 10 a. m., works straight through the lunch hour, and seldom departs before 6 p. m. Along Seventh Avenue Uviller's simplicity has become as legendary as his industry. A Uviller lunch consists of a cup of black coffee, which he brews himself, and some tea biscuits. A guest, however, is favored with a sandwich. Uviller stubbornly resists any persuasion to take a vacation, or air condition his office, or replace the worn maroon rug and nondescript chairs.

He is determinedly functional in his approach to existence. He has sheared off all the nonessentials. He has no hobbies, no preferences in food. He regards clothes as merely a protection against the elements. The only ornamentation he permits himself is two or three match folders attached to his belt like cartridge clips. This saves him the time that might otherwise be consumed rummaging about his person for matches.

Uviller belongs to that select fraternity of executives who seldom answer letters. He infinitely prefers face-to-face contact. "And when you see him, he's a magician," says ILG leader Julius Hochman. "You place a problem in Uviller's hands; he considers it, rolls it around, rubs his palms together, and then, poof, it's disappeared. Solved. A regular Houdini, that Uviller."

We Must Make Democracy Work

EXTENSION OF REMARKS

OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. YORTY. Mr. Speaker, one of the most potent weapons used by totalitarian propagandists to destroy America's democratic influences throughout the world is the internal disunity in our country over the issue of civil rights. Every incident, no matter how far removed from national importance, is magnified and exploited. Repeated attempts are made to prove that the freedoms, privileges, and protections of individual rights which we consider the practical expression of the ideal American democratic pattern are still being denied to millions of persons in our Nation. Our enemies do this because we are vulnerable. We need not be.

A comprehensive civil-rights program administered by the Federal Government would serve as a positive, cohesive force to bulwark the growing trend toward recognizing the human dignity of all men, regardless of race, color, creed, or national origin. It would help combat our enemies who claim that in the United States the agents of prejudice and race hatred have more influence than those of us who would like to wipe intolerance and discrimination from the face of the earth. In these perilous times the immediate security of our great Nation must take precedence over any considerations of cultural lag and sectional differences. We cannot afford to longer indulge those who do not see the plain handwriting on the wall. We must show by example that democracy works for all of the people all of the time; that it means equality, justice, and freedom for every citizen. The proposed program, supported by the Attorney General's office, has no other objective except to place in the hands of the Federal Government those legal instruments whereby the elimination of undemocratic and discriminatory practices might be accelerated. It would make possible a speedier, more positive implementation of those constitutional rights and guarantees of freedom and equality of opportunity which have been characterized as the heart of the American dream. The picture would then be complete with all agencies of Government—Federal, State, and local—empowered, along with private and voluntary groups, to industriously concern themselves with giving our conception of democracy a glowing vitality. Thus we would not be furthering the interests of a select group at the expense of any other, but we would be upholding the premise upon which our Nation was founded, "to form a more perfect union, and secure the blessings of liberty to ourselves and our posterity."

An effective national civil-rights program would offer to divisive forces either within or without our Nation no quarter to flourish. The gap between theoretic-

cal and practical democracy would then be closed. The issue before us is a challenge to practice what we preach. The American spirit has always inclined us to remove fearlessly any obstacle threatening to deter our cultural or economic advancement. This we must do to keep America strong—and there can be no compromise. We are dealing with an important phase of human liberty—something countless Americans have proved they valued more than life itself. Our ability to lead the freemen of all races and nations in the world struggle against totalitarian oppression may well depend upon our willingness to rise above race prejudice here at home.

Honesty Seen as World-Peace Basis

EXTENSION OF REMARKS OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. POULSON. Mr. Speaker, this editorial taken from the Los Angeles Herald Express speaks for itself:

HONESTY SEEN AS WORLD-PEACE BASIS

Even as political forces in the United States, Asia, and Europe move toward a cease-fire order in the Korean war and the world prays for what may at best be but a temporary and uneasy peace, an ideological revolution is in the making, right here in Los Angeles, which may well, as its sponsors hope, remake the world.

We should not underestimate in any particular the importance of the MRA Assembly for the Reconstruction of Pacific Relations, which is now under way, an assembly which seeks to remove mistrust and fear and create a real basis of unity.

Moral rearmament has already—

1. Brought industrial peace to the docks of London, Liverpool, and Scotland.
2. Eliminated the threat of civil war on the Malayan Peninsula.
3. United the people of France and Germany in a common cause.
4. Curbed the menace of communism in the Ruhr and stepped up production more than 20 percent.
5. Given the youth of Germany an ideology which is superior and more acceptable to them than communism.
6. Given Japan the spiritual urge to rehabilitate its government as a bulwark of democracy in the Orient.
7. Brought new understanding in management-worker relations throughout the world.
8. Curbed communism in Italy to the point that it is no longer an immediate menace.
9. Dramatized the solution of management-labor problems with the presentation of Jotham Valley, the Forgotten Factor, and The Good Road.

More than 400 delegates from 16 foreign countries are attending the assembly now under way in this city. They have come from Great Britain, France, the Netherlands, Italy, Germany, Denmark, Sweden, Switzerland, New Zealand, India, Malaya, Burma, Japan, the Philippines, Australia, and Korea.

They come with this thought and this plea—as presented by those from Malaya in the House of Representatives in Washington:

"Military aid and material is not enough. Millions of people throughout the East look forward to more than a program of more

houses, food, and work. They want a simple, illuminating, practical way which leads them out of a fear-plagued life drifting into the next world war.

"We must quickly find the way which above all else recreates trust.

"We want to fight with America to bring this ideology to the world. America leads the world materially. If she also gives leadership in this superior uniting ideology, Asia will respond."

Moral rearmament is not a religion—but is rather a new approach to all religion—an approach in which faith in God and complete honesty is the guide to the conduct of individuals, of industry, and of nations.

Remaking the world does not seem impossible to those who have seen what changes this new way of life has done for them as individuals.

False Notes in Truman's July 4 Speech to America

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Detroit Free Press of July 6, 1951:

A TRUMPET OF UNCERTAIN SOUND—FALSE NOTES IN TRUMAN'S JULY 4 SPEECH TO AMERICA

Recounting the birth of this Republic, dwelling upon the perils which confront it, President Truman's July 4 message to the American people rang like a clarion.

It echoed the majestic notes of the pronouncement penned by Senator RICHARD B. RUSSELL a few days after the close of the MacArthur inquiry, in which he warned all hostile powers that this Nation stands with an impregnable solidarity as the defender of freedom.

"We must remember," Mr. Truman told his national audience, "that Korea is only part of the wider conflict. The attack on freedom is world-wide. And it is not simply an attack by fire and sword.

"It is an attack that uses all the weapons that a dictatorship can command. Subversion, threats, violence, torture, imprisonment, and deceit."

It was a summation of the wiles, the immorality of an ideology of totalitarian slavery that in all places and in all ways fights the rights and dignity of man as set forth in the Declaration of Independence.

Indeed, yes, Korea is only part of the conflict. It is not all waged on battlefields. Equally viciously it assaults the individual who stands for truth, for freedom to worship God, for the tenets of justice which safeguard political liberty.

These attacks are as endless as they are inhuman. They are exemplified by such martyrs as Cardinal Mindszenty, Associated Press Correspondent Oatis, Archbishop Groesz, by Vogeler, the American businessman ransomed from the Reds after suffering shattering cruelties.

"The Soviet rulers are trying to destroy the very idea of freedom in every part of the world," Mr. Truman declared.

And on that note, as we have said, he sounded a clarion.

But then, alas, the sound grew tinlike, without the ring of a true trumpet. Mr.

Truman began to address not the American people, but a mirrored likeness of himself alone.

"Moreover," he said, "it is doubly important that we set an example of sober and wise and consistent self-government. We face a long period of world tension, and great international danger. . . . All of these tasks challenge the ability of free people to govern themselves with both reason and resolution."

Who but Harry Truman, in his administration of the Nation's highest office, does not set such an example? Who else is responsible for the General Vaughans, the Bourbon boys of the kitchen cabinet—the fumbling and stumbling and corruption?

Did the people of America try to dismiss traitors in Government with airy references to red herrings? What role can Mr. Truman claim in rooting out the Hisses and Remingtons except as an obstructionist?

Who declined to order Donald Dawson to tell what he knew when Senators sought to flush out the crooks in the RFC, an outworn bureau used to buy political advantage with public money?

Not the people, but Mr. Truman.

Under whose Presidency has honesty in Government fallen to such a low ebb that for the first time in our history a Senate committee has felt it necessary to explore the whole subject of moral ethics in American leadership? The answer is Harry Truman's.

"There are people," the President went on, "who say our democratic form of government cannot do these things (the difficult tasks involved in freedom's preservation). They say we cannot stick to a hard, tough policy of self denial and self-control long enough to win the struggle."

The only defeatist words we have heard come from Mr. Truman. More than once he has resorted to a mustering of fear rather than courage.

It is under his administration that government has run in the opposite direction from self-denial and self-control.

Doesn't the application include public business?

Apparently not.

We have a sprawling, wastrel bureaucracy with more nondefense employees on its payroll than at any time in history.

And in specific economic controls it was Mr. Truman who took no action when they became necessary. It was he who turned his back on advisers such as Bernard Baruch and Dr. Edwin Nourse, of the famed Brookings Institution, who foresaw their necessity. Now Congress dawdles and Mr. Truman demands, but it was he who provided the raw political example.

St. Paul, in his Epistle to the Corinthians, asks

"For if the trumpet gives an uncertain sound, who shall prepare himself to the battle?"

Mr. Truman, as an Independence Day trumpeter, lapsed into the most uncertain of political sounds. And if insufficient Americans fail to prepare themselves for the battle, it is because of the sour notes which the President's own record makes inescapable.

Mr. Truman charged that there were Americans who proclaimed, as defeatists, that "we can't take it."

That is not true.

They have cried from the housetops that we "can't take it" with a leadership that wastes our resources with socialistic experimentation, with stupid inefficiency, and with gross corruption.

He himself said later in his address that we will lose if we do not correct the domestic evils of inflation and mismanagement brought upon us—but by his own administration.

Yet we believe that even with this terrible handicap of cruel negligence and criminal

waste as well as graft the American people can take it.

This Nation is bigger than any group of politicians who go to make up the Government.

Faith in their way of life is in the very marrow of their bones.

And Mr. Truman is the first President to ever preach the ignoble doctrine of timidity.

Lucas Amendment to Defense Production Act

EXTENSION OF REMARKS OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

RAILWAY LABOR EXECUTIVES' ASSOCIATION,
July 13, 1951

Hon. M. G. BURNSIDE,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: The railroad unions, along with other organized labor groups, are strongly opposed to adoption of the Lucas amendment to the pending bill to amend the Defense Production Act. The Railway Labor Executives' Association, consisting of 18 national railroad labor organizations representing more than three-quarters of the railroad workers of our country, carefully considered this matter at its regular meeting in Washington this week and it is our considered judgment that adoption of the Lucas amendment would be most unwise.

We agree with the position of the American Federation of Labor on this subject. We are confident that their views have been fully expressed to you and other Members of the House. We think, too, that the presentation made by Mr. Taylor, Chairman of the Wage Stabilization Board, should be given very great weight.

Railroad workers will appreciate it if you and other Members of the House will vote against the Lucas amendment when it comes to the floor.

Respectfully yours,

A. E. LYON,
Executive Secretary.

Extend for 1 Year Deadline for Entrance Into Education Under GI Bill

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. KLEIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the following resolution unanimously adopted at the recent Department of New York, Jewish War Veterans convention. I strongly endorse the proposal to extend the July 25, 1951, deadline to July 27, 1952, to enable all veterans who wish to enter school under the GI bill to have a proper and fair opportunity to do so

when all schools are open and available to them. I am confident that my distinguished colleagues on the Veterans' Affairs Committee will do everything in their power to extend this deadline:

RESOLUTION OF DEPARTMENT OF NEW YORK, JEWISH WAR VETERANS

Resolved at the Department of New York, Jewish War Veterans convention, held in South Fallsburgh, May 31 through June 3, 1951, That Congress be strongly urged to extend the deadline for entrance into education under the GI bill (Public Law No. 346) for 1 year until July 27, 1952, to enable those veterans who wish to enter school, to have a proper and fair opportunity to do so when all the schools are open and available to them; and be it further

Resolved, That this extension go into effect at once through proper legislation by Congress.

You Said It, Mr. Halleck

EXTENSION OF REMARKS OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1951

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Indianapolis Star of July 12, 1951:

YOU SAID IT, MR. HALLECK

Representative HALLECK went right to the crux of the issue of price control when he said the people and Congress have lost confidence in the administration's competence or willingness to deal honestly with inflation. Control involves a grant of authority to someone to do something. Somebody has to be given the last word. The controller has to be a dictator to get results, if any result is attainable.

No matter how hard Congress might try to legislate a cure or control for inflation. Mr. HALLECK pointed out, it would face the incompetence of those who would be entrusted with administering it. Politics could be expected to figure first with the administration, instead of the public welfare.

There are leading Democrats in Washington who have said as much as Mr. HALLECK about the political miasma that envelops the Nation's Capital.

Big Water Project Nears Completion— Central Valley of California Irrigation Plan Starts August 1—Truman May Attend

EXTENSION OF REMARKS OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. YORTY. Mr. Speaker, I should like to call attention to the following news story by Mr. Lawrence E. Davies, which appeared in the New York Times last Sunday. Mr. Davies describes the great Central Valley project of California which will shortly go into opera-

tion. This project represents the kind of comprehensive planning that must be done throughout the United States, if we are to properly conserve, control, and distribute our water supply free from both floods and water shortages. We have been too slow in recognizing our crying need for making local water developments conform to the greater need for over-all planning, and in some areas as a result we have a hodgepodge of individual projects, the purposes of which could have been accomplished more effectively and efficiently by the execution of an over-all plan for the entire watershed in which they are located. The report of the President's Commission on Water Resources has pointed the way to better planning for control, conservation, and distribution of our invaluable water resources.

The Central Valley project was originally planned by the State of California. The legislature authorized a bond issue of \$170,000,000 to finance the construction of the project. A referendum against the act was sponsored by short-sighted groups spearheaded by some privately owned utilities, who thought they saw in the project a potential threat to their own interests. The campaign was hotly contested. The proponents of the project employed a young campaign expert from San Francisco, Mr. Clem Whitaker, who has since become one of the highest—if not the highest—priced public relations counselors in the United States. He is one of the partners in the firm of Whitaker & Baxter, the firm employed by the American Medical Association to fight the President's proposed health-insurance program.

The opponents of the project employed the clever strategy of telling the voters in southern California that the huge bond issue would obligate them for a project of benefit only to northern California. This sort of propaganda, being an appeal to narrow-minded sectionalism and selfishness, is always hard to combat.

Mr. Whitaker was assisted in southern California by the late Ray Davidson, another outstanding public-relations counselor who was able to draw upon his experience in successfully handling several bond-issue campaigns for the Los Angeles municipally owned department of water and power. I had the pleasure of assisting Mr. Davidson as a volunteer worker, enthused over the potentialities of the great project. Volunteers were not numerous in southern California, and the campaign for the project was meagerly financed, although the opponents were well-financed. I remember making as many as 12 speeches a day in various parts of Los Angeles because of our shortage of speakers. We knew that our small group could not hope to carry Los Angeles County for the project, but we felt that if we obtained a large enough vote for it, the overwhelming favorable vote in the area directly affected would give us a State-wide majority. This was the strategy of the campaign worked out by Mr. Whitaker, and, needless to say, his analysis of the situation proved correct. The project was authorized by the voters. Thereafter, on Mr. Whitaker's recommendation, I am

proud to be able to say that I was offered an appointment to the State Water Authority authorized by the act. Although highly appreciative of this kind recognition of my small part in the campaign, I was not in a position to accept the appointment.

Mr. Whitaker, having demonstrated his genius for conducting campaigns, was retained by the largest of the private utilities which fought the project, and under his guidance the public relations of that company have improved to the point that they have, in recent years, been more successful in appealing to the voters than they were in 1934 at the time of the referendum.

Now the great project, envisioned more than half a century ago by farsighted Californians, is about to go into operation. Many of the persons who contributed much toward its success will not be among those of us attending the opening ceremonies, but the spirit of men such as Dr. John R. Haynes, of Los Angeles, lives on in the great public works for which they fought, and in the furtherance of which they gave unstintingly of their time and their fortunes. Yes, it will be a great day, Mr. Speaker, when the Central Valley project goes into operation. The project itself has been so well described by Mr. Davies that I am happy to include it at this point in our RECORD.

[From the New York Times of July 15, 1951]

BIG WATER PROJECT NEARS COMPLETION—CENTRAL VALLEY OF CALIFORNIA IRRIGATION PLAN STARTS AUGUST 1—TRUMAN MAY ATTEND

(By Lawrence E. Davies)

SACRAMENTO, CALIF., July 14.—California's \$600,000,000 Central Valley project, center of many a bitter fight in and out of Congress since construction work began 14 years ago, is about ready for a dramatic public demonstration.

With \$400,000,000 worth of big dams, power plants, pumps, canals, and transmission lines representing the first phase of the project due for completion within 2 weeks, the Federal Bureau of Reclamation has set August 1 as the starting date for integrated operation of the project.

During the following 10 days, by means of a system of rivers, canals, and a pumping station, there is to be carried out what the Bureau describes as "the longest mass movement of water ever attempted by man." Bureau officials here expressed confidence that, despite conflicting reports from Washington, President Truman would be in California to participate at Tracy in one part of the 10-day program on August 4.

The Central Valley project, first envisioned as a State proposition and then taken over and expanded by the Federal Government, is based in its irrigation aspects on the fact of an uneven water distribution in California.

VALLEY 500 MILES LONG

The Sacramento Valley on the north and the San Joaquin on the south make up the Central Valley, 500 miles long. The San Joaquin Valley has two-thirds of the irrigable land, but the San Joaquin watershed offers only one-third of the total water supply. Thus the problem posed to engineers was how to transport the surplus water of the Sacramento hundreds of miles southward to help irrigate the starved San Joaquin area, in which the underground water table has dropped to alarmingly low depths.

The forthcoming celebration is to mark the solving of this problem. The ceremony starts at Shasta, the world's second largest and second highest concrete dam, 10 miles

north of Redding at the northernmost end of the Central Valley. Water being conserved in Shasta Lake, behind the dam, will be spilled over the dam and sent coursing down the Sacramento River.

Not far from where the Sacramento empties into an arm of San Francisco Bay, some of the water is to be diverted from the river through floodgates into a so-called delta cross channel.

This channel carries the water to the Tracy pumping plant, some 50 miles east of San Francisco. There, beginning on August 4, when the Shasta-released waters are due at Tracy, a set of six powerful pumps will lift the waters 200 feet into the Delta-Mendota canal. These pumps, capable of lifting 2,000,000 gallons of water a minute, are second only in size to pumps installed by the Bureau at Grand Coulee Dam in Washington to lift water 280 feet out of Lake Roosevelt to irrigate the Columbia Basin lands in the central part of that State.

The pumping plant at Tracy is operated by electricity brought down from the Shasta Dam generating plant over a Government transmission line. The water hoisted by the plant will flow southward for 117 miles through the Delta-Mendota canal.

At the canal's southern point the water will be dumped into the San Joaquin River to flow back northward and eventually empty into San Francisco Bay. In the meantime, in the San Joaquin Valley water will be released from Millerton Lake, behind Friant Dam, near Fresno, into the Madera and Friant-Kern canals. The latter will carry it southward 153 miles to the vicinity of Bakersfield, 500 miles south of Shasta Dam.

Because of the relatively small water supply in the San Joaquin Basin, it is unfeasible to take this water in quantity from Millerton Lake on the San Joaquin and divert it northward 27 miles through the Madera canal and southward through the Friant-Kern canal without replenishing the San Joaquin River itself somewhere along the way.

This is why the Shasta Lake water is being sent all the way down to Mendota and dumped into the San Joaquin. Thus, in a sense, water from Shasta Lake will be used after early August to irrigate lands as far south as Bakersfield, 500 miles from this lake itself. Actually, some symbolism is involved, since the Shasta Lake waters will start back northward after being poured into the San Joaquin.

Some acreages in the San Joaquin Valley already are under irrigation from Friant Dam, however. As a result, Bureau of Reclamation officials have collected such examples as these:

A 160-acre farm netting \$331 from pasturage 2 years ago with this year's net from an irrigated cotton crop estimated at close to \$20,000, a 400-acre farm netting \$1,500 from barley and pasturage in a dry farming condition with an expected profit this year of more than \$77,400 from cotton.

Completed parts of the Central Valley project have a power generating capacity of 450,000 kilowatts and are designed to help control winter floods, increase summer water flows, combat salinity on farm lands, and improve river navigation.

should be free to editorialize has been a moot question before FCC for many years. Radio stations are now free to use their facilities for editorial comments and the manner in which KFMB, of San Diego, Calif., is using its facilities should prove of interest to all Members of Congress.

Now that most communities have only one newspaper, freedom of editorial comment by radio stations seems most desirable and radio station KFMB's intelligent utilization of that freedom has met with instantaneous approval from the citizens of San Diego.

The comment follows:

ANNOUNCER 1. KFMB's editorial page Transcribed and heard every Friday at this time.

ANNOUNCER 2. An anxious, perhaps an eager world, has been waiting now for 2 weeks to learn whether the United Nations and the Communists can work out a cease-fire agreement in Korea. Has an overt act of Soviet aggression finally been contained? Has the United Nations, through its unique police action, really become a formidable physical force in world affairs? Is peace soon to settle over a peninsula so decimated by war that it is almost literally bankrupt of housing, wealth, able-bodied, healthy citizens, transportation, communications and everything except rice-bearing paddies?

With negotiations beginning tomorrow, we'll soon know the answers to those questions. But there's another gnawing, insistent, disquieting question plaguing all of us. "Will we again lose the peace as we almost did after World War II?"

Tonight, KFMB will tackle that one, certainly as grave a question as ever faced the American public. Here to give you this station's own opinion is Paul W. White, our executive editor.

Mr. WHITE VJ-day was such a short time ago. We all remember what happened. The night we celebrated, and the hangover and hysteria that followed. We'd won the war, hadn't we?

We'd done so well that Mussolini had been killed by his countrymen, Hitler lay dead by his own hand, the Japanese Emperor represented now merely the ghost of proud sovereignty. Two atomic bombs and a series of staggering defeats had made a mortal out of a god.

We were sick of war, utterly sick of it. We hated price and wage controls and rationing. Every single, solitary individual wanted back, in his own hands, the direction of his own destiny. That was the American way.

So what did we do in our mad ecstasy of peace?

Well, we brought the boys home. Any Congressman who suggested that we might still need an alert and expansive Armed Force was howled down by outraged mothers. We wanted an end to controls. Certain people were on hand to assure us slickly that the law of supply-and-demand would work then, that prices would "level out" that there would be plenty of everything for everybody as soon as the production wheels started turning again exclusively on consumer goods.

Surely you can remember what happened to prices—even in the face of ever-increasing, record-breaking production. The 1939 dollar became worth 75 cents, then closer to 60, then down to 49. Maybe today it's worth 40—it all depends upon what index you use to prove a point.

Two other things happened that shouldn't have happened. In 1946, a Congress was elected on the promise that taxes would be reduced. They were, all right, but nothing more phoney was ever handed the average American. People paid lower percentages

KFMB'S Editorial Page

EXTENSION OF REMARKS

OF

HON. CLINTON D. McKINNON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1951

Mr. McKINNON. Mr. Speaker, the question of whether a radio station

of their incomes in taxes, but higher percentages in terms of the value of their money. And no effort whatever was made to write off the monstrous national debt.

The other thing was an economy wave in our defense establishment. We, who were so weak in 1940 and 1941—it seems impossible now that a renewal of the draft bill passed by only a single vote—were weakening again. We, who should have been able to keep that weakness in mind, especially when Soviet Russia made it clear to anyone with eyes and ears that domination by the forces of communism was a world-wide goal. But, no.

We crossed off the list a projected battleship here; we gave up a division of marines there, we quit cold on the airplane and the tank makers, we cut our Army and our Air Corps, we closed down plants making artificial rubber; we ran our affairs as though the Kremlin were issuing the orders. You can't blame the Republicans. You can't blame the Democrats. You can't blame the administration. You can't blame the unholy alliance that keeps conservative Democrats and Republicans in actual control of Congress. You can only blame the people, and they just didn't understand. Maybe they needed guidance and leadership, but about all they heard and read was "economy, economy, economy," as though that word had somehow acquired a spiritual sanctity.

It wasn't enough that Russia kept on expanding. Nobody cared too much about even the loss of stubborn little Czechoslovakia, let alone the sprawling mass of China. After all, we had the atomic bomb, didn't we? Even if the Russians got a clue—it turned out that Americans in the pay of the Communists gave 'em not only the clue but the blueprints—we'd still be so far ahead of any possible enemy that we were safe "Safe."

They showed us a little more than a year ago just how safe we were. KFMB doesn't know—or pretend to know—the Communist timetable, but the Korean Express was probably due to visit next such bastions as Formosa, the Philippines, our hard-won chain of Pacific Islands, and possibly Japan itself. All these in addition to the present adventures in Indochina and Malaya. To say nothing of vast Tibet, where we nor anybody else really tried to stay the forces of communism.

Korea changed things. It got us started again developing our military muscles and our armed might. At first, everyone buckled down to the job, aware that sacrifices would have to be made not only in the spilled blood of our fighting men but on the home front as well.

But, for some reason, the sacrifices weren't called for very soon. The Nation prepared to tighten its belt and then found, suddenly, it was fatter than ever and had actually gained weight.

The grumbling began. Why did we ever get ourselves loused up in Korea anyway? Why did the United States have to supply almost all of the U N fighting strength, with only token forces from 17 allies? What's in it for us?

War production sagged. Civilians weren't even donating enough blood to answer emergency appeals from front-line hospitals in Korea. And the wages, price, and farm subsidy controls' bill passed last year suddenly seemed onerous. Credit restrictions were hurting normal business. Of course they were. Why had they been passed in the first place?

All this before peace in Korea even looked like a remote possibility.

You can imagine what may happen now. If there's a cease-fire, sit down, buy some popcorn, and watch the movie all over again. Already Senator AIKEN, of Vermont, has said we wouldn't need any further controls, and we could cut down on military expenditures. Soon there'll be shouts to bring the boys

home and get 'em out of uniform. The need for a big protectionary Army in Japan and in Western Europe won't be any less, but who's to prove it?

The need for a highly mechanized, mobile Army and Marine Corps, for a fleet to patrol the seven seas, and the need for an Air Force faster and with more fire power than any other, won't be any less, but who's to establish that?

The need to control inflation will be greater, not less. If that isn't done, Korea can be written off the books as a dead loss. The kids who were killed over there in those mountains and in the muck and mire—well, they just got killed; that's all.

Someway, somehow, the public must be saved from the tragedy of making the same mistake twice within 5 years. KFMB dedicates itself to avoiding that mistake. Does any member of our audience have a plan or a program—or even a nebulous idea—that will help? Because right now, with peace so near and so likely, it could easily be the time to dance our way toward disaster.

ANNOUNCER 2 This has been the regular edition of KFMB's Editorial Page, in which the station expresses its own opinion on current events. We shall be glad to hear from others, whether or not they agree with us.

ANNOUNCER 1. The preceding was transcribed. This is KFMB, San Diego—first in news and public service.

Price Control

EXTENSION OF REMARKS OF

HON. CHRISTOPHER C. McGRATH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. McGRATH. Mr. Speaker, our country launched upon a great program of mobilizing its military and economic strength against the world-wide threat of Russian expansionism last September when the Defense Production Act was passed by the Congress. The act was an integrated program that aimed to facilitate the production of goods required by the military and at the same time to avoid inflation through price and wage stabilization. One without the other could only result in jeopardizing our major objective, which is to preserve the democratic way of life against the machinations of the policies of aggression emanating from the Kremlin.

On April 26, 1951, the President recommended to the Congress a number of amendments that were designed to strengthen the Defense Production Act. Among these were authorization to build and operate defense plants where necessary to produce essential materials and equipment, stronger means for enforcing price-control regulations, regulation of speculative trading on the commodity exchanges, and more effective control over residential and commercial rents. Immediately thereafter, powerful lobbies descended on Washington urging an end to the stabilization program.

The opponents of an effective price-control program are ready to gamble with our national security by failing to give the administration the necessary tools for keeping the price level stable.

This should delight the Russian leaders, who have long nourished the strong belief that inflation is the most effective internal device for destroying the free-enterprise system. Those in our midst who clamor for scrapping price, wage, and rent controls are apparently willing to risk industrial strife and national disunity by giving free reign to the wage-price spiral. So strong is their yearning for business as usual that they are ready to delude themselves and the American people with all sorts of specious arguments. They may be ready to indulge in pleasant illusions, but one fact they cannot ignore, namely, that military expenditures which have been running at the annual rate of \$25,000,000,000 at the end of the first quarter of 1951 will increase to the rate of \$30,000,000,000 by the end of the year. This rate of expenditure will powerfully strengthen inflationary pressures.

Since Korea the rise in the cost of living has taken \$20,000,000,000 out of the pockets of consumers. The people in my district—the Twenty-sixth Congressional District of New York—have had to pay out \$50,000,000 because of the rise in prices since June 1950. They look to their Government to prevent any further deteriorations of their standard of living. They are willing to make sacrifices but they are not willing to see others profit from inflation while they watch their savings shrink and their buying power reduced.

The American people know that half-hearted measures are no way to build up strong defenses against a powerful foe. This is no time for yielding to pressure groups. That is the road to disaster. The emergency calls for self-sacrifice by businessmen, farmers, and laborers. Let us all pull together to achieve our common objective.

No Cease-Fire for Inflation

EXTENSION OF REMARKS OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I include the following address by the Honorable Charles Sawyer, Secretary of Commerce, which was broadcast over the Columbia Broadcasting System on July 13, 1951:

I shall talk for a few minutes about controls.

We have imposed controls upon ourselves because we have inflation. We have inflation because we do not have enough production to go around. Unless we keep controls we will not be able to channel this production into defense activities. Unless we keep controls inflation will greatly harm us and perhaps permanently harm us.

It will not do to say that if we fail to retain controls we can reimpose them if inflation gets out of hand. Nothing short of a terrific depression, the results of which, both social and economic, it is impossible to foresee and appalling to contemplate, can have any substantial effect on rising prices once all controls are lifted. This sober thought

should occupy the minds of all those now facing the question, "Shall controls be continued?"

The most vigorous expressions of opinion on controls have come from organizations of business, agriculture, and labor. They are not in agreement, but they are vocal and influential. They are vocal as spokesmen for particular groups, but it is well for them, and for us, to keep in mind that businessmen, farmers, and members of organized labor are also members of other groups. They are first of all Americans—citizens of our great country. They are all taxpayers. They have sons and brothers and husbands and daughters and sisters serving in Korea. They are also consumers and as consumers have a vital and personal interest in the effort to keep inflation from getting out of hand.

There is another group, large in numbers, but not too vocal—those with fixed incomes—disabled veterans, pensioners, white-collar workers, upon whom the pressure of inflation bears with continued and increasing severity and who are not in a position to demand or to secure increases in income which will match inflationary developments. For them, the control of inflation is vital. An abandonment of controls today would have a devastating effect upon them.

Very few people are in favor of controls for the sake of merely controlling somebody—I certainly am not. I would prefer to live in a happy state where I, at least, could do what I pleased—although I would probably have some doubts about the wisdom of this for the other fellow. I know, of course, that this is impossible. We operate daily under all sorts of controls. Many of them few people question. Control exercised by the police, control exercised by local health departments, are examples.

For 3 years I have exercised control over the export of commodities from this country. I will leave it to my listeners to envision the catastrophe which would follow if all controls were immediately removed and shipments from this country were permitted to all parts of the world, without any restriction or restraint whatsoever. If we were to permit materials badly needed here or materials of high strategic value to go to Red China, each of you would regard such an action with horror.

The handling of export controls in the Department of Commerce has been a difficult and at times an irritating task, but it has been done. I hope and believe it has been done to the satisfaction of the Congress, and my belief is supported by the fact that recently our export control authority was extended for 2 years without one dissenting vote in either the House or the Senate.

So-called indirect controls and other suggested remedies will not suffice now. Great increases in taxation and drastic reduction of Government expenses, especially military expenses, where most of the money is now going, would undoubtedly greatly reduce inflationary pressures. There are, however, limits to taxation—the law of diminishing returns will begin to operate; and in the military field there are certainly limits to what we can do in the way of economy.

Controls imposed are not necessarily permanent. To say that they are is nonsense. They were removed after World War II, and in my own Department, about a year and a half ago, when the need for export controls lessened, I reduced substantially the number of commodities under control and released hundreds of employees who were handling them. I will do it again as soon as the opportunity offers.

As early as last July I stated that I thought we should impose immediate price and wage controls, that by this method we

would avoid a spiral of inflation which would become more severe as time went on. Events have proved that I was right. The fact that we did not impose these controls earlier is, however, no reason for releasing them now while they are still needed.

I am, of course, well aware that there are certain commodities which at the moment are in ample supply. Some articles are selling below the price ceiling for that reason. While, for them, at the moment controls are not necessary, neither are these controls hurting anybody. When the supply is reduced and the demand increased, the ceiling will be there to protect the consumer. In my opinion, it will not be long before many commodities now in free supply will be absorbed by a public with ample cash.

There are, of course, today some unemployed in this country; and it is no comfort to a man out of work to be told by statistics that many men are at work. However, our last census report on employment, taken as of the middle of June, shows total civilian employment at 61,800,000. This means that the purchasing power of the people of America is at an all-time high. It is childish to pretend that inflationary pressures are not upon us.

I will leave generalities and talk specifically about commodities with which I am particularly concerned, as Secretary of Commerce. Sulfur, for example. While our country is self-sufficient in sulfur, its exports of this item are vital to the industries of practically all the other nations of the free world. If all controls upon the use and export of sulfur were removed, prices would skyrocket, the supply would go to the highest bidder, regardless of the location or essentiality of its use, and the whole economy—not to speak of the defense machinery—would be thrown out of gear.

I will mention an item more familiar to the average American—structural steel. In the fourth quarter of this year only 1,300,000 tons will be available. Requests already in hand show that 2,400,000 tons could be used by the military, the defense-supporting activities, and the essential civilian economy. In other words, we could use almost twice as much structural steel as we will have. To say that control of this item is unnecessary is to contradict facts which are indisputable.

Of the three materials which are now under the controlled materials plan—steel, copper, and aluminum—the total demand is now at about 35 percent above supply. The controlled materials plan cannot increase the supply, it can see that distribution is made with a proper regard to the various needs of our economy and, in particular, the needs of the small-business man.

The real solution of inflation is increased production. Increased production involves an expansion program. The target for steel is 118,000,000 tons by 1953. The target for aluminum is 1,500,000 tons as soon as we can get it, roughly double the capacity at the time our defense program began. If controls are abandoned it will be impossible to assure the flow of the materials needed for the construction of these facilities or, in the case of aluminum, to assure an adequate supply of power. Only by controls during the immediate future can we get along without controls later.

Immediately following the Communist attack in Korea, we experienced a feeling of unity and a willingness to sacrifice which were most encouraging. People from all walks of life joined in statements that we must discipline ourselves to meet the emergency. I quote from Members of Congress of both parties:

"Controls authorized or imposed now seem a small sacrifice of liberty in terms of what failure to mobilize our economy may ultimately bring."

"Controls are distasteful and contrary to the psychology of our form of government

and our way of life, but the present world-shaking crises make them necessary."

"We are going to give the President of the United States the power to institute controls which may be painful, but controls on the domestic front will maintain a stable situation and give proper backing to the boys overseas."

Every one of these statements was true when made and is true now—with equal, if not greater force, than 1 year ago.

I hope, as we all do, that the war is about to end in Korea. If we permit this possibility to lull us into a false sense of security, if we relax from our determination to prepare for adequate defense, we shall suffer immeasurably from our folly.

If we are asked, "Is there nothing which can be done to remove the pressures of inflation?" my answer is, "Yes, and it will produce a prompt result." We can decide to abandon all operations to defend ourselves, all military aid to our allies; we can agree to a quick truce, or even treaty of peace, in Korea, yielding to the Communists whatever they demand. By these simple procedures we can remove the need for most of the controls we now operate. Such procedures would, of course, have other results, far worse than any controls we have had or will ever have. We would make ourselves the helpless prey of communism. We would let our allies shift for themselves. We would, in short, be entering deliberately upon the road to chaos. This course we will not take. If, however, we intend to defend ourselves, to prepare, if necessary, for an attack against us; if we think the many liberties and blessings we enjoy are worth preserving, we must ignore temporary and unimportant inconveniences, and even sacrifices, and determine to see this thing through.

May I say in closing that not only Congressmen have a great and serious responsibility at this time, but those of us in executive positions should make it clear, and make our promise explicit, that as soon as controls can be abandoned or alleviated, they will be. For whatever part I play in the control operation, I personally make that pledge. I am certain that others handling controls will willingly do the same.

Our enemy in Korea is communism; our enemy in America is inflation. We hear of cease-fire talks in Korea and the war there may stop by agreement. We will never witness cease-fire talks about inflation. The war against inflation will never be stopped by conversation or agreement. It will be stopped by positive and continued action. This enemy will not compromise; he must be conquered. He is momentarily checked. Let us see that he does not get on the rampage again.

History of Labor in the United States

EXTENSION OF REMARKS

OF

HON. DONALD L. O'TOOLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. O'TOOLE. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address of Nat Messing at installation of officers of the Waiters and Waitresses Union, Local No. 2, of Brooklyn and Queens, July 5, 1951:

The history of labor in the United States is relatively unknown; numerous misconceptions about unions still exist, and mistakes arising from ignorance create difficult situations. Many union regulations rest

upon long and bitter experiences of industrial hazards. If the fear of unemployment were removed by adequate security, some regulations would become obsolete.

Some union leaders have indeed misused their offices for their own personal advantages and aggrandizement. However, the intelligent person will examine the situation as a whole before forming an adverse opinion. Our political system has not been condemned because some political leaders have been found to be dishonest. Individual bankers have been proven unworthy of the trust placed in them, yet, we do not condemn banking on that account. How can anyone in his right mind condemn the American labor movement as a whole, only because we find an unworthy leader in some insignificant post.

The records will show that labor unions grew up in the United States as a praiseworthy movement in mutual aid and to protect men and women who toil. The labor history shows a valuable contribution to the well-being of our country by way of higher standards of living and increased social security. Labor's unstinted participation in the all-out production effort during World War I and World War II was a distinguished addition to that record. Production was quadrupled because workers sacrificed their normal regulations of the workweek, and thousands of them became casualties as a result of the speed-up system.

The men and women who make up the unions today are typical American citizens who unite for specific economic purposes. They are the soldiers without uniforms, whose sweat, brawn and brain are indispensable both in peace and in war. Contrary to some conceptions, for each unavoidable strike which disturbs production, thousands of strikes are prevented by union negotiations. The great majority of unions cooperate with employers in collective bargaining and loyally abide by their contracts. The closed shop is merely a logical application of majority rule, and is as fair as our system of public taxation, under which we all share the costs of maintaining the services that protect and educate us. The unions justly claim, that all workers who enjoy conditions won by union efforts should assume the responsibility of union membership. Some employers are convinced, and rightfully so, that it is to their advantage to deal with their workers collectively through the union representative and have the worker subject to union discipline, so that the provisions of the agreement can be applied. Union management cooperation has been operating quite successfully and will even be recognized by the die-hards as the only method for peaceful collective bargaining.

Employers used the courts to suppress unions, planted spies within union ranks, hired gangsters to smash picket lines, so as to prevent collective bargaining. Happily those days are largely gone; such activities are now illegal. They should, however, be remembered as a warning against their possible return.

It is our responsibility as citizens of the modern industrial age, to know how and why unions grew up, and to examine their general record. Thus we can eliminate tension and bitterness between labor and management, and approach our contemporary social problems with a better understanding toward solving them.

Unions depend, like other democratic organizations, upon the intelligence of their members, to choose good officers, and to study and adopt wise policies in the light of facts. Now more than ever, citizens organized on the job should be informed about their industry and the general economic situation, to the extent that unions don't have to fight for sheer existence or survival; instead they should participate in endeavors of cooperation between labor and management.

Everyone knows that more and better production is achieved by workers when they are treated properly, and it is our business to see to it that they are treated properly. Dictatorship should have no place in labor, industry, or in politics. If union members are well informed they can correct such dangers. Thank God for the members of the Waiters and Waitresses Union, Local No. 2; they are informed and intelligent people, who are constantly seeking more information for the betterment of their conditions and for the community.

One other problem that the community faces is the fear of labor's power, which exists in the minds of the people who are not informed about the labor movement. The prevalent misconception that the New Deal has given labor a special privileged position, and that it may misuse its power, must be eradicated from the minds of those who think so. They must be enlightened as to the real blessing workers and their unions bring to a community. This fear rests upon ignorance about the purpose and practice of the trade-union movement, and a lack of knowledge of the American citizens who form the trade unions.

Local No. 2, of the Waiters and Waitresses Union, of Brooklyn and Queens, is affiliated with the American Federation of Labor and the A. F. of L. as an organization has always refused to organize a political labor party. It insists that it is nonpolitical and nonpartisan. This does not mean that it is not interested in politics. It has, in fact, a very definite interest, the election of candidates friendly to labor and the defeat of those opposed to labor is very important. It adheres to the doctrine laid down by the immortal Samuel Gompers, "To reward its friends and punish its enemies." This means that it continually endorses and works for particular candidates, no matter what their political label may be. It was the use of injunctions in labor disputes that brought us into the political arena whether we liked it or not.

Again great fear clutches the world. Six years after the defeat of the totalitarian forces in the Second World War, the democratic world is still under threat of totalitarian aggression. The ruthless invasion of the Republic of Korea by an army of Communist puppets, organized, equipped, and directed by the Soviet dictatorship, has made it clear that free nations must at all times be fully prepared to fight in defense of peace and freedom.

Despite the strains and tensions of two world wars in one century, America has continued her forward social and economic progress. Freedom has been snuffed out in half a dozen European countries, and on much of the Asiatic Continent. But freedom continues to thrive in America, because 150,000,000 people of various religious beliefs and racial backgrounds have developed a system of government, and a pattern of human relations based on respect for the rights of their neighbors. Today, we are asked to put our own evaluation on freedom and democracy, in the things we are ready to give up for it, and the sacrifices we are ready to make. Should we price freedom and democracy too low it will be taken away from us, however I have complete confidence in our way of life. I am sure that our democracy will control the conflicting and selfish interests of those who put their personal gains above the over-all welfare. The present situation demands honest to goodness loyalty to our way of life. I am sure that freedom-loving people of the entire world will pass this test with flying colors.

There is no place, in a fight for survival, for dissension and lack of harmony among ourselves. There certainly is no moral or patriotic ground for any American to seek political or personal profit out of this present emergency. I believe that most Americans recognize these facts and live up to

them. We aim to utilize all our personal and organizational influence to reduce the number of exceptions. The one value which we share and revere alike, is the country that provides liberty and equal opportunity. We must put aside the differences that divide us and rally around the uniting cause. Personal bias and pet hates are expendable; the lives and freedoms of Americans are not. People are not born biased, and prejudice is not inherited. It depends entirely upon us to expose and overcome these destructive habits.

We in America, who so frequently take our many blessings for granted, too often take our priceless gift of freedom as a matter of course. We have always lived in liberty and enjoyed freedom and democracy in such large measure, that we sometimes imagine it to be the only normal and natural mode of existence. Some nations are deprived of liberty and their people are forced to endure incalculable indignities and afflictions. We know that wherever liberty is suppressed, truth, dignity, and opportunity for advancement are lost. Let no one say that liberty is a mere abstraction pursued by impractical idealists. History tells us that liberty is as necessary to our existence, as is the air we breathe and the food we eat. In many generations and in many lands, men have foregone food and fortune just to obtain liberty. America has prospered and has become truly a blessed land only because of liberty. It is this regard for human dignity, this respect for our own and our neighbor's rights, this democratic accommodation for the differences of opinions—that made this great country of ours, which we love so dearly, strong and prosperous.

Costly Obstinacy

EXTENSION OF REMARKS OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following editorial from the Memphis Commercial Appeal:

COSTLY OBSTINACY

Kansas and Missouri are experiencing record-breaking floods. Thousands of persons are homeless. Damage already done can be reckoned in the millions of dollars and the end isn't even in sight. Most of the flooding is being done by the Kansas (Kaw) and its tributaries. The Kansas empties into the Missouri and, of course, all of the water eventually reaches this funnel which is the lower Mississippi Valley.

Much of the damage could have been prevented. That's always the saddest part of modern destructive floods. Prevention in this instance would have come in the form of construction of the Tuttle Creek flood-control project on the Big Blue River. It was authorized by Congress in 1938. Because of opposition of some Blue River Valley residents, and especially those from whom rights-of-way would be required construction funds have never been appropriated despite repeated requests by the Corps of Engineers. The drainage area for the proposed Tuttle Creek reservoir and its flood-control dam is 9,556 square miles. Storage capacity at full pool would be 1,245,000 acre-feet.

Had Tuttle Creek Reservoir and Perry Reservoir on the Delaware River been built so that they could be operated during the present floods, crests of flood heights could

have been reduced from 4 to 8 feet, according to Army engineers. As it is, about the only way to get around those fertile valleys today is in a boat. Here again has the adage of penny-wise pound-foolish been proved in relation to flood control. The repetition is sickening.

The Reclamation Department's Cedar Bluff Reservoir and the Kanapolis Reservoir, a Corps of Engineers installation—both on the Smoky Hill River—are in operation and are more than meeting flood-control expectations. Had they not been built, flood heights in the Smoky Hill Valley during the present flooding would be double what they are and cities and communities downstream would have been washed out.

The answer to those who wonder what concern a flood-control dam on a tributary of the Kansas is to the economy of the lower valley is simple—this area's security from floods. If the Ohio happened to be in flood at this time, a man-size flood fight would be in progress from Cairo to New Orleans. There would exist the elements for a major disaster. As it is, the lower river can carry off easily all the water that is causing so much misery in the Kansas-Missouri area, but not until all the authorized projects of the Mississippi's tributaries have been completed has the lower valley a right to regard itself as being completely safe.

Some projects along the tributaries of the lower Mississippi are being delayed or blocked because of the obstinacy or shortsightedness in the matter of providing rights-of-way. The bitter experience of the people in Kansas and Missouri carries a lesson for those responsible. That there is no economy or savings in floods is something some people and areas simply refuse to learn.

President of Ecuador Visits San Francisco

EXTENSION OF REMARKS OF

HON. CLINTON D. McKINNON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1951

Mr. McKINNON. Mr. Speaker, I wish to bring to the attention of the Members of Congress the following article by David Perlman, of the San Francisco Chronicle, concerning the visit of President Galo Plaza, of Ecuador, to that city, where he signed the United Nations Charter in 1945. A great advocate of world government and an outspoken enemy of communism, President Plaza points up the growing need for a more true and effective world government.

[From the San Francisco Chronicle of June 29, 1951]

VISIT FROM A PRESIDENT—UN HAS LIVED UP TO GREAT PROMISE, SAYS ECUADORAN LEADER

(By David Perlman)

Galo Plaza, Ecuador's breezy and personable President, came to San Francisco yesterday to visit the city where he signed the United Nations Charter 6 years ago.

He brought with him an expression of continued faith in the world organization he helped to build, and a hope it would soon grow into "true world government."

He also brought a message from all Latin America. It was this: "As we grow into democracy down there we know our destiny lies with the free world—and our future lies irrevocably with the leadership of the United States."

The husky 45-year-old chief of state, who played football at the University of Cal-

ifornia in 1925, shouldered protocol aside throughout the day.

SECURITY SKIPPED

He greeted the press at the Mark Hopkins Hotel in the morning in loafer shoes and a gabardine sport suit, quipped with University of California faculty members at an International House luncheon in Berkeley, and frustrated State Department security officials who tried to shunt him into elevators while he insisted on stopping to chat with well-wishers.

But he had serious things to say as well, and he underscored them at his press conference and in a speech to the World Affairs Council of Northern California later in the day.

He spoke in a perfect Americanized English which he learned during years in the United States as a student, an apple seller on the streets of New York when his father cut off his allowance, a Grace Line assistant purser, and an Ambassador of his country to Washington.

WORLD GOVERNMENT

"The UN has already lived up to its great promise," he declared, "but eventually we will vest in it sovereign powers that will make it a true world government."

He saw the Soviet proposal for a Korean cease-fire as a "great moral and military victory for the UN" and urged that "we now discuss matters instead of killing people."

Although he urged that "any effort to save lives and bloodshed be considered," he conceded he couldn't quite understand the Russian truce suggestion.

"Nothing the Russians have said so far," he commented wryly, "has been clear to anybody, and we must never forget they have a blueprint for world domination that governs every action they take"

ECONOMIC TEST

Although he hailed America's determination to arm for defense of the free world, he emphasized time and again that only economic progress under democracy could eventually win over communism.

"We have already begun to prove to the people of the world, and especially to the underdeveloped countries, that democracy can provide today what communism promises for tomorrow," he said.

The President pledged that his nation of 3,200,000 people astride the Andes and the Equator would contribute their natural resources and increasing productivity to the fight against communism.

"With technical assistance and protected capital investment from the United States," he said, "we in this hemisphere can create an inner defense line to make us all self-sufficient if the dangerously long lifeline to Asia's resources is cut off."

"Nothing can be so effective in fighting communism as a master plan"—he meant the point 4 program—"of economic development to raise the standard of living in underdeveloped countries"

ECUADOR POLICY

President Plaza proudly termed his own country "a true democracy with complete freedom." Even the Communist Party is permitted to exist there, he said, for "I don't believe in persecuting ideas with police methods."

President Plaza made his trip to Berkeley with his wife, two daughters, his official party of 18 Ecuadoran Government leaders, and State Department officials—all preceded by a motorcycle escort. The Campanile chimes played Ecuador's Himno Nacional as he toured the campus.

Greeted by University Vice Presidents Claude Hutchison and Baldwin M. Woods, Plaza recalled the year he spent as a freshman on the campus and the days he played left end in intramural football. "It was a big disappointment that I could not play on the freshman team," he said, "but I was

playing varsity soccer and the coach wouldn't let me."

DANGEROUS GAME

His father, twice President of Ecuador himself, quereed Plaza's football career for good when he termed it a "dangerous Yankee game" and shipped his son to the University of Maryland after the freshman year. But Plaza confided that standards of danger differ—for he still bears a scar of his chin from a goring by a bull when he was a champion amateur matador in Quito.

At the International House luncheon President Plaza was presented with three inscribed volumes—one on California agriculture and two on the United Nations conference proceedings here in 1945. The UC Alumni Association gave the Plazas a wedgwood platter, a cigarette box that plays Our Sturdy Golden Bear, and a set of paintings of campus scenes.

DINNER WITH WARREN

Last night the President and the men in his party attended a private dinner with Gov. Earl Warren at the family club here, while the ladies saw a performance of Guys and Dolls. They met at midnight at the Mark Hopkins for a party in the Peacock Court given by Brayton Wilbur, president of the World Affairs Council.

The presidential party will spend today shopping and resting and tonight the President will attend a gang dinner at the Press and Union League Club. The President plans to leave for Mexico City, Caracas, and home early tomorrow morning aboard the Air Force plane that brought his party here yesterday from New York.

Amputee Pfc Robert L. Smith

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. EVINS. Mr. Speaker and Members of the House, lying out at Walter Reed Hospital is Pfc Robert L. Smith, a youth of 19, who in a period of a few short months has experienced all of the horrors of the Korean war.

Private Smith is totally and permanently disabled for life—an amputee without legs and without arms—all limbs having been lost as the result of gunshot wound, frostbite in Korea, and imprisonment and mistreatment by the Chinese Reds.

Let me give you a brief statement of the moving events leading up to the amputations of this soldier, Bob Smith. He entered the service April 10, 1950—was shipped overseas August 26, arriving in Japan 3 days later and 3 weeks later in Korea. He was attached to Company B, Thirty-first Infantry Regiment, of the famed Seventh Infantry Division.

On November 29, 1950, at about 10 o'clock at night in the Chosan Reservoir, Private Smith, together with a group of men in his outfit, attempted a breakthrough of a blockade of Chinese Reds who had succeeded in cutting the group off from the rest of their company.

During this attempted break-through, Private Smith was shot in the right arm. His buddies bandaged his wound as best they could, but the crudeness of the bandage was such that Private

Smith continued to lose blood as he lay in the freezing temperature protected only by two blankets and a poncho.

It was in such critical condition that Private Smith was taken prisoner by the Chinese Reds in whose hands he remained for a period of 10 days—a prisoner—without food or water. All the while—during his imprisonment in a mountainous region with temperatures subzero, he was beaten, kicked, and abused by his captors. He was rescued 10 days later by a column of United States Marines. Half frozen, emaciated, Private Smith was sent to an Army hospital at Osaka, Japan, where it was deemed necessary to amputate both legs and arms—three of the limbs being lost as result of frostbite, the other as a result of the gunshot wound which, because of extended neglect, became gangrenous.

As many of you know, Private Smith is now at Walter Reed Hospital where he is being treated and prepared for complete prosthetic fittings.

When the story of Private Smith was disclosed, many generous Americans who wanted to help this soldier in his eventual return to civilian life under one of the most severe of all handicaps, donated to him a total of \$120,000. In order that he may have and enjoy the full benefits of these gifts and donations, I have today introduced a special bill to relieve this veteran—relieve him from payment of a donee's tax under the provisions of the Internal Revenue Code. I hope the members of the Ways and Means Committee and the Congress will favor this legislation.

We Are Busily Occupied Destroying Fine Values

EXTENSION OF REMARKS OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an editorial column by Mr. Robert Ruark, commenting upon the dangerous inroads which our quest for individual security has made in the fundamental American belief and reliance on private initiative and enterprise.

This particular column of Mr. Ruark's is being printed and distributed as a public service by Mr. Ellett Lawrence, of the Lawrence Printing Co., of Greenwood, Miss. I take this means of making the commentary available to all Members of Congress.

RUARK SAYS WE ARE BUSILY OCCUPIED DESTROYING FINE VALUES—BECAUSE MONEY ISN'T WORTH MUCH OUR INCENTIVE BECOMES LESS, TOO

(By Robert C. Ruark)

NEW YORK.—The most damning condemnation of the destruction of our old values that I have run into lately rests in the experience of an advertising executive I know.

This fellow, who works for a major outfit, argued the sum of \$75,000 from his budgeters, said dough to be used to hire three salesmen.

The man wanted top-grade guys, which meant that he went shopping among the opposition. He waved a fat \$25,000 salary under the noses of some first-class fellows he knew. None was making more than \$15,000 a year. And he got no takers.

The answers they gave him were the same; they did not feel that a raise of \$10,000 a year justified risking their established security with a new firm. They were unwilling to gamble, they said, because their new net income after taxes would not be enough more to offset the risk they would face in switching jobs. Here you have the practically unparalleled example of a man with both bold hands full of riches who is unable to find takers.

WILDEST DREAMS OF AVARICE

There was a time when an annual salary of twenty-five grand represented the wildest dreams of ordinary avarice. Twenty-five thousand clams put you in the yacht-and-town-house class. Two bits' worth of thousands averages out to \$500 bucks a week, and for that kind of scratch you could wear mink overalls. Even a few years of that salary would allow a man to store up enough security to keep him comfortable while he lived.

But in the case of the frustrated executive you have several men turning down \$10,000 raises because, as the most common cliché of our time runs, "you can't keep it." This amounts to depriving money of its worth, and the end result is a destructor of initiative, a clipping of ambition. You eventually wind up with lethargy, the translation of which says let George do it. Letting George do it works two ways—either eventual communism or fascism, which means that in any case the control of his personal existence is out of the hands of the individual.

A man just back from the Argentine tells me simply how Peron clinched his control. He merely encouraged collectivism, to such point that when he pulled the drawstrings at the top he had all the trade-unions in the bottom of the sack. He then was able to use them as a blackjack, to where a dictatorship as fine as Mussolini's is now in operation, with Juan and Evita squatting at the top.

WHO WANTS STATIC SECURITY?

Whatever we have in this land was not founded on a desire for static security. The original settlers took a great gamble when they took off from England. A great many rugged men and women wound up porcupined with arrows in order that Hollywood and Vine might become possible.

Many of our mighty moguls of industry today will speak with an accent that is not local to the scene. The vast fortunes that built the know-how that let us win wars were mainly built on gambling, and I don't mean crap shooting. The development of new industries rests on the availability of risk capital. Our national health rests on a man's willingness to take a chance.

I do not understand this sudden apathy, this noncraving for adventure, which seems suddenly to have afflicted us. The young men crave security; they ask about retirement age before they ask about the possibility for advancement. Men offered increases of \$200 a week refuse them because they are not willing to take a chance. I remember I changed three sets of jobs, once, for a cut of two bucks on one and a raise of three bucks on the other, merely because the prospects seemed brighter at the time.

Maybe we are watering down our stock as we water down our currency. But when a man loses interest in making money, you have just deprived him of his power. And that goes for a nation, too.

Call of Reservists to Active Duty

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. AYRES. Mr. Speaker, congratulations are in order for our colleague, OVERTON BROOKS, for conducting a thorough investigation of the Reserve program. It is too bad so many homes had to be wrecked, so many injustices inflicted before the true facts were brought out into the open.

Just this morning I received letters from reservists stationed on the U. S. S. *Fort Mandan* and the U. S. S. *Ajar*, the two ships I mentioned previously to the House whose officers were supplied napkin rings the reservists were ordered to make. These men are very much disturbed over the waste of the taxpayers' money, and I agree with them that the Armed Forces certainly did not consider their individual welfare or that of the country when they were haphazardly recalled to active duty.

Although it will be difficult to rectify the mistakes of the past, I sincerely hope the release program will be speeded up and that these men will be sent home. Congratulations, Representative Brooks, on a job well done.

How Czechs Have Lost Freedom in Stages

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I am pleased to include and call attention to an article from the Washington Post of July 15, 1951. Its author, Mr. A. I. Goldberg, who was there, accounts for the slow strangulation of freedom in that proud and democratic nation.

In it, Mr. Goldberg has this to say:

Freedom is indivisible, a collective thing. Wherever it is attacked, the collective body is wounded.

I am in complete agreement with this truth. I hope that the conviction of William Oatis an honest newsman, who was seeking only the truth but who was found guilty of treason in a predetermined sham trial, will bring this home to all of us. There is no room for truth when evil men seek to kill freedom.

Many in America have yet to see this truth. Many still do not understand the evil of the Kremlin and its use of tricks and subversion which sound the death knell of freedom. Yet none will proclaim that the Czechoslovakia of Benes and Masaryk freely voted itself into slavery and oblivion. Even our Progressive Party split over this, for those who were

truly American gagged when the bald coup broke the hearts of free men everywhere and forced Jan Masaryk to hurl himself to death as a symbol of the freedom which had died in his home country.

The gain, the profit from the supreme sacrifice of the patriots in that battered nation, is that it showed clearly the blood-stained hand of the despots of Russia. Free men saw clearly after 1948 that freedom was indeed collective. They saw and understood that to stand alone was to die alone. Czechoslovakia was stolen, but the steal electrified the bewildered people of Europe and America to join in collective action to preserve freedom. Out of it came the North Atlantic Treaty and the NATO Army—a pooling of strength. Sometime, God willing, this truth, bulwarked by strength, will return freedom again.

OBSERVER TELLS HOW CZECHS HAVE LOST FREEDOM IN STAGES
(By A. I. Goldberg)

(Two years ago yesterday, A. I. Goldberg left Prague after serving as Associated Press bureau chief from August 1947 on through the Communist seizure of control. Goldberg, now on the Associated Press staff at the United Nations, writes of the developments that have crushed freedom in Czechoslovakia.—EDITOR'S NOTE)

Freedom in Czechoslovakia has been killed off by stages for 4 years.

This death by installments began even before the Communists seized power in 1948. The Kremlin issued a no-appeal order to the Czechoslovaks in early 1947: "Stay out of the Marshall plan."

Freedom is indivisible, a collective thing. Wherever it is attacked, the collective body is wounded.

But freedom is also individual.

So long as one man lives with the ideal of freedom in his heart and mind, freedom survives. That is why it takes so long to kill it off, in Czechoslovakia as elsewhere.

CZECHS HAVE LAGGED

That is why the arrest, the mock trial, and the planned conviction of Associated Press Correspondent William Oatis in Prague were but another of a mounting series of attacks on freedom in Czechoslovakia. Almost the first was the regime's throttling of Czechoslovakia's own free press. Another was its attack on organized religion.

Other countries where Soviet push buttons set the pace for Communist executions have had a number of such spectacles. Bulgaria tried several Government officials and a group of Protestant pastors. Hungary put Cardinal Mindszenty and Archbishop Groesz, a foreign minister, and Robert Vogeler, an American businessman, in the dock. Rumania and Poland tried political leaders.

Czechoslovakia has lagged behind. It has been working up slowly to the trial of its former foreign minister, Vlado Clementis, on spy charges. Somehow it hasn't produced him in court yet. It has held trials of minor Roman Catholic clergy.

But since the Communists cowed ailing President Eduard Benes, later forcing him out, and drove Jan Masaryk in despair to hurl himself to death from a fourth-floor window of the Foreign Office Palace, Czechoslovakia has avoided international sensations.

VIRTUAL PRISON CAMP

The Oatis trial brought home to America how far Czechoslovakia has gone from the principles of its founding fathers—principles based on the British, French, and American democracies and written into a declaration at Pittsburgh in 1918 by the Czechoslovak leaders headed by Thomas G. Masaryk.

In Czechoslovakia I saw how those ideals of freedom sought for centuries were arrested by the Communists. I saw push-button executions of freedom begin without even mock trials.

Czechoslovakia has become virtually a prison camp. President Klement Gottwald, an old Communist International officer, and the members of his regime guard it zealously. A very small number of people are trustees, allowed occasionally outside the prison walls for such things as United Nations meetings, or to serve in the diplomatic service.

Many of these are often summoned back. The Czechoslovak diplomatic service, including the one at Washington, has just recently been depleted by such summonses. New trustees are sent out for a short time.

Some have been so contaminated by freedom outside that they refuse to go back. If they go, they are, like Clementis, prisoners. Some are executed. Clementis may yet be one of them.

Push buttons in Moscow control what goes on in the countries under its influence. In Czechoslovakia the push button was working when a Soviet Ambassador made a sudden reappearance in Prague. Revolution followed quickly.

SOVIET INFLUENCE GROWS

A Soviet Politburo member, heavily guarded, made a speech at a Communist Party rally in Czechoslovakia. A purge followed.

The Soviet Foreign Minister nursed his weak heart and his strong bile at a Czechoslovakia spa. Czechoslovakia delegates in the UN began to voice not only the very words of the Kremlin but to speak them in Russian. Before that they used English and French.

A Russian general visited the country. The army got political commissars and Soviet equipment and "reorganization." What I saw, and reported, when freedom was first attacked were police seizing the headquarters of the principal anti-Communist Party. Immediately afterward, troops took over the party's newspaper. Censors were installed in all other newspapers to exercise rigid Communist control so that no word of protest against the regime could get out.

Foreign newspapers and magazines, until then freely sold and widely read, were swept off the news stands. Armed workers paraded and patrolled the streets, to keep down any ideas of a struggle for freedom.

CHURCH ATTACKED

An attack was begun, and continues to this day, against the Roman Catholic Church and its leaders because it was the last big organized obstacle to complete Communist domination.

Nationalism of industry and services was pushed to 95 percent of totality, to crush the shopkeepers, the dangerous middle class.

Work permits and ration cards were issued only if, in effect, a loyalty oath to the Communist regime and to the might and leadership of the Soviet Union were subscribed to.

The Soviet flag, it was proclaimed officially, must fly alongside the Czechoslovak red, white, and blue on holidays. The Sokol, an historic national patriotic society, first was infiltrated and then taken over by the Communists.

Passports of citizens were recalled. No longer could Czechs or Slovaks leave their prison country for vacations in the west or on the Yugoslav coast, favorite recreation spot. Despite this, thousands braved death to escape across the fortified guarded borders.

Parliament rubber-stamped a people's democracy constitution that defended class war.

Workers were forced to attend lectures in Marxist history and teachings. They were incited to denounce the west.

The new Marxist educational program was thrust onto the schools, from 602-year-old Charles University down to the primary schools where photographs of Stalin and Gottwald replaced the crucifix and pictures of the elder Masaryk.

BOOKS SEVERELY CENSORED

The printing of books was severely censored. Listening to western radios was discouraged. Western embassy libraries and cultural centers were shut down.

Workers were sentenced to political re-education labor camps if their ideology was suspected.

The aim was to convert the hearts and minds of men and women—and especially children—from thoughts of freedom.

The campaign to squeeze out western correspondents began with the revolution and came to a climax in the Oatis trial. Before he entered the dock, the campaign was a success. Oatis was in prison, charged with espionage because he tried to do a complete, accurate reporting job as democracies know it—and as the Czechoslovaks knew it not too long ago. All other western correspondents had fled.

Oatis' trial came at the apex of what was almost the first step in Communist freedom-crushing—the assault on press freedom.

But because there are individuals in Czechoslovakia whose hearts and minds still harbor memories and hopes of freedom, it is not entirely dead there.

Appeasement in Korea Will Bring on World War III

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. FARRINGTON. Mr. Speaker, appeasement in Korea will bring on world war III. This is the lesson of Munich which was followed by World War II.

The Korean people, whose sacrifices in the war against communism in that country have been far beyond those of any other, recognize this. Their point of view was eloquently expressed by Dr. Y. C. Yang, their Ambassador to the United States, in a speech on June 23 to the Marine Corps League at Trenton, N. J. In this speech, Dr. Yang said:

This terrible Communist war in my country is approaching its first anniversary. In the dreadful year just past there has been wave after wave of war, up and down, back and forth—all over our Nation.

It is hard for anyone who has not seen it to imagine what this has meant in poverty and suffering.

More than 10,000,000 of my countrymen and countrywomen are homeless. Nearly 3,000,000 of our civilians are dead—from starvation, disease, exposure, bombs, shells, and bullets.

There are thousands and thousands of children who have lost their parents by becoming separated from them in all the confusion and terror of modern warfare. This hasn't happened so much to the tiny tots. Their fathers and mothers carry them as they travel. It is the boys and girls of seven or eight and older—the ones who are big enough to walk and big enough to run when they are frightened. Now they are homeless, with no food and no clothing, and with no way of knowing whether their parents are alive or dead.

I don't know how many of these children have been adopted by the Marines and other U. N. forces. I know you have shared your food with them and covered their nakedness. May God bless you for those acts of mercy.

In the liberated part of my country, many a mountain cave continues to yield its dead—groups of children and grown-ups, too, who have starved to death, or died of privation and cold. Our ruins have yet to give up their quotas of dead.

Now we mourn our dead, both civilian and military, and we mourn the awful destruction of modern war.

But we don't want all of this to have been in vain, and any peace settlement or ceasefire or armistice which leaves Korea divided and the enemy in control of the northern half of our country will never be acceptable to my Government or to the Korean people.

What kind of war would that be, anyway? You lick the enemy and then you beg him to make a peace with you.

I tell you that any half-way settlement in Korea will not bring peace. Instead, it will insure world war III.

We will have given the Communist aggressor a chance to rearm, regroup his forces, and to start all over again. We will have agreed to his timetable of aggression.

But this will not be the case if we deliver the knockout blow in Korea.

Let us respect our honored dead. Let us prove to them that we know they died for liberty and decency and justice—the things brave men are always ready to fight and die for. Let us not commit the unforgivable sin of callously chalking off their sacrifices to appeasement of communism, aggressive communism, the enemy of all mankind.

Yet there are some, I regret to say, who are unmindful of our Korean sacrifices. There are some who seem unmindful of the sacrifices of the noble men who, as members of the forces of the United Nations, have given their lives so this Communist threat will not do to you as it has done to us—the Korean people.

There are some who would forget their dead, their wounded, and their missing. There are some who, even as their fellow citizens die on Korean battlefields, say in effect: "Give us peace. We shall admit that our dead have died in vain."

There are some who think they can make a deal with the Devil and profit by it.

The Korean people, I am proud to say, are not among them. Of all the nations threatened by communism since the end of World War II, we are the only ones who stood up and fought.

Had you not come to our assistance, we would have been overwhelmed because we were fighting with the arms of a constabulary against a Russian-equipped, Russian-directed, and Russian-financed army which had tanks, planes, and heavy guns. We had no tanks, no planes, no heavy artillery. We fought because death was preferable to slavery under communism.

The very fact that we fought has bought time for the free world—time to rearm, to train, and to be prepared.

We have freely given of our life's blood to buy this time. Don't you think that what we ask in return should be given to us?

Our demands are not exorbitant. All we want is a free, independent, and reunited nation. We want to live peacefully, and to rebuild our shattered country. But this will never be possible if the Communists are permitted to remain in control of half of our ancient land. Why, it's as though a murderer and killer entered your home, slaughtered your wife and children, burned down half of the house, and thereafter was permitted to live unmolested in the other half. It's unthinkable. It's insane even to consider such a proposal.

But stark as that example is, there's another word for it in international power politics. That word is appeasement. Are

our memories so short that we have forgotten Munich? There was appeasement for you. Did it preserve peace? It did not. It hastened World War II. I hope and I pray that the statesmen of the free world will see the folly of permitting Korea to be the Munich of the Far East, for the Communist timetable is well known. It's Asia first, Europe second, and America third. There is no if, and, or but about their diabolic plan. It is world conquest and nothing short of it.

Republicans Believed Abandoning Peace Hopes in Effort To Contain Reds

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MILLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MILLER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of the House the following article by Dorothy Thompson, which appeared in the Buffalo Evening News July 9, 1951.

The article follows:

REPUBLICANS BELIEVED ABANDONING PEACE HOPES IN EFFORT TO CONTAIN REDS—GOVERNOR DEWEY'S WORDS, "COLD WAR WILL GO ON," INTERPRETED AS MEANING UNITED STATES AND RUSSIA CAN NEVER LIVE TOGETHER

(By Dorothy Thompson)

NEW YORK, July 9.—The original American policy to contain any further spread of the Soviet empire by armed force is being enlarged, at least by the Republicans. Governor Dewey, when leaving America on another of his international journeys, declared: "The cold war will go on as long as communism leads Russia."

The cold war, with incidental hot spots, now is costing us \$60,000,000,000 a year out of a \$71,000,000,000 budget. We are asked to contemplate the continuance of such a hemorrhage of savings and income, along with inflation, declining purchasing power, hardly veiled military dictatorship over the economy, inability of our youth to plan their lives or even envisage a stable future, as a means—of all things—of checking revolution.

And we are expected to follow through until 800,000,000 people in other states overthrow their governments (presumably with our aid and yet without war) or until these governments decide to come on their knees to Washington.

MEGALOMANIAC PROGRAM

Gentlemen, would you kindly sit down for 10 minutes and think?

What Governor Dewey's words mean, and will be recognized as meaning—in Moscow and Peiping, among all our allies—is that the United States abandons every hope or intention of a settlement based on reason and mutual interest; that we commit ourselves to conspiring for the overthrow of governments not pleasing to Washington; that we reject the possibility of the United States and the Soviet Union coexisting in the same world; that we enter every conference with the prior intention of bringing it to naught; and that we invite war.

If anything is likely to solidify the peoples and governments of the Communist countries and disintegrate the United States coalition, that megalomaniac program is.

PLEDGE TO F. D. R. BROKEN

A legitimate charge against the Soviet Government is its gross interference, via the international Communist Party, in the

internal affairs of countries with which it is at peace; the aid and comfort it gives to subversive elements in all states and the recruiting of their citizens to a higher allegiance to the U. S. S. R., even to the extent, when opportunity affords, of arming those partisans and instigating them to civil war.

What can be charged legitimately is that the Soviet Government has broken its pledge to President Roosevelt to sever itself from control of this party, and cease and desist from such activities.

SAYS WE WILL FAIL

But we cannot so charge or ever hope to reach a detente if we ourselves set out to do the same things, in a world ideological battle.

Furthermore, we will fail. It takes revolutionaries to make revolutions—or even counterrevolutions—not Trumans, Achesons, Deweys.

Since the foundation of this Republic we have watched the expansion and ebb of empires and have interfered only where vital American interests were involved. During the lifetime of this Republic we have had to live in the same world with states whose premises we rejected—with absolute monarchies, dictatorial despotisms, corrupt oligarchies, arrogant aristocracies, devolutionary regimes.

OUTCOME—A SENSELESS WAR

To some such recognition of limitations both we and the Soviet Union must come if the tensions presently driving the whole world to mental and social anarchy, to economic breakdown, and possibly to a senseless war, are ever to relax.

Such would be the counsel of conservatives. But where are they? Where are leaders of common sense—in this epoch the most uncommon quality? They have all become apocalypsts—especially the converted isolationists like Dewey—beating the drums for one world or no world, the millennium or bust.

Sometimes I think it's sunspots.

Judges on the Stand

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 29, 1951

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Washington Daily News. The editorial follows:

JUDGES ON THE STAND

A Senate committee is investigating ethics, or their lack, in the conduct of Government agencies. And some Members of Congress are talking of enacting a code of morals to be applied to officials of the executive departments.

A bill just put before Congress deals with ethics on another high level—the ethics of Supreme Court Justices.

Introduced by Representative KENNETH KEATING (Republican, New York) and approved unanimously by eight Members of a House Judiciary Subcommittee, it would prohibit Justices of the Supreme Court from testifying as character witnesses in any court.

This bill is a direct result of testimony as character witnesses by Justices Felix Frankfurter and Stanley Reed in the perjury trial of Alger Hiss, who despite their favorable words in his behalf was convicted of lying under oath when he denied giving Government secrets to a Communist agent.

The two justices not only proved themselves poor judges of character. As Mr. KEATING points out, they disqualified themselves from taking part in consideration of the subsequent appeal by Hiss. And they placed other Supreme Court members "in the awkward position of being forced to pass on the guilt or innocence of a person whose character their colleagues had endorsed under oath."

It is unfortunate that Congress should feel it necessary to legislate a common-sense standard of ethical conduct for members of the Nation's highest court. But Justices Reed and Frankfurter are responsible for that necessity. The Keating bill should become a law.

Revenue Revision

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. REED of New York. Mr. Speaker, the bill which I am introducing today is a revenue revision bill representing the accumulated recommendations of many years of the American Bar Association, acting after exhaustive analysis and study by its tax section, which is composed of several thousand members of the bar of the country who are particularly interested in the field of taxation.

The purpose of this bill, like that of H. R. 7025, introduced by me in March, 1950, is to correct a great many of the inequities, largely of a technical nature, which presently exist in our vast tax system. With the exception of minor typographical corrections in the table of contents, the bill is identical with H. R. 4775, introduced on July 16, 1951, by my distinguished colleague on the Ways and Means Committee, Mr. CAMP. Mr. CAMP and I both feel that this legislation is and should remain nonpartisan because it is drawn with a view toward eliminating inequities and promoting a fair and better-administered tax system.

The tax section of the American Bar Association deserves the highest praise for its constructive work in this field. These distinguished lawyers have devoted themselves unselfishly to this task, not in the interest of their clients but in the general public interest of making our tax laws equitable in their application and better in their administration.

Unfortunately, there has been no general tax revision since the Revenue Act of 1942, and as a result there are a great many technical problems which have accumulated during the past 9 years which should be remedied with all possible dispatch. It is unfortunate indeed that these inequities and discrepancies, which are bound to develop in any tax structure as complicated as ours, have had to await correction for so long a period.

The provisions of this legislation do not primarily affect the revenue. The inequities dealt with are not social or economic in their nature, such as, for example, whether one particular group of taxpayers should be taxed more or less than another group, but are tech-

nical in character and are generally recognized as inequities by persons familiar with the practical operation of our tax laws.

A detailed explanation of the individual provisions of the bill prepared by the tax section of the American Bar Association was included in the extension of remarks by my colleague, Mr. CAMP, in the CONGRESSIONAL RECORD for July 12, 1951, at page A4320 of the Appendix. This clear and excellent statement will be of inestimable value to the Ways and Means Committee and to the Congress, and it reflects the high caliber of work which these gentlemen have done.

It is a distinct pleasure to me to join my distinguished colleague [Mr. CAMP] in introducing this nonpartisan legislation embodying the tax recommendations of the American Bar Association. These highly meritorious recommendations deserve the most careful consideration, and favorable action should be taken by the Congress without delay.

Private Enterprise and Not Socialism

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. JONAS. Mr. Speaker, on the evening of July 14, Col Robert R. McCormick, editor and publisher of the Chicago Daily Tribune, delivered a most remarkable address over the Mutual Broadcasting Network. This historical and instructive address was undoubtedly heard by many thousands of listeners throughout the Nation. After reading what the colonel said, one cannot help but be impressed by the fact that the development of inventions in the United States has had a marked effect on the growth and progress of our Nation, and in some instances played a prominent part in determining world policies. The inventive genius of our citizens unquestionably made America the most progressive and outstanding Nation on earth. No country today enjoys the comforts and conveniences that Americans do.

I wish that Colonel McCormick's address on inventions were added as a chapter to our school books; that would place in the hands of young Americans something that they need very much. Too many of our youths appear to be under the impression that what we have attained in progress and achievements in practically every field of endeavor, including science, education, and medicine, just came about by chance.

The efforts contributed by and through the inventive genius of Americans in developing the sciences tells a story of the faith and confidence that men had in the future of America. The address of Colonel McCormick especially features the story of what can be accomplished by a free people, unhampered by socialistic and communistic philosophies.

I take pleasure in making this informative and instructive address a part of the CONGRESSIONAL RECORD, with the hope that those people who were deprived of the benefit of the compact and concise story set forth in Colonel McCormick's address may have the opportunity to read his remarks published in the RECORD, and thereby profit from the story that the address contains.

Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD, I include a radio address of Col Robert R. McCormick as of July 14, 1951, which address is entitled "Inventions; Part I," and is as follows:

INVENTIONS: PART I

(By Col Robert R. McCormick)

In past years I have broadcast on our Constitution and Bill of Rights. Only recently I have lectured on the founding fathers and the liberties they have brought to us that no other people enjoy. Tonight I will speak upon the great scientific developments which have sprung from this freedom.

Before Revolutionary times, there had been little development since Rome. Ships were built of wood and propelled by sails. Land transportation was by horse or human power, mechanics confined almost to the crossbow. Metal was developed for military purposes. Small quantities of metal were used in furniture, which was all hand made. It is interesting to note in Independence Hall, Philadelphia, that the chairs were made to fit each individual Member of Congress.

The first great inventor was Franklin, and he was a revolutionist, not a colonial. He discovered electricity, invented the lightning rod, the Franklin stove, and bifocal spectacles, first perceived heat in the Gulf Stream, and created modern navigation.

The Revolutionary War also produced the submarine and the screw propeller, but not efficient ones, invented by Bushnell. Submarines were later built by Fulton, by the Confederate Hunsley, and were made practicable by Holland with the use of an internal combustion engine and a storage battery.

After it became a nation, America produced most of the inventions. Eli Whitney was the first creator of mass production. He made muskets for the War of 1812 with interchangeable parts, to the admiration and astonishment of Jefferson, himself no mean scientist. Whitney also invented the cotton gin, which opened the way for the gigantic textile industry.

The Baltimore clipper, a great improvement on all sailing ships, led to American dominance in the merchant marine. American frigates in the War of 1812 were faster sailers than their English and French counterparts.

Agricultural machinery came in the thirties. Deere and Oliver were the best known steel plow builders. Hussey and McCormick produced their reapers which have led to immense agricultural improvements.

Also in the thirties came chloroform; ether 11 years later; and the Colt revolver, precursor of the Gatling gun of 1862. The telegraph, also came in the thirties and after it the telephone in 1875.

First Fitch and then Fulton produced the steamboat which was fully developed on the Mississippi River before the Civil War. Steam was first used exclusively as power on the ocean in the *Monitor*, invented by Ericson, who also had perfected the screw propeller, which was necessary for the use of steam as ocean waves broke paddle wheels.

Sails were still found on ocean liners at the turn of the century and delayed the use of steam on ocean ships, and have been in

diminishing use to this day. Steam ships did not come into their own on the ocean until the introduction of the steam turbine which is now being supplemented by Diesel power. Fishing boats and St. Lawrence schooners now operate on internal combustion engines without sails.

Edison, greatest of inventors, is best known for his electric filament light, now becoming obsolete, and the phonograph.

In 1846 the rotary press was invented by Richard Hoe. The multiple unit press, now in universal newspaper use, was invented by me in 1919; rotogravure was made practicable in Germany just before World War I, coloroto by John Yetter here. The linotype was produced by Mergenthaler in 1884. The stereotype machine by Henry A. Wise Wood in 1900.

Modern dentistry originated here. The airplane was invented by the Wright brothers; the helicopter by Sikorsky. Airplane engines were not entirely satisfactory until the coming of Wright (no relation to Orville and Wilbur) and Pratt and Whitney in the twenties. The Rolls Royce engine is built by the automobile factory of that name.

Selden applied for an auto-transmission patent in 1878; Duryea built an automobile that ran in 1892. Rubber was then produced in quantities for tires. A little rubber has been used on bicycles and carriages before that. We now have synthetic rubber made from petroleum and alcohol.

The Kentucky physician, Ephraim McDowell is credited with being the first physician to remove a tumor of the ovary.

Dr. William Beaumont (1787-1853) studied the nature of the gastric juice and early stages of gastritis in a Canadian half-breed, Alexis St. Martin. The Indian had been wounded in the abdomen and was left with an opening in the stomach. Beaumont was thus able to experiment on the effect of gastric juice upon different foods.

It was during 1900 that Dr. Walter Reed proved that yellow fever is transmitted by the *Stegomyia fasciata* mosquito.

Karl Eberth is credited with first distinguishing the typhoid bacteria in 1880. As nearly as I can determine, Dr. William Budd, an English physician, was the first to publish a statement warning that sewage might be looked upon as a means of spreading typhoid.

Streptomycin was discovered by Dr. Selman A. Waksman in 1944; aureomycin by Dr. Benjamin Duggar in 1948. Sulfanilamide was a common chemical used in the German dye industry, but its medicinal value was first discovered by Dr. Domagk. Tyrothricin, a pioneer antibiotic drug, was discovered by Dubos, an American, in 1939. This drug could not be taken internally, but its value intensified the research in penicillin.

The host of household utilities are of American invention. Among other American inventions were:

The water turbine, perfected by Uriah Atherton.

The sewing machine by Elias Howe in 1846.

An ice-making machine by Dr. George Gorle in 1851; electric refrigerators superseded it about 1925. Air conditioning has many forms and many originators.

Oil well (first drilled) by Edwin L. Drake. Oil and its derivations have many uses besides furnishing power and heat. Its first use in lamps is obsolete.

A tractor was built by Jesse Lake in 1867, but successful combustion tractors were not built until after the First World War.

The typewriter by Christopher Latham Sholes in 1867.

Now we have electric typewriters.

The airbrake by George Westinghouse in 1869. The electric transformer, invented by William Stanley in 1885, was produced by the Westinghouse company commercially about 1900.

Barbed wire was produced by Joseph Farwell Glidden in 1873, the steel windmill by Thomas O. Perry in 1882. Barbed wire, the windmill, the steel plow, and the revolver made possible the development of the West. Central heating by Birdsall Holly, but steam heat came with the turn of the century.

Window screens by Edward Thomas Burrows in 1878, but not in general use for another decade.

Machine gun by Hiram Maxim in 1883.

Boats driven by the expansion of naphtha heated by burning the expanded gas came in the eighties; boats were propelled by internal combustion engines in the early nineties, but they could not go as fast as racing rowboats for 10 years more. Gar Wood developed the hydroplane, which made possible hydro-airplanes and the amphibian by Curtiss.

Electric welding, originated by Prof. Elihu Thomson in 1886, was applied to shipbuilding about 1930.

The electric sewing machine was manufactured by Singer in 1889.

Bottle caps by William Painter in 1892.

Electric stoves by William Hadaway in 1896.

The electric vacuum cleaner by John S. Thurman in 1899.

The caterpillar system by Benjamin Holt in 1900. Its use as a tractor is of recent origin.

High explosives by Hudson Maxim and others in 1901.

The repeating rifle in the sixties and the automatic rifle by Winchester in 1903.

The radio tube (from which came television) by Lee De Forest in 1906.

The electric washing machine by Maytag who, he told me, had sympathized with the drudgery of his mother.

Smelting of aluminum was invented by Hall in 1888. Its great use is in airplanes and electric, high-power lines and cooking utensils, but more and more uses are being found for it.

Bronze, brass, and an inferior steel were known to the ancients, but now the combinations of aluminum and of steel with other metals would take a long time to enumerate.

Radar by Dr. Albert H. Taylor and Leo C. Young in 1922.

Nylon yarn by E. I. du Pont de Nemours & Co. in 1939.

Atomic energy, released and controlled, by Enrico Fermi and other scientists at the University of Chicago in 1942.

The Fourdrinier wire of the paper machine was invented in France, as were the balloon, the camera, an imperfect steamboat, an impractical water turbine, the stethoscope, and cellophane. While water pipes were much older, the first considerable pipeline took water from the river Seine to Versailles for the fountains.

Following horse-drawn railroads and steel rails, England's great contribution was the invention of the steam engine which led to the locomotive and steamboat, power looms, and the steam turbine. Her dominant merchant marine, however, was due to her command of the sea, rather than especially good building.

Aniline dye (coal tar) was invented by Perkin in 1856.

An English doctor, Alexander A. Fleming, rediscovered penicillin, a medicine of the Indians, but its great production has been in this country.

The English also combined an armored car with the caterpillar system and made the tank.

The generator was invented by Michael Faraday in 1831 but its practical application did not come until the nineties. Electric power has now supplanted almost all other forms of power transmission.

Marconi of Italy invented wireless telegraphy.

Cyrus Field invented and constructed the Atlantic cable after cables had been used over shorter distances.

Brazil contributed the blimp, still used, while Germany followed up with the unsatisfactory *Zeppelin*.

The German, Otto, produced the first gas engine; Diesel the Diesel engine, which is supplanting steam on railroads and on the ocean and bids fair to do so in powerhouses. One great advantage of Diesel engines over coal in boats and locomotives is that no fuel is burned when they are stationary.

The thermometer was invented by Fahrenheit in 1714.

Smokeless powder was invented by J. F. E. Schultze in 1863.

The gas burner by Bunsen in 1855.

The jet for airplanes is another form of internal combustion engine, completing Germany's contributions in this line. Strangely enough, the first unsuccessful efforts at steam locomotives were jets. Rockets were used by the English in the War of 1812, successfully at Bladensburg, unsuccessfully at Fort McHenry for recall, "by the rockets red glare" in the Star Spangled Banner. They have been part of our Fourth of July fireworks for a century.

The X-ray by Roentgen, and radium, which led to uranium and the atom bomb, by the Curies.

Germany produced groundwork for paper making but hardly can be given credit for originating the automatic pistol as that is merely a variance of the machine gun.

Sweden's only contributions are dynamite, the safety match, and the cream separator. Scotland's are the bicycle and the threshing machine, produced by Meikle in 1786. The bicycle first came into general use here. It led to one of our first trusts—one which failed.

Colonial status is not favorable to originality or achievement. Canada contributed insulin—no other colony anything.

Austria produced the locomotive torpedo and the malarious bow for ships.

Inventions used in public utilities are found generally over the world, but the use of agricultural machinery is largely limited to the United States, as are household appliances. This is because of our social and political principles that everyone is to be served, while in Europe the lower classes and servants are not considered.

We have produced far more discoveries and inventions than all other countries put together as a result of free institutions. Let us preserve them from foreign adulteration, from socialism, and from communism.

This Is Our Business

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. KEATING. Mr. Speaker, our modern world is divided into two segments. What divides the western or free portion so sharply and clearly from the eastern countries behind the iron curtain is not primarily a curtain, no matter how stiff, nor the lack of free interchange of information or communication between the two. It is the value placed upon human life and human dignity. Beyond that dividing line human beings are regarded and treated as mere

pawns in the master plans of ambitious tyrants.

Anyone who is so unfortunate as to stand in the way of those ambitions and plans is summarily done away with. Any persons whose religious or political beliefs are a threat, or whose property is marked for confiscation, or who prospered sufficiently under an older, freer regime to want to return to that way of life—these are the doomed men. Archbishop Groesz and William Oatis are the latest victims among the thousands who have suffered a similar fate.

We in the security of our freedom and strength read of these horrors and are infuriated and frustrated. One natural reaction is to send troops or rain bombs down to annihilate all the perpetrators of these incredible tortures and mock trials. Soberer, second thoughts, of course, reveal the impossibility and futility of such a course. But we can do more than rage or protest our anger in violent language.

Although verbal condemnation may seem weak and puny compared with bombs or other direct military action, we must not neglect to do what we can. Two very thoughtful editorials appeared in the New York Times recently setting forth the avenues of action that are open to us. The victims must not be allowed to feel alone in their time of trial, nor should the instigators of these bestial acts be allowed to forget that their time will come, too. Their actions will not go unpunished. Civilized mills, like those of the ancient gods, may grind slowly, but they, too, will grind exceedingly fine. God willing, the day of retribution is not far distant for the present malefactors.

Under leave to extend my remarks, I include these editorials from the New York Times, entitled "The Mark of Cain" and "What Is Our Business?":

THE MARK OF CAIN

The letter which we publish today from Dr. Fabian of the Hungarian National Council is one more reminder that the time has come for our Government to do something about these Communist outrages. To gnash one's teeth, to shout protests and imprecations, to express horror and pity or to throw up one's hands in despair will not help these victims, although it will give them the satisfaction of knowing that they are not suffering in a vacuum. We must do what we can to make certain that they will not suffer in vain.

To begin with they must be made to understand that the United States is interested in their fate and trying to help them. It is not enough for the Voice of America to tell them so. They should have direct word from Secretary Acheson or even from President Truman. When the world learned about the Nazi extermination camps and deportation in 1943 and 1944 President Roosevelt and other Allied leaders issued warnings that such measures must stop and that the criminals responsible for them would be held to account. On March 24, 1944, the President took it upon himself to issue a special statement in which he again proclaimed our determination that none who participate in these acts of savagery should go unpunished. The statement was widely disseminated throughout Europe and circulated through the underground in enemy territory—and by all accounts it was effective.

In this case we are not at war with Hungary, but we did make a peace treaty with

her that contained a human-rights clause, and that clause is now being flagrantly violated. The United States has protested on other occasions to the United Nations against such violations in Hungary, Rumania, and Bulgaria, and the protests were ignored or rejected. Another protest against the present deportations in Hungary would receive a similar rebuff, although it should be made for the record. But obviously some stronger method is required. The men who conduct these brutal deportations, or who carry out the tortures and mock trials of innocent men like Archbishop Groesz or William Oatis, are criminals by the standards of the civilized world. Why cannot they be branded as such by leaders of western civilization? We should name names, and with the mark of Cain on them these men will at least know that some day, circumstances permitting, they will be held to account, and their victims will know that we do not and will not forget.

WHAT IS OUR BUSINESS?

In the familiar language of Soviet diplomacy the Hungarian Government has advised the United States to "mind its own business." The admonition is in reply to an official protest against the expulsion of three staff members of the American Legation at Budapest, but it is really inspired by the unofficial outburst of indignation in this country at the Communist regime's brutal treatment of its own citizens. Mass deportations of helpless people did not begin in Hungary and are not confined to one country in the grim borderlands under the iron rule of Moscow. But the Hungarian evictions are on a larger and more indiscriminate scale, and we know more about them, chiefly because so many victims are determined at any risk to themselves to let the world know what is happening. The popular reaction to the reports infuriates the authorities in Budapest, accustomed as they are to doing what they please behind the iron curtain.

"Mind your own business," they say. And this immediately raises the question, What is our business? In the first place, it is certainly our business, taken for granted by the entire civilized world until the new cavemen seized the seats of government, to protect American citizens in the pursuit of their lawful duties and to demand proof and satisfaction for nonsensical charges against our diplomatic representatives in foreign capitals.

But above and beyond our business as Americans it is our business as members of the human race to resent, condemn, and stop, if we can, wrongs committed against the human race. Violations of human rights anywhere abridge human rights everywhere. Every crime against humanity—in Hungary, Latvia, China wherever minorities are persecuted, families torn apart, men and women deported, imprisoned, tortured, and killed at the whim of arbitrary power—is a crime against all humanity. We see but dimly, in horrifying glimpses, the cruelties millions of our fellow creatures suffer under the great tyrannies of the twentieth century. But when in the vast, impersonal mirror we do see one instance of this millionfold agony it is impossible not to feel a sense of shame—shame as human beings that we live in a world in which such horrors can be perpetrated, shame as citizens of a free and powerful nation that we can do nothing to prevent or punish them.

But at least we must never become so callous, so blind to our human interests, so defeatist in our fight to overcome evil as to admit that these crimes are none of our business. Let us inform the rulers of Hungary that they are so much our business that we are engaged in a world struggle that is fundamentally a fight for the very rights of humanity that they are violating.

Last Letter Home of an American Marine

EXTENSION OF REMARKS

OF

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. DEMPSEY. Mr. Speaker, under permission to extend my remarks, I am placing in the RECORD the last letter home of a young American marine who died in Korea for his God and his country.

What Lt. James Callan says in this letter should be important to use who are charged with the grave responsibility of governing this Nation. What he does not say—the unspoken words that lie between the lines—are even more important.

I am including also in the RECORD a letter to me from Jimmy Callan's father, a constituent of mine in New Mexico and an outstanding American. There is little that I can say or add to either letter. The two together speak a better commentary on the price we have paid in the bloody hills of Korea than any story written by a war correspondent.

There has been a great deal of confusion among some of our leaders as to just what our purpose is in Korea, but there was no doubt in Jimmy Callan's mind as to why he fought and died. He gave his life that the America he knew and loved might live. May God give those of us here the strength, the courage, and the wisdom to keep faith with Jimmy Callan and his comrades who have paid so dearly for our freedom.

The letters follow:

CALLAN RANCH,

Red Hill, N. Mex., July 10, 1951.

HON. JOHN J. DEMPSEY,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR SIR: Mrs. Callan and myself wish to thank you for your kind letter of understanding sympathy, as expressed in your letter of July 2, 1951, concerning the death of our son, First Lt. James Callan 3d, USMCR, killed in action against the enemy in Korea, June 14, 1951.

After being on inactive duty since close of War II, we moved from Texas out to this ranch 4 years ago and he had been operating it, until called to active duty again December 27, 1950. Three months training at Quantico and after a furlough left for Korea, May 12, and after a brief period of getting his command was moved up to the lines—lasting about 2 weeks thereafter. I know he was properly trained and did his best, like the thousands who died before and after him, so my one prayer is that the remainder of our forces be spared; unless we enter a war to win, if it is necessary for our national safety.

I am enclosing his last letter home, since you might find a thought in it as I did. The people referred to were my youngest daughter and my mother, who is ill (in this letter), and my other son.

I cannot help but ask myself a question as I think of our dead and wounded, and I am sure you also have wondered, Does the Star-Spangled Banner yet wave o'er the land of the free and the home of the brave? or is it a Union Jack, a pink one, or a red one? A New Deal, a Fair Deal, or just a raw deal.

Pardon my voicing an opinion, but all with whom I've talked wonder as I do.

As a citizen of New Mexico, I appreciate your letter, and as a father of one of those whose son gave his life to and for our great Nation, I appreciate your sharing with us our great personal loss.

Sincerely,

JAMES CALLAN.

FRIDAY, JUNE 8

DEAR FOLKS War is just as Sherman said. I am now a combat veteran and have acquired a feeling of confidence. This is a good outfit. I just hope to hell the war can be settled one way or another. It's a shame, but I feel that we are doing good, that we can and are helping to prevent world war III, which would be disastrous to the world. Maybe this will wake the world up to the fact that God cannot be denied or ignored.

I hope it has rained and that Biddy's wedding comes out all right. Also that the damned Socialists haven't ruined the beef business.

Damn, but I wish some mail would get in here, then I'd know what kind of questions to ask and what to talk about. Is Sam in the Navy yet? Hope he made that deal he talked about.

Don't you all worry about me. I'm doing my job and can take care of myself with God's help, can do a damn good job.

Write often and send air mail a large pocket knife and whetlock. How is Alma? Hope she is recovered. Tell everyone hello, and I'm fine.

As ever,

JIMMIE.

Postage Rates on Books

EXTENSION OF REMARKS OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MILLER of California. Mr. Speaker, the following article on book rates should interest all Members of Congress.

The cultural growth and intellectual development of America can be measured in terms of the availability of books.

Joseph Henry Jackson is an outstanding newspaperman in California. He knows his subject.

Under leave to extend my remarks, I include the article from the San Francisco Chronicle's magazine section, This World, of July 8, 1951:

BETWEEN THE LINES

(With Joseph Henry Jackson)

It's about time, I believe, that the general public knew more about something that is threatening the distribution of books everywhere, but particularly in the West.

To understand this, I'll have to ask you to be patient through a few brief paragraphs of facts and figures. You can't realize what is facing the far-western bookstore unless you absorb these figures, but I'll try to keep it simple.

First fact of importance:

In 1938 there was established a "book rate" in postage. This rate of 1½ cents a pound was based on the rate paid by the reading-matter portion of magazines. (Magazines pay a higher rate on their proportion of advertising matter, but the reading-matter figure is the one that applies here.)

This rate was established "in the interests of the promotion of cultural growth, education, and development of the American people." It applied equally to the reading matter of magazines and to books.

In 1943, the book rate was doubled and a surcharge was added which had the practical effect of making the book rate 4 cents a pound for the first pound and 3 cents a pound thereafter. Meantime the rate on the reading matter in magazines stayed the same.

In 1949 the book rate was increased again—this time to the present rate of 8 cents a pound for the first pound, and 4 cents a pound thereafter. The magazine rate for its reading matter is still 1½ cents a pound.

Now there is a proposal to raise the book rate again, and very sharply.

The new proposal is to (a) raise the flat unzoned book rate 25 percent, or to 10 cents for the first pound and 5 cents for each additional pound. But the package may not weigh more than 10 pounds in any event, and (b) to substitute a special zoned book rate (to be fixed by the postmaster) for all book packages over 10 pounds and up to 70 pounds.

Thus, at the very least, book postage is to be raised by 25 percent for packages up to 10 pounds, and for packages over 10 pounds still more sharply. In the case of west coast shipments, what has been learned about the Postmaster General's ideas on the subject suggests rises up to 200 or perhaps 300 percent.

One point: There is also a proposal to raise the rate on the reading matter part of magazines, but only from 1½ cents a pound to 2.4 per pound. This still leaves the book rate more than double that of magazine reading matter in packages up to 10 pounds, and between four and five times greater in packages of books heavier than that.

So much for that.

Now for a look at what this does to the far-western bookseller.

First, the profits of the average western bookseller have gone down since 1938, when the 1½-percent book rate applied, from about 5 percent to about 1 percent. Anybody in this audience care to do business in nonrepeat merchandise (books are not like cornflakes; you don't buy the same book over and over again each week or so) on a profit margin as slim as that?

What happens, under the new rate, to western booksellers?

Well, a 10-pound weight limitation would add from 10 percent to 20 percent to the cost of each book handled. These costs of handling would make it unprofitable, moreover, for the publisher to take care of small orders. Even five ordinary books usually weigh over 10 pounds. So, if the new rate goes into effect (it is awaiting action by the House right now), the far-western bookseller is up against it. He will either have to pay an average of some 34 cents each for the transportation cost of books to his store, or pay 10 percent to 25 percent more to the publisher for his books to be sent in smaller quantities at the rate applicable to packages of 10 pounds or less. Either way, the bookseller's costs go up. And in the far West, the bookseller is working now on so small a margin that an increase of this kind will just put him out of business.

How about the public?

In the far West, the public will simply find that the bookstore is disappearing. This means that the resident of the Pacific coast will be limited to the books put out by book clubs and/or the reading matter in magazines—the latter financed in part by advertising, and in part by the low rate (still far below books even if it is raised to the proposed amount of 2.4 cents per pound) that applies on magazine reading matter.

Well, is this what the public wants? The Congress is the representative of the public, it should not be needful to say.

There is reason to think that it is not what the public wants. In fact, on June 6, the House Post Office and Civil Service Committee voted unanimously to freeze the book-postage rate where it now is. Representations were made by various Congressmen to this committee, and it found good cause to take a different view from the Post Office itself and from the ICC which okayed the new rise in rate. Among those very active in following this through and calling attention to the effect of such a new rise in rate upon the western bookseller was California Congressman GEORGE MILLER.

One thing, for example, that Congressman MILLER brought to the attention of the House committee was the fact that according to the Post Office Department itself, only 1½ percent of postal expenditures in 1949 were attributed to the cost of carrying books at the present rate. As to volume, while the poundage of merchandise sent by parcel post just about doubled from 1942 to 1949, the increase in book shipments over the same period was less than 5 percent.

To come down to the point, those interested in books are not arguing for a subsidy. They do ask for equitable treatment vis-à-vis the reading matter in magazines.

And then you note that the rate on this magazine reading matter has stayed where it is for some 20 years while the book-postage rate has increased three times—well you wonder what the basis of this is. And again when you note that the suggested increase in the rate on magazine reading matter brings it only to 2.4 cents per pound, while the proposed new rate on books moves them up to at least four times that much, and in the case of larger, zoned-rate packages, much more than that—well, again you wonder why.

As to what you may do about it—well, a letter to your Congressman or your Senator or both should help show that you are interested.

Any Congressman or Senator is—or should be—in the business of listening carefully to what his constituents say, and, so far as is possible, paying attention to it. Most, as a matter of fact, do exactly that. They are in Congress for that reason.

But the far West is easy to forget; it's 3,000 miles away from Washington. Most of the books are sold in the northeastern part of the United States, where most of the population is, and where the manufacturers are too. Wherefore—well, the far West, that's "way out there."

Yes, but that's not a sound reason for a rate that will result in putting booksellers out of business. One of the reasons for the establishment of the 1½-cent book rate in 1938 was "to disseminate culture equally throughout the land." Now, no one says that costs today should be the same as in 1938, especially when the Post Office loses money regularly. But—well, shouldn't there be some near-parity, at least, between "culture" as interpreted through the reading matter in magazines and "culture" in books? Can you think of two reasons—or even one—why not?

Price, Wage, and Credit Controls

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. CURTIS of Missouri. Mr. Speaker, I have read the July 15, 1951, state-

ment of Hon. JESSE P. WOLCOTT, Congressman from Michigan and ranking minority member of the House Committee on Banking and Currency, on the subject of controls which I am inserting in the RECORD. I concur wholeheartedly in what he has stated. I have been on record for 2 months now in favor of an extension of the President's powers to impose price, wage, and credit controls. I recently voted to extend those controls for a month longer and I voted against the proposal to limit roll-backs during this month period.

I did so because I believe that the only fair way to impose controls is across the board with no group exempted.

I strongly favored the Wolcott proposal aimed to correct the inflationary fiscal policies of the Federal Government which are the major cause of inflation. I believe with Mr. Wolcott that without correcting these policies, controls will not work, they will merely aggravate the situation and, in the end, produce a real explosion.

The President, by not exercising the power to control which he has had now for 10 months, across the board, has invited the scene we now have in Washington of special groups trying to obtain exemption for themselves. The OPS has been staffed throughout the country with Democratic Party leaders which in itself does not inspire confidence in the manner in which controls have been imposed.

People have asked the Republican Party for an affirmative program and we have responded with the Wolcott amendment. The administration has rejected it. Yet, the majority of the Republicans, I believe, will still vote for the extension and strengthening of controls which the President asks, even though we may feel that this will not stop inflation.

If there is any struggle going on, on extension of controls it is not Democrat against Republican, but, rather, city versus farm. And though I think the farm bloc is wrong, I cannot blame them too much, in view of the fact that the increase in prices beyond that resulting directly from the inflationary fiscal policies of the Federal Government results from cost-of-living increases granted to labor. In fairness, I must state that I have been in favor of labor's cost-of-living increases, because until the rise of cost of living is stopped by across-the-board controls you cannot fairly freeze wages. Increase of wages, though in itself inflationary, is the only safety valve left to prevent a tragic lowering of the standard of living of our wage earners in meeting increased costs.

When controls are imposed across the board, of course, wage control must be included.

To date—July 16, 1951—the majority of the amendments to the Defense Production Act which the Republicans have successfully fought have had nothing to do with price controls. Many of the amendments that are still to come up have nothing to do with the power to impose controls. The power to impose controls is only one segment of the Defense Production Act, and the people should be made aware of this fact.

I conclude by restating that a \$260,000,000 Federal debt and a spend-

thrifty administration that, having started our people on a course of dope addiction, seems intent upon keeping us supplied with dope—unsupported paper money—lie at the root of inflation.

We must change our course. Controls mean nothing unless we do.

Mr. WOLCOTT's statement follows:

WOLCOTT ANNOUNCES HE WILL VOTE FOR CONTROLS BILL

(Statement by Representative JESSE P. WOLCOTT, of Michigan)

The action of the House, and particularly of Republican Members of the House, on pending control legislation, is being badly misrepresented to the country by the bureaucrats and certain irresponsible elements of the press and radio.

If the American people were being correctly informed, they would realize that the Truman administration has endangered the entire controls program by attempting to use the current emergency to grab new powers that would be palatable only to a British Socialist. The program brought before the House by the administration is as dishonest as anything uncovered by the Kefauver committee.

The public should be reminded of some facts.

1. The public should know that the Congress, on its own motion last August, inflated and passed legislation authorizing the imposition of controls on prices, wages, and credit. Mr. Truman did not favor such action, declaring in his press conference on August 10 that the Government was capable of handling the inflation situation with existing machinery. I quote from a story in the Washington Post of August 11, 1950, signed by Edward T. Pollard.

"He (President Truman) still doesn't think the time is in sight for using price and wage controls, which Congress seems ready to give him on a stand-by basis. He thinks the Federal Government, thanks to reorganization and improvements over the last 5 years, has an administrative set-up that can meet any emergency. Replying to a question, he said that the reporter could take that to mean that there would be no revival of OPA."

2. Despite the President's shortsightedness, Congress enacted the Controls Act and it became law on September 8, 1950. Notwithstanding the fact that prices were going up by leaps and bounds, and hoarding was being engaged in by suppliers and distributors, thus sending prices higher, the President blindly refused to act, with the result that between June 27, 1950, and January 26, 1951, the cost of living went up 7 percent and the cost of food 8 percent.

3. On January 26, 1951, the President belatedly decided to impose price, wage, and credit controls. As my colleague, the Republican leader of the House, Joe MARTIN, said at that time, "The administration has only frozen the hole in the consumer's pocket-book."

4. The ineffectual operation of the Office of Price Stabilization can best be evaluated by the fact that between January 26 and June 1, the cost of living and the cost of food went up another 2 percent each. The truth is that in every month since June 1950, without exception, the cost of living has taken a fresh rise.

5. When it recently came time to renew the controls act passed last year, the administration and its coterie of Socialist planners decided that here was the chance to hitchhike a free ride for a number of their pet socialistic schemes. The result was that the bill which was presented to the House contains numerous provisions which are totally unrelated to the consumers' problem of price, wage, and credit controls. For example, the administration is seeking authority to set up Government-

owned plants, to set up Government corporations in competition with private industry, to move existing privately owned plants to other parts of the country by Government edict, to impose marketing quotas, and to sneak in the thoroughly discredited Brannan plan through a system of so-called production subsidies.

Those are pertinent facts.

It is a scandalous picture which is being kept from the American people. It is a national disgrace when the Socialist schemers in this administration trade upon an emergency that is costing American boys their lives in Korea.

There is a deliberate campaign underway to make it appear that Members of the House, including an overwhelming majority of Republicans and not a few patriotic Democrats, are sabotaging price, wage, and credit controls by any change made in the bill.

The truth is that 99 percent of Republicans voting last August 10 on the controls legislation voted in favor of enactment. I voted for the act, as did 140 other of my Republican colleagues.

The truth is that once the socialistic power grabs which this bill contains have been weeded out, and price, wage, and credit controls have been strengthened, the House will pass this bill. I shall vote for it, and countless of my colleagues will do likewise.

It is high time that the campaign of untruth and calumny was stopped and the American people told the truth for a change.

Tax Bill Held Wanting in Fight on Inflation

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the last of a series of articles by Harold Fleming, appearing in the Christian Science Monitor.

TAX BILL HELD WANTING IN FIGHT ON INFLATION

(By Harold Fleming)

NEW YORK—Some people here are inclined to view the current administration party line that national defense constitutes in itself a dire inflationary threat as a political form of gainful employment.

This is not to say that the country is going back to the days of the old-fashioned business cycle downswings, nor to say that inflation may not return. It is merely to say that if inflation should return, it will not have been necessitated by the defense program.

TAX BILL SEEN BAD ON SEVERAL COUNTS

One of the chief butts of Wall Street criticism is the tax bill now under consideration in Congress. The objection is not that it would not raise enough money, but that it is ill-devised to curb inflation and in some parts would encourage it.

It is true that few tax bills ever get a good word in Wall Street, whose customers are usually in the direct line of fire of any tax rise and whose top people have probably forgotten more about economics than most of Washington's top people have ever learned. But Wall Street's criticism of the pending bill is more wearisomely negative than of any tax bill in many years.

There is much agreement here with the Roswell Magill Committee on Federal Tax Policy, which recently said that the recent House-passed tax bill is full of "fundamental faults" and is "probably the most badly devised tax measure in recent history." Nor is the local view of wholly pecuniary origin. Wall Street, an aggregate of financial carpenters, has also an "instinct of workmanship" and likes to see things done right.

TAX ON DIVIDENDS HITS OLD FOLKS

The criticisms include the following:

1. The plan to have corporations "withhold" tax on dividends would save the Treasury trouble by causing all stockholders trouble. Hardest hit would be the old folks, who would have to wait for their money, then find out how to get what they saved and invested for, then fill out forms and mail them, then wait for the Treasury to send them their money.

2. The proposal to cut the exempt basis of the excess-profits tax from 85 down to 75 percent is heavily criticized on several counts. First count is that the term "excess-profits tax" has been made a misnomer; any company that makes over 75 percent of what it made in recent years must pay an "excess profits" tax even if its earnings have not increased and have nothing to do with the national defense program.

The excess-profits tax was originally justified as a "blood" tax on those who stayed home from war and made profits from it. The proposed tax is nothing like this. Most people here would rather see the same amount of money raised by straight increases in the regular corporate income tax across the board than raised in this way, which almost seems to reward a corporation for going backward.

EPT SEEN CAUSE OF WASTE

Perhaps the chief criticism of the EPT, however, is that it encourages wasteful financing and soft wage policies. The well-established and successful corporation can figure that over 70 cents of every additional dollar it spends for wages, raw materials, interest, or overhead costs will be paid, in effect, by the Treasury in the form of a smaller tax revenue on a smaller taxable statutory net income. A specific effect is to put the big, successful corporate employers on the side of repeated wage increases (which may explain the support given the new proposals by CIO leaders).

3. The proposed increases in personal income taxes are political. It is argued, but not anti-inflationary. They hit the higher brackets hardest, where the least revenue is to be had and where the most saving is done. The House-passed bill would go even further in this direction than the Treasury's proposals. The Treasury originally proposed an increase of four percentage points in the tax on each income bracket. The House instead voted a 12½-percent increase in everybody's income taxes.

TAX NOT APPLIED WHERE MOST MONEY IS

The difference shows how complex these tax questions have become. The Treasury's proposal would hit hardest the lower brackets, where the money is. For the man paying 20 percent on \$4,000, or \$800, it would raise the tax to 24 percent, or \$960. For the man paying 80 percent on \$500,000, or \$400,000, it would raise the tax to 84 percent, or \$420,000.

The House bill, in raising taxes a straight 12½ percent for everybody, would raise the first man's taxes only from \$800 to \$900, but would raise the second man's taxes from \$400,000 to \$450,000, or from 80 percent to 90 percent.

The Treasury's proposal would cut the first man's take-home by 4 percent, the second man's take-home by 20 percent. The House bill would cut the first man's take-

home pay by only 2½ percent, but the second man's by 50 percent. Yet the Treasury's proposal would raise more money, because there are millions of men in the first bracket but only a handful in the second.

4. Third criticism here of the current congressional tax proposals is that they skip lightly or entirely over excise and sales tax. These are deflationary taxes, in that they discourage expenditure. But this is an old argument of regressive taxation and need not be gone into further here.

DISINGENUOUS ARGUMENT ON INFLATION

The administration gets as much blame as Congress for failing to cope with inflation. Chief charge is favoritism to farmers and labor. On the former count, the administration still stands for parity-based price supports. Thus, for instance, the price of wheat is now down around price-support levels.

The payoff on the administration's attitude toward labor could be heard in the President's June 14 address to the Nation on economic controls. After having taken credit for the price reversal of last spring, and flatly claimed credit for having prevented depressions, the President clearly showed his hand by saying:

"When some of us have to take a cut in profits or pass up wage increases we might otherwise get, let us remember that we are making a contribution to peace in the world."

The idea that some people should contribute by taking less, while others contribute by foregoing more, is seen here as a key to some of the Nation's current complexes on the matter of inflation. A complex in modern idiom is something that you are afraid of but want, but won't admit you want and can't get over thinking about. Thus inflation remains a problem.

Peace Talks in Korea

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, the American people do not want another Yalta.

This belief is strengthened by a telegram I have received from the Wyoming Department of the Reserve Officers Association, sent me at the direction of the department's executive committee.

Their telegram reads as follows:

Several recent occurrences, notably the Communists finagling our representatives into their armed camp for peace talks, may indicate that we are again to be jockeyed into an opportunistic compromise for their benefit. Every American is desperately interested in a lasting peace which would be honorable and just but to keep faith with those Americans killed and wounded and the families they have left behind, we must never again be committed by someone who purports to know the answers, before our people are advised of the facts. We hope you, as our elected delegate, will make it your business to know and to tell the people the details of any settlement before it has gone far enough to bind this Nation. Will you please advise us what you can do to inform our citizens on these matters of public concern as and before decisions are made and not after it is too late?

In reply to this telegram, Mr. Speaker, I told the Wyoming Reserve Officers

Association that under present circumstances I seriously doubt if anyone except President Truman, Secretary of State Acheson and the Joint Chiefs of Staff will know the full details of any Korean settlement until such settlement has been concluded.

Unfortunately, this probability may become a reality, a twin to the tragic Yalta experience, when the American public was kept in the dark concerning the secret agreement for more than 2 years. And the public was informed of the terms of the Yalta betrayal only after a congressional committee demanded the details before taking action upon administration requests for foreign-aid funds.

I repeat, the American people do not want another Yalta. They do not want another secret agreement shrouded from the public view to protect the actions of men in whom the American people have lost confidence.

Members of Congress, myself among them, have called for the replacement of Dean Acheson, but without results. We have warned of the loss of faith with our foreign-policy makers which has been expressed by the people we represent. But our warnings have gone unheeded.

Now, Mr. Acheson as Secretary of State will have a major voice in acceptance or rejection of truce terms now being discussed in Korea. The people want to be advised of those terms before—and I emphasize this word—conclusion of the truce conferences. In short, they do not trust Mr. Acheson. He has been paying too much attention to foreign interests and too little attention to the opinions of good American citizens. They feel that he is giving only lip service to Americanism, but is permitting himself to become a tool of foreign masters.

What appears to me to be an indication of the dangerous situation existing in connection with the Korean truce talks is the fact that the Reds are conducting themselves as though they were the victorious hosts extending a condescending hand to a fallen foe. This, of course, is not the case in any degree. The Korean War has not been won by either side. Nothing whatsoever has been accomplished except a vast amount of destruction and human suffering. Both the Reds and the United Nations conferees should be considered on an equal basis, with neither side playing host to the other. This the Reds have not recognized.

The Communist conferees have halted UN truce teams because they were accompanied by newsmen and photographers; yet the Communists have admitted their own newsmen and photographers into the area. I was glad to learn that the UN truce conferees had broken off talks until this situation had been remedied.

Also disquieting is the knowledge that the Chinese Reds are massing troops behind their lines, at the same time that peace conferences are underway. This, of course, lends strength to increasing doubt of the Reds' sincerity in the truce talks.

Many Americans are not too trusting of either side in these negotiations, and

are demanding to be advised of the full facts, as the Reserve Officers Association's telegram states, "before it has gone far enough to bind this Nation." I join with them in this demand.

Texas Cattleman Gives His Side of Beef Question

EXTENSION OF REMARKS

OF

HON. LLOYD M. BENTSEN, JR.

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. BENTSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by a patriotic young American giving his views on the beef problem, which was published in the Columbus Evening Dispatch:

TEXAS CATTLEMAN GIVES HIS SIDE OF BEEF QUESTION

The papers and radio programs have been so full of statements, official and private, relating to the cattle industry that I wonder how there has been time or space for anything else. The terrible thing about all this is that so little of what has been said is actually a representation of the true facts. I wonder if it would not be of interest to the people of your city to learn from a person who was born on a ranch and who has, with only the time spent in the armed service to interfere, spent all of his life on a cattle ranch?

I am 27 years old and I am a veteran of 24 months' service in the Pacific from New Caledonia to Japan with the One Hundred and Twelfth Cavalry Regiment. Just as soon as my Army service was terminated I returned to my home and reentered the ranching business. That was and is the only business I know and it is the business I like. I just naturally like to raise cattle. To me, about the prettiest thing in the world is a Hereford calf. No matter what happens, I believe I will have to stay in this business. I know I will do so just as long as the Government will let me.

From what I have been reading and hearing, I wonder if most people don't believe that this cattle business is just about the easiest and most prosperous occupation in the world. Let me give you some of the facts that ought to correct this impression.

In my own operations I breed cows for the purpose of raising calves to develop into beef animals. This is a year-round operation. We must, of course, depend on nature, especially on rainfall for the answer to the question of whether or not our year will be successful. There has not been a general rain on the land I run my cattle for the past 16 months. Our land is as dry as powder. On a large part of it, you couldn't find a hatful of grass in a day's search.

I do not know of any place to which I could move all my cattle and keep an interest in them. I have been forced to give my cattle a lot of supplemental feed for 9 months. I did ship my steers to better grass but the cows and calves I have had to keep on feeding, and from the looks of things, this feeding has to be kept up for a long time. On these cows this drought forced me to spend an average of \$40 a head more to keep my cattle alive than I would have had to spend if we had been blessed with a good rain. This has been just to keep my cattle alive, not to fatten them.

A range cattleman ordinarily hopes to get about an 80-percent calf crop. Because of this drought I will be lucky if I can get a 50-percent calf crop up to weaning time. And, because of the poor condition of the cows, I cannot hope for anything better than this next year. So instead of getting two calves a year from my cows, as was stated to be a fact by one Member of Congress (a thing prohibited by nature), I will be lucky if I get one calf in 2 years from my cows.

I know that Mr. DiSalle has stated that his figures are derived from studies made by experts. I wonder how many of these experts ever "tailed" a poor cow out of the almost dry bottom of a water tank or hauled feed over a range where the dust would choke a grasshopper. Mr. DiSalle's averages might fit into a book pretty well, but when a fellow has a year like I have had and like this one I am having now, I know that such averages will break anyone.

I like the cattle business. I knew all about the risks to be expected when I came back home from the Army and started out for myself. I'd like to stay in this business. I want to produce cattle, not only because I like to grow cattle but I also like to supply something for other people to enjoy, especially the working class of people who are the ones who ordinarily buy the type of beef I produce.

When Mr. DiSalle can tell me how to make it rain, or how to write a regulation that will hold back a frost or stop a norther, then I'll begin to believe in regulations. But until he can do these things by regulation, I will know that this business of cattle raising just can't be carried on from Washington by a Government agent who never saw a live cow. Let me take my chances with nature, but please save me from the schemes of the do-gooders who sacrifice me and my business in order to develop fine figures and stop beef production.

JOE B. FINLEY, JR.

ENCINAL, TEX.

What About the War Criminals?

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks, I am inserting in the CONGRESSIONAL RECORD what I regard as a rather pungent thought-provoking editorial which recently appeared in the Albion Journal-Register, of Albion, Ill.

The subject of this editorial raises the question as to whether or not the leaders who started the war in Korea should be hanged or otherwise executed as were the war criminals of Germany and Japan.

Is it to be a soft or a hard peace? I commend the reading of this editorial which expresses the thinking of the editor of a small newspaper from the grass roots of the country. It has something of the ring and spirit, so lacking these days, of those who started the fight for freedom at Lexington and Concord.

WHAT ABOUT THE WAR CRIMINALS?

As this is written Monday morning, it appears that a truce may be effected in Korea. The cease-fire will bring an end to the appalling casualty lists which have brought

grief to families in almost every city, village and hamlet of the United States during the 12 months of the police action.

The end of the actual shooting in that respect is cause for rejoicing. * * * But negotiation of an armistice, when considered on a broader canvass means writing off as wasted the gallant efforts of our Armed Forces during the last year.

It means that those who died, died only to maintain an uneasy status quo. It means those who suffered frostbite and battle wounds endured their agonies in vain. It means that the billions of dollars that the United States has poured into the conflict has been poured down an oriental rat hole.

But a negotiated peace in Korea means that nothing definite has been accomplished, unless one counts the millions of Korean civilian dead, the ruined cities, the wasted fields that have been crossed and crisscrossed by the Four Horsemen.

Our State Department may hail the probable armistice as a satisfactory conclusion to the fiasco. Diffident delegates to the U. N. may rejoice that the oriental sideshow has been abandoned in favor of eventual action under the big top of Europe.

The U. N. will probably hail the armistice as a major accomplishment, blithely ignoring the fact that nothing has been decided in the 12 long and weary months of the limited war.

Worse still an armistice will mean that those responsible for the rape of South Korea and the death of perhaps 25,000 American men, will never face punishment.

Unlike the Nazi high command, that only 5 years ago paid in full on the gallows for their crimes against humanity, those who brought the reign of terror to Korea are to be permitted to sit down at a Munich-like conference table.

An armistice now means a complete repudiation of the blueprint for the brave new world. It means that free nations have turned their backs on the dreams of all of us who believed that somehow a permanent peace might be evolved back in 1946.

It means that the U. N. has tacitly admitted that the Nuremberg convictions and the executions that followed were not the actions of a united world, firmly determined to stamp out aggression and murder. It means that the war-criminal trials less than a half decade ago were not conducted in a solemn responsible court of all nations, but in a manner of a jerkwater JP who shapes the conduct of the trial to meet the predetermined verdict.

If the Korean, Chinese—yes, and even the Russian—leaders responsible for the Korean aggression are not brought before the bars of the same tribunal that sentenced those high in Hitler's oligarchy to the noose—if the same stern punishment is not meted out to the oriental war makers, what is there to deter future aggressors?

Five years ago the world believed that only the threat of swift, sure, and impartial trial and speedy execution of those found guilty would deter would-be aggressors. The nations, prodded by the United States, even went so far as to write new international law—and to, of all things, make such law retroactive—so that the Nazis might climb the 13 steps to the scaffold.

Now, just a few years later, we repudiate that concept—now, because we're afraid of Soviet might—or some other imagined boogie—we agree to sit down and talk things over with the oriental war makers.

Hitler would have talked things over in 1944 or 1943, or at any other time after D-day. A negotiated peace back then would have been no more dishonorable, no more indecisive, and no more repugnant than is an armistice-table capitulation today.

At the end of World War II we solemnly declared that all future infringement on the peace would face stern and sudden justice.

Now, 5 years later, we treat with the perpetrators of the first major aggression to develop since we made that declaration.

No bells should ring when the armistice is announced in mid-July. There should be no rejoicing. The heads of Americans—and those of citizens throughout the entire free world—should be bowed in shame. We should weep—not for our brave men who gave their lives fruitlessly in a phony war, which accomplished nothing—but our tears should be shed for the death of an ideal—for the failure of free men to meet their first test in a struggle to create a world where the "four freedoms" might endure.

More Interior Department Propaganda

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. POULSON. Mr. Speaker, the propaganda of the Department of the Interior has reached to all corners of the United States. I am submitting another editorial from a Georgia newspaper, the Savannah Morning News, of June 20. It will speak for itself.

CENTRAL VALLEY PROJECT

The propagandists for high Government spending are improving their techniques. The Morning News has received from the regional information officer of the Interior Department's Central Valley project in California a detailed account of ceremonies to be conducted in connection with the inauguration of operation of various phases of the giant Central Valley multi-purpose reclamation project. Water from Shasta Dam used to generate power subsequently flows down the Sacramento river to a pumping station more than 200 miles down stream, where it is pumped up 200 feet into the mountains to flow southward again through a man-made canal eventually as far south as Bakersfield, some 500 miles from the starting point.

The account of the inauguration ceremonies contains glowing descriptions of the way in which mankind will benefit from the vast Federal project through hydroelectric power, swimming, and recreation, fishing, and irrigation from farm lands. There will, no doubt, be many benefits from the project, for no one can deny that fishing, swimming, electric power, and irrigated farmlands are good for the people.

Two questions are prompted by the accounts of the scope of the project, however. First, since the Federal Government, through the Interior Department's Central Valley Authority, will be involved directly or indirectly in virtually every phase of economic life in the entire 500-mile-long Central Valley of California, isn't there a strong possibility that the entire area will be developed into somewhat of a Government-controlled autonomy within itself? This might amount to a small area of total socialization in the midst of an otherwise free and capitalistic area, and if controlled by unscrupulous and ambitious bureaucrats in a strong central Government in Washington, grave political misuses could result.

Secondly, granted that all the various benefits from the project are desirable, can we afford them at a time when the Federal

Government is unable to balance its budget, and at a time when taxes are so high they threaten our ability to maintain our continued high production?

Cooperation of the Veterans' Administration in Treatment of Louisiana Polio Cases

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. BROOKS. Mr. Speaker, because of a heavy demand for hospital space caused by a seasonal increase in polio cases which has been much higher than usual, the doctors of Shreveport, La., last week, called upon the Veterans' Administration for permission to use beds in the VA hospital located there. The Administration cooperated splendidly with us, and it was only a matter of hours after the request was made that I was able to telephone my people at home and inform them that our request had been honored.

Under leave to extend my remarks in the RECORD, I offer for inclusion the following editorial upon the Louisiana polio situation which appeared in the Shreveport Times on July 13, 1951:

THE CITY'S SPLENDID WORK IN FACING POLIO

The splendid manner in which public and private agencies of Shreveport are functioning in the present polio situation should arouse confidence, calmness, and admiration among the people as a whole.

In homes where sorrow already has entered, and in homes where naturally there is worry, there also can be complete satisfaction that everything humanly possible to combat the disease has been done and is being continued. The medical knowledge of not only the entire local profession but of national organizations and research groups is in action here in Shreveport.

The question of whether the local polio situation should be called an epidemic is utterly unimportant. "Epidemic" in its general definition simply means widely prevalent locally and spreading somewhat. Technically some would define epidemic as an incident of 1 case in each 1,000 of population. Using the former definition, Caddo's present incidence might be called epidemic; in the latter definition the present 74 cases would have to be more than doubled to justify the term "epidemic." In a nearby town there were 13 cases in 2,000 population. To meet that ratio, Caddo's cases would have to increase to more than 1,100. The National Infantile Paralysis Foundation terms a ratio as small as 1 case in 5,000 population as epidemic. That would mean that almost every polio outbreak in the Nation is an epidemic.

The point in the whole situation is that here in Shreveport the steps that have been taken are the identical steps—and virtually the only steps—that could and would be taken if the present incidence of polio were doubled, tripled, quadrupled, or multiplied to even greater extent.

The announcement of the health board yesterday morning that city swimming pools

are not contributing to the spread of polio is sound, logical, and obvious. Only 2 out of 49 of the present city cases had been swimming in city pools during the polio incubation period. The idea that a properly handled, filtered, and purified swimming pool is a cause of spread of polio is as outmoded as the yarn about warts coming from playing with toads.

Backwoods swimming holes, bayous, lakes, et cetera, may be quite different. But could any area naturally be less susceptible to disease than a modern, new, sunshiny swimming pool with the most modern purification system and the water checked chemically every 2 hours?

The city council is being guided in its steps by the medical profession, through the city health board. The latter acts under decision not only of its own members but of the medical profession, with the city's pediatricians all called on to determine such courses as closing or leaving open places of public gathering.

Back of this is the full strength, research, and knowledge of the National Foundation for Infantile Paralysis, and the physical facilities of it and of the Veterans' Administration.

When the polio incidence began to rise locally, surveys were made quietly throughout the city for space for patients if the number of cases exceeded capacity of normal facilities. The completeness of this job would amaze everyone if there were space for all the details.

When the need for additional bed-space came, it took only 22 hours to call on Washington for space at the local VA hospital and then have that space available for patients. Dr. Fred Bearden and Manager D. A. Hiller at the local VA hospital worked with the medical profession and the health board at this end. Admiral Joel T. Boone of the VA medical force in Washington handled things there. The whole thing went through like greased lightning—because all the steps had been planned in advance.

The National Foundation for Infantile Paralysis has made two physio-therapists available for Shreveport. The foundation's area head nurse will teach regular nurses special polio technique at the VA polio ward. The Red Cross will provide extra nursing manpower if needed. The foundation has sent its service director here so that physical facilities for handling polio may become available quickly, if needed. There is no need now. Six respirators have been brought in to Charity Hospital.

These steps not only meet current needs, but they are precautionary as to further increase in polio locally. They inspire confidence and deserve commendation. And the people as a whole deserve their share of praise. A decade or so ago fewer polio cases than at present brought near-hysteria. Today everyone is taking everything in stride—calmly, cautiously, confidently. There's no reason to do otherwise.

Controls: Whose Side Is the Calendar on?

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. BROWNSON. Mr. Speaker, emotionalism and appeals to class prejudice have figured entirely too prominent-

ly in attempts to influence consideration of the Defense Production Act. One of the more sane editorial approaches to this complex economic problem was that of an article in the Sunday Star, of Washington, D. C., July 15, 1951. Under unanimous consent, I insert this article in the Appendix of the CONGRESSIONAL RECORD at this point.

CONTROLS: WHOSE SIDE IS THE CALENDAR ON?

Like a cat leisurely toying with a crippled mouse, the House of Representatives was taking its own sweet time.

There might be a war still going on in Korea. There might be a bigger war in the offing—to be fought, or prevented by the speedy amassing of enough power to deter the aggressors. There might be, as so many said, a looming threat of disastrous inflation, and it might be that the administration could not cope with it, without the passage of H. R. 3871, a bill to amend the Defense Production Act of 1950, and for other purposes.

There might be desperate pleas for action from Defense Mobilizer Wilson, his gesturing fingers nervously twining and untwining on television screens in every sitting room in the country. There might be a lot of things. But the House was having none of the hysteria. It was going to go easy on this business of economic controls.

And so last week, which had been billed as a period of great decision for America, turned out to be nothing of the kind. The question at issue was a vital one, and a big one. Yet, in effect, the House had only to say whether curbs on prices, wages, rents, consumer credit and materials are necessary at this stage in the battle against world communism and domestic inflation. It has not said anything decisive yet, either way.

Hard as the debate has been to follow, what was going on in the lower Chamber last week was not shadow boxing. Both sides were in grim earnest. There has been no friendly give-and-take in the exchanges. Neither has there been any of the extreme name-calling that, in the past, has gone along with angry outbursts in many a debate on many a less important and controversial issue.

For behind all the politics, there was at issue a question which both sides knew to be debatable, a question on which sincere convictions may clash: Whether a democratic Nation, even in a period of emergency, however doubtful the prospect of genuine peace, should apply to itself the kind of economic tourniquets requested by the President.

TRADING TALK FOR TIME

This week begins with the legislators still trading talk for time. They will continue to pore over scores of proposed amendments, many of them reflecting other purposes from those specifically listed in the bill.

The situation is simply this: Opponents of control authority, a coalition of Republicans and southern Democrats, already have shown enough strength to wallop any of the antinflationary powers sought by the President—including some he got last fall without asking. Several important provisions of the big bill already have been knocked down. Appeals or warnings from outside the congressional ring have had next to no effect. The antiadministration forces have been in a position since Tuesday to pass precisely the control bill they want—or none at all.

And yet they have seemed in no hurry to wind up the fight. They moved slowly in aiming a body blow at the prime target of price roll-backs. They are weaving cautiously in weighing the advantages or disadvantages of the several courses open to those in the driver's seat. Should they knock out the entire law? Or perhaps just soften

up the bill, so that it may still stand above the weakened measure by the Senate 2 weeks ago? Or should they simply come out with a bill battered beyond recognition except for a technically existing title?

Neither side has been in a hurry to take the bull by the horns. Why?

TO HIM WHO WAITS

Speaker RAYBURN, who usually has a pretty fair idea what he is talking about came up with what probably is the shortest and soundest answer to this question. Each side, he said, apparently thinks time is on its side.

In this explanation, Mr. RAYBURN might merely have been proceeding on the assumption that there is some truth to what each side is saying about the other's motives.

The Republicans, that is, say administration Democrats are looking longingly, but in vain, for the postman and the telegraph messenger to haul in huge stacks of demands from outraged constituents demanding that their Congressmen vote for firm authority to hold the price line.

Administration members, on the other hand, say Republicans and southern Democrats bank on a Korean truce that would wipe out whatever demand still exists for strong economic controls.

The Democrats also say the Republicans plan a slow-down that will prevent any sort of Senate-House conference bill from reaching the White House until late this month. The point here is that the Defense Production Act which was to have expired June 30, got a last-minute reprieve until July 31, with prohibitions on price roll-backs during that period.

A take-it-or-leave-it bill presumably would present President Truman with the unpleasant choice of signing a bill of which he disapproves or vetoing it and leaving the country without any controls law or defense production authority.

Basically, the contention of the antiadministration coalition is that Mr. Truman really is after more power, not just some temporary economic controls. The basic contention of the administration is that the people need and want to have their economic life controlled in this period of emergency.

HOW DOES JOHN FEEL?

The House of Representatives, theoretically at least, is the legislative branch where Members are closest to the people. Congressmen run for reelection every 2 years. It may be assumed they are not deliberately unresponsive to what they believe to be the wishes of their constituents. Back of the varied moods, arguments, actions, and inactions of the 435 House Members last week, there were a variety of theories about the reaction of John Q. Public to the problem of economic controls.

Here are some of them:

1. John is apathetic about the whole matter. For all the public clamor, he hasn't really been hurt by inflation so far, and he isn't convinced that the worst necessarily is yet to come. He may talk a lot about how high prices are, and how something ought to be done about it—but he's actually rather relieved when nothing is done about it. He isn't prepared, in other words, to buckle down to business for the long, serious pull.

2. John is hopelessly confused about the whole question of the need for controls. Day after day, from left and right, he is assailed by expert assurances that the country is going to run on the rocks unless controls are instituted—and equally expert assurances that nothing can do it more harm than the establishment or continuance of controls. He is unable to follow the technicalities of the argument. He does not even know whether those controls the administration al-

ready has have been handled effectively so far.

3. John hasn't had a real, across-the-counter chance to see that, despite the still-high prices of many items, the upward price swing of many other items has been checked by present controls.

4. John is fed up with controls. He is constitutionally allergic to them, and as long as his leaders give him any choice in the matter he would rather take his chances on a free-wheeling approach to the Nation's economic problems.

5. John really dreads the day when price ceilings may be removed in an atmosphere of increasing cutbacks in civilian goods as defense production speeds ahead. He assumes—often wrongly—that most Congressmen pay attention to everybody except the "unorganized consumer."

If the House only knew which one of these is a picture of the real John, it presumably would have no difficulty in disposing of the controls bill with dispatch. Meanwhile, however, one thing remains perfectly clear. No one person, event, hope, motive, fear, political consideration, or economic theory is to blame for the legislators' apparent inability, displayed last week, to come to grips with the Nation's economic problems.

A great many factors, rather, all rolled together, have been enough to discourage the House Members from staying up until 4 o'clock some morning, as the Senate did, to whip through a bill. Those factors add up to a feeling of uncertainty on the Hill—a feeling, perhaps, that this is a decision which can look sweet in the making and turn sour overnight. The chances are too great for comfort that today's verdict might be snapped back at the politicians by some sudden turn in the course of human, domestic, or international events.

There could be not the slightest doubt that the House Members, even while they frittered away the hours, knew they were engaged in a debate likely, in its outcome, to influence the course of American history for some time to come. It could not be said they showed signs of not caring about the business in hand.

EVERYBODY'S IN THE ACT

At the beginning of every day's session last week no fewer than 375 and sometimes as many as 395 of the Members answered the opening quorum call. On only one important amendment did the total vote fall below 300. And as for 5-minute speeches, they must have set something of a record.

Administration forces won a limited and short-lived victory in a skirmish last Monday. Representative Wolcott, Republican, of Michigan, urged unsuccessfully that direct controls not be applied unless the Federal Reserve Board and the Secretary of the Treasury used "traditional, orthodox methods" such as raising discount rates, increasing bank reserves, and stopping Government buying to support Government bond markets.

Democrats jumped on the proposal by citing everything from history to horse meat. One Member predicted that if the Wolcott amendment were adopted, this Congress would become known to posterity as "the Congress that put the old gray mare on the family dinner table."

The ease with which Democratic lines turned back the opening-day tide brought premature predictions by some leaders that the principle of direct controls had been saved.

On Tuesday, however, the coalition of Republicans and Democrats at the southern end of the Capitol went into action. King Canute himself, had he been present and duly recorded, could not have stopped the tide. The sight of southern Democrats and farm-State Members streaming up the center aisle to be counted with the Republicans must haunt the week-end dreams of those

inclined to believe that the administration eventually will wind up with the sort of controls authority it wants.

In a fine display of pertinency, the coalition put across an amendment barring until June 30, 1953, foreign imports of fats, oils, butter, cheese and dairy products, and peanuts and rice where such imports would compete unduly with domestic production. It also pushed through an amendment banning restrictions on the quantity of livestock that may be slaughtered.

On Wednesday the coalition was obviously licking its uncontrolled chops, and the blow seemed ready to fall at any moment. But suddenly the debate swung to a sectional issue, arousing another form of coalition. Republicans and northern Democrats beat down a proposal to give the President (who hadn't asked for it) permission to disperse new Government-financed defense plants in nonindustrial areas.

WAITING FOR THE WORST

Administration Democrats, still remembering Tuesday's pounding, hung on for dear life awaiting the worst. A no-compromise decree came from Representative COOLEY, Democratic chairman of the Agriculture Committee and a main promoter of the thumbs-down policy on roll-backs on farm products in particular and other commodities in general.

On Thursday the roof almost fell in again on the administration. The only visible relief was that the price-ceiling amendments had not yet been introduced—and that votes limiting the President's authority were by somewhat narrower margins than the one that had banned livestock-slaughtering quotas. Those amendments would take away the authority of the President to acquire and operate defense plants and to pay subsidies on farm products.

Friday the 13 was as unlucky as ever for administration hopes. Banking Committee Chairman SPENCE, venerable Democratic Kentucky lawyer, who looks like a banker, and Representative MULTER, New York, Democrat, whose round-up effort for beef price roll-backs earned him the nickname "Brooklyn Cowboy," lost again. The House adopted an amendment to deny the President authority to create new Government corporations.

The fog lifted long enough to disclose that the House has almost reached the bill's price stabilization sections. That could open the way for action beginning tomorrow on proposed crucial changes to ban roll-backs on food and farm prices, nullify previous roll-back orders, and prohibit future roll-backs on industrial prices.

Speaker RAYBURN forecast a final vote by late Wednesday. He didn't say positively.

President Truman said he had done all he could to get real a controls bill through; that Congress would have to take the responsibility from here on in. Representative TABER, of New York, a GOP fiscal spokesman, retorted: "Until the President realizes he has responsibilities, there will be no controls bill."

So it went. Meanwhile, with voters watching on the sidelines, both sides clearly are mindful of the risks they are running.

The Republicans and their allies risk scuttling the controls bill and then having the economic situation grow worse. Because of their strength, their risk seems at the moment to be the greater of the two. But the Democratic faithfuls run their own risk—that of pushing for controls against a possibly antagonistic public opinion which, in 1952, might side with a do-nothing Eighty-second Congress, instead of with a whistle-stopping President.

The key man, as always, was the imponderable voter, John Q.—for question mark—himself. What did he want? He might know. But he was not talking loud enough for the men on the Hill to hear.

Injustices in Reserve Call-Ups

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Star of July 15, 1951:

HOUSE UNIT CONDEMNS INJUSTICES IN RESERVE CALL-UPS SINCE KOREA—REPORT SAYS GRANDFATHERS WERE TAKEN IN RUSH, ASKS RECTIFICATION OF ERRORS

A special House Armed Services Subcommittee yesterday lambasted the Armed Forces for injustices it found in the call-up of reserves since Korea.

It said even grandfathers were called to arms in a hasty rush that results in broken homes, lost business, resentment, and bitterness.

In a sharply worded report, the subcommittee said partial rectification can be made by releasing as early as possible all reservists now on active duty involuntarily.

This subcommittee, headed by Representative BROOKS, Democrat of Louisiana, has been investigating the entire reserve program preliminary to hearings on a new proposed reserve law.

WANTS ERROR CORRECTED

Mr. BROOKS said a new reserve program must be set up and managed so that what he called the recent errors and injustices will not again be visited on American citizens.

In the rush to build up strength to meet the Communist aggression, the committee said in its report, grandfathers in the inactive reserve were called up while youngsters in the Organized Reserve were left at home.

"Enlisted men with multiple dependents—one with 10 children—were involuntarily ordered to duty while single men remained behind because of their membership in an organized unit.

"Reservists were picked out of college and ordered to report for active duty in a matter of days while their draft-protected non-veteran schoolmates continued to safely lounge on the campus."

SHOULDN'T HAVE BEEN CALLED

Many inactive reservists, employed in essential industries, were called up when they should have been kept in their jobs, the report continued.

The subcommittee said it was understandable that the Armed Forces were in a hurry. There was a pressing need for individual men and officers to fill out regular units.

As a result many inactive reservists were called up before the Organized Reserve organization, such as the National Guard, although there had been a general belief that the Organized Reserve would be called first and the Inactive Reserve only as a last resort.

The report pointed out that as of April 1 there was a total of 650,212 enlisted men. The number of Reserves now on duty represents 24 percent of the total Reserve strength.

MUST DEPEND ON REPLACEMENTS

The subcommittee, while urging rapid release of men called up against their will, said it recognized the discharge must depend on replacements.

Recently all the military services have announced release plans for some reservists and

the subcommittee said it intended to watch the program closely.

"The military services should treat these schedules as contracts and every effort should be made to keep the terms of the proposed release," the report said.

The subcommittee found much fault with the services for not keeping up-to-date records on Reserves to show whether a man, when called, could serve without undue hardship.

More fundamental, it said, was failure of the military leaders to provide a better way to deal with the contingency of a partial mobilization such as that undertaken when the Korean conflict came.

No Federal Ban on Gas Space Heating Is Necessary

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. BOW. Mr. Speaker, the public desire and need for natural gas—the only fuel that has reduced living costs in the American home—is now being threatened by a very broad and Nationwide arbitrary order proposed by the Petroleum Administration for Defense for issuance within the next few days. Provision is made in the proposed order for exemptions, if initiated by utilities, where gas supplies are adequate. However, it seems obvious that in many such areas the utility concerned will not apply for exemption because of practical considerations even though the gas supply in that area is adequate.

Such drastic action would seriously affect an estimated 50,000 dealers and installers of gas space equipment and approximately 300,000 workers for dealers and manufacturers. The financial losses inherent in such an action are estimated conservatively to exceed \$100,000,000, involving not only industrial organizations but banks as well.

The problem is not the supply of gas reserves, but a problem of gas usage and distribution.

Obviously the real answer to the gas-supply problem for certain areas is the availability of additional steel pipe for transmission lines. But just as obviously, this problem cannot be solved by any order of the Interior Department.

The matter of distribution and restriction of gas usage has been a matter handled by State regulatory bodies, coordinating their activities with the Federal Power Commission.

Why should this satisfactory arrangement be changed and the Federal Government be allowed to usurp State powers?

Is the real purpose just regulation as such?

When the Federal Power Commission has authorized gas-distribution lines in the interest of the public, and gas companies have established rates and publicized their program, and when the pub-

lic, including the manufacturers, distributors, and dealers in gas-heating equipment have acted on this condition, it seems inconceivable that a temporary agency such as the PAD should be allowed to overrule experienced and informed permanent organizations dealing with the industry.

Recently Tennessee Valley Authority officials testified before the Federal Power Commission that 90,000,000 cubic feet of natural gas per day would be needed from Tennessee Gas Transmission Corp. for use at a new steam-generating plant at Johnsville, Tenn.

TVA is in the heart of the waterpower and coal areas. Is it in the public interest to consume tremendous quantities of natural gas—one of this country's most valuable natural resources—for such purposes when other fuels can be utilized more efficiently for this purpose than they can be for heating a great number of individual homes where natural gas is the logical fuel?

Why should the basic public-utility concept of serving more people who desire such service at lower cost be sacrificed without any corresponding public benefit?

Why should the relatively small amounts of gas used for actual heat-treating and process work in connection with defense production be used as an excuse for such an order?

It has been publicly announced that the principal reason for the proposed order is that one gas-distribution system is going to be short on gas this winter. No one has yet explained why this condition exists.

If this company's lines were authorized by the Federal Power Commission and the gas was properly distributed by the distributing company, why does this condition exist?

Who is really at fault?

Why should the whole country be made to suffer for one such case?

As recently stated in *Business Week*, "What's eating Interior? There was plenty of speculation this week as to why Interior was playing so rough, but no solid answers. Some thought that the long and bitter jurisdictional disputes between FPC and Interior may be involved."

In view of these facts is a Federal ban on gas space heating by the PAD really necessary?

Relief Chiseling

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. BROWNSON. Mr. Speaker, since the Senate-House conferees have eliminated the Jenner amendment from the original conferees report on the Labor and Federal Security Administration appropriations bill, it seems their attention should be called to the fact that welfare chiseling is not a problem alone in Indi-

ana. Unfortunately the effects of this relief chiseling are depriving worthy recipients of a fair payment based on today's cost of living. That this abuse does exist elsewhere than Indiana is suggested by the letter from Mr. Jenkin Lloyd Jones, editor of the *Tulsa Tribune*, which under unanimous consent I include in the CONGRESSIONAL RECORD with the editorial in the *Tulsa Tribune* to which he refers:

THE TULSA TRIBUNE,
Tulsa, Okla., July 11, 1951

HON. CHARLES B. BROWNSON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BROWNSON: I have read with interest an account of your efforts to get a bill that would repeal a Federal restriction on the use or disclosure of information about persons receiving relief benefits. You are indeed right in your stand, and if this battle is not won we will be engulfed with an army of relief racketeers. I am enclosing an editorial that I wrote for our today's issue before I read the story concerning you.

We conducted an exposé of aid to dependent children racketeers in *Tulsa* last winter; and the reporter who did the job, Paul Molloy, has had an article on this subject accepted by the *Saturday Evening Post*. You might ask your staff to keep an eye out for it when it appears within the next 6 weeks, for I think it would give you some valuable ammunition.

Very truly yours,

JENKIN LLOYD JONES,
Editor.

HIDING THE RACKETEERS

Speakers at a convention of social workers in Oklahoma City this week attacked newspapers, like the *Tribune*, that have exposed racketeers among those who receive Federal aid to dependent children.

The *Tribune*, in a survey of conditions in *Tulsa* last spring, brought to light dozens of cases of women, some of them prostitutes, who were making a good thing of bringing illegitimate children into the world to be supported by the taxpayers. Our reporter found repeated cases of children being brought up in squalid, riotous, and immoral surroundings. Case workers were doing nothing about these conditions. And the list of those receiving aid was so well hidden the *Tribune* had to get it from independent sources.

Mrs. Val M. Keating, regional representative of the dependent children aid program, denied that the fund encourages illegitimacy, divorce, desertion, and continued dependency on public funds. Presumably she means that case workers will not permit such conditions to exist. How does she explain what we found in *Tulsa*?

Carl Schmidt, executive secretary of the Illinois Public Aid Commission, attacked the growing move to make public the names of those who are receiving relief funds. He denied it would remove chiselers, but said it would hurt the truly needy most. And Miss Loula Dunn, director of the American Public Welfare Association, said, "Publication could be used for pressure purposes, for political campaigns, and other purposes."

We're getting a little tired of these arguments that tell us we must put our trust in the bureaucrats. We are told we must let them hide the names of those receiving our funds on the theory that the people getting our money have a right to conceal this fact from us, and that if we knew the truth they would be unduly and cruelly embarrassed. What balderdash. Suppose the bureaucrats are inefficient or crooked. Under this system of secrecy who sees to it that families which could care for their own are not dipping into the public till? Other bureaucrats

We can check up on the governor or the mayor, or the fire chief. These people have to tell us what they did with our money. But when it comes to relief funds we are supposed to trust implicitly in the welfare workers. Has there ever been a case where public servants were able to hide the disposition of their funds that a general condition of inefficiency or corruption didn't take over?

And this business about protecting the aid receivers from exploitation by the politicians—that's the biggest laugh. The public officeholders can get at these rolls, although the taxpayers can't. The politicians can make neat little lists of grateful aid-getters. With proper connections they can get friends and supporters on the rolls. The bigger the rolls the more people will be beholden to the politician and the more case workers can be hired to supervise the load. But the taxpayers must never know if the drunken harridan down the street is getting public assistance so her ragged illegitimate children can enjoy their homelife, or if the family with the two television sets, a deepfreeze and a Buick are riding on the gravy train.

Until we can reestablish the principle in this country that no person who is unwilling to be known has a right to put his hand in the public treasury our relief load will grow and abuses will multiply. It is a fundamental principle, and one that must be won over the combined opposition of the politicians, the social workers, and the racketeers.

MacArthur, the People's Man

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial that appeared in *Collier's* magazine on June 30, 1951. It relates to General MacArthur and points out very clearly that the general has grown in stature and favor with the American people.

The editorial is as follows:

TAKE A CLEAR LOOK, THEN LISTEN

As a result of Mr. Truman's most controversial decision in his 6 years as President, Gen. Douglas MacArthur has finally emerged before his countrymen as a flesh-and-blood human being. From the start of the war with Japan until his return 2 months ago he had been a shadowy, frequently distorted, and almost legendary figure to most of us. He was a hero, a scapegoat, and a political football. He was quoted, misquoted, and tirelessly analyzed and interpreted by the press.

Perhaps circumstances made all this inevitable. But the general's home-coming, his speech before Congress, and his testimony in the senatorial hearings on foreign policy should have put the whole complicated matter in a better perspective. The extraordinary thing is that they did not. A great many Americans, including influential Government officials and influential writers, seem unwilling or unable to give up their preconceptions. MacArthur the man has been eclipsed by his own shadow.

What the general has said since his return makes it quite impossible for him to be all the things that he is credited with being. He has a policy, whether you agree with it or

not, and he stated it clearly. As a witness before the Senate committees he was composed, lucid, and readily articulate—at least that is the impression given by the bare transcript of the secret proceedings. His 3 days of testimony were a remarkable demonstration of physical and mental vigor in a man of 71. And at the end of those 3 days he had told the world unmistakably where he stood.

He spoke with legitimate authority on matters of which he has intimate knowledge, such as the Korean war and the Far East. But he carefully separated his expert conclusions from his layman's views on conditions in other areas where his knowledge is less direct and precise. He did not present himself as omniscient or omnipotent, as some of his adulators would make him seem. Nor did he do or say anything to justify the New York Post's intemperate editorial description of him as "a desperate, demagogic Republican politician fighting a dirty political war." He gave, it seems to us, as clear-cut and logical a presentation of his side of the vastly complex argument as was possible. Yet the emotion-charged prejudices on both sides were such that the reactions to his testimony resembled nothing so much as the fable of the blind men who, after a limited manual examination of the same elephant, gave their highly divergent descriptions of the beast.

We do not, of course, quarrel with anyone's right to criticize General MacArthur honestly, or honestly to defend him—though we suspect that in the end he will be more hurt by some of his friends than by his enemies. We did not question—nor did General MacArthur—Mr. Truman's right to relieve him of his United Nations command and his administrative post in Japan. We do question his judgment.

Secretary Marshall and General Bradley had built up a detailed and elaborate case for Mr. Truman's judgment in their Senate committee testimony. But Mr. Truman's own later statements indicated that, so far as he was concerned, the main points in the Marshall-Bradley argument were afterthoughts. What first gave him the idea of dismissing General MacArthur, he said, was the general's public statement opposing the sunder of Formosa to the Chinese Reds. (The very same view for which Mr. Truman wanted to dismiss the general is now, of course, administration policy.) And as for the President's methods of dismissal, his summary firing of the commander, in view of General MacArthur's distinguished record, was deplorably rude.

But the general's disagreement with the administration is past history. Obviously the all-important thing now is the underlying difference in policy. For that reason it is necessary for the public and the press to receive the general's views with the same candor that he showed in presenting them, and to make a calm and intelligent attempt to understand his reasons.

This department at least has read the general's statements calmly. It has tried to read them intelligently. And it seems to us that the disagreement boils down to this: The administration believes that the U. N.'s exertion of any greater force in Korea than is being used at present would provoke the Soviet Union into starting a world war; General MacArthur believes that the U. N.'s failure to utilize fully the strength it has at hand is a sign of weakness which plays into Soviet hands and encourages the Reds to further depredations. No one outside the Communist hierarchy knows which is the correct estimate.

We do not say that the general hasn't made mistakes. There may be ambiguities in his position—though fewer, we feel, than in the administration's position. And we also feel that the administration has made

and encouraged charges against the general that are not only unfair but untrue.

General MacArthur has been damned as a warmonger for wanting to use some of Chiang Kai-shek's troops in the Korean war, for wanting to bomb the enemy's bases in Manchuria, and for wanting to blockade China. But now increased aid to Chiang, possible bombing of Manchurian bases, and banning of war-usable exports to Red China are explicit in our Government's policy. Will these actions be any more or less provocative of war because General MacArthur will have no hand in planning them or carrying them out?

This magazine believes that it is more than coincidence that moves suggested by the dismissed general have now been made. It believes that in spite of the hampering atmosphere of emotion, in spite of the powerful effort by the administration and its army of press agents to discredit him, he is having a healthy influence on American foreign policy. Douglas MacArthur has shown himself to be a remarkably honest and intelligent person, and a surprisingly simple and unaffected human being. He has something of value to say to America. It is time that his countrymen forgot MacArthur the legend, took note of MacArthur the man, and listened.

The Challenge We Face

EXTENSION OF REMARKS

OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mrs. HARDEN. Mr. Speaker, under unanimous consent to extend my own remarks in the RECORD, I include therein the text of an Independence Day address, *The Challenge We Face*, delivered before an Independence Day celebration at Veedersburg, Ind., July 4, 1951:

THE CHALLENGE WE FACE

Friends, we gather here today, here in the heart of the greatest Nation on earth to pay tribute to a hardy band of men who 175 years ago brought into being the American Declaration of Independence.

Today, of course, those men are gone, but the Declaration of Independence still stands, a shining beacon to oppressed peoples throughout the length and breadth of the world.

With you, my friends and neighbors, I should like to briefly discuss this afternoon the manner in which we have lived up to the principles set forth in the declaration which we honor each year at this time. I shall not do so in a partisan manner, for this is not the time for partisan talk.

I shall take as my text excerpts from the writing of Thomas Jefferson, father of the Declaration of Independence, and we shall then be able to judge, perhaps, whether we have lived up as a nation to the mighty principles to which Jefferson and his colleagues affixed their signatures 175 years ago.

Now, a century and three-quarters is no great span of time, as the life of nations is measured. Rome lasted 1,000 years. Athens, the first democracy, survived for five centuries. No; we are still a young Nation, as nations go, and the great American experiment initiated by Jefferson in 1776 is still, relatively speaking, a new experiment in self-government.

Yet, in these 175 years, history has recorded the growth of the physical America

from a community of some 3,000,000 persons to a great world power, the home of more than 150,000,000 people—the goal, we must realize, of hundreds of millions more of the world's peoples in less fortunate circumstances.

History has moved at a faster pace during the past two centuries than in previous times. At no known period has science advanced at such a rapid rate. The hardships of the Jefferson period are practically unknown in modern America, just as the luxuries we view so lightly today could hardly have been foreseen even by a mind so great as that of Thomas Jefferson.

Yet, while it may well have been impossible for Jefferson to have foreseen the marvels which science and technological progress would bring to the America of 1951, he did foresee the pitfalls we might be unable to avoid in our guardianship of the Declaration of Independence. For this what he said as he looked into the future 175 years ago.

"We are able to preserve our self-government if we will but think so."

He might well have added that we will preserve our self-government if we are sufficiently interested in doing so. But are we that interested?

As a Member of Congress, I am of course vitally interested in this question. But, I am likewise interested as an American citizen, just as each and every one of you in this audience is also interested.

The main weapon that you and I have in the ever-present battle to retain the freedoms awarded us by the Declaration of Independence is the right of the ballot box—the right to vote. Indeed, surveys taken by Dr. Elmo Roper indicate that the American people cherish the right to vote above all other freedoms.

Yet it is a shocking commentary on the zealotness with which we guard our independence that only 44 out of every 100 adult American citizens take the trouble to vote in our elections. Fifty-six Americans out of every 100 traditionally do not bother.

And what of our young people? How have we fared as parents and grandparents in imbuing them with the traditions of the Declaration of Independence? Possibly the answer may be found in the fact that of all American men and women between the ages of 21 and 34, only 4 out of every 10 have voted at least once during the past 4 years.

These, my friends, are startling figures, for they show as nothing else can show the dismaying lack of interest among our people in preserving the very freedoms which have made this land of ours the symbol of hope for a suffering world.

The cause in 1776 was freedom—not this or that freedom, not 4 or 50 separate fractions of freedom, but the essential, indivisible thing itself. Freedom, the freedom we gained in 1776, is not a divisible thing. It cannot be broken up into catch-all political phrases. It is a positive thing, this freedom of ours, and it is designed for positive uses.

The goals of 1776, independence and freedom, have become somewhat obscured in recent years. I doubt that Thomas Jefferson would find in the America of today the spirit which was abroad in the land 175 years ago.

Today too many of us are more interested in security than in freedom and the two are not interchangeable words. The true lover of freedom actually scorns security. He does not seek protection, he seeks only opportunity, the freedom to do as he pleases within the moral code which governs all of us.

This, my friends, this freedom seeker, was the American who made our land the greatest in all the world. This was the pioneer who opened up the West. He did not go west in search of security, not at all. Instead, he gave up security which he had at hand in the settled eastern section of

America because, in the true tradition of the Declaration of Independence, he sought more and ever more freedom and he turned to the unexploited western plains for a better area in which to find that freedom.

Jefferson said, and I quote:

"I would rather be exposed to the inconveniences attending too much liberty than to those attending too small a degree of it."

We should pause and study today the lessons in that brief quotation.

The authors of the Declaration of Independence hoped they were establishing here in the new world a community in which freedom would remain uppermost in the public mind for all time. But they realized with Jefferson that constant vigilance would be necessary if the freedoms would be preserved.

Writing in his commonplace book, Jefferson quoted an old Roman epigram: "The more laws, the worse the republic."

The Romans found from bitter experience the truth in that age-old epigram as they vainly endeavored to offset corruption at home by conquest abroad. The Roman Republic fell, my friends, in spite of numberless statutes designed to control prices, provide public employment, supply meal tickets, develop backward areas and, in general, provide both bread and circuses for everyone.

Then, when the Roman senate tried to call a halt by refusing to add more and more laws, it was denounced by power-drunk emperors as a "do nothing" body. Finally, the whole top-heavy imperial structure collapsed under pressure from barbarians who had no laws and no interest whatsoever in social security.

The guilt is not all on a single group of people. All of us have failed to a degree, and the extent of the degree is the measure of our shame.

Less than half our people, as I pointed out a few moments ago, are sufficiently interested in what is happening to American freedom to do anything about it. As a matter of fact, the figure is even less, for reputable analysts maintain only one out of four adult American citizens lists himself as being actively interested in politics, which is the science and art of government.

In 1776 Thomas Jefferson warned that no country can preserve its liberty if its rulers are not warned from time to time that the people preserve the spirit of resistance.

The spirit of resistance, I fear, does not flame very hot in the breasts of the America of today, for how else can we explain the missing 53,000,000 American citizens who failed to participate in the last presidential election.

We have come a long way since 1776. We have multiplied our population 50 times over. But have our problems basically changed? Has our goal changed with our physical growth with the passing of 175 years?

In 1776, the goal was freedom and independence.

Is it any different today? No, it is not. For America once again is engaged in that same struggle. Only the scene and the methods have shifted. The goal remains the same.

During the lifetime of most of us here in this auditorium two great wars have seared the world. Many of you in this audience were very close to those wars and I need not emphasize to you the horror, the suffering, the devastation and, in the end, the seeming futility of those tragic encounters.

Millions were killed, millions wounded. The whole world today still bears those scars, still hears the echoes of destruction.

We thought, you and I, that war had reached its peak in the dark days of 1917 and 1918. And we thought, too, that the First World War was a war to end all wars.

We believed that, you and I, and we prayed that our belief would be borne out. For we were fighting for freedom, just as the revolutionists had fought for freedom a century and three quarters ago.

Then came 1939 and the rumblings of war again were heard across the seas.

1940 and the phony war, and then, in early winter, 1941, we knew at last how wrong we were in believing that the war to end all wars had been concluded in 1918.

We found to our dismay that war, 1940 style, was far more horrible, far more devastating, and then, in the dying days of World War II, a new weapon of unbelievable horror was unleashed. We dropped the first atomic bomb.

Hiroshima, a city the size of Indianapolis, almost ceased to exist. Nagasaki was next and but for the surrender of the enemy there would have been more.

Thus ended the second war to end all wars. We are not well into the first decade of time following the termination of that war.

Are we also, my friends, in the first decade of preparation for the next world conflict?

America is today engaged in the greatest armament race of all time. Our ally of World War II is openly described as our opponent in the world war of the future.

The world has been divided into two parts, one American and free, the other Russian and slave.

The present situation we see described as a cold war. Yet, America has suffered nearly 150,000 casualties on the battlefields of Korea, 8,000 miles distant from this community.

The Korean conflict, so we are told by Mr. Truman, is a United Nations police action.

Yet thousands of American boys are dead, thousands are missing in action, and probably dead. Three hundred thousand more of our sons man the battle lines while the diplomats seek a means of ending this war, which is not a war.

How are we faring in this new challenge to our freedom, this new threat to our independence?

We handed China, with its 400,000,000 inhabitants, to Russian communism. Eastern Europe is in the hands of the Soviet.

Today we discuss peace for Korea, and we discuss that peace on Russian terms. In the Middle East, Iran is on fire.

Communist fifth-columns are at work throughout the world, and their successes outnumber their failures.

Our leaders tell us a war is still 2, 3, 5, 10, perhaps 20 years in the future. The estimates vary but there are few who tell us war is not coming soon.

The only disagreement is to the timing.

So we must be prepared. We must have atom bombs and hydrogen bombs, guided missiles and bacteria, napalm bombs and radar nets, and, of course, planes and ships, tanks and guns, the backbone of military power.

You do not have to go far distant from Veedersburg, Ind., to see what is going on with your own eyes. Witness the smoke belching from the defense plants in Indianapolis. Drive down to Vermillion County where 3,500 laborers are completing a \$50,000,000 plant for the Atomic Energy Commission. No; you need not go far. The signs of war and preparation for war are everywhere.

Is a third world war inevitable? Must it come? Is Korea just the first spark which will set off world holocaust?

I do not think so.

I cannot bring myself to believe that world conflict is inevitable, that it must, of necessity, come in our time or any other time. I think there must be a way out.

I say to you that there has to be a way out, for this tired old world, battered and bruised from the effects of the last two

struggles, cannot stand another and infinitely more horrible disaster.

This is the issue which we face as freedom fighters on Independence Day, 1951. We must prevent world war III.

Not at the cost of our freedom, no, for we value freedom above all else.

But, my friends, I do not see how we could possibly wage a world-wide war—even though we should win it as I believe we would—and preserve our freedom in the winning.

So we must win the battle for peace, for in so doing we can also preserve for ourselves the freedoms handed down to us in the Declaration of Independence 175 years ago.

We have some weapons at hand. The cause of world peace is not a hopeless one.

First, we must bring the conflict in Korea to a close, and on our own terms, not on the terms laid down by Jacob Malik or Joseph Stalin.

This is essential, for we must snuff out the spark of world war III before the fire gets out of control.

Second, we must preserve our national solvency by getting our financial affairs in order, and we cannot accomplish this if we do not cut out the red-ink spending in Washington.

Third, we must retain our free enterprise form of Government and stop the socialistic experimentation. We need watch our step. Freedom lightly held is easily lost.

Remember, we won World Wars I and II because, as a free Nation, we were economically much stronger than the controlled economies of our opponents. The production power of American free enterprise is the greatest single deterrent to Russian plans for conquest. Let us keep it so.

The fourth and final necessity, to me at least, is that we have a spiritual reawakening in this Nation.

We need to reaffirm our christianity. We need to get closer to God. For if the world ever needed God and His teachings, we need them now.

These, then, are the ingredients of a real American program for winning the peace and preserving our freedom.

Please let us pray:

Our Heavenly Father, we humbly beseech Thy guidance on this Independence Day, 1951. Give us the courage and the strength which you bestowed upon our heroic forebears 175 years ago, that we may preserve for our children and all the children of our future the way of life which they established for us. And give us, too, the wisdom we so sorely need to settle our problems without recourse to war and carnage. And above all, give to us renewed appreciation of Thy holy teachings, that we may be better prepared to meet and solve those problems in the days ahead. We ask these things in the Name of our Lord, Christ Jesus. Amen.

Resolution of Jimmie Harris Post, VFW

EXTENSION OF REMARKS OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. RAINS. Mr. Speaker, a resolution has been adopted by Jimmie Harris Post, No. 6837, Veterans of Foreign Wars, Boaz, Ala., which post was named for one of the Korean casualties who received many honors in giving his life for his country.

This resolution will be of interest to the Members of Congress, in view of the fine attitude of this organization, and I recommend it for your reading:

Our Nation is facing the greatest crisis in its history. Never before has the future seemed more uncertain; never before have the people been more confused in their plans and proposals to meet the critical problems that confront us. Never before have we experienced such an anomaly in our foreign relations. We have never before been called upon to fight an undeclared war on foreign soil.

While the conditions we face are unprecedented, the issues before us have never been clarified—at least not to the satisfaction of those whose lives and destinies are most affected by them.

It is therefore only natural in such unparalleled circumstances for men to be honestly divided in their opinions. While such a diversity of opinions and such conflicting philosophies may, in normal times, be only the growing pains of healthy progress in a vigorous democracy, they could easily prove to be the means of our undoing in times of great tensions and stress. Violent clashes of political opinion in these disturbing and unprecedented times can only result in lending aid and comfort to the enemies of our free way of life; Therefore, be it

Resolved, That the Jimmie Harris Post of the Veterans of Foreign Wars call upon all patriotic Americans to rally to the support of our national administration at this time and lend such sympathy and encouragement to President Truman as is in our power to do, as individuals and as groups; be it further

Resolved, That the national organization of Veterans of Foreign Wars be requested to draft a similar resolution and give it such implementation as its officers deem wise or feasible.

T. G. THOMPSON,
Commander.

Price-Control Power Only Part of Demands

EXTENSION OF REMARKS OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1951

Mr. SHAFER. Mr. Speaker, despite the lengthy, well-publicized, and still continuing debate in Congress and in various public forums over administration proposals for extension and amendment of the Defense Production Act, I question whether there is, even now, a full understanding of the scope and character of the powers being sought by the President.

I suspect that there is still a widely prevailing impression that the proposed legislation is designed primarily to continue the authority to place ceilings on prices and wages. That is part of the program, of course. As I have frequently pointed out, even this phase of the proposals is open to grave criticism, on at least two counts: It represents an attack on the symptoms of inflation, rather than on the causes. Furthermore, it involves the very dubious assumption that Government can set fair prices, in proper relationship to each other, for some

9,000,000 different price items in the Nation's economy, and that a governmental bureau can thereafter make adjustments in those prices as rapidly as overall economic changes occur.

But this is only one part of the program. Actually it represents only a minor part of the powers sought by the President. Let us look at some of the other features of the legislation for which Mr. Truman has asked.

There is the matter of the roll-back authority. A roll-back is a price-control order requiring that existing prices for a given article or product be reduced to a lower price of some past date. It was a power granted very sparingly and used in only a few instances under World War II price controls.

The roll-back which is currently causing the most controversy, of course, is on the price cattle raisers may charge packers. It should be noted, in this connection, that if the prices on cattle had been included in the general price freeze imposed last January, there wouldn't have been any excuse for a roll-back 4 months later. So a roll-back is itself a cover-up for a bureaucratic blunder.

The important point is that a roll-back in effect is an attempt to unscramble scrambled eggs. Serious injustices, to the point of driving a man out of business, are bound to result if you single out one commodity or product for a roll-back and do not, or cannot, also roll back the costs which go to make up the price of that commodity or product.

Thus, in the case of the cattlemen, they must either sell their cattle at a loss as a result of the price roll-back or they must sell them earlier than they normally would, in order to avoid the cumulative cost of continuing to feed the stock. The latter action, of course, cuts the amount of beef available to the consumer.

Added to this is the admission by both Agriculture Secretary Brannan and Economic Stabilizer Johnston that the meat packers, instead of the consuming public, will be the ones to benefit from the roll-back on cattle prices. It is estimated that the roll-back order "will dip into the cattlemen's pockets to the tune of \$75,000,000 to hand over to the packers." That, obviously, amounts to confiscation.

But entirely apart from the price control and roll-back powers sought by the President, the proposed legislation includes the power of the President to grant subsidies—something almost inevitable if there are to be roll-backs. That means a vast "pork barrel" opportunity for the administration. Remember Mr. Truman's 1950 campaign comment that farmers—beneficiaries of Federal subsidies—who did not vote for the administration "ought to have their heads examined"?

The proposed legislation also would give the President power to license every business in the United States—and the power to revoke such licenses. That would mean a complete, life-and-death power over all American business.

The proposed legislation also would give the President authority to construct Government-owned factories for making defense goods and power to acquire any

facility he felt necessary to national defense. That is power to nationalize American industry and business by Presidential order. That is socialism of an even more absolute and virulent type than exists in England.

Let there be no mistake about it. Nothing less than survival of our economic system, and with it our basic political liberties, is at stake in the proposals currently before Congress.

The Public Be Damned

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the Brooklyn Eagle of Sunday, July 15, 1951:

CONGRESS ABANDONS PUBLIC INTEREST BY
ABJECT SURRENDER TO LOBBIES

Congress, through its subservience to powerful pressure groups, is laying the groundwork for severe economic distress and industrial conflict. There seems to be little possibility that the development of these conditions can be avoided.

At every step of the way, President Truman's efforts to establish effective economic controls are being rebuffed. Meat-price roll-backs, which Mr. DiSalle considers as basic to the control of food prices, are accepted now as a dead letter. The farm and the cattle lobbies do not want them.

The apparent helplessness of the President with respect to this issue has been emphasized anew by House denial of the requested authority to build and operate defense plants and to use subsidies to hold down food prices. Congress, in fact, is disposed to give President Truman little or nothing with which to carry on the fight against a rampant inflation.

It is true that there are some Members of Congress who are aware of the dangers of the current trend. They are speaking and voting to bring it under control. But the dominant power is held by the same coalition of forces that is so consistently aligned against legislation designed in the public interest.

In the end, of course, there will be some sort of control law. But it will be a sham, without practical value, drawn with a view to the protection of certain interests. Meanwhile living costs will soar, as also will the costs of the armaments program.

Intimations of the industrial conflict which seems to be a logical consequence of the absence of adequate controls are to be found in the warning of James B. Carey, secretary-treasurer of the CIO, that unions will not and cannot submit to wage ceilings without effective price controls.

Such an attitude was to be anticipated. Every consumer is aware of the truth of Economic Stabilizer Johnston's statement that the dollar is not worth much more now than half a dollar in terms of its 1939 value. Congress, too, should have knowledge of this decline, also a knowledge of the Marxist theory about the inevitable depression which will smash America.

But Congress, as the record shows, has other fish to fry and proceeds faithfully to serve the farm bloc, the cattle industry, the bankers, and other groups whose profits are at stake. It is still possible that the fight

for effective economic controls can be won. It cannot be won, however, unless the people at home, the masters of the ballot box, speak up in great numbers and in a loud voice.

Dan A. Kimball, an Able Secretary of the Navy

EXTENSION OF REMARKS OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks, I include an article from the United States News and World Report concerning Dan A. Kimball, new Secretary of the Navy.

It pleased me to hear the announcement that Dan A. Kimball had been appointed Secretary of the Navy. He served an apprenticeship for the position as Assistant Secretary and Under Secretary. Those tours of duty proved conclusively that he was well qualified for the job of Secretary and on any basis of merit was entitled to it.

I am proud of the fact that Mr. Kimball and I are fellow Californians and fellow aviators of the First World War. But I am more proud of the fact that Mr. Kimball has shown in all his conduct in connection with the Navy that he is a fine executive. In all his conduct with the Navy he has not shown a single tinge of partisanship. He has handled his job with skill and understanding. He understands men and knows how to get along with his associates. That not only brings loyalty but excellent work from his subordinates. The Navy is lucky to have a man of Mr. Kimball's business attainments. He was eminently successful as a businessman and has carried those talents into his work in the Navy Department. He has no favors to dispense and no axes to grind. All he wants to do is to make the Navy the best instrument of defense that the money and men put at his disposition can build. Mr. Kimball does not know I am going to say these things and I hope he will not consider me presumptuous for doing so, as I mean every word I say.

The article follows:

DEFENSE BUYER

Dan A. Kimball has been named head of the revitalized United States Navy. He brings to the post a number of qualifications. He is a businessman of many years' experience. He is an aviator in his own right. He has been a leading figure in the development of rockets and jet engines. And he has been in the Navy Department since February 1949, as assistant secretary and under secretary.

A tremendous mass of detail wells up to the desk of a service secretary—papers to be signed, letters to be written, a multitude of personnel matters. Mr. Kimball, however, plans to devote the greatest part of his time to procurement questions.

Preparations and plans for possible fighting, he says, are the job of Admiral Forrest P. Sherman, Chief of Naval Operations. But many requests and recommendations, particularly about equipment, come from the

military and must be screened at upper levels. All construction projects must have the Secretary's approval.

A recurrent problem is whether to delay construction of a ship or a plane, while new devices for it are perfected. But a time comes, Mr. Kimball believes, to freeze prototypes and get on with production. This question arose several times in connection with the Navy's new supercarrier which now is about to be built.

The Secretary deplors what he sees as a tendency among military men to buy equipment in quantities and store it away. The answer to preparedness, he says, lies not in building warehouses, but in building industrial capacity and having it ready to turn out military equipment when it is needed.

Mr. Kimball, 55, a comfortable, unexcitable giant of a man, is that occasional paradox, an industrialist who also is a good Democrat, supported Franklin D. Roosevelt throughout and believed all along that President Truman would win the election of 1948.

He was born in St. Louis but spent much of his adult life in California. In World War I, he was an Army Air Corps aviator and trained with the famous James H. Doolittle. They remain close friends. Until he entered the Navy Department, Mr. Kimball piloted his own private plane.

Shortly after World War I, he went to work for the General Tire & Rubber Co., of Akron, Ohio, and rose rapidly. For a long period, Mr. Kimball was in charge of the firm's business in 11 Western States. In 1944, the company made him executive head of its subsidiary, the Aerojet Engineering Corp. It was in this capacity that he learned about guided missiles and jet engines.

Mr. Kimball is companionable, a storyteller with a cigar usually in a corner of his mouth. He makes friends readily and keeps track of them. He has gotten on well with congressional committees, before which he makes frequent appearances.

Mr. Kimball also is on close terms with the other service Secretaries, Frank C. Pace, Jr., of the Army, and Thomas K. Finletter of the Air Force. They have an organization known as the Joint Secretaries which meets once or twice a week.

Like most men connected with the military departments, Mr. Kimball is worried lest a Korean truce be followed by a letdown in American military preparations. He holds to the view that peace is best assured by keeping the country strong. Preparedness costs many dollars, but, Mr. Kimball says, if we can stay out of war, that would be the cheapest investment we could have.

The Kremlin Retools Its Foreign Policy

EXTENSION OF REMARKS OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. YORTY. Mr. Speaker, the following article by Mr. Edward Crankshaw, the well-known English historian, appeared in yesterday's New York Times magazine. The excellent article is worthy of widespread attention.

THE KREMLIN RETOOLS ITS FOREIGN POLICY—
THE COLD WAR MAY BE RELAXED, BUT THE
SOVIET IS NOT ABANDONING BASIC HOSTILITY
TO THE WEST

(By Edward Crankshaw)

The Kremlin's move for peace in Korea is a sign that one phase of Soviet foreign policy is coming to an end. And this results not

from any change of heart—it has been forced upon the Kremlin by positive action on the part of the west.

We cannot tell precisely what has caused the Kremlin's change of front. All we know is that for a year Stalin has considered, on balance, that the Korean war served Soviet interests, and that he has now decided that it serves them no longer. It may be that China has refused to fight any longer without direct Soviet aid. The Kremlin, knowing that its direct intervention could only precipitate a world war, and having no desire at all to see American troops installed just across the Soviet frontier from Vladivostok, would, in that case, be acting reasonably in trying to establish an armistice along the thirty-eighth parallel. This would have to be seen as a purely tactical move. Or it may well be that the retreat in Korea is only the first move in a larger strategical maneuver.

We do not know which it is, or what caused the step. All we can know is that the Kremlin had two major aims in prolonging the Korean war: the first and obvious one was to drain away the strength of the west in general, and of America in particular, the second, and to my mind equally important aim, was to drain away the strength of Communist China—a strong and unified China standing on Russia's long and vulnerable Asiatic frontier being a standing nightmare of all Russian Governments. If the Kremlin could not even control a Communist Yugoslavia it must know perfectly well that it could not hope to control a Communist China, unified, ambitious, and xenophobic.

But instead of draining away the strength of the west, Korea has multiplied it alarmingly. What it has done to China, we do not know. However, it is a fairly safe bet that the arrangement whereby the Chinese fought while the Russians looked on could not last indefinitely without some friction between their Governments.

And so we in the west, given a moment's breathing space, are once again asking "What next? Is there any real chance of a lasting settlement with the Kremlin? Even if the Kremlin shows itself in an accommodating mood how far is it to be trusted?"

And, beyond these queries is the real question of our time: "Can we live at peace in the same world as Stalin's Russia without paying too high a price?"

The idea of a basic settlement is a contradiction of reality, it implies a static agreement; and the one thing we know about life is that it never stays still. There is only one way of achieving a basic settlement with a major power whose interests and ambitions conflict with our own, that is by conquest or submission, and history has shown that even resounding victories do not last forever, to say the least.

As to whether or not we can trust the Russians to keep any agreement that may be reached, this seems to me to be irrelevant. Trust, alas, is a word which is not found in the vocabulary of modern diplomacy. In dealings with a state which bases itself on an official creed denying morality and seeing the future in terms of predetermined conflict, its use is obviously misplaced. The most that can be expected vis-à-vis the Kremlin is an agreement based on mutual self-interest. The Kremlin would keep any agreement for as long as it thought it to be in its own interest to do so, which might conceivably be a very long time.

In a word, so long as the Soviet Government officially retains what it calls the Marxist-Leninist creed we must regard it as hostilely disposed toward ourselves. There is no escape from this. But it does not mean that we are bound to clash headlong in war. It means only that we have to be very careful. Presumably Stalin and his friends now find it in their interest to reduce the tension. With the end of the Korean war the time is most propitious for

a change of line. This is because there can be no more Koreans. The Kremlin must know very well that it cannot repeat the Korean tactic anywhere in the world without inviting a major war. Whether Stalin would like to fight or not, for some years to come the odds against him will be steadily and rapidly increasing. In other words, if ever there was a danger of Russian attack, which I myself have never believed, that danger has passed its peak.

It cannot recur until either the free economy of the west collapses under its own weight and creates conditions for the spread of native communism, or until the Kremlin has succeeded in reorganizing the whole basis of Soviet economy to support a modern industrialized community at a reasonable level of life and thus put Russia into a position to catch up with the west and ultimately outstrip it.

Since 1947 the Soviet economy has been harnessed to cold war, for which the Russian people have had to pay in their daily lives. The cold war may be seen as a gamble which has not come off. By ruthlessly subordinating civilian to military needs the Kremlin hoped to maintain the commanding position of the Soviet Union, making no concessions, until such time as the natural flaws of the capitalist economy, aggravated and exploited by Soviet threats and maneuvers, should result in the impoverishment of the west and fatal discord between America on the one hand and a divided Europe on the other.

Then through chaos the Kremlin would have been able to extend the Stalinist empire, not by war but through a series of internal revolutions until it was in a position to turn its back on the American Continent and, while building the new Soviet order throughout the greatest land mass in the world, proceed quietly with the task of undermining Britain's overseas empire by encouraging nationalist movements and banditry impartially.

This sort of plan I take to represent the highest flight of the Kremlin's ambitions. In fact, it seems to me far more likely that the chief aim has been limited to sowing discord and depression outside the Iron Curtain wherever possible and by all conceivable means in order to break up the anti-Soviet coalition until such time, as the Soviet bloc had been placed, by a sustained and mighty effort, in a position of invulnerability.

Be that as it may, the gamble has failed. By its actions in the "cold war" the Soviet Government has called into being the most astonishing and overwhelming manifestation of power in the history of the world. And after the failure of Korea she finds herself directly exposed to the most rigorous pressure from this increasing power—pressure which she cannot hope to divert by conducting further wars by proxy. So a new decision is called for.

There are two possible ways in which the Soviet Government might yet hope to achieve its original purpose. The first is by placing such an intolerable burden on the peoples of Europe, forced to spend too great a portion of their substance on armament, that conditions favorable to the spread of communism will again be created. But forcing the enemy to overreach himself in the production of armaments is a dangerous and double-edged game which even the most doctrinaire Stalinists must shrink from.

The other way is suddenly to withdraw the pressure, show nothing but sweet reason, and—fantastic though the idea be—hope that the reaction in America will be so violent that the Government will be forced to call off its armament drive, give the free market its head, and run headlong into a slump which would be the ruin of western Europe. But the Kremlin must know that it will take more than a few easy gestures on its part to gain the confidence of the west.

On the other hand it seems highly improbable that Stalin can keep up his present emergency pressure on the Russian people indefinitely and still get the results he requires if the Soviet economy is to be reorganized to exploit its resources to the full and catch up with America—a task which given the most favorable conditions and on the assumption that America stands still must take at least 20 years.

The Government and party are in danger of working the Russian people to a standstill. I am not saying that the Soviet economy is anywhere near collapse at the present moment; but I am suggesting that there is a limit to the industrial and military power that can be built upon a subsistence level of existence. And the Soviet Union to keep up with American production which is rapidly drawing away from hers is compelled to exceed that limit.

It seems to me that we see a realization of this fact in the emphasis on the giant projects—the hydroelectric and irrigation schemes which have lately superseded the normal 5-year plans. This year since the completion of the first post-war 5-year plan we have heard no more of future plans. Stalin's forecast of what would be accomplished in the next three 5-year plans has been relegated to limbo.

This means that the Kremlin is changing over from the short-term exploitation of the Russian people and their resources in the interests of the cold war to a long-term construction program similar in its aims to the program of the first three 5-year plans which began in 1928 and were designed to provide a suitable base for a greatly expanded economy 10 or 15 years ahead. The drastic revolution in Soviet agricultural practice now being carried out is in keeping with such a long-term view. It is as though the Politburo has seen that on its present basis the Soviet Union cannot possibly hope to compete with the western powers and has decided as it were to retread even if this means a temporary check to the upward curve of production of finished goods.

This whole development, of course, is being presented to the Soviet people and anyone else who will listen as proof of the peaceful intentions of the Soviet Government. But, in fact, the expanded economy made possible by the successful completion of the "projects" can be geared to war production with the greatest of ease. The question asked at the beginning of this article, however, was not "What will the Kremlin be doing in 10 or 15 years' time?" but "What happens next?"

At the present moment, having failed in its object of disrupting the west, the Kremlin, it seems to me, has nothing to lose and a great deal to gain by encouraging a relaxation of international tension and, to improve the lot of its own people and fortify its future strength, trying to inaugurate a period of improved relations with the western powers, with an eye principally to reestablishing trade.

As for our own attitude, it seems to me that we, too, have nothing to lose and much to gain by encouraging a lessening of the tension insofar as this can be done without moral or material damage to the western cause.

Nobody can foretell the future, and for us to share the Communist belief in inevitable conflict is, by implication, to subscribe to their own dogma. If—as may well happen—Stalin decides for whatever reasons that the Soviet Union requires a period of years for consolidation and internal development (as he had done once before in his lifetime) and if this decision offers the prospect of some years of peace without disgrace to ourselves, then to reject it because we believe a future war inevitable is to cast away the substance for the shadow—or to arrogate

to ourselves those powers of infallible foresight which the Marxists claim erroneously for themselves.

But the lesson for us all is crystal clear. If there is to be a general slackening of international tension it will be due to a display of strength and resolution on the part of the west and to nothing else at all. If a change occurs and the Kremlin appears more conciliatory there will be a great temptation to abandon these very policies, above all rearmament and all that this stands for, together with ERP, which themselves have brought about this change. The argument will be that if the Kremlin offers the hand of friendship and we, while appearing to accept it, continue with warlike preparations we ourselves shall be to blame for any future disaster.

This is a false argument. The Soviet Government is the declared enemy of all non-Communist societies everywhere. Until it abandons its declared belief—until, that is to say, there is a complete revolution in outlook of Russia's rulers—we must assume then latent hostility toward us however deeply this may be concealed. Nothing that we can do in the way of conciliation will change this profound hostility. If, as I believe possible (provided we ourselves keep our heads and the Kremlin does not commit some gross miscalculation), we can work through this terrible conflict without a major war it will be because we have opposed strength and resolution with superior strength and resolution (strength is not only a matter of armaments but also of morale) and for no other reason at all.

But to be strong and well armed is not the same as shouting abuse and indulging in belligerent hysteria. It should be seen simply as a form of insurance, and we have to resist with every means in our power the importunities of those who will try to make us abandon this insurance because they will say it is provocative to the Russians and too costly to ourselves.

The Russians are unprovocable. As to the cost to ourselves—rearmament and military service and heavy taxation—even if it means doing without some of the things we want it is surely a small price to pay to avoid a catastrophe. To allow ourselves to become weak and divided and irresolute once an immediate crisis is passed is to invite a dreary repetition of events of the past few years.

The Farm Arm

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1951

Mr. MULTER. Mr. Speaker, the following column, written by Thomas L. Stokes, which appeared in the New York World-Telegram and Sun and other papers throughout the country, is deserving of the attention of all of the Members of the House:

THE FARM ARM

(By Thomas L. Stokes)

WASHINGTON, July 13—The farm lobby is perhaps the most powerful lobby operating just now. At least that seems a fair deduction from the way it cracks the whip and cows Congress to curtail controls.

It was not always so. In 1921 a little book appeared entitled, "Uncle Reuben Comes to Washington." It was written by Charles S. Barrett, legislative representative of the then National Farmers Union.

The book was at the same time an announcement that the farmers had come to Washington and a defense of their lobby by pointing out how other interests were represented here. It was, in fact, a catalog expose of lobbyists of that time.

So the farmer came. And, indeed, he did need a friend here then. He had overexpanded during World War I. All through the 1920's we had a depressed situation in agriculture as prices continued to fall. This became a big contributing factor, though little recognized in Washington until too late, in the general depression dramatized by the stock market collapse in October 1929.

Farm organizations, then lacking the power and influence they exert today, battered in vain at the citadels of government. They did get through Congress the McNary-Haugen bill directed at the surplus problem, but it was vetoed by both Presidents Coolidge and Hoover. The latter offered and got enacted an alternative plan of his own for a Federal Farm Board, but it didn't meet the problem.

We are familiar with what happened thereafter in the Roosevelt administration, which recognized the basic role of agriculture in a balanced and healthy economy and put into effect, with the approval of Congress, those well-known measures that brought agricultural recovery and prosperity.

In all of this new dispensation for agriculture, farm organizations had their part. Their lobby grew more and more powerful. It has become so powerful politically it has developed into a sort of hierarchy that often dictates what farmers want rather than following the real and best interests of the farmers.

That is true also of other lobbies, including business and labor. But the farm lobby seems to enjoy one special privilege—its demands are taken virtually at face value in Congress, or a majority of Congress, while demands of the others usually are discounted to some extent. We are suffering now, as a Nation, from this overstimulation of Congress by the farm lobby—and it could be costly.

It is time for Congress to take that into account, to consider the economy as a whole, and to make the necessary discount for the farm lobby that it does for others.

Private Industry and Personal Initiative

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following commencement address by President Joe E. Harrell at Worcester Polytechnic Institute, and president of the New England Telephone & Telegraph Co., June 17, 1951, at which he received the honorary degree of doctor of engineering:

PRIVATE INDUSTRY AND PERSONAL INITIATIVE

President Cluverius, distinguished guests, members of the graduating class, ladies and gentlemen, it is a pleasure and an honor for me to be here today.

It is an important day for you who are graduating and it is important for your families and friends who are sharing the day with you.

I would like to join them in congratulating you on this occasion and spend a little time

with you this afternoon thinking about the years ahead.

Since most of you are planning to enter the field of private business, I would like to make a few comments about that field and the extent to which personal initiative is required to achieve success.

In the first place, may I say that I believe your prospects in private industry are better than those of any preceding generation.

This may seem like wishful thinking to you. In fact, it may seem a little unrealistic because of what you read in the daily papers about war and further threats of Communist aggression.

But may I remind you that beginning with 1775, this country on the average has had a war every 25 years. No generation has been without one. Yet the country has continued to prosper—and some day we shall surely find a way to permanent peace.

And so, in spite of the present unsettled conditions throughout the world, the future holds out many opportunities for the young men who are entering private industry. There never was a time that offered so many chances for success, especially in the fields of engineering and science. Nor has there ever been a time when capable, courageous leadership has been so urgently needed.

For out of the confusion of our times emerges a recognition of what we have here in this country and a realization of what we must do in the future to preserve it. We are learning to appreciate more fully the real significance of those forces that seek to change or destroy our economic system.

Under these circumstances the energy and initiative of young men will be required more than ever to strengthen the system that has brought us where we are today. This is your opportunity.

Looking back over the years, there does not appear to be a single period that could be regarded as normal. Perhaps normal periods are unknown in business. For in business, as in life, change is certain. But the character of the change and the time when it will occur cannot always be predicted.

The trends, however, are unmistakable. From a business point of view, two of these have been of particular significance.

One is the coming of age of private industry in our national life. The other is the importance of the individual in our economic system—a unique development of our American concept of government.

Together these two trends are the basis of our national strength.

Private industry and personal initiative have brought us an unrivaled material wealth. Only a visitor from abroad can really appreciate all that we have here. No other country in the world can equal our industrial production. An almost endless list of products and services is regularly available to the people of America. We take for granted our national wealth and personal opportunity which are the envy of the entire universe.

Important as this industrial production has been to the welfare of the American people, the real skill of private industry has been demonstrated clearly and repeatedly during times of national emergency. The simultaneous defeat of two powerful enemies in different hemispheres during recent years has shown that our national strength lies in our power to produce.

Truly, during a half century marked by two world wars and a world-wide depression, private industry has come of age in this country. For it has learned by experience—often by bitter experience—that its obligations reach far beyond profits and financial success.

It has assumed a major part of the responsibility for our national defense and has met the challenge of warfare with great success.

It has learned its responsibility to individuals, to communities, and to the Nation as a whole.

It has developed a realistic attitude toward working conditions, wages, pensions, vacations, and other benefits.

But in spite of its accomplishments in creating our national wealth and maintaining our national strength, you men doubtless know that for some time private industry has been under attack. In fact, the characteristic mark of foreign dictators has been their hostility toward private industry.

I am sure that you have noticed their eagerness to restrict private business and personal initiative. And business leaders in this country, aware of this fact, are facing up to their tremendous responsibilities with renewed strength and vigor.

Far too many people, even within this country, have accepted the theory that greater regimentation is unavoidable and, in fact, highly desirable. But the advocates of socialism and communism have no intention of going part way. They would eliminate private industry altogether—and with it our national strength. They would stamp out personal initiative. They would destroy completely our free western civilization.

It is my belief that both our material production and our spirit of unselfishness are the fruits of liberty. And I think we have more of both of them here because we have more liberty here.

This greater liberty, however, carries with it greater responsibility. To the degree that Government takes command the individual is relieved of responsibility and is thereby deprived of some liberty—and some opportunity as well.

Government is of course absolutely necessary for the preservation of order, for national defense, and for a great many other things. And if Government fails in its primary functions, there would be little useful freedom in the anarchy and chaos that follow.

But any government which continually extends its power beyond these primary functions continually whittles away at personal freedom. How much personal freedom the Government leaves to its citizens in your generation will be yours to decide.

And so I cannot think of any time in the past when there was more opportunity for a young man in private industry.

I do not limit this to material things. They are important for it is hard to make a good life out of a poor living.

But income is not the only thing. In this country more than anywhere else in the world people get together for good causes.

They give time and money to the support of youth agencies, science, medicine, education—in fact to every conceivable effort to improve the welfare of mankind. The society which you are entering is not only one characterized by great opportunity but one highly charged with good will.

Private business today offers an amazing variety of possibilities for young men.

In the first place you can start in for yourself either immediately or fairly soon. A great many people do.

You can go into a small business owned either by an individual or a few partners. That has been a familiar form of enterprise since the country started.

Or you can go into a so-called publicly owned company—one whose stock is held by many people, whose directors are trustees for the many shareholders and whose professional managers are not themselves large owners of the business.

There is always room for real ability and energy in the big corporation. In general, men rise strictly on merit, for there is little favoritism in the companies run by present day professional management. In these companies most of the present officers began at the bottom and worked their way up by

their own personal initiative, and this process is going on all the time.

Big business owned by the general public should and generally does give its owners pretty complete information about its operations. This is also available to its employees. More than that it is becoming increasingly common to give the employees on their jobs a great deal of information about the company, its policies, practices, and results.

This was not always true and the change is greatly to the advantage of those going to work now.

So it is important for the beginner to make use of this information and turn his vision to the over-all aspect of the business as much as he can.

Furthermore, the first job given to a man—especially if he is an engineer—is likely to involve the doing of some specific thing. This he must do and do well. But never forget that the world is run by people.

If you are going to rise in industry, you must rise by your relations with people. An understanding of people is the key to success in any large organization.

While we can take great pride in the accomplishments of private industry, we cannot overlook the importance of the individual in the success of the system which has made this country great. Learning to deal with people as individuals is our prime responsibility and, in fact, provides the greatest opportunity we have for further improvement in our free economic system.

We must learn to deal not only with physical nature, but with human nature as well.

The engineer, the scientist, the businessman overlooks his greatest opportunity if he fails to bring warmth and understanding to his work—or fails to bring friendly encouragement and tolerance to his associates.

The business leader of today must recognize and share the human emotions of those about him—the pride of the workman in his son's achievements—the grief of the clerk on the loss of her father—the bitterness of the poor and underprivileged—the loneliness of old age—and the justice in the statements of sincere labor leaders.

To you scientists and engineers, I would say that an understanding of the human mind and heart will go a long way in making your technical work more interesting and stimulating. It will speed the day when you can move upward into supervisory and management positions.

For, in this country, the transition from worker to management is a continuous process.

Eliminate the system which provides the urge for exercising personal initiative and you destroy the foundation on which this Nation's progress has been built.

Many of you are going back home. Others are going to strange and new locations. But wherever you may be, do your best to be a good citizen. Do your best to help your company be a good citizen.

I think you will find that your new employer is aware of his responsibility to his own community. For example, right here in Worcester, business leaders have been giving generously of their time and effort and financial support to make this a better city in which to live—a better location for your school and its faculty and its students. This city has earned an outstanding reputation in this respect—and your sense of responsibility to your own community may well be patterned after what is being done here.

In summarizing, I would say that to achieve complete success, you must have initiative and resourcefulness—a determination to excel in the business world which you will soon discover is highly competitive.

You must show a genuine interest in people. You must develop a real sense of re-

sponsibility to your community. You must have courage—with no fear of the future, nor of your own ability to contribute to it.

These are the simple traits required in our continuous search for peace and tolerance in a world which will soon be turned over to you.

May you do your utmost to make it a better world than any other generation has yet seen.

And, above everything else, continue to have an undying faith in Almighty God.

Thank you.

We Await the Answers, Mr. Wilson

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 10, 1951

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following letter from Mr. Earl Bunting, former president of the National Association of Manufacturers, to Defense Mobilization Director Charles E. Wilson, under date of July 11, 1951.

Despite the attempt of President Truman, in his recent radio address on price controls, to smear the NAM and anyone identified with it, it will take more than a smear to answer the questions raised by Mr. Bunting in this letter.

I await with deep interest Mr. Wilson's reply to the following letter from Mr. Bunting:

JULY 11, 1951.

MR. CHARLES E. WILSON,

Director, Office of Defense Mobilization,
Washington, D. C.

DEAR MR. WILSON: Your radio talk of Monday night troubled me greatly and I have given a lot of thought to it before writing this letter to you. Along with millions of other listeners, it was hard for me to believe that the words I heard came from the lips of a man with your long, practical experience.

We in the National Association of Manufacturers have given you our solid and loyal support in your difficult task to mobilize the strength of America to meet the challenge of world communism. We share your fear of inflation; we agree that inflation plays into Stalin's hands, that we must continue to build our military and economic strength no matter what happens in the cease-fire negotiations.

Therefore it was extremely disappointing to hear you, the acknowledged master of production, completely ignore the role of production in the battle against inflation and to have you put all of your dependence in economic controls, which your experience should tell you will handicap production. By linking the opponents of wage and price controls to the enemies of America, you have aroused the resentment of millions of loyal Americans who are not convinced that by the simple gesture of passing a law, you can hold back the flood of inflation, blueprinted and manufactured in Washington by an administration which refuses to either economize or live within its means.

There are honest men in America—on the farms, the cattle ranges, in the factories, business offices, and small shops of the Nation—and in the House of Representatives and the Senate of the United States. These men and women disagree honestly with your

artificial solution to the problem of higher prices. They love America with as great a love as those who cry for a new law to solve every problem, and they are due a better answer than an attack upon their patriotism and love of country.

Because the association for which I speak represents many thousands of these honest men and women who have disagreed with you, I call upon you to provide these answers. And because I remain sure of your inherent courage and willingness to face the truth, I am confident that you will not hesitate to answer these questions which you failed to answer in your message to the people Monday night.

1 Why, as Director of Defense Mobilization—and chief of the Nation's production program—did you fail to mention at any point in your speech that production, and more production, is the backbone of any anti-inflation program?

2 Why did you fail at any point in your address to tell the American people that inflation and higher prices always are created by Government indebtedness, and that an honest, pay-as-we-go tax program, coupled with real economy in Government, is the only known method of stopping inflation before it gets started?

3 If, as you say, you are opposed to controls in time of peace, why are you then advocating controls at this time, when we are faced with a period of defense mobilization which even the Government says may last for 20 years? Do you favor continuing direct controls by Government over this entire period?

4 You say defeat of controls will cost American consumers \$1 a day in the next year. This country tried those same controls during and for a year after World War II, and yet inflation cut the value of every man's dollar in half. Is not the cost of controls vastly greater than the cost of a real anti-inflation program which would save the people this tragic loss of their savings?

5 You have asserted that, if controls are defeated, prices will rise from 5 to 7 percent in the next year. Is it not true that prices during 5 years of the last war period rose more than 35 percent—or an average of 7 percent a year? Does this not indicate that, unless a real anti-inflation program is adopted, prices must rise despite the controls you seek to impose?

6 If farmers accept the fairness of price controls and roll-backs, as you suggested in your speech, why then is every major farm organization opposing the controls you propose?

7 You cite a little story of Charles Dickens, the author, to the effect that indebtedness always brings unhappiness to people. Does not this also apply to the Government of the United States which has gone into debt the last 18 years out of 21? Did not this debt create the very inflation you now are trying to cure by passing a control law?

8 You say that price controls which have been in effect have succeeded in leveling off prices in the past few months. If this were true, would not the demand for clothing, furniture, electrical appliances, television sets and other articles continue at a high rate? Is it not a fact that inventories of stores and manufacturing plants are filled, and there is a weak market for these products? Would you deny that the stable prices on such goods are the result of the high rate of production that has more than met the demand—and not by regulations of your pricing agencies?

9. You referred to the pressure groups—apparently meaning business and agriculture—opposed to wage and price controls. Why did you not mention the efforts of the pressure groups favoring direct controls? (1) Organized labor, which you have

termed the strongest and most effective in the Nation; and (2) the administration, which has unleashed the greatest flood of propaganda in recent years?

It has been difficult for me to address you in these blunt terms, Mr. Wilson. But I firmly believe that in your radio address to the Nation, the full story of inflation—and the proper methods of controlling it—were not given either to me or to my many fellow listeners.

The Nation must be told that the only certain way to check inflation and the high cost of defense, which you described, is for the Government to encourage production; to adopt sound tax policies to pay for the goods it buys and prevent national indebtedness; to reduce all spending not necessary to your defense program and to adopt such other measures as controls over credit and allocations of material. With these courageous steps, the socialist-type controls by which the present administration seeks to delude the American people will not become necessary at all.

Sincerely yours,

EARL BUNTING.

What Price for Better Housing?

EXTENSION OF REMARKS

OF

HON. W. M. (DON) WHEELER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. WHEELER. Mr. Speaker, under leave granted by the House, I am extending my remarks and including an editorial which was written by my good friend, Mr. Albert S. Jenkins, and published in his fine paper, the Baxley News-Banner, published in Baxley, Ga., under date of July 5, 1951.

The position taken by Mr. Jenkins in his fine editorial adequately expresses the position I have taken relative to public housing since I have been a member of this great body. The line of reasoning followed by Mr. Jenkins should persuade many other Members of Congress to his position and mine. I commend this editorial to the attention of the entire membership of the House and the Senate. It follows:

WHAT PRICE FOR BETTER HOUSING?

Some time within the next few days construction will begin on Baxley's 40 public housing units, at a negotiated average cost of slightly less than \$8,000 per unit, we have been advised.

The low bid for the 40 units was originally \$346,400, which would have made the average unit cost \$8,660, but the low bid was reduced to \$312,000 to come more nearly within the appropriation of \$304,000 set up by the Federal Government for the project.

While every town in Georgia, ranging in size from Abbeville to Atlanta, is getting public housing we have felt that Baxley should get its share, especially since we will be called on to help pay for the whole "she-bang." However, we do want to register what we think is a legitimate protest against the program as a whole.

In urban areas like Atlanta, Macon, Savannah, Augusta, and Columbus, low-income families may not remain long enough to acquire homes and the slum removal effects of the program and the high market value of land may justify the low rental housing projects. We do not believe, however, that

either of those three conditions prevail in many towns of less than 25,000.

If the Federal Government really wanted to make a substantial contribution to better housing for low-income groups in the smaller towns and cities of the Nation, we believe the cause would have been more effectively served by making long-time loans at a nominal interest rate to these families to build their own homes.

Those who have had some recent building experience, including the writer, must admit that even at existing building costs in Baxley, a fairly decent small home can still be built for \$8,000 or less. At an interest rate of 1 or 2 percent to cover handling charges, payments could be made within the reach of anyone who can afford to keep up the rent in the public housing units, and we sincerely believe the Government's loss and administrative costs on such a venture would be far less than they can possibly be on a low-rental housing project. And based on observation and statements of landowners and home owners, we can safely conclude that such homes would be far better cared for than any Government-owned units.

The aim and hope of every family is to own a home at some time. Why, oh why, in the name of common sense and decency, must we continue squandering millions and millions, which all add up to billions, on Government-owned and operated projects where a more realistic approach to the problems they are designed to cure would accomplish the results more cheaply and more effectively?

Year of No Decision

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial by the editors of Collier's magazine for June 30, 1951:

YEAR OF NO DECISION

The undeclared war in Korea, a war the like of which the world has never seen, is now a year old. It began with a courageous and unprecedented action in defense of a noble ideal. For the first time in history, soldiers of 15 nations fought beneath a common flag as representatives of an international organization whose purpose is the preservation of peace. At the end of the year the ideal is still noble. The flag is still there. So are the soldiers. They fought with an unsurpassed bravery to the point where, at this writing, there are indications that at least an informal cessation of hostilities is possible.

We should like to hope that by the time you read this, the United Nations' original goal of an independent, united, democratic Korea might be in sight. But the prospects at the moment are bleak. For in its first year, the Korean conflict has developed certain aspects which, while also unprecedented, are considerably less noble and more confusing than the ideal itself. This situation applies particularly to the United States, which has assumed the United Nations command and provided the great majority of non-Korean troops, and which is the center of the turmoil over strategy and leadership. So let us look back at some of these unprecedented developments from an American point of view.

The Korean war is a war in which our civilian and military leaders can give a clear

picture of what defeat would be like, but cannot describe the pattern of victory.

It is a war fought under a new set of rules. It has become a fight in which the U. N. is restricted to counterpunching. It is not the U. N.'s purpose to pursue the enemy and destroy him.

It is a war in which no sizable reinforcements of the U. N. forces are apparently contemplated, whatever the fortunes of battle.

It is a war from which the United States has excluded the trained and accessible soldiers of a potential ally (Nationalist China), even though the potential ally is willing to participate and is a member of the world organization under whose banner the other allies are fighting.

It is a war in which some of those other allies have fought the enemy and at the same time traded with him, providing him with the materials which eventually aid him in killing their own soldiers. And the war was almost a year old before the combined goadings of Winston Churchill and the United States Congress prompted those allies to take steps toward ending this practice.

It is a war in which, as the result of a general's dismissal, the country's war councils have become an open forum, with many details of military planning and many bitter differences aired for all the world to hear.

It is a war in which the basic American, and hence United Nations, strategy is built on the shifting foundations of fear and uncertainty, and in which there is no attempt on the part of our leaders to conceal or minimize those emotions. The result of that strategy has led to an ironical situation in which the U. N. is afraid to win the war for fear of making its actual and potential enemies angry.

These unique military aspects have been set down here, of course, without regard for diplomatic and political considerations. Those considerations are highly important. Their ultimate purpose, the prevention of a general war involving Russia, is well known. And it may be that they have inevitably dictated some of the unorthodox strategy in Washington.

But there is one paramount aspect of this unorthodox strategy which is of deep concern to many Americans, including the editors of this magazine. That is the seemingly endless continuation of the slaughter-and-be-slaughtered policy which Mr. Truman and his advisers have decided is the only possible policy in Korea if the third world war is to be avoided. It has already cost some 70,000 American casualties. It has caused suffering, destitution, and staggering loss of life among Korean civilians. All this, of course, is the inevitable toll of war. But in this case the U. N. forces, unless they are driven into the sea, seem committed to fight indefinitely up and down the Korean peninsula (within certain limits) in a minor-league war—for the enemy's lack of air and fire power makes it just that—and try to bleed that numerically superior enemy until he is so weak that he surrenders.

This policy is also of deep concern to General MacArthur, and that concern seems to be one of the things that cost him his command. We have considerable to say about the general on our weekly editorial page in this issue. But it might be pointed out here that one factor in his disagreement with the administration was his desire to fight the war along sound, proven military lines, and fight it to win with the least cost of lives. This concern for the cost of lives brought General MacArthur a rebuke from Secretary of Defense Marshall.

In his testimony before the Senate foreign policy inquiry, Secretary Marshall said, "I am disturbed and I should think you would be disturbed at the effect that will sweep through that force (in Korea) of a situation in which their commander has stated his

views which accentuate the casualties that they are suffering and in effect that it is without justified purpose."

It is quite possible that the soldiers in Korea do not need to have their former commander "accentuate" the casualties they are suffering or point out to them the inhibited and frustrating aspects of the campaign in which they are engaged. It is also possible that they might be disturbed by some other testimony by Secretary Marshall, as well as by General Bradley, before the same Senate committee. For, though they disagreed with General MacArthur on many things, the Defense Secretary and the Chairman of the Joint Chiefs of Staff did confirm his opinion that the slaughter-and-be-slaughtered policy carries no guaranty of victory.

General MacArthur told Congress that "the position of the command from the military standpoint forbade victory." Secretary Marshall said to the Senators, "I should say that if the Chinese Communists continue in force in North Korea with the potential of additional reinforcements that might be made available, and with our situation where we visualize no considerable reinforcement of the United Nations army, that they could not be driven out of North Korea." And when a Senator asked General Bradley if the present program in Korea would bring decisive results, he replied, "I am not too sure we will get them under our present methods * * *. I don't believe anyone is going to promise you or the country that we are going to get decisive results under what we are doing."

In spite of this, the President and his advisers see no alternative policy that would not in their opinion bring on general war. Their adherents seem satisfied with that policy and only slightly dismayed by the casualties incurred in the indecisive conflict. One of these adherents, Prof. Arthur Schlesinger, Jr., the Harvard historian and a sort of unofficial spokesman for the administration, had this to say: "MacArthur says * * * the American people simply cannot take any longer our 'staggering' and 'progressively mounting' losses." Mr. Schlesinger asked, "What have these losses been?" Then he answered himself thus: "MacArthur himself said that 13,000 Americans had been killed in Korea since last June. This is a terrible and tragic thing. But it seems hardly an intolerable loss for a nation which killed 31,500 people in 1949 by automobile accidents."

The families of those 13,000 dead, among others, will not share Professor Schlesinger's callous view. They will take his snide quotation marks away from the general's description of the casualties and agree that in a war of vacillating policy, a war whose most hopeful outcome now is the status quo ante bellum, the continuing losses are, indeed, staggering.

Some of the occurrences that followed General MacArthur's dismissal give reason why the Government's present policy may aptly be called vacillating. The general proposed certain actions which were stated as contributing causes to his being fired. Now the administration has either adopted them or is contemplating their adoption.

No one outside the Iron curtain can accurately say whether General MacArthur's adopted or discarded policies would provoke Russia to open attack. But it is our opinion that some of the people who have disagreed with him most bitterly have made more provocative statements than the former U. N. commander ever did.

President Truman, Secretary Marshall, General Bradley and others high in Government have told Russia and the world that the United States is not ready for a war with the Soviets. Mobilization Director Wilson was even more specific. He said the country wouldn't be ready for 2 years. Now, isn't that provoking Russia—or rather, isn't it

enticing Russia into war and inviting attack? If Russia is ready for war, would the Kremlin need any more provocation than this open admission of weakness, plus a hot war already going in Korea? Would bombs in Manchuria or a naval blockade of the China coast give the final tip to scales which already are so heavily weighted to our disadvantage?

No one, we repeat, can be sure of the answers to those questions. But it does seem that if the men in the Kremlin want war and are prepared for it now, they have ample excuse to get into it. And it also seems that the best guess is still the familiar speculation that Russia has its own time-table, and that if there is to be a general war it will begin when Russia is ready and not before.

So all the arguments and disagreements over Korean policy and strategy boil down to this: the only over-all American policy is the passive policy of waiting to see what Russia is going to do next. Generals may be fired and replaced, but Stalin still calls the turn.

THE EDITORS.

Federal Pay Increase

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SHELLEY. Mr. Speaker, Congress will shortly be asked to take long-needed action on salary increases for Federal Government employees. The Senate Committee on Post Office and Civil Service has already made its recommendations and the House Committee is meeting in executive session tomorrow morning to give final consideration to the matter.

In view of the urgent need for congressional action to relieve the serious distress which a large proportion of Government workers and their families, particularly in the lower pay brackets, are experiencing, and in view of the imminence of action by Congress, I ask to have printed in the RECORD a copy of a statement which I made to the House Committee on Post Office and Civil Service during the recent public hearings on salary increases for Government employees. The statement follows:

STATEMENT BY CONGRESSMAN JOHN F. SHELLEY, OF CALIFORNIA, TO HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE AT HEARINGS ON THE FEDERAL PAY INCREASE BILLS

Mr. Chairman, I want to thank you and the members of your committee for this opportunity to tell you what I think should be done to clear up a very bad situation. I don't have to tell you what a terrific time the families of Federal Government employees have been having trying to make ends meet since prices began to skyrocket after the Korean emergency. I know that your mail has been just as heavy as mine with pleas from fathers and mothers who have to try and feed and clothe a family with food and clothing prices what they are—mothers who have to go out and work, and fathers who have to try and hold two jobs or to borrow money just to keep bread on the table and shoes on their children's feet.

I know that you are just as conscious of the problem as I am, and are just as anxious to find a solution. It is true that there are

a good many complex factors which must be considered. I know that the Federal budget is strained severely by the demands of the defense effort. I know also that the question of just what pattern salary increases for the various classes of employees should take requires grave thought before an equitable formula is worked out. The special adjustments proposed and required for post-office workers present another complicated situation which must be gone into. But the point I want to emphasize is that action should now be taken just as quickly as possible to get final congressional approval of legislation which will help these families keep the wolf from the door.

Wage increases for privately employed workers have been almost universally granted since last June. The Government employee who has so far been denied a raise has been paying for more than his share of the cost of the defense effort. Every time he goes to the corner market and pays \$3 for \$2's worth of groceries he makes another contribution. He has been doing that for over a year now, and in a good many cases, he has just about reached the end of his rope. In a good many other cases the end of the rope was reached some time ago. The turn-over rate among employees in Government agencies, particularly in the lower-paid brackets, has been terrific. Just for example, it has climbed to over 30 percent in the San Francisco Post Office. The Government just cannot afford to go on doing business that way. And there certainly is no justice in forcing faithful employees to a choice of going hungry, or of giving up the benefits they have accumulated during their Government service to go out and take another job.

We all know how much of a scramble Government agencies have had in trying to find people to fill such jobs as clerk-typist and other lower-paid positions. If the Government is to continue operating with any degree of efficiency at all it must be able to meet the competition offered in the labor market by private employers. If we don't do that we will find that the only people we can hire will be those who cannot hold a job in private industry and the operations of Government will suffer accordingly.

First and foremost then, I strongly urge that the just demands of Government employees for salary increases which will permit them to at least maintain the same standard of living which they enjoyed before Korea, be granted. Consideration should be given to two special factors in this connection. Firstly, the extent to which Government salaries may have lagged behind private salaries for comparable jobs before the Korean emergency, and, secondly, the fact that the 10-percent-increase formula established by the Wage Stabilization Board for industry and other private employment in February of this year is now subject to upward revision in the light of most recent cost-of-living indexes which show a continued upward trend.

The matter of equity for employees of the Government, which should be the first thought in the minds of the committee and the Congress as a whole, as it is in mine, is backed up by the practical consideration that unless we do something very soon about the salary situation we just will not be able to keep enough employees on the Federal payrolls to perform the essential services of Government. I know that there are some among my colleagues in both Houses of Congress who will probably say that it would be a good thing if that happened. I want it understood that I am not against economy in Government, and that I certainly believe that waste and inefficiency should be attacked wherever it is found. But when it comes to the point where the Government cannot carry on its essential operations, I will draw the line. Further, when it comes to the point where the Federal employee is

expected to do all the sacrificing while little is done to hold the line any place else, I will go all the way in urging that he be given a little elemental justice.

Thank you, Mr. Chairman and members of the committee.

When the Bankers Ask for Controls, We Must Need Them

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1951

Mr. MULTER. Mr. Speaker, the following column by John Elliott is printed in the New York Herald Tribune of July 15, 1951, establishing beyond a doubt that the Defense Production Act is not the brainchild of the state planners, Socialists and Communists:

NEW YORK BANKERS FEAR FOR PAY, PRICE CURBS—SEE PRESSURE GROUPS SABOTAGING CONTROL BILL

(By John Elliott)

The New York banking world is frankly worried about the activities of the pressure groups which in Washington these days are trying to sabotage the price- and wage-control bill.

It sees in the activities of these lobbyists a menace even more dangerous than the subversive labors of the Communist underground. As Charles E. Wilson, Director of Defense Mobilization, expressed it in his radio speech on Monday night, "the only way the Russians can beat us is to encourage us to beat ourselves." These pressure groups, as seen from the New York financial district, are playing, even if unwittingly, the Russian game.

As one prominent New York banker recently pointed out, competent people have been appointed to administer the price control measures, including the roll-backs which are now threatened by congressional action. These officials have been given a job to do and they ought to be left alone without fear of their administration being broken up by pressure groups representing specific interests.

REGULATION W UNDER FIRE

The same holds true for regulation W, which imposes reins on consumer credit buying. The same pressure groups are now trying to bludgeon Congress into depriving the Federal Reserve of its discretionary powers in administering this regulation. While nobody can say dogmatically whether 15 or 18 months is the right length of time for these controls to run, for Congress to come out and proclaim that the period should be 18 months means throwing administrative discretion and wisdom out of the window.

Last summer, when inflationary pressures were just getting under way after the Korean war had started, it was found desirable to go beyond indirect controls, such as raising reserve requirements and making use of open-market operations, and to put into effect direct controls (regulations W and X and wage and price fixing) to halt the rising wage-price spiral.

The experience of the last year has shown conclusively that direct controls do contribute effectively to combating successfully mounting wage and farm prices. And, while it is true that inflationary pressures have been relaxed for the last 2 months and may

continue to lie dormant still for another month or two, they are still potentially dangerous, so that to remove controls now would leave the Nation at the mercy of rising prices, with resultant decline of the dollar in the autumn.

FULL INFLATION SEEN IN FALL

For the grim fact is that it is not until autumn that the Nation is likely to feel the full impact of inflation. Expenditures under the defense program are expected to amount in the next 6 months to as much as they did in all the last 12 months.

Moreover, the Treasury ended the first 6 months of the present calendar year with a cash surplus of \$7,000,000,000. But the cash deficit for the next half year will probably match this huge sum. If it does, this development will represent a swing of \$14,000,000,000 in the Treasury position. The junction of these two factors alone is calculated to produce a strong inflationary pressure in the latter part of 1951.

That is why the New York financial world is so worried about the impact of developments in Korea on Congress. Just at the very moment when the inflation peril may begin to develop in earnest Congress is tending to relax and consider that the crisis is past.

SEEKS TIGHT REIN ON CREDIT

In this critical situation the Federal Reserve System is trying to keep a tight rein on the credit position. It wants to preserve the credit gains of the last 2 or 3 months and will exert no more pressure of its own until the autumn, when it will review the situation in the light of events.

The March 3 accord between the System and the Treasury, which buried their hatchet for the time being, has so far been working extremely well. If there was ever a free market in Government securities, it has been that which has been in operation the last 2 weeks.

It is, of course, possible that the Federal Reserve may in the near future be found to intervene for the sake of preserving an orderly market. If it does enter the market it cannot be too strongly emphasized that the System will do so not from considerations of price or yield of Government bonds, as bond dealers are all to prone to think. Its sole concern is the availability of credit.

If it can be avoided the Federal Reserve does not want again to have to peg the Government bond market and so by increasing bank reserves pave the way for a sixfold expansion of loans, thus transforming the System into what Marriner S. Eccles, former chairman of the board, so aptly called "an engine of inflation."

Tax Squeeze on Our Middle Class

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1951

Mr. BENDER. Mr. Speaker, in all the concern of our Nation for the public welfare, a new threat to America is in the making with all the sanctions of perfect legality. This menace concerns the great middle class, which economists like to call the backbone of the Nation. In this group are professional men and women, businesses below the level of big business, workers who have accumulated resources sufficient to enable them to

invest in securities or property, shopkeepers, and small merchants.

Under the tax program of the present administration these people are being driven hard. They fear to make any new investments because the risk of loss far outweighs the prospect of net gain after taxes. They are unable to develop substantial savings programs because their living costs have mounted to a point where they can barely maintain their life-insurance policies after paying taxes and ordinary bills.

Colleges, dependent to a large degree upon big givers to support their endowment funds in bygone years, have turned to the middle class more recently. Now they discover that this source is rapidly drying up. If this process continues unchecked, we may run the serious risk of creating an unhealthy gap between the very wealthy and all the rest of us. Nothing is worse for any independent, free people than a situation of this kind.

Self-Interest Groups Fight Effective Price Controls—An Open Letter to a Congressman

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SABATH. Mr. Speaker, under the leave granted me I insert an open letter addressed to a Congressman by Robert P. Vanderpoel, a recognized financial authority, appearing in the July 14, 1951, issue of the Chicago Sun-Times. Mr. Vanderpoel has so addressed his Congressman because it is claimed that consumers have not communicated their views to their Representatives to support a real control bill that will prevent still further inflation and an increase in the high cost of living. I feel that this open letter deserves the earnest and serious consideration of the membership of the House. It follows:

VANDERFOEL WRITES AN OPEN LETTER TO HIS CONGRESSMAN

(By Robert P. Vanderpoel)

AN OPEN LETTER TO CONGRESSMAN TIMOTHY P. SHEEHAN, HOUSE OFFICE BUILDING, WASHINGTON, D. C.

MY DEAR CONGRESSMAN: Dispatches from Washington state that our Congressmen have not been hearing from home to any great extent on the matter of inflation and controls. They add that in view of this a very much watered-down control bill is likely to be passed because the various self-interest groups, meanwhile, have been bringing terrific pressure to bear.

Under the circumstances, my dear Congressman, I thought I should write to you, I am sure you will not mind this communication coming in the form of an open letter which readers might care to send on to their own Congressmen.

I suppose the majority of those who wrote last winter demanding that Congress take the necessary action to halt inflation, check the rise in prices and protect the integrity of the dollar, feel that one letter should be enough, that they should not have to repeat

themselves every few months or weeks. Maybe they forget that the pressure groups work night and day, month after month, with tireless energy.

You and I know, dear Congressman, there has been a let-up in inflation pressures. Prices have stopped going up. Here and there, in fact, they have declined a bit. You and I also know, however, that this is but a temporary lull in the storm that when the full impact of the defense program is felt late this autumn or early in the winter terrific pressures will arise. The mail from your constituents at that time no doubt will increase, but the inflation surge will already be on and for Congress once more it will be too little and too late.

Controls can be effective

Another thing that you and I know is that controls, while they do not cure the fundamental causes of inflation, can be effective, particularly over limited periods of time and if they are strictly enforced. In order to moderate the results of inflation the public, and apparently Congress, favored the imposition of controls while the more basic factors were being attacked.

Bosses Wilson, Johnston, and DiSalle have used their powers very moderately. The public, in fact, was disappointed that they did not crack down more sharply. In particular, the public wanted price roll-backs. Very few were ordered, the most notable being in livestock where prices had moved ahead so rapidly that meat was disappearing from many tables despite the fact that the packers themselves, at least temporarily, were operating at a loss.

The livestock industry, which successfully fought price controls during World War II, once more girded for the struggle. Feeders had bought high-priced steers confident, as many merchants were in buying excessive stocks of high-priced electrical goods and textiles, that the public would pay any price, and that they could make a fast buck. If prices were rolled back, it would end their opportunity to make a killing. It is not surprising that they howled.

As for the producers themselves, they had done very well but expected to do better. Even at today's high prices they are reluctant to sell their cattle because they believe they can break the back of price control and that the consumers, generally, have so much money that they are willing to pay almost anything for their meat.

The slaughter quota system, Congressman, was a very essential weapon in the hands of the Office of Price Stabilization to keep meat from flowing into black markets. Recognizing that if a sufficient amount of meat were diverted from normal channels into the black markets, the whole price-control effort would fall apart, the pressure groups concentrated their attack on this quota system and as this is written I understand that it is out. This surrender by Congress to the cattle lobby strikes me as a tragic betrayal of the public interest.

Fundamental defenses neglected

Meanwhile, the more fundamental defenses of the dollar have been pretty much neglected. Congress has shown some inclination to cut appropriations but certainly not enough to indicate that it believes that the defense needs and the desirability of preventing a new rise in prices warrants a program of austerity as far as the Government is concerned.

On the other side of the picture, Congress is still fussing around with the tax bill, apparently more afraid of the public's reaction to higher taxes than to the alternate consumers' resentment of still higher prices. In other words, Congress seems still willing to make the widows and orphans, the pensioners, the thrifty, the patriotic holders of Government bonds, the white-collar workers, the civil servants, and unorganized labor pay

for the defense effort through higher prices because it lacks the courage to write a tax law which would bring in the needed revenues.

At the same time Congress, once more acting under the whiplash of the pressure groups, has threatened to force an easing of credit restrictions in the face of admonitions from the Federal Reserve Board that this would be a grievous mistake and despite factual evidence that the combined voluntary and regulatory restrictions have thus far failed to reduce significantly outstanding credit.

I hope, dear Congressman, you will accept this letter in the spirit in which it has been written, as representing the sincere views of one of your constituents who has no axes to grind but is deeply concerned about the domestic outlook.

Respectfully yours,

ROBERT P. VANDERPOEL.

We Need a Real Control Law Now

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MULTER. Mr. Speaker, the following article, written by John Stuart, which appeared in the New York Times of July 15, is most appropos:

PRICE DELAYS HIT FOOD PROCESSORS—CONGRESS' INACTION ON CONTROLS HAS CAUGHT MANY "IN MIDDLE," HALTED JUSTIFIED REDUCTIONS—FINANCING IS COMPLICATED—UNCERTAINTY ON FUTURE CEILINGS HOLDS UP LOAN APPLICATIONS TO ACQUIRE NEW HARVEST

(By John Stuart)

Congressional inaction on controls has caught about half of the food processors in the United States between the general price freeze of January and the increased prices permitted on due proof of increased costs, a formula withdrawn when controls were not renewed on July 1.

A survey yesterday showed that the uncertainties of the situation are preventing price reductions that might otherwise be put into effect.

The uncertainty is further complicating the loan applications of food processors who seek to finance the inventories they must acquire during the forthcoming harvest season.

'SAYS CROP CANNOT WAIT

One important figure in the food field yesterday characterized it in this grim fashion:

"Congress can ponder—not to say dawdle. But the crops can't, and neither can we. We've not only got to buy them but process them and finance ourselves on our estimates of costs and future prices. A great industry has never been more critically in the middle."

This man, who refused to be quoted for the obvious reason that he does not want to be called as a congressional witness, pointed out that when the general price freeze was made effective on January 25 processors were caught with inventories both below and above the ceilings then set. Recognizing this, the Office of Price Stabilization ceiling price regulation 22, under which price "roll forwards" as well as roll-backs were to be permitted.

To take advantage of such roll-forwards, however, processors had to file schedules of their costs so complicated and expensive that

in many instances they could not complete them by the announced deadline in May. So the deadline was extended to July 1.

SCHEDULES NOT COMPLETED

By July 1, when, Congress having failed to act, OPS called off all changes, even the biggest food processors had not completed their schedules on some lines. As a result, they are unwilling now to reduce prices on lines due for reduction through softening of the raw-food markets, because they are unable to estimate their losses on other lines where their properly justified increased prices have been suspended.

The maker of one of the most important inventory loans in the food field refused to discuss the situation yesterday. He said he had not only to face the bankers who made the loan but the annual meeting of his corporation's stockholders next week. "And what can I tell them?" he asked.

Like most corporation heads, he does not like controls. But he describes the uncertainties created by congressional delay as worse than "all the hell bureaucracy ever caused industry."

International Labor Conference

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SHELLEY. Mr. Speaker, last month Geneva, Switzerland, was the scene of the thirty-fourth general conference of the International Labor Organization—the ILO. I am extremely proud that in the past, as an official of the labor movement in this country, I have had direct contact with and have contributed something to the work of this great organization.

As most of us know, the United States began official participation in the work of the ILO back in 1934. A total of 60 nations are now members of the organization and work together to accomplish the primary purpose for which it was founded—the promotion of peace by improving social and economic conditions among working people everywhere. The ILO is now one of the specialized agencies of the United Nations. The practical means used to work toward fulfillment of the organization's goal is the study of such questions as working conditions, wages, hours, child labor, social security, industrial safety, employment and industrial training, with emphasis on the preservation and furtherance of the ideal of human dignity. The results of such studies are gone over by representatives of both labor and management in the participating countries, conventions are formulated, ratified at the general conferences, and sent to the several nations for adoption and effectuation.

At the recent general conference Mr. David A. Morse, the Director General of the ILO, prefaced his annual report with a statement underscoring the fundamental beliefs and principles upon which the organization bases its work. Because of the inspirational nature of the simple and yet tremendously impor-

tant credo which Mr. Morse voiced, I include the accompanying excerpts from his remarks in the CONGRESSIONAL RECORD at this point:

EXCERPTS FROM REPORT MADE BY DAVID A. MORSE, DIRECTOR-GENERAL OF THE INTERNATIONAL LABOR OFFICE, TO THE INTERNATIONAL LABOR CONFERENCE, GENEVA, SWITZERLAND, JUNE 6, 1951

Often during the past 3 years delegates have suggested before the Conference and to me personally that the International Labor Organization should pause from time to time to reflect on the simple beliefs which underlie its work. * * * Today, in a time of uncertainty and fear, when the hearts of many may be faltering before the tremendous issues confronting us, when millions in vast areas of the world are awakening to the possibilities within them, I have felt it to be the moment to pause for reflection. I have attempted to restate the beliefs our work is founded upon, to discern the progress in past years as a basis for sober optimism in the future, and to suggest how these beliefs must inspire the developments taking shape in our midst if we are to achieve progress in the years ahead.

The mainspring of our work, as indeed of all true progress, has always been the belief in the essential worth and dignity of the individual. * * * It is from those few who have seen clearly the implications of this belief that has come the inspiration for the advances of the human race: the movements toward liberty of thought and expression, toward political freedom and democracy, and the social achievements of past generations. * * *

We must work toward a society where each individual can live a natural and civilized life, with full scope for the development of his abilities and yet with a sense of responsibility to others and to the community at large, a society which will satisfy the need of the individual to belong, to feel that his life has meaning, and to render service to his fellow men. We must guarantee political and civil liberties so that freedom and social justice may grow together from strength to strength in mutual fulfillment. Only thus can we create a democratic society where man can be truly man. This is the way of progress and of peace.

The obstacles and dangers in our path are a challenge to the best in us. They are, in short, the conditions of poverty, disease, ignorance and injustice stunting the lives of millions today, the enslavement of other millions, the injustices which can result from too rapid industrialization and impersonal bureaucracy, the effects of war, petty nationalism; and, throughout all, the block of fear, freezing action or driving men into dangerous paths. These are among the real threats to peace. These must be the object of attack. * * *

There has been a slow but steady acceptance of the belief that the welfare of all individuals must be the central concern of national policy; that all men and women who are willing and able to work should be able to do so in decent and constantly improving conditions; and that all resources should be developed and utilized to this end. This is no longer mere theory. This conviction is slowly finding expression in achievement.

Wherever this conviction has taken root the working man is no longer a unit in the labor market, or a cipher in national statistics, but is a respected citizen of the community. Independent trade unions have fought their way through opposition, often through bloodshed, to positions of responsibility. There is a growing understanding among employers of their responsibility to the general public interest and of the importance of human relations and good working and living conditions to sound national life. * * *

We have also learned that enterprise and initiative are indispensable if anything positive is to be achieved. The difficulties are so great that the vicious circle of poverty, ignorance, and disease can be broken only if those who have enterprise and initiative are willing and able to use them. Governments, private individuals, and international organizations can contribute in different ways. Together they can take the essential steps of progress.

They must proceed with a full knowledge and understanding of all the facts. They will not achieve progress, and may even cause a backward movement in society, if they attempt more than can be successfully managed at once, or if, by introducing methods alien to the qualities and character of the people, they break down the structure of society and have nothing wherewith to replace it. They must relate their plans to the resources available and to the practical difficulties before them, and work only in ways which can win the understanding and support of the people themselves. * * *

We need an open world. We need a wide understanding between all people, the meeting of man with man, of mind with mind. No barrier should exist to the free movement of people and of ideas. Without an open world we shall never be free from suspicion and fear, we shall never move toward a society of prosperity and peace.

Mr. Speaker, during the later proceedings of the ILO General Conference at Geneva, Mr. George P. Delaney, International Representative of the American Federation of Labor and an official United States delegate to the Conference, addressed the delegates on the very matter which is now causing the Congress of the United States and the people as a whole so much concern—control of inflation during the period of defense rearmament to meet the Communist threat. In his address Mr. Delaney, as he said, was "speaking for both the Congress of Industrial Organizations and the American Federation of Labor, as well as the workers of the United States as a whole." The views on wage policy and economic stabilization which he presented to the Conference are, I am convinced, the views of the American people today. This House would do well to bear them in mind as it votes this week on the various phases of the Defense Production Act. I submit a copy of Mr. Delaney's remarks in the RECORD, as follows:

SPEECH BY GEORGE P. DELANEY, WORKERS' DELEGATE, UNITED STATES AND INTERNATIONAL REPRESENTATIVE OF THE A. F. OF L., THE THIRTY-FOURTH GENERAL CONFERENCE OF THE ILO, GENEVA, SWITZERLAND, JUNE 1951

I should like, before commenting on the Director-General's report, to announce that I am happy and gratified that, for the first time since 1945, the Congress of Industrial Organization has joined with the American Federation of Labor in participating in the work of the International Labor Organization. I am fortunate in having as my advisers, in addition to the four representatives of the American Federation of Labor, four officials of the Congress of Industrial Organizations. In expressing my views on the question of wage policy and economic stabilization, I am speaking for both the Congress of Industrial Organizations and the American Federation of Labor, as well as the workers of the United States as a whole.

Under the threat of Communist aggression, the free nations have been compelled to rearm in self-defense. With rearmament

has come a new danger of inflation. Inflation, once it appears, tends to spread without regard to national boundaries, until it becomes the common property of all nations.

It is, of course, up to each country to work out its own best answer to the many problems which arise, according to its own particular likes. Nevertheless, these problems are matters of mutual concern to all of us, and it is both timely and appropriate that they should be brought forward for discussion at this meeting.

These matters are complex and involved, but they have very practical consequences, as we have learned only too well over the past decade or two. In particular, the question of wage policy—which means the bread and butter of all workers—is a matter of vital concern to trade unions everywhere.

Speaking for the workers of the United States, we welcome this opportunity to restate here the views which we have sought to advance as a basis for public policy with respect to wages under the conditions now prevailing in the United States.

It is our firm belief that to succeed in its objectives, governmental wage policy during this period of inflation must be based upon a recognition of three basic principles:

First The role of collective bargaining, and the practices and relationships developed under collective bargaining, must continue to be of fundamental importance to the national economy. Steps taken in accordance with public policies in the field of wages may supplement, but they must never supplant, collective bargaining.

Second No policy of restraint with regard to wages can be successful unless preceded by an over-all system of anti-inflation controls, based squarely upon and guided by the doctrine of equality of sacrifice.

Third Wage restraint is not an end in itself. Production is the basic counterforce to inflation. Wage policies which provoke industrial unrest, which interfere with the best use of manpower and resources, or which deprive workers of any real stake in industrial progress, will in the long run defeat their own broader purposes.

If they are to prove successful, wage policies must prove adaptable to industrial realities, and to changing conditions and needs. They must seek to avoid, rather than to emphasize, the use of rigid arbitrary formulas having no better justification than administrative convenience. They must offer workers the assurance that considerations of justice have not fallen victim to considerations of expediency—that their grievances are to receive a fair hearing and prompt adjustment, and that ample scope will be allowed for the alleviation of hardships. They must encourage the correction, rather than the perpetuation, of inequities and disparities in the wage structure.

To stabilize does not mean to make static. Rigid and inflexible wage controls could only prove detrimental to an enlightened concept of stability, particularly in conjunction with a long-range defense effort such as that which confronts us now. They could only have an adverse effect upon labor mobility, morale and efficiency. In the administration of any wage program, flexibility is a basic requisite. It is essential to genuine—as contrasted with superficial—stability.

This means that a high degree of trust and reliance should be placed in the practices and procedures which have evolved under collective bargaining. A workable wage stabilization policy must recognize that collective bargaining is itself a system of equitable stabilization. Negotiated wage agreements—unlike prices which rise from day to day—eliminate uncontrolled fluctuations, and offer guaranties of stability for their duration. They reduce the uncertainties and

speculative influences which are primarily responsible for inflation.

Furthermore, collective bargaining has developed realistic and practical methods for the administration of wage standards, on the basis of the first-hand experience of those most familiar with the facts of a given situation. In view of its stabilizing role, collective bargaining must continue to be the primary means by which those standards are established and administered. National wage policy should be a supplement to, rather than a substitute for, the collective bargaining process.

Increases in the general level of wages, serving to offset increases in living costs, are a consequence rather than a cause of price inflation. Our experience since the Korean outbreak provides ample proof of this. The sharpest price increases have occurred in commodities where wages are a relatively negligible factor in the cost of production, and for which the incomes of workers furnish none of the direct market demand. Commodity market speculation, inventory hoarding and profiteering by dealers and manufacturers have been at the seat of the inflationary disease.

To attempt to combat inflation through a policy of wage restraint, unaccompanied by effective price controls, or to deny workers wage adjustments to compensate for price increases, would be to attempt to cure that disease by attacking one of its symptoms.

To approach the problem of inflation control through the route of wage restraints simply because wages are easier to control than prices would work the gravest injustice upon those who work for wages and salaries, and would impose an undue share of the burden upon those who are least in a position to bear it.

American workers are willing to do their part and to accept their just share of any necessary sacrifices involved in the defense effort. But we say that they must not be required to suffer the economic consequences of legislative or administrative tenderness toward other groups that are actually far better able to bear this burden of sacrifice. They cannot be expected to take kindly to any arrangement whereby they are called upon to subsidize—through reduced living standards—special privileges and immunities accorded to their employers, their landlords, the merchants with whom they deal, or to speculators and profiteers at large.

Not only would such policies violate all standards of equity, in the long run they would be self-defeating. To attempt to offset inflationary forces through a policy of harsh restriction on wages would serve only to hide for a time the basic defects and failures in other vital areas of control, thereby endangering the cause of long-range economic stabilization.

The forces of inflation should be counteracted at their point of origin, and in those areas where controls will involve the smallest possible degree of actual hardship. While wage stabilization policies can have only a negligible effect upon incomes in the higher brackets, it is there that substantial margins of spending can be most readily curtailed without impairing health, welfare, or productive efficiency. Most of the wage earner's income, on the other hand, is spent for food, rent, and the other necessities of life.

Enlightened anti-inflation policies must include an equitable tax program, based upon the principle of ability to pay. This means that taxation should bear heaviest upon individuals with high incomes and corporations with large profits. It should not further impair the living standards of lower- and middle-income families, to the detriment of their health and well being.

Such policies must include an effective and actively enforced program of controls over hoarding and speculation, as well as

price controls. They must include a system of production controls which will assure the flow of materials and resources into the areas of greatest actual civilian and defense needs. Only when measures such as these are in force does it become appropriate to ask the representatives of workers to exercise restraint in their wage negotiations.

In closing, I can perhaps best summarize our position with regard to the major elements of a proper wage policy, in a general system on anti-inflation controls, by quoting from the statement presented to the President of the United States by the United Labor Policy Committee on December 20, 1950:

"The wage stabilization policy must permit the adjustment of wage rates to compensate for increases in the cost of living. Wage stabilization must not become wage freezing. This policy must also provide for the correction of substandard wage and the adjustment of inequities in existing wage rates within or between industries. The now well-recognized principle that wage earners should share in the benefits of industrial progress and increases in productivity which the Nation must and will have from its industrial workers, should be specifically embodied in the wage stabilization policy. Any wage stabilization policy must recognize existing collective bargaining agreements which themselves assure stability."

"Overtime payments for premium work now protected by collective bargaining agreements or existing law must continue to be held inviolate. These provisions do not in any way preclude the working of a work week longer than that now considered to be normal. They merely provide the incentive for productive overtime and holiday work."

The committee further states that: "Our labor force is the Nation's greatest single asset. Steps should be taken to strengthen and enlarge our manpower resources. These steps must recognize the fact that free labor can out-produce slave labor. Free labor will play its role in attaining our objective of maximum production."

No Headlines for These

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. BENNETT of Florida. Mr. Speaker, I read with interest the following thought-provoking and sensible editorial in the July 12 edition of the Clay County Crescent entitled "No Headlines for These":

Thanks to big headlines and sensation-loving commentators, the people of the United States are thoroughly familiar with the milk-coat episode and the huge profits that a few people have made through the cooperation of the 5-percent boys in Washington.

Not many have heard of the following news stories:

(A) Secretary of Agriculture Charles F. Brannan dismissed two officials because they accepted favors from a company doing business with the Government. One of the men, it seems, bought a television set and an automobile at wholesale by using the company's credit.

(b) Raymond M. Foley, Housing and Home Finance Administrator, overheard a chance remark that led to the discovery that every employee in a regional office had received a gift, including television sets, liquor, watches, and hosiery. He forced the return of all gifts and set up a policy to prevent a repetition.

The first class of stories, while interesting to people, does not indicate that most of those who work for the Government are looking for unearned, if not dishonest, dollars. Neither does the second class of stories prove that all governmental officials are watching closely to prevent such incidents.

Does America Back the Ulster Bridgehead?

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. GRANAHAN. Mr. Speaker, under leave to extend my remarks, I wish to include an article by Senator Denis Ireland, published in the Irish magazine *Hibernia*, in the issue of March 1951. Senator Ireland is a well-known journalist in Great Britain and Ireland, who works ceaselessly for the abolition of the partition of Ireland.

The article follows:

DOES AMERICA BACK THE ULSTER BRIDGEHEAD?

(By Senator Denis Ireland)

(So long as the English consider that a "foreign" island on their ocean flank holds direful possibilities in time of emergency, so long will they hold on to our six north-eastern counties. Instead of futile protests and rhetorical slogans can we not evolve an all-Ireland defense plan, an antipartition document that must engage the serious attention of Washington, London, and Belfast?)

During the second act of World War II the pro-British, Anglo-Saxon, and Protestant Episcopal influences in the American State Department worked on the assumption that since Britain is closer to Ireland, it must know more about Irish affairs, and that therefore American policy in Ireland must dovetail with and reinforce British policy in Ireland.

It was a strange assumption in face of 700 years of Anglo-Irish history. But any intelligent Irishman must believe the assumption was made, hence the American Republic's ham-handed handling of Irish affairs under the by-no-means-lamented Mr. David Gray. Hence, too, the reticent official attitude toward Ireland that persists to the present day. Once the American Republic entered World War II, it was, admittedly, bound to act on the basis of the division of Ireland then existing, but a little intelligent analysis then, and a minimum of retrospective analysis now, should have convinced it then, and should convince it today, that as far as Ireland is concerned it has been, and is being, led up the garden path by British imperialism. For the assumption the American State Department took over lock, stock, and barrel, and, apparently, without the slightest examination, from the British was that the division of Ireland positively guaranteed the security of the "British Isles," and that the "Ulster" bridgehead was a gift from God.

Now, the first thing that would strike an intelligent schoolboy about that assumption is that one of the islands included in the British Isles is not British; so little British that in World War II three-quarters of it had succeeded in remaining neutral. And the second thing that would, one imagines, strike a member of a State Department or Foreign Office was that the British Imperial General Staff was laying down the law about an island where the overwhelming majority of the inhabitants declared, and were prepared with arms in their hands to maintain, that they were not within the British Empire. That was not a very promising start for the Imperial or British Isles theory of Irish defense, and American diplomacy might at least have been less ham-handed in Irish affairs during World War II if it had taken the trouble to examine it. It might even today discover just how far British stupidity about Ireland has led it up the garden path, if it was prepared to reflect on Irish affairs after the event. If it were, for example, prepared to reflect on the divided Ireland theory so beloved of the British Imperial General Staff, it might discover what every Irishman who has taken the trouble to study the political anatomy of his own country knows to be the Irish pons asinorum of the years 1939-45—namely, that partition made it impossible for Ireland to produce a clear-cut reaction of any kind. In order to bring home the effect to Americans we have only to inquire whether the United States would ever have entered the war if the sacred union between its North and South had been still unachieved, if their Northeastern States had been occupied by British troops, and if there had been no such provocation as Pearl Harbor?

Having made clear to Washington the basic fact that, insofar as American policy accepted lock, stock, and barrel from Britain the theory that Irish division was somehow a kind of God-sent contribution to British security in the last war, it was itself helping to bring about the very results it deplored, our statesmen, in their exposition of common sense in relation to Ireland and the strategic security of the eastern Atlantic, might then go on to point out the absurdities of the British Isles theory as it affects the use of Irish manpower in wartime. As I pointed out in *Hibernia* last April, the theory that Ireland, far from being a nation, is just a strategic extension into the Atlantic of the island of Britain, leads to an Alice in Wonderland situation in which Irishmen are taken out of Ireland to serve in the armies of foreign nations, and are then replaced in Ireland by foreign troops whose presence in Ireland helps to be-devil the Irish political situation. It is, in effect, very much as if the British and Americans had declared in the last war that the defense of Stalingrad would have been much better carried out by British and American troops, with the Russians standing by as spectators.

ULSTER LOYALISM

In this catalog of muddled thinking one crowning absurdity is still missing—the situation in wartime inside the loyal six counties. Here the Americans must be better informed than they pretend to be, because they were there to see for themselves. They must know that the recruiting figure of the Ulster loyalists, even when swollen by the figures of men from the 26 counties who enlisted in Belfast, do not make impressive reading. They must know the proportion of able-bodied young Protestants who, instead of fighting Germans, were enrolled in semi-Fascist armed police forces to keep watch over the other young Irishmen who were only too anxious to defend their own country, so long as they were allowed to defend it in their own green uniform. The whole thing boils down in retrospect to a mixture of wasted effort, farce,

and an extremely revolting hypocrisy on the part of the more blatant and self-adulatory Ulster loyalists. Here, in fact, was merely another portion of the hell-brew concocted in Ireland by British and American muddled thinking, not to mention vigorous stirring from Ulster, and the main impression that emerges in retrospect is that Irishmen, Englishmen, and Americans should all alike thank a merciful Providence for Hitler's inability to think clearly enough about the job to be done, which was the subjection of Britain and not alarms and excursions in the east.

Here again, as in the matter of the future of industrial Belfast within an Irish economic framework, Irish nationalist propaganda fails because it is not sufficiently realistic. Ulster loyalty may produce results exactly opposite to what a true loyalty to Ireland would imply, since if all Irishmen, including political Ulstermen, were loyal to Ireland in the same fashion and to the same extent that Englishmen are loyal to England, then the safety of Britain would be enhanced by the presence of an island fortress on her ocean flank, whereas the mere existence of the Ulster bridgehead ends, in times of crisis, in the automatic creation of a kind of psychological no man's land almost on Britain's doorstep.

ETHICS AND IMPERIALISM

Such, in the last analysis, are the ethics of the situation. What Dublin has to deal with are, however, not the ethics but the extremely pragmatic politics of imperialism. Imperialism never bothers much about ethics at any time; it does so least of all when interpreted through the inelasticity of the average military mind—as the firing squads following Easter Week 1916 and their consequences in Irish history are there to prove. Now in the year 1951 in the matter of the strategic consequences of Irish division, the military mind crops up again, and what Dublin has to deal with are not the dubious ethics of Ulster loyalty existing by themselves in a vacuum, but the use the British Imperial General Staff is making of Ulster loyalty for imperial purposes of its own—which is a very different matter. The imperialist general staff is thinking in terms, not of political justice but of airfields in Fermanagh and Derry, of flying-boat bases on Lough Foyle and Lough Erne, and of the air coverage that can be provided from them over the North Channel of the Irish Sea and the northwest approaches from the Atlantic. The military and naval minds see only air strips and flying-boat bases neatly marked on a map, what they are not so quick to calculate—what they seem in Ireland completely incapable of calculating—are the political consequences of their calculations. They are not greatly to be blamed for that, since in fact a politician like Churchill, presumably an expert in politics, is quite incapable of calculating them either, and remains blandly insensitive to the political sentiments of the Irish nation; as insensitive as any British Socialist chancellor when, with smooth words about democracy and the liquidation of imperialism, he cocks a mental eye at the dollar-earning capacity of Ulster industry.

THROUGH ENGLISH EYES

Irishmen must grapple with this English form of imperialist thinking that consists in avoiding thought in the kind of terms it understands, that is, in this matter of strategic defense, in terms of the air fields themselves. They must, in other words, come down for a moment from their high plane of political ethics and look at the problem through the eyes of Englishmen. If there is a nexus of Irish political sentiment that seems to an Englishman as frail (and as inexplicable) as a spider's web but is actually, and especially in wartime, stronger than steel, there

is also a ghost at the back of the English mind, a fear that haunts every Englishman every time he looks at a map of what he illogically call the British Isles and notes the nearness on his ocean flank of an island which he knows to be foreign. The first thing a psychiatrist would inquire, of course, is why if he knows the island to be foreign he always acts as if it were part of the British Isles and is naively hurt and surprised when he finds it isn't. But logic like that is lost on an Englishman, and, where Ireland is concerned, the English mind continues to alternate between sentimentality and bitter hostility.

Meanwhile, as any psychiatrist could have prophesied, the ghost remains unaided, the ghost being the fear that some day the foreign island will be the Achilles' heel of Britain. Useless again to point to the imbecility of the fact that it is he himself who is creating the Achilles' heel, not so much by supporting partition (since in fact he is perfectly capable of talking against partition and at the same time making use of it), as of using partition as a stalking horse behind which to conceal his armed forces in Ireland. Useless, too, to underline the fact that at the moment he is supporting a whole series of self-contradictory propositions about Ireland, including a Kiplingesque music-hall tradition of the gallantry of Irish soldiers, coupled with an, at any rate, apparent conviction that the same gallant Irish soldiers could not be trusted to defend Ireland. The English are not interested in logic or dialectics and the only way to crash through their Chinese wall of sentimentality, illogicality, and occasionally downright dishonest thinking where Ireland is concerned would be for an Irish Government to produce a concrete plan for the defense of Ireland, a master plan that should be publicized simultaneously in America, since the moment such a master plan appeared, the English would pretend not to see it, and hardly an inch of space would be allotted to it in their national newspapers.

FIRST PRINCIPLES

This master plan, which should be publicized throughout the world as well as in America, would resume the first principles that have underlain all Irish-Government statements in the matter of the North Atlantic Pact—namely, that Ireland is perfectly willing to sign on the dotted line the moment her reservations under article 4 are met—that is, the moment the threat of the Ulster bridgehead to her territorial integrity is removed. But at this point the new statement should cease scoring juridical and ethical points, and come down to the brass tacks of military strategy; should, in fact, provide an embarrassingly large number of brass tacks for the brass hats of the British Imperial General Staff. Hitherto there has been an air of bleak unreality about Irish demands that Britain should withdraw her forces from Northern Ireland, for the reason that nobody has ever stated, at any rate in public, exactly what is to replace them. And it is exactly at this point that a new analysis can penetrate the unholy alliance between Ulster loyalty and the British Imperial General Staff that constitutes the not-too-solid foundation for the mixed, and in time of crisis potentially chaotic, defenses of the island as a whole.

For at this point the new Irish statement should turn from the court of American, British, and world opinion generally and address itself to the Ulster loyalists. If you insist on being loyal to Britain rather than to Ireland, it would say, then we assume that, even on a basis which we deplore, you want to build the military security of Ireland on a firm and lasting foundation. In that event, with British military resources strained to breaking point to provide garrisons in the Far East and in Germany, not

to mention commitments under western union, we assume you would be prepared to play a part—which in proportion to your numbers within the six-county area must be a leading part—in gradually replacing the British forces at present in the six counties by forces recruited from among the inhabitants of the six counties. If conscription should be necessary, we are prepared to introduce it in the 26 counties at the same moment. The British forces to be finally withdrawn only when the new Northern Irish Air Force is in a position to carry out the tasks and duties at present allotted to the British air arms using six-county airfields and flying-boat bases. The main political assumption underlying these proposals is that the present conception of Ulster unionism must be widened to include the real twentieth-century unionism of the United Nations, western union, and the North Atlantic Pact, to the end that Ireland, at least a military unit, will be able to take her place in the ranks of the western nations.

FINANCIAL ASPECT

Such, in outline, is the substance of a statement that Irish nationalism could make at any moment, *urbi et orbi*, to the world and, more particularly, to the city of Belfast. If its first principles are admitted, but its financial cost to Ulster deplored, the answer is that the financial burden of the new defense forces can be borne by the imperial contribution of which Ulster is always boasting—that the new contribution to the security of both these islands off the coast of Europe would be in men and in the unification of Irish sentiment, rather than in money—always allowing for the fact that, when the complicated financial transactions between Britain and Ulster are finally unraveled, Ulster may not be found to be paying all that she so publicly labels as imperial contribution. The final effect of the new plan would be that the reality of Ulster claims would be finally tested against the reality of world conditions.

QUESTION FOR UNITED STATES

Having asked Ulster the kind of questions that cannot be answered without giving the whole Ulster bridgehead theory away as the dangerously antiquated British imperialist nonsense that it is, having publicized to the Western World the entire statement, plus the absence of any sensible reply from Ulster unionism (and its absence can be safely assumed, since Ulster unionism is in this matter, merely a stooge for the British Imperial General Staff); we shall then be in a position to ask Washington point blank just what it thinks of Irish division as a basis for the security of these extremely important islands off the coast of what might within the course of one short, hectic campaign easily become an all-Red Europe, English Channel ports and all?

It would be an interesting question, the answer to which would involve Washington's opinion of British imperialism in Ireland. For that reason the answer would probably be silence, in which event the rest of the Western World could then decide for itself just how much reality there is in all this talk about the United Nations and the ending of imperialism.

Do Not Slaughter the Slaughter Quotas

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MULTER. Mr. Speaker, I think it is of the utmost importance that every

Member of the House read the following release issued by the counsel to the National Association of Independent Beef Slaughterers, with reference to abandonment of slaughter quotas. It is as follows:

SLAUGHTER QUOTA BAN FAVORS MONOPOLISTS AND BLACK MARKETEERS, SAY INDEPENDENT SLAUGHTERERS

The National Association of Independent Beef Slaughterers warned Congress today that elimination of slaughtering quotas on meat would harm independent small business and turn the meat industry over to monopolists and black marketeers.

The organization, which comprises some of the largest as well as the smaller independent meat firms, said that Congressmen who voted tentatively Tuesday to prohibit OPS from setting quotas on livestock slaughter "apparently were under the mistaken impression that they were helping small business. They were completely wrong."

"In our experience as law-abiding independent slaughterers," the association declared, "we find nothing to support the claims made in Congress that abolition of OPS slaughter controls will either increase the slaughter of meat or help the small and independent slaughterers."

"The ban on slaughter controls will not result in the slaughter of an additional pound of meat, but it will result in the slaughter of many of our independent slaughtering firms. Slaughter controls, in a period like the present, are the only assurance independent slaughterers have of getting their fair share of meat animal for slaughter. Without slaughter controls, the supply of animals is gobbled up by the monopolists and by the black marketeers."

"We speak from experience. Our members have been in business for many years—some have been in continuous business for more than 50 years. The investments of all of us run into the many millions of dollars, and we employ many thousands of people. We have slaughtered cattle and distributed meat through good times and bad, and we want to stay in business."

"We saw what happened to the orderly distribution of meat when slaughter controls were lifted during the last war. Immediately fly-by-night slaughterers sprang up in areas where cattle are produced and drained off the supply of cattle. Legitimate meat supplies dropped sharply in the heavy industrial areas where our members' plants are located and where the bulk of the population works and lives. Not only was the orderly distribution of meat wrecked, but the country lost great amounts of much needed supplies of pharmaceuticals and leather because the fly-by-night slaughterers, who made a killing on meat, didn't bother with the byproducts."

"We don't want this situation to recur, and we appeal to Congress not to turn the meat industry over to the monopolists and black marketeers by abolishing the slaughter control program."

The officers of the association are president: Eugene Meyer, Illinois Packing Co., Chicago, Ill.; vice presidents: Max N. Lampert, Somerville Dressed Meat Co., Somerville, Mass.; Jack T. Ruddy, Peerless Packing Co., Cleveland, Ohio; Carl Rothschild, M. Rothschild & Sons, Inc., Omaha, Neb.; David Resnick, Monarch Meat Packing Co., Milwaukee, Wis.; secretary-treasurer: Sol A. Meringer, Siegel-Weller Packing Co., Chicago, Ill.

The directors of the association include, in addition to the officers listed, Meyer Averch, Capital Packing Co., Denver, Colo.; J. R. Cohn, CeeBee Packing Co., Chicago, Ill.; Harold Dugdale, Dugdale Packing Co., St. Joseph, Mo.; Isadore Gentner, Gentler Packing Co., South Bend, Ind.; Thomas Graver, H. Graver Co., Chicago, Ill.; Fred

Hagenauer, Lincoln Meat Co., Chicago, Ill.; Ira Loewenstein, Superior Packing Co., St. Paul, Minn.; Milton Marshall, Cross Bros. Meat Packer, Inc., Philadelphia, Pa.; Floyd A. Segel, Wisconsin Packing Co., Milwaukee, Wis.; Leroy Wimp, Wimp Packing Co., Chicago, Ill.

Horseshoe Bend Battle Recalled

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. RAINS. Mr. Speaker, the Alabama Historical Association, on June 28 dedicated the Horseshoe Bend highway marker, near the historic Horseshoe Bend Battleground in Tallapoosa County, Ala.

Before a large audience in Dadeville, Ala., Judge C. J. Coley delivered a great and memorable dedication address on the Battle of Horseshoe Bend. It not only is a great oration but is a historical document worthy of study. I commend Judge Coley for the outstanding address and the Alabama Historical Association for the recognition given to this national shrine. I am happy to place the following address of Judge Coley in the CONGRESSIONAL RECORD, in order that it may be preserved for posterity:

On the north side of the Tallapoosa County Courthouse here in Dadeville, Ala., you will find a bronze plaque on which are these words:

"This tablet is placed by Tallapoosa County in commemoration of the one hundredth anniversary of the battle of Horseshoe Bend fought within its limits on March 27, 1814. There the Creek Indians led by Menawa and other chiefs were defeated by the American and allied Indian forces under General Andrew Jackson. This battle broke the power of the fierce Muscogee, brought peace to the southern frontier and made possible the speedy opening up of a large part of the State of Alabama to civilization."

The wording on this tablet is indicative, to some degree, of the importance of the battle which began on that eventful morning of March 27, 1814; Maj. Gen. Andrew Jackson, commanding 2,000 Tennesseans and friendly Indians, stood poised for mortal conflict. With water on three sides of him, and entrenched behind breastworks, the fierce Muscogee 1,000 strong, nervously awaited the order to sound the war cry. Jackson had placed men on every vantage point around this bend in the Tallapoosa River.

These Muscogees, who were nicknamed Creeks by the British presumably because they built their villages along the banks of creeks and rivers, were worked into a frenzy by varied and many incantations. Then too, the more discerning of the braves were not unmindful that this was to be the epic struggle for their survival as a nation. The medicine men had promised victory to Chief Menawa. They said, "The signs from the Great Spirit were unmistakable."

This particular bend in the Tallapoosa River forms almost a perfect horseshoe and contains approximately 100 acres, then furrowed with gullies and covered by timber. The Red Sticks had thrown huge logs across the peninsula at the narrowest point which made formidable breastworks. The Muscogees were also known as Red Sticks because

of the crimson pole erected in their village which was a symbol of a declaration of war. In the breastworks were two rows of port-holes. This defense was so substantial and built with such skill that one wonders if General Jackson's British adversaries of that time did not aid and abet the Creeks in this plan of battle. At the toe of the horseshoe a fleet of canoes was waiting for the Creeks, should a retreat become necessary.

The ever-faithful Gen. John Coffee was ordered to complete the surrounding of the peninsula with his cavalry and friendly Indians, the type of encircling move for which Jackson became famous. David Crockett was with Coffee on that memorable day. A thousand of Jackson's men were drawn up on the land side with the order "any officer or soldier who flies before the enemy without being compelled to do so by superior force—shall suffer death." Jackson's artillery, consisting of one 3-pounder and one 6-pounder placed on an elevation some 80 yards from the breastworks, began pounding away, but the cannon balls sank harmlessly in the soft pine timbers while Red Stick sharp shooters diverted the cannoners.

Jackson, recognizing the ineffectiveness of his artillery warfare, ordered the infantry to scale the fortifications. The drums of the Regulars beat the long roll. The first man to reach the top of the works fell back dead with a musket ball in his head. He was Virginia-born, courageous Maj. Lemuel Purnell Montgomery, of the Thirty-ninth Regiment. Andrew Jackson wept unashamedly over his body crying "I have lost the flower of my army." Montgomery was 28 years old. His bones lie at rest near Dudleyville in this county.

Young Ensign Sam Houston, who stood 6 feet 6 inches in his sock feet, emerged from the smoke of battle waving a sword and leading his platoon over the ramparts. Houston fell on the inside of the fortifications with an arrow in his thigh but quickly regained his equilibrium and requested a lieutenant fighting nearby to remove it, but the lieutenant suggested he go to a surgeon. Houston became so enraged that he brandished his sword and demanded the lieutenant to pull with all his strength, which the officer did. The removal of the barbed arrow made an ugly gash in Houston's flesh. Immediately, a surgeon was summoned to bind the wound. Jackson, seeing Ensign Houston's plight, ordered him back but as soon as the general had left the scene, young Sam was in the midst of the fray again.

In the meantime, Coffee's Cherokee scouts swam the river, set fire to the village of Tohopeka on the horseshoe and carried away many of the Creek's canoes. This relieved considerably the Indians' resistance to Jackson's frontal attack. Scaling the breastworks was in full swing.

The Red Sticks began retreating and 20 battles raged at once. The plight of the Muscogees seemed hopeless. In the middle of the afternoon Jackson suspended hostilities and sent an interpreter to offer life to all who would surrender.

At that moment, the medicine men were moving among the braves chanting encouragement and falling as the warriors fell. The medicine men said, "The Great Spirit has promised victory, and the sign will be a cloud in the sky." During the lull in the fighting a cloud did appear in the sky as prophesied and the Red Sticks refused Jackson's offer with scorn. This sign of deliverance brought only a light shower.

On the refusal of the Creeks to surrender the wounded Sam Houston seized a musket and led a charge. Five yards from the redoubt Houston received one ball that shattered his right arm and another that smashed his right shoulder. The redoubt was reduced by Jackson with flaming arrows. The carnage was dreadful. The

surgeons removed one of the balls from Houston's body and the other he carried to his grave.

By nightfall the battle was over. Five hundred fifty-seven Indian dead were counted on the ground, and the river was the grave of 200 more. Probably 200 escaped, but not a single Red Stick surrendered. Jackson's losses were 49 killed and 157 wounded.

To chronicle the story of the battle of Horseshoe Bend, or Tohopeka as some are wont to call it, would be incomplete, it seems to me, without taking cognizance of the bravery and the daring, together with the unwavering loyalty, of the Muscogee chieftain, Menawa.

He was a native of the Indian village of Okfuskee, 15 miles south of Horseshoe Bend, and there as a youngster he was known as Hothlepoya, being interpreted "crazy trouble hunter," a name which he earned because of his reckless abandon. His father was a Scotsman. While in his teens he made annual trips to the Cumberland and returned with horses and other booty which he confiscated primarily for the sport of it. In the athletic arena of the giants of the Muscogees he may have met his equal but never his master.

By the time he had obtained his majority, he was known as Menawa, and his reputation for military skill and courage was widespread among his tribesmen. More and more the Red Sticks looked to Menawa for council and leadership.

When Tecumseh, the eloquent and powerful chief of the Shawnees, made a trip south at the request of the British to bestir the red man against the Americans, it was to Menawa he came. Using his golden voice and incantations, he pled with Menawa to mass the Muscogees in any movement that would divert or destroy the Americans. Tecumseh's visit, along with other happenings, was responsible for the Creek stronghold at Tohopeka.

Soon after the battle of Horseshoe Bend got under way, Menawa and the principal spiritual leader or medicine man, disagreed on tactics of warfare. The chief prophet had a tremendous following among the braves, but notwithstanding, Menawa slew him on the spot and as paradoxical as it may seem, the Red Stick warriors rallied to Menawa without a defection.

Menawa was so badly wounded in the late afternoon at Tohopeka that he was passed over for dead. However, the brisk air on that March night revived him and by the force of his unconquerable will he dragged himself to the river's edge, pulled his mutilated body into a canoe and let the current of the water waft the canoe downstream. The Muscogee women and children had been sent, previous to the battle, some fifteen miles to a site where Elkahatchee Creek flows into the Tallapoosa. The next day one of the squaws noticed what appeared to be an unmanned canoe, and set out to retrieve it. Upon investigation, she found it to contain the body of an almost lifeless warrior, which was soon identified as their admired chieftain, Menawa.

In the course of time Menawa regained his health and made his way back to his beloved Okfuskee to find his once flourishing trading business gone, his cattle stolen or destroyed and the village in ashes. Undaunted, he began anew.

An order had been issued in 1836 by the Federal Government to force the Creeks to leave Alabama for a distant land. Menawa had sent his petition to Washington asking that he be allowed to live his remaining years at Okfuskee. The request was granted but due to the lack of dispatch of mail during those times, the affirmative answer from Washington to Menawa reached Alabama after the Red Stick chieftain had been forced to join the "trail of tears" or the "march

of the broken spirited." Menawa died on the trek West and his spirit went to the happy hunting ground before the Creeks reached their new land.

The battle of Horseshoe Bend is important in the annals of American history because it ended the Creek War. And because of the famous Americans who participated. Among them was Major Montgomery, who made the supreme sacrifice and for whom the County of Montgomery, Ala., was subsequently named and some say the capital city of our State. Gen. John Coffee was there. He distinguished himself at Horseshoe Bend and later at the Battle of New Orleans, and was an early settler of what is now Lauderdale County in this State. Coffee, County, Ala., was named in his honor.

And there Davy Crockett, the famous frontiersman, who later died gloriously at the Alamo, was slightly wounded. Sam Houston, who was severely wounded at Horseshoe Bend, was elected to Congress from Tennessee and became governor of the State. Houston became the first president of the Republic of Texas and was later elected Senator from and governor of the State of Texas. Andrew Jackson's conclusive victory over the Indians at Tohopeka added greatly to his fame and he was promoted immediately thereafter. The battle at Horseshoe Bend cleared the way for his campaign at New Orleans. Andrew Jackson is, of course, principally remembered for having been President of the United States for two terms.

The battle at Horseshoe Bend is also significant because it opened up a great part of the southeastern United States for peaceable settlement by the white man.

Surely sometime in the not-too-distant future, in addition to the Government monument there, a fitting park will be built on the land 12 miles to the north of us where a struggle of such enormous consequences took place.

Almost a century ago, a historian wrote this:

"It was not only the power of the Creeks that was broken at the Horseshoe Bend, on the 27th day of March, 1814, but the power of the Red Man in North America. We have had since that day, and shall have for many years to come, occasional encounters with Indians. But never since has there been in arms against the white man any force of Indians large enough to excite anything like general or serious apprehension, or to task the power and resources of the United States, or of any single State, and there never will be. At Tohopeka the scepter was finally snatched from the Red Man's hands; at Tohopeka the long struggle for the possession of the Western World was ended and a continent changed owners."

Knock the Price Down, Spread Distribution: Promotes Industry and Wealth at Home and Abroad

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SIEMINSKI. Mr. Speaker, at this stage of our debate on the Defense Production Act, I think it well to reaffirm our faith in a good, old-fashioned American rule, a rule which in our short history has enabled America to pace the world in promoting industry and wealth, at home and abroad: "Knock the price down, spread distribution."

Prices are going up, the world around. Distribution is shrinking. The pursuit of industry and wealth in the free world is threatened.

The President of the United States calls for action, price action, to spread distribution. He shall have it, at home and abroad, not only from Congress, but from the United Nations.

On Saturday, July 14, 1951, the Washington Evening Star, on page A3, told of a courageous move:

United States ready to ask U. N. to act on crushing world monopolies.

Congratulations, Mr. President. "Knock the price down, spread distribution," and you will keep alive a good, old-fashioned American rule.

Effective Price Controls and the Welfare of Our Country

EXTENSION OF REMARKS OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SABATH. Mr. Speaker, among the many letters and communications which I received this morning was one from the president of Clifton's Cafeteria, of Los Angeles, Calif., urging support of an effective controls act and criticizing the Congress for delaying its passage. This letter struck me very forcefully and the sound arguments advanced for the enactment of this law is deserving of reading by every Member of Congress, as follows:

JULY 13, 1951.

DEAR CONGRESSMAN SABATH: We operate Clifton's Cafeterias in Los Angeles. We enclose for your information a copy of Clifton's Food for Thot (issue of July 5, 1951) that explains (on page 4) to our 20,000 daily customers the difficult situation in which we find ourselves. We are having to pay the highest prices for food in our experience. Yet the crying need of the times is for anti-inflationary prices. It is our obligation to pass along to guests this high-cost food at lowest prices possible. This is becoming extremely hard to do.

We think that our experience illustrates what is happening to many others across the land. We would like to see effective action on a food-wage control law that will help to check the inflationary spiral.

We believe that the alarm expressed by such responsible statesmen and businessmen as Charles Wilson, Eric Johnston, and Bernard Baruch is well grounded and that here is the opportunity and now is the time to let considerations of public welfare and statesmanship override politics and the selfish arguments of special-interest groups for exemption from price and wage controls so necessary as a foundation for our domestic and world policy.

The facts stated in this leaflet constitute a report from the people who have not been heard in your committees.

It is a maxim of statesmanship that those in charge of national policy should always reserve a corner of their minds for the man who has not been heard.

Sincerely yours,

EDMOND J. CLINTON,
President and General Manager.

Mr. Speaker, here are a few comparisons of prices of 1931 and 1951 as shown in a pamphlet which accompanied the Clifton Cafeteria letter which shows what the company paid for its foods:

Item	1931 price	1951 price	Percent of increase
	Cents		
Box of tomatoes.....	25	\$3.00	1,100
1 pound of butter.....	15	.75	400
Top grade rib beef per pound.....	15	.76	400
Canned goods.....			350
Rice and flour.....			500
2 1/2 pint bottle of milk.....	1 1/2	.05 1/2	375

If we fail to pass a real and effective price-control bill, I greatly fear that prices will go still higher and how low-income workers, white-collar workers, and persons with fixed incomes will exist may become a grave problem and bring about unrest throughout our country. Weak controls will bring about inflation. Those in favor of effective controls are interested in the common people and the welfare of our country.

Colorado's Aspinall

EXTENSION OF REMARKS

OF

HON. REVA BECK BOSONE

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mrs. BOSONE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Frontier magazine for July 1951: COLORADO'S ASPINALL—SHORT ON BOMBAST, LONG ON HONEST PUBLIC SERVICE

(By Robert L. Perkin)

DENVER—Colorado's resource-rich western slope is in many ways a land apart. Despite airlines, the Moffat Tunnel, and modern highways, the Continental Divide still pokes its lofty ridgepole down the middle of the State to create a barrier which is both mental and topographical. The western slope is at once a state of mind and an empire to itself.

To represent these wide open spaces "over the hill" in the Halls of Congress, western slope voters twice have chosen by substantial margins a quiet lawyer-teacher-peach grower named WAYNE NOBVILLE ASPINALL.

WAYNE ASPINALL is one of the work horses of the Democratic Party in Colorado. Ever since 1930, in his unspectacular way, he has been ramrodding the party program in lean years and good. Some question about western slope policy. Ask Wayne. Need some votes over there? Wayne would deliver them.

Yet ASPINALL is the veritable antithesis of political hack or party big wheel. Quiet almost to the point of being colorless, school-teacherish in mannerisms, he prefers to serve his district without fireworks, whether as State senator or United States Representative.

His district is a big one—half the State, geographically—and its interests are as diverse as uranium for atom bombs and White River honey for biscuits. There are peach orchards, gold mines, Ute Indians, the "twentieth century's most important oil field" at Rangley, some of America's most awe-inspiring scenery, and the world's larg-

est proven oil shale reserves. The Fourth Congressional District of Colorado also is range country with huge spreads of beef animals, blooded breeding stock and sheep. And there's the rub.

For many years the district was represented in Washington by venerable Ed Taylor, the universally respected Democrat who fathered the Taylor Grazing Act for sensible, controlled use of the public domain. When Taylor died he was succeeded by a Republican who distinguished himself chiefly as spokesman for the big cattlemen in their efforts to grab the Taylor grazing lands and plunder the national forests. He also lined up with the enemies of reclamation even though his own district prospers or hungers in direct ratio to available water.

WAYNE ASPINALL gave special interest serving its comeuppance in 1948, and the western slope once again got decent representation. Early this year the Republican cattlemen tried a sleeper play aimed at riding ASPINALL out of their way. They arranged a memorial suggesting that he be given a post of prestige on the House Ways and Means Committee. Certainly he deserved it. But that would have taken him off the Public Lands Committee, making a vacant chair for Republican J. EDGAR CHENOWETH, from southern Colorado, whose record shows him most friendly to the cattlemen's designs.

ASPINALL spotted the play immediately. In his calm, definite, and forthright way he checkmated the move with this statement: "I want it definitely understood by all the people of Colorado that I do not intend to get off the committee and that I have already refused a place on three of the most important committees in the House in order to keep my membership on the Public Lands Committee."

Round faced, almost cherubic of countenance, ASPINALL is friendly without being hale-fellow. His rare speeches are scholarly, direct, fact-cramped; oratory is for others. His weakness as a political leader is his lack of color and verve, but he makes up for it many times over in the in-fighting.

For it was not by chance that he was tagged twice as majority whip in the State senate, once as speaker of the house, and several times as senate minority leader. He went to the Colorado House of Representatives originally in 1930, served for 8 years, and then was elevated to the senate for another 8.

This rich political education was not lost on the small man who once taught high school in his home town of Palsade. ASPINALL is a sincere, seasoned legislator, short on bombast, long on honest public service in the liberal tradition.

Price and Wage Controls

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent that two polls and an article, indicating that the voters of this country favor continuing and strengthening price and wage controls, be printed in the Appendix of the RECORD. The first is a poll from my State of Minnesota conducted by the Minneapolis Tribune of June 20, 1951, entitled "Keep Price and Wage Curbs, Public Says." The second is the George Gallup poll entitled "Poll Reveals Voters Favor Tighter Curbs," publisher in the Minne-

apolis Tribune of June 29, 1951. Next is an article in America for June 30, 1951.

There being no objection, the polls and article were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Tribune of June 20, 1951]

KEEP PRICE, WAGE CURBS, PUBLIC SAYS

A majority of Minnesotans thinks Congress should continue price and wage controls. Two adults in every five, in fact, favor even stronger price regulations.

These Minnesota Poll findings are based on interviews June 6-10 with a State-wide cross-section of men and women 21 years of age and older.

The Government's control program is operated under a law scheduled to expire June 30. Congress is being urged by President Truman to extend the law. The President also has asked for strengthening of the regulations.

Interviewers asked first:

"What do you think Congress should do—make price controls stronger? Keep them as they are? Ease up the controls? Get rid of them altogether?"

The answers:

	Percent
Make them stronger.....	41
Keep them as they are.....	12
Ease up controls.....	8
Get rid of controls.....	25
No opinion.....	14
Total.....	100

Thus, 53 percent favor keeping controls, either in their present or in stronger form; 8 percent would like an easing up of the regulations; 25 percent prefer to see controls ended, and the remaining 14 percent are undecided.

"If you're going to have price controls, the law should be stronger; dealers should be punished if the laws are not obeyed," an Ely farm woman said. A Minneapolis man thinks controls should be as strong as they were in World War II. A Hawley farmer believes that if we take off controls, it will cause inflation.

Persons who favor doing away with controls offer comments like these: "Business will regulate itself if given a chance" (a Pine City man); "Controls just don't work unless there is a real emergency" (a Pine River farmer); "The majority of products don't need control" (a Crookston man).

Among farm people, there are almost as many (34 percent) who think Congress should either extend the present controls or strengthen them.

Fifty-two percent of the college-educated people want to see Congress tighten controls and another 8 percent think the present controls should be continued.

More than two out of three labor union members (69 percent) are in favor of price-control extension, in the same or stronger form.

On political lines, Democratic-Farmer-Laborites, Republicans, and independent voters offer these views:

	DFL	GOP	Independents
	Percent	Percent	Percent
Keep or strengthen controls.....	61	46	47
Ease up controls.....	7	13	8
Get rid of them.....	19	31	28
No opinion.....	13	10	17
Total.....	100	100	100

Interviewers also asked the same State cross-section:

"What about wage controls—do you think Congress should keep wage controls, or do away with them?"

The answers:

	All	Men	Women
	Percent	Percent	Percent
Keep wage controls.....	56	59	54
Do away with them.....	24	26	22
Other answers.....	6	6	6
No opinion.....	14	9	19
Total.....	100	100	100

DFL, Republican and independent voters alike want to see wage controls continued. So do people of all educational levels and of all economic groups. Sixty-four percent of the labor union members interviewed endorse wage control extension.

[From the Minneapolis Tribune of June 29, 1951]

POLL REVEALS VOTERS FAVOR TIGHTER CURBS

(By George Gallup)

PRINCETON, N. J.—Although most voters are far from satisfied with the working of economic controls, there is overwhelming popular support for continuing them.

In fact, the President's repeated pleas for making the price-wage-control program even stronger have struck a responsive chord. A survey just completed by the American Institute of Public Opinion finds that the main weight of sentiment is for making the program more strict and comprehensive.

Interviewing on two questions was concentrated during the week of June 17 to 23, just before Congress began debating the control-extension measure.

The first question was:

"The Federal price and wage control laws end this June 30. Do you think these laws have worked well or not?"

Here is the national vote:

	Percent
Yes, worked well.....	31
No.....	45
No opinion.....	24
Total.....	100

In general, voters who classify themselves as Democrats take a much more favorable attitude than those who consider themselves Republicans.

Among Democrats the vote is evenly divided, whereas among Republicans sentiment is unfavorable by a ratio of 5 to 3.

Here is the vote:

	Democrats	Republicans	Independents
	Percent	Percent	Percent
Yes.....	38	28	28
No.....	39	50	46
No opinion.....	23	22	26
Total.....	100	100	100

In spite of criticism of the laws' effectiveness, fewer than one voter in six thinks Washington should abandon them and have no controls at all.

This is shown in answers to the second question in the survey, as follows:

"Do you think the Federal price and wage control laws should be continued as they are, or strengthened or done away with?"

	Percent
Continued.....	20
Strengthened.....	45
Done away with.....	16
No opinion.....	19
Total.....	100

Sentiment for strengthening the controls was found to be somewhat higher among Democrats than Republicans, as follows:

	Democrats	Republicans	Independents
	Percent	Percent	Percent
Continued.....	22	18	20
Strengthened.....	49	38	46
Done away with.....	9	26	14
No opinion.....	20	18	20
Total.....	100	100	100

[From America of June 30, 1951]

SPEAK UP, M' CITIZEN

When the President faced a battery of microphones and television cameras the night of June 14, Congress was in no mood to write the kind of defense production law the White House asked for way back on April 26. Neither was it disposed, in response to a vigorous request from Charles E. Wilson, mobilization czar, to extend and toughen the Housing and Rent Act of 1947. So far as we can see, Mr. Truman might just as well have spent the evening reading his favorite history books or planning a week-end cruise. Capitol Hill reaction to his deadly serious, down-to-earth speech was very, very chilly.

Whatever doubts existed before, it is painfully clear now that the Eighty-second Congress, dominated on most domestic issues by an informal coalition of Taft-Wherry-Martin Republicans and southern Democrats, will not come honestly to grips with the menace of inflation unless an aroused citizenry makes its influence strongly felt and takes the play away from self-interest pressure groups. Most Senators and Representatives appreciate the timeliness and justice of Bernard Baruch's recent advice to Michigan's freshman Senator, BLAIR MOODY: "You know well enough what to do. Damn the political torpedoes, go ahead." But the run-of-the-mill politician doesn't damn political torpedoes. For the most part, short of an all-out war, he doesn't let them come within a country mile of his craft.

No slouch as a politician himself, Mr. Truman knows this better than most people. That is why he went to the people over the heads of Congress on June 14. He is betting that once the people appreciate the imminence of another wave of inflation, they will accept the necessity for strict controls and light a fire under their dawdling, lobby-conscious Representatives in Washington. He is even convinced that a majority of the rank-and-file members of the farm and business groups opposed to effective wage and price controls are out of sympathy with what their spokesmen have been up to. He is not at all convinced that the National Association of Manufacturers is the authentic voice of business, or that the American Farm Bureau Federation is the authentic voice of agriculture. And he is certain that when John L. Lewis and William Hutcheson oppose controls, they are not speaking for the coal miners and carpenters of the country.

We think the President is right. On the basis of his radio address, we think he is right all along the line. The danger of a big inflationary bulge this fall or early next year is real. Despite the current lull on the price front, the people can be made to see this danger, and once they see it will accept whatever curbs are needed to ward off a catastrophe. Most of them still remember acutely what happened in 1946 when OPA controls, at the insistence of the very groups which are warring on controls now, were prematurely removed. Many of them haven't yet recovered from the resultant price binge. That goes for farmers and businessmen, too, who have discovered that

selling prices do not rise alone. They are accompanied by rises in costs, including the cost of labor, and frequently the most tangible result of an inflationary rat-race between wages and prices is a bad case of ulcers.

Now that the President has gone to the people, it is important for all of us to understand what the issue really is. First of all, it is not a question of all controls or none. Everybody agrees on the need for credit controls, for higher taxes, for a system of priorities and allocations. Despite all the farm and business lobbies in Washington, it is not even a question of either continuing wage and price and rent controls or doing away with them. Even Mr. TART agrees that they must be continued on a temporary basis. The real question is whether or not present controls are going to be tightened up, extended and given a good set of teeth. That's what the fight is over. That's the issue which we, the people, must decide. If you agree that a well-rounded program of controls, including wage, price, and rent controls, is needed to keep inflation in check, let your Senators and Congressman know where you stand. And do it now.

Rider Means Job Freeze

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. CURTIS of Missouri. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of July 16, 1951:

RIDER MEANS JOB FREEZE

(By John Cramer)

If Congress does the expected, and tacks the so-called Jensen rider onto pending non-defense appropriation bills, one of the things you can expect as a result is air-tight freeze on Government employee transfers from agency to agency.

Civil Service Commission has authority to order such a freeze by regulation—and if the Jensen rider becomes law it almost certainly will do so.

Here is why:

Under the rider, agencies could fill only 25 percent of all job vacancies occurring in the new Government year which started July 1—one vacancy out of every four.

The job freeze could be expected to function in two ways:

1. A stiff penalty would be provided for employees who voluntarily resigned from Government, planning to return within a few months. This penalty probably would provide that such an employee must wait at least 6 months to a year before returning to Government. A similar rule was in effect during World War II to discourage unauthorized transfers. Then, employees who resigned with the idea of subsequent transfer, had to wait 90 days before going back to a Government job.

2. Agency-to-agency transfers almost certainly would be prohibited outright in a freeze far tighter than any Government previously has invoked. No agency could be expected to tolerate a situation in which every 12 employees lost by transfer could be replaced by only three employees. Civil Serv-

ice would have no choice except to order a freeze.

This freeze would have its most undesirable effect on defense agencies, who would find themselves prohibited from acquiring new workers by transfer from nondefense agencies—something Congress has been trying to encourage.

That's the dark side of the picture.

On the other side, as pointed out here previously, the Jensen rider would:

1. Accomplish its deep personnel cuts without requiring lay-offs—a tremendous boon to employees who otherwise might find themselves without jobs.

2. Open the way for promotion for scores of thousands of deserving employees. That's because the rider's prohibition against filling vacancies would not apply to vacancies filled by promotions from within. And the many vacancies it would create, inevitably would lead to wholesale promotions.

Incidentally, don't let yourself be confused by headlines (in other papers) which tell of wholesale "job cuts" as a result of the Jensen rider. True enough, it would reduce Federal employment. But the important thing for employees is that it will wipe out any possibility of mass lay-offs in Government during the current Government year.

SPECIAL CASES

Here is how the Senate Civil Service Committee's bill to raise the pay of classified (white collar) Government workers would affect employees drawing so-called seniority pay—and those at rates which do not correspond exactly to the ordinary classification pay steps:

1. Those whose pay falls between regular steps of regular pay grades would be advanced to the next higher step—and assigned the new rate for that step. In other words, they would get slightly higher increases than other employees.

2. Those in regular seniority pay steps would have their salaries increased by the same "average" 84 percent as other employees.

3. Those whose present pay falls below two seniority steps would be advanced to the next higher grade, and given the new rate for that step.

4. Those whose present pay exceeds that of the top seniority step for their grades would have the "average" 84 percent added to their salaries.

CURIOUS DOCUMENT

President Truman's letter Thursday urging 7 percent pay increases for classified and postal workers was a curious document in more ways than one.

On its face, it was a simple appeal for congressional action on raises. But the facts are:

That Mr. Truman's own White House assistants (or at least some of them) took a dim view of raises from the very start.

That these same assistants were mainly responsible for the fact that the administration recommended a parsimonious 7 percent, instead of some larger figure.

That these same assistants argued that the administration should take no position whatever on pay increases—but were talked into a definite stand by Civil Service Commission Chairman Robert (Bob) Ramspeck.

That the real inspiration for the Truman letter was not a White House desire for raises—but, instead, an attempt to head off increases larger than 7 percent. The inside fact is that the letter originated with the Budget Bureau, which was disturbed by Postmaster General Jesse Donaldson's statement to the House Civil Service Committee urging 10 percent for postal employees.

Postscript: If I seem to be belaboring the Administration and the White House, it's only because I like my public officials to be

more forthright in their dealings than administration officials have been on the pay raise question.

Puts Politics in Price Control

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Adrian (Mich.) Daily Telegram of July 14, 1951:

PUTS POLITICS IN PRICE CONTROL

Just what the Democratic national committee hopes to accomplish by its declared intention to rally "grass roots" support for the kind of inflation control bill the President wants from Congress is difficult to see. Of course, the declaration puts the party on record against high prices. But there is nothing distinctive about that. Everybody is against high prices and wants them lower.

As for rallying "grass roots" support for stiffer controls measures, it is probable that party wheelhorses throughout the 48 States may send telegrams or letters to Washington. But it is doubtful that any great number of rank and file consumers will do so. President Truman in a recent address appealed to the people to urge passage of a strong controls law. The news from Washington never has reported any ground swell of public opinion in the wake of that appeal.

As a matter of fact, the pressure on Congress for and against stronger economic controls is coming almost entirely from self-interest groups. These groups—business, labor and farmer and their various subdivisions—all imply that they are speaking out for the public interest and for the consumer. But actually they are working for the interest of their own particular group. Nobody is working for the consumer which is the largest and most important group of all. And these groups speaking all at the same time talk in a babel of tongues.

The people are confused. They don't know what to think. But they do know that price control has not been especially effective. They heard a lot of talk that meat was going to be cheaper. But the price over the counter is as much, if not more, than it was before all the talk. They know that the President who is now calling for sterner control measures did not want any measure when Congress insisted he have one last July after the war in Korea began. And the people know that he dilly-dallied about price and wage controls during the autumn, delaying any action whatsoever until the November elections had been held. Prices were rising all those months, but the President who seems so concerned about price increases now was not all concerned about price increases a few months ago.

The people, by and large, are disillusioned and somewhat skeptical about the whole subject of inflation control. They have heard a lot of talk out of Washington about inflation control but inflation goes on just the same. They look for sound, inspiring leadership but they do not get it. They look at price control as just about as nonpartisan a matter as anything can be nonpartisan. And the Democratic National Committee makes it a partisan issue. The people know that the party group did not make it a party issue unless the President consented.

United States, Gray Marketeers, and Industry Linked to Steel Shortage

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. BROWNSON. Mr. Speaker, many of my good friends in the CIO and CIO-UAW have visited me this week urging almost complete control of our American economy by big Government under the provisions of a stringent Defense Production Act. In this connection, it is interesting to me to note that maladministration of existing Government controls is blamed by union leaders and industry alike as one of the main reasons why 100,000 workers are idle in the Detroit area, which includes subcontractors as far away as my district in Indiana. Evidently there can be too much control, especially where the administration of these controls rests in the hands of politically selected field administrators. A happy mean between complete control and absolute laissez-faire seems in the public interest:

[From the Washington Sunday Star of July 15, 1951]

UNITED STATES, GRAY MARKETERS, AND INDUSTRY LINKED TO STEEL SHORTAGE

DETROIT, July 14—Government, industry, and gray marketeers all received a share of the blame today as the Senate dug into reasons for the critical steel shortage and resulting layoffs.

A union man said 100,000 workers were idle in the Detroit area while other parts of the country had a manpower shortage.

A company man said a rocket manufacturer in Dayton, Ohio, had so much steel on hand he had to refuse 5 carloads of it while Michigan manufacturers of the same item were screaming for steel.

The union man was Norman Matthews, national Chrysler director of the CIO United Auto Workers. The company man was William H. Leininger, chairman of the Small Business Committee of the Michigan Economic Development Commission.

PARADE OF WITNESSES

Both were in a parade of witnesses who told Senator Moody's, Democrat, of Michigan, Small Business Subcommittee they didn't know where America's record production of steel was going.

Though not members of the subcommittee, Senators BENTON, Democrat, of Connecticut, and FERGUSON, Republican, of Michigan, joined in the questioning at the opening of the committee's cross-country hearings.

Michigan's Gov. G. Mennen Williams and Blake O'Connor, committee investigator, also took part.

Mr. Matthews attributed the manpower surplus-shortage to the Government's parallel-plant plan for locating defense factories. The Department of Defense adopted this system to reduce loss of military production in the event of an enemy attack.

Mr. Matthews contended that such new plants as those being built by Chrysler Corp. in Newark, Del., and New Orleans were built farther from the biggest sources of manpower supply than necessary for strategic purposes.

BIG LAY-OFFS CITED

"I don't know of a single plant in Detroit where there has been reconversion to de-

fense production," said Mr. Matthews, listing big lay-offs at General Motors, Ford, Chrysler, Hudson, Kaiser-Frazer, Packard, and other auto firms.

Mr. Matthews said he believed Chrysler picked the sites for its new Delaware and Louisiana plants. But when Senator FERGUSON spoke up that the Government would have to approve the location, Mr. Matthews remarked:

"It's six of one and half a dozen of the other."

Mr. Matthews read a letter from Defense Mobilizer Charles E. Wilson saying "a mistake had been made" in the allotment of defense contracts. He said Mr. Wilson promised to have defense agencies review the situation and help the city if possible.

Mr. Leininger said he would give the name of the Dayton rocket manufacturer to the Moody committee in confidence. He said he knew of no Michigan firms stockpiling steel beyond moderate reserves.

NEW WAREHOUSES APPEAR

Mr. Leininger testified that a few new steel warehouse firms had sprung up in recent months to capitalize on the demand for the basic metal. Under present price regulations, he said, some of them can legally charge 200 to 300 percent of the prevailing market price.

"I'd call that a very gray market," Senator Moody commented.

The president of a steel warehouse firm that has been in business 11 years recommended "heavy fines and wide publicity" for "chiselers who take monetary advantage at the expense of the defense effort."

J. Ivan Fiscus, head of the Huron Steel Co., Detroit, made the recommendation. He said the steel mills themselves could help by "keeping closer control on the flow of steel rather than creating a whole new flock of unqualified steel brokers."

How To Control Inflation Without Curbing Incentive

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks, I wish to include an abridgement of an address by Dr. Neil H. Jacoby, dean of the University of California Business School, before the town hall meeting in Los Angeles on April 30. This compendium was published in the monthly bulletin *Estate and Tax Letter*, published by Clyde R. Welman, of Memphis, Tenn.:

HOW TO CONTROL INFLATION WITHOUT CURBING INCENTIVE

There are four initial features of the tax-reduction bond plan.

First, Congress should increase personal income tax rates by X percentage points in all brackets and label the addition a Defense Tax.

Second, Congress should provide that a taxpayer may deduct from his tax liability, up to the full amount of the new defense tax, the amount of tax-reduction bonds that he elects to purchase.

Third, Congress should direct the Treasury Department to issue a new series of bonds to be known as tax-reduction bonds. These would be nonmarketable, nonnegotiable and available only to persons who take credit for the amount purchased against their de-

fense taxes. Except to meet specified personal emergencies, these bonds would not be redeemable before January 1954; thereafter, redeemable at the option of the holder or of the Treasury. They would bear interest comparable to that on savings bonds.

Fourth, Congress should provide that employers shall withhold the full amount of employee's estimated tax liabilities, including defense tax. At an employee's direction, an employer shall use up to the full amount of his defense tax to purchase tax-reduction bonds in his name.

Why is this tax reduction bond plan superior to alternative methods of curbing price inflation?

Our chief economic problem is to expand production to meet the needs of an enlarged Military Establishment, and to do this in a fully employed economy without generating further price inflation and subsequent economic instability.

The projected increase of 30 to 40 billion dollars in expenditures for military purposes will surely produce a rapid increase in prices under present tax, debt management, and monetary policies. Our economy has yet to feel the full impact of mounting military demands for goods and the withdrawal of young persons from the work force for military service. The inflation problem remains.

The basic solution is to reduce consumer demand, during the next 2 or 3 years by some 15 to 20 billion dollars annually below what it would otherwise be. We cannot rapidly increase production by expanding industrial plant, the work force and workers without either direct controls, which are expensive and partly ineffective, or price inflation, which is unjust and disruptive. Our strategy must be to curb consumer demand, while maintaining incentives for maximum-productive effort.

Consumer demand may be curbed by direct economic controls or by indirect controls. Higher taxes, savings programs, or general restrictions on bank credit are indirect in their effects, they do not apply to particular transactions and decisions. Direct controls, price or wage ceilings, rationing, materials allocations, or manpower restrictions apply to specific transactions and substitute detailed regulations for free-market action. Complex and costly to administer, they often have unexpected and undesirable consequences.

There is a strong case for maximum reliance upon indirect controls. They leave customers wide choice in spending their income and permit larger consumer satisfaction than do price and rationing directives.

They deal with the cause of price inflation. They are inexpensive to administer and they are effective. Direct controls of wages do not prevent substantial increases in take home pay. Price ceilings do not prevent price inflation in the form of curtailment of services by vendors, down-grading of quality, gray or black markets. Direct controls may be justified in maximum mobilization; in the present limited mobilization, indirect controls should be our main reliance.

Certain other elements of the economic situation do not seem to have received sufficient attention.

Fiscal planning should contemplate a "hump" in Federal expenditures. In 2 or 3 years, the Military Establishment will have been expanded to the point where, barring a world war, Federal expenditures may be reduced to the level that will maintain it. We shall probably have passed over the hump of increasing Federal outlays and will enter a period of declining Government expenditure. At that time, the main economic problem may be a deficiency of demand for our enlarged production.

Construction and durable goods production increased rapidly from 1945 to 1950. By mid-1950, the sharp edge of consumer demand for housing and durable goods had been blunted.

What would our economic condition be today had not war in Korea shifted our goals to defense? Potential inflationary pressure, while great, may be overestimated. We may have to face the question of stimulating consumer demand in 1954 or later.

The step-up of annual Federal expenditures from \$40,000,000,000 to \$70,000,000,000 or \$80,000,000,000 may well be a temporary bulge, to be followed by a reduction to a lower long-term level, although probably not as low as \$40,000,000,000. Federal fiscal policy should be designed to meet this probability. The tax reduction bond plan will permit scheduling consumer expenditures in the interest of economic stability.

Reducing consumer expenditure by increasing saving is more important than achieving a budgetary surplus.

The salient economic objective is to prevent further price inflation, not to achieve a balance or surplus during the next 2 or 3 years. There is much confusion over this important distinction.

The prevailing sentiment is that taxes should be increased to cover the prospective budgetary deficit. Pay-as-you-go is the slogan. It is widely believed that inflationary pressure will stop, if only the Federal budget is balanced.

The fact is that a balanced Federal budget provides no guaranty against further inflation. Last year, prices soared despite a Federal budget which generated a large surplus on a consolidated cash basis. Avoidance of deficit financing is desirable in itself and also complementary to a savings program.

Yet the paramount goal is to prevent erosion of purchasing power of the dollar by curbing consumer expenditures. This can be done by inducing consumers to save more, as well as by increasing their tax payments. The need is to transfer spending power from consumers to the Government. Whether consumers get savings bonds or tax receipts is secondary in importance. One may hope for both price stability and budgetary balance; but by all means let us have the former. The tax reduction bond plan will curb consumer expenditures, and therefore price increases.

A steep increase in personal income tax would impair productive effort and widen tax evasion.

Higher corporate incomes taxes would not reduce the gap between personal incomes and the supply of consumer goods. Federal sales and excise taxes would reduce this gap, but by raising prices and thereby increasing pressure for higher wages. If we choose the tax route toward price stability, we should therefore focus on higher personal income taxes.

Personal-income-tax increases large enough to deal with inflation (fifteen to twenty billion dollars per annum) would dampen productive effort. Some already believe that income taxes will take so much of any increase in income that it is foolish to work longer or harder. There is much evidence that further large increases in personal income taxes may seriously curtail productive effort. The public interest requires maximum effort from everyone. The tax-reduction-bond plan deflates expenditure without reducing incentives.

With every rise in the tax rate, also, incentives to evade taxes increase. To the extent that evasion occurs, tax increases fail to reduce consumption or block inflation. The tax-reduction-bond plan would not increase incentives or opportunities to avoid taxes.

The argument is not against any increase in personal income taxes. Increased taxes need to be supplemented by other weapons in the fight against inflation.

Efforts to increase savings-bond purchases are ineffective because of inflationary expectations.

Inducing the public to save more and to invest more in present Government securities would hold promise were it not for growing public expectation that the purchasing power of the dollar will fall further.

These expectations are evidenced by the excess of savings-bond redemptions over purchases and the mediocre success of savings-bond campaigns. The urge to buy tangible things, arising from fear of inflation, itself produces inflation and justifies the expectations upon which it was based. We must break out of this "vicious circle." The tax-reduction-bond plan provides the incentive to defer consumption and purchase bonds. Outright compulsory savings is avoided, yet few taxpayers would fail to reduce their income taxes by buying bonds.

In conclusion, the central idea of the tax-reduction-bond plan is to impose a powerful indirect control over consumer spending by combining a personal-income-tax increase with savings-bond purchases in a way that is economically sound, psychologically appealing, and administratively simple. People will accept curbs on spending, without diminishing productive effort, if provided with an interest-bearing claim on future production, exercisable at a time when spending will serve the public interest.

The plan is not a panacea for price inflation, but merely one element in an economic program for the defense period. Its effects could be offset by failure to achieve necessary governmental economies, by lax credit, taxation, or debt-management policies. Inflation must be fought with a variety of weapons. The use of this weapon does not prevent the use of others.

Finally, the proposal embodies elements of economic philosophy, fiscal policy, and administrative procedure with which the American people are well acquainted. It requires no radical change in our habits of mind. It would put us on the right track in dealing with inflation, but would be a step away from the dubious course of major reliance upon direct price and wage regulation. It would set our feet on the path of responsible fiscal and monetary policy. This is the only route by which the Nation may hope to pass through the years ahead with a minimum damage to a free economy.

Overseas Activities of the Government

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. BROWNSON. Mr. Speaker, as a member of the Federal Relations With International Organizations Subcommittee of the Committee of Expenditures in the Executive Departments, I believe it is important that the Members of Congress become fully informed concerning the 73 multilateral international organizations in which the United States participates. As a step toward this objective I have asked the subcommittee to approve a program whereby the staff will prepare a brief and impartial report on United States participation in each of these international organizations. This project has been approved and these reports are now in preparation by the subcommittee staff.

Under unanimous consent, I include in the CONGRESSIONAL RECORD an article

from the Sunday Star, July 15, 1951, Washington, D. C., which points out some of the British and French criticism of the shortcomings of UNESCO, which seems to suggest that there is a definite need for the enactment of legislation similar to that introduced by Mrs. CHURCH and Congressman DAWSON, chairman of my committee, H. R. 3406 and H. R. 3697, respectively, which would create a commission to make a study of the administration of overseas activities of the Government with view toward securing maximum efficiency and effectiveness from our expenditures and operations abroad and in our territories:

UNESCO DOINGS CAUSE EUROPEAN GRUMBLING AT CRACKPOT CARNIVAL

(By Marcel Wallenstein)

PARIS, July 14.—Men and women who have the softest jobs in the world at good pay—and tax free—are beginning to worry. A fire has been lit under the United Nations Educational, Scientific, and Cultural Organization, which has been meeting here in plenary session.

The British who pay one-eighth of UNESCO's expenses and the French, who pay less, are beginning to grumble. The United States taxpayer, who pays twice as much as anybody else for what one European editor has called the crackpot's carnival, seems not to be worried about the drain on his small change.

Next year UNESCO will spend \$8,500,000. Since 1946 it has spent \$34,000,000. What have the nations which have footed the bill obtained for their money? It is doubtful if they have had anything except the information which the UNESCO committee members have sought in many parts of the world.

EMPLOYEES GET GOOD PAY

The chief beneficiaries of this organization, according to critics in Europe, are the employees. They get fat salaries. They are paid traveling expenses to and from all parts of the world and receive a per diem of \$25 a day. They pay taxes to no government. They get whisky, wine, and cigarettes duty free and have other diplomatic privileges.

Investigating the finances of UNESCO recently Viscount Simon, former British Secretary of Foreign Affairs, complained: "They keep books in a haphazard manner."

An investigator in Paris wished to find out what the UNESCO staff does to earn a living. This is what he discovered: The organization seriously put forward a plan to take information criticizing any country out of school-books throughout the world. It supplied cash to numerous strange causes, including a search for mythical Inca treasure. It suggested a new Garden of Eden on the Amazon River, the funds to be supplied by members of the United Nations. It studied the case of an African tribe which extracted the front teeth of children, so they could pronounce words of the native dialect.

EXPLAINING CUSTOMS

He discovered that Miss Myrna Loy, the Hollywood actress, a member of the organization, was concerned with explaining to the world certain national customs—such as why Englishmen carry umbrellas. John Gordon, editor of the London Sunday Express, who is attacking UNESCO as a useless and wasteful group, suggests Miss Loy explain why Americans chew gum.

UNESCO has sent scientists to many parts of the world to study the causes of war. It has published a report on education and agriculture in remote places in Mexico and Africa. It sent a delegation to study newspapers in Brussels and is said to have reported three newspapers were published in a

city that has none. In the same report it praised what it believed was a newspaper when actually the institution concerned in the report was a lunatic asylum.

The critics list many such cases.

HE NOW DRAWS \$1,500 A MONTH

Last year a retired English politician in France found it difficult to bring money from England for his living expenses. He knew officials of the UNESCO and succeeded in having himself nominated to its Paris staff. He draws \$1,500 a month. When he travels he is paid expenses of \$25 a day. He has been repeatedly to New York. Wishing to spend a holiday this summer in North Africa, he applied for and received traveling expenses from UNESCO.

The positions are obtained by nomination by members within the organization. The staff is an international body drawn from most nations which are members of the United Nations. The Director-General is Torres Bodet, a Mexican poet, who draws \$20,000 a year and has a very large expense account and other privileges. Secretaries, messengers, and other minor employees are paid three times the salaries such work normally brings in Europe. All salaries are payable in United States currency.

Stronger Controls

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from Columbia, published and printed monthly by the Knights of Columbus:

DEAR CONGRESSMAN I probably wasn't paying too much attention at the time but I seem to remember you telling me, as a member of the great invisible audience, to let you know if there ever was anything you could do for me. I'm not even sure right now that there is anything you can do for me—according to the papers, you're having plenty of troubles of your own—but there are some matters that have me baffled and even our next-door neighbor, on the left, who is so smart he fixes his own leaky faucets, doesn't know the answers. What got me writing to you is some trouble my neighbors, on the right, had with their 5-year-old daughter, Iris Sandra, a cutie pie who not only does acrobatic dancing but is also a great help to her mother. Well, one day last week, Iris Sandra lugged home \$15 and some cents' worth of meat and groceries from the corner store, which is all of a hundred yards away, and pulled up at the kitchen door breathing hard. Naturally, her mamma and poppa were amazed and distressed and worried about what the neighbors would think about the way they were treating the tot. In fact, they are still telling everyone on the block over and over again: "It was only \$15 worth of meat and groceries we sent her for and we never thought it would strain her strength and anyhow we are feeding her some of those three-star vitamin pills." No one on the block is taking any digs at poppa and mamma because they all know it is something that could happen to anybody at these prices, which brings me around to the problem I would like to bring respectfully to your attention, knowing that you like to have your

finger on the pulse of your constituents as long as they have any pulse. Frankly, you are in danger of becoming known as the representative of the stupidest collection of constituents in the United States of America—or at least that is the impression you'd get if you heard them talking. They open their morning papers on the bus and all you hear is guys muttering, "This is where I came in."

If you look over a fellow's shoulder—which is a cheap trick but you know how it is when your excess earnings are being syphoned off so you won't do anything foolish with the \$3.68—you see a set of headlines that tell about how many miles our boys are on this or that side of the thirty-eighth parallel, and who left how many paragraphs out of some document he was reading to some Senate committee, and how much some big wheel said the price of hamburger should be come December, and what some cattle raisers' mutual protective society told him he should do instead of stand on his head that long and how many shoestrings some Air Force general has squeezed out of a measly little bank roll of a few hundred or a few thousand million—or zillion, or something—dollars, and how some smart operators bought all the bullets left over from the last war and are selling them back or renting them to Uncle Samuel. There are also a couple of stirring messages to the citizens urging them to tighten their belts but it doesn't say around whose neck. Anyhow, these fellows on the bus I am speaking of are so stupid that they think someone is giving them a slight rooking somewhere along the line. They can't figure out for sure who is responsible for the cuffing they get when they start negotiating for a few slices of the cheaper cuts but they know they are getting the old sandbag right behind the ear—and sold. They wouldn't like to think that some of their fellow citizens are ganging up on them but it could be that when they are saying, "That's where I came in," they are thinking of what happened a few years ago when the price controls went off the book on the theory that the result would be lower prices. They seem to think, also, that there is enough of just about everything, including the cheaper cuts, in this country so that there shouldn't be any occasion for a butcher, even as a gag, to put a sign in his window offering a roast of beef for \$1 down and \$1 a week. That ain't funny, McGee. And the front-page pictures of the empty stock pens aren't funny, either. A string of empty coal cars, featured that way, would signify a strike. What are the empty stock pens supposed to mean? Some of your constituents are wondering if some of your colleagues' constituents, out where the deer and the antelope play, are fixing to put the squeeze on them a little tighter. Maybe there isn't much you can do about this, but would you pass the word that the city slickers in your district like to bite on a small steak, at least on festive occasions, without asking the wife's people to go on another note. It isn't that we want anybody to go broke home on the range but would it be all right with them to get rich a little bit gradually, so to speak? Well, Congressman, I will close this letter before it starts to wander all over the lot and I am sorry to have taken so much of your time but I just wanted you to know that things seem to be more than usually mixed up, and I am the same, and I think what is at the bottom of it is that old competitive spirit running a little bit wild and in the wrong direction. Maybe I'm wrong, but I'll bet this joker, Stalin, would blow a lot softer on his bazooka if we were all as set on trimming him as we seem to be on trimming each other.

Yours truly,

J. DOAKES.

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. VAN ZANDT. Mr. Speaker, the first Governors' Conference of Inland America held recently at Omaha, Nebr., and termed "nonsectional," turned out to be a high-pressure attempt to rally Midwest support for the extravagant St. Lawrence seaway.

The rest of the story about this conference is told in the following editorial that appeared in the June 20, 1951, edition of the Philadelphia (Pa.) Inquirer.

The editorial follows:

NONSECTIONAL SEAWAY?

It's strange that the First Governors Conference of Inland America, which has just been held in Omaha, under auspices which its organizers termed "nonsectional," turned out to be a high-pressure attempt to rally Midwest support for the extravagant St. Lawrence seaway, which, if put through, would cause immense damage to eastern seaports, including Philadelphia.

Gov. Val Peterson, of Nebraska, and Gov. G. Mennen Williams, of Michigan, sponsors of the meeting, declared any sectional purpose. But it quickly became apparent that one objective was to enlist the Missouri River States in aid of the seaway project, which has been a threat against American taxpayers since 1895 and which repeatedly has been rejected by Congress.

On hand was an array of big shots from Washington, including Secretary of the Interior Oscar Chapman and Secretary of the Army Frank Pace, Jr., to shout the glories of the often-discredited seaway. Speakers pleaded for the St. Lawrence project as a means to get ore to Midwest steel plants in spite of the fact that it has been argued convincingly that their needs can be taken care of without sea-borne Labrador and Venezuelan ore.

The Truman administration's backing of the seaway as a defense measure lacks merit. The St. Lawrence is frozen up at least 5 months of the year. The truth is that this two-to-four-billion-dollar project is impractical and uneconomic. It should again be tossed out by Congress.

Taxes: 77 Cents an Hour

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. HAND. Mr. Speaker, the Millville (N. J.) Republican analyzes our tax problems in an interesting, down-to-earth fashion. Its worth-while editorial follows:

One of the problems in talking about the cost of our Federal Government is the fact that so many of us just cannot comprehend what \$1,000,000,000 means.

Most of us in Millville work for a living. Very many of us started work when we were young. All can recall that in some of our

dream making we may have wished to be a millionaire. To be a millionaire a person would have to have at least \$1,000,000.

So most all of us have grasped the knowledge that a million dollars is a lot of money. We know, for instance, that if we put a million dollars to work for us as an investment at 3 percent, we will have an annual return of \$30,000.

We know very well that we could live handsomely on \$30,000 a year. And to top it off we would get the \$577 a week (that's \$30,000 a year) and if our investment were secure, we would always have the million bucks. We could leave that to the wife and children, or we could bequeath it to charity without any regrets for it had produced quite a comfortable living for us all during our life.

Now we may have some conception of what a million dollars constitutes in money. Even in these times of inflation, that is still a lot of wherewithal. When we talk of a billion dollars, we are dealing with one thousand millions—in other words one thousand times a million dollars is a billion of them.

Our Federal Government proposes that we spend \$72,000,000,000 for fiscal 1952. That is seventy-two thousand millions. Are our figures getting too big?

Another way to look at this seventy-two thousand millions (seventy-two billions) is that spread among the families of the United States it would mean approximately \$1,600 for each and every family.

What does \$1,600 mean to the head of a family? If he works 40 hours a week for 52 weeks at 77 cents an hour he can earn just about that much.

Who is paying this big tax bill? We are. Soak the rich. Tax the corporations. That is always the popular cry of the politician and the office seeker. He figures we dumb voters swallow such balderdash. Some of us do.

But the truth of the matter is that taxes come from the people who work. Who pays the tax of General Motors? The people who buy their cars. Who pays the tax of Swift? The people who buy their meats.

Taxes are part of the cost of doing business. Any business that did not include in its sale price the taxes it pays would soon go broke. So all of us are paying the taxes—whether they are direct or indirect.

Remember it's 77 cents an hour—better than \$30 a week for your family. That isn't hay.

Know Your Waterways

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1951

Mr. LARCADE. Mr. Speaker, under previous leave to extend my remarks in the Appendix to the Record, I wish to submit an article by the Marine News, of New York, published in the Washington Star of date July 16, 1951, as follows.

KNOW YOUR WATERWAYS—FLOOD CONTROL

Should our rivers flow down to the seas carrying away fertile top soil from countless upland acres and wreckage from flood desolation, rather than a large part of the Nation's commerce? Should their tremendous power run wild, disrupting industry and transportation, destroying wealth rather than creating it? It is estimated that the Mississippi deposits more than 400,000,000

tons of fertile soil (silt) into the Gulf of Mexico every year, and the Columbia more than 100,000,000 tons into the Pacific. This tremendous loss of one of the Nation's most valuable assets, the fertility of its land, is ominous. Certain cities and whole regions containing vital industries are dependent upon flood protection. The great city of New Orleans, and many smaller cities, are wholly protected by levees. Should up-country flood water be dumped on unprotected regions below? Overflows from as widely separated areas as Montana and New York State finally reach the Gulf of Mexico through the Mississippi and its tributaries. Water from the Miami Valley in Ohio finally reaches the Gulf, more than 1,500 miles distant, flowing through flood protection works along the Ohio and Mississippi most of the way. The disaster striking in Kansas and Missouri at this very moment could have been averted through flood-protection works. When unimproved and uncontrolled, rivers are idlers and destroyers; when controlled and improved, they are servants and producers.

MARINE NEWS,

GEORGE H. PALMER,

President and Publisher.

Judge the Record of the Democratic Administration in Foreign Affairs

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, the record of the Democratic administration since 1943 in the matter of foreign policy is clearly set out by Mr. David Lawrence in United States News and World Report of July 20. Under leave to extend my remarks, I am including this pertinent editorial. There can be little doubt that our foreign policy has been a failure, as evidenced by the record.

LEST WE FORGET

(By David Lawrence)

December 1943: United States, Great Britain, and China issue declaration at Cairo that Korea would become free and independent upon the termination of the war.

July 1945: Pledge to free Korea reaffirmed at Potsdam, the Soviet Union concurring.

September 1945: Japanese surrender North Korea to Soviet Union, South Korea to United States. The thirty-eighth parallel is military dividing line.

December 1945: Agreement of victors, including Russia, to set up democratic government in Korea.

March 1946: Soviet Union refuses to consult with any except pro-Communist groups in Korea.

May 1946: Joint commission adjourns due to Russians' blocking of progress.

September 1947: Soviet Union rejects proposal for conference to establish Korean provisional government. U. N. takes up problem of Korean independence. Soviet Union attempts to block it.

November 14, 1947: General Assembly of U. N. adopts resolution that elections should be held in both occupation zones and that a U. N. temporary commission should be present during the elections, "with the right to travel, observe, and consult throughout Korea."

January 1948: Soviet Union refuses to allow members of U. N. commission to enter North Korea.

May 7, 1948: Two days before general election ordered by U. N. commission, Communist Party in Korea is told Soviet troops will be withdrawn. Effort to compel American withdrawal.

May 10, 1948: More than 75 percent of 8,000,000 eligible voters in South Korea go to polls and choose national assembly. Dr. Rhee elected chairman.

June 25, 1948: U. N. commission announces election results were "valid expression of the free will of the electorate" in supervised parts of Korea, comprising two-thirds of the population of Korea.

August 1948: United States declares new regime is entitled to be regarded as the Government of Korea. United States military government in Korea terminated.

September 9, 1948: Announcement made that new central government had been established in North Korea, obviously under Soviet auspices.

December 12, 1948: General Assembly of U. N. formally recognizes government at Seoul under Dr. Rhee as lawful over the area where the temporary commission was able to observe and that "this is the only such government in Korea."

August 6, 1949: North Korea Government broadcasts appeals to overthrow Republic of Korea Government.

June 25, 1950: North Korean Army attacks South Korea at dawn south of the thirty-eighth parallel. U. N. commission calls for a "full-scale invasion of South Korea."

June 27, 1950: U. N. calls on members to furnish such assistance to the Republic of Korea as may be necessary to repel the armed attack to restore international peace and security in the area.

October 7, 1950: U. N. resolution reaffirms its objective of establishing a unified, independent, democratic government for all of Korea, and calls on members to give military assistance to that end. This resolution, in effect, also gave approval to the crossing of the thirty-eighth parallel by U. N. forces.

October 17, 1950: President Truman declares "our sole purpose in Korea is to establish peace and independence—our troops will stay there only so long as they are needed by the United Nations for that purpose."

November 28, 1950: General MacArthur reports to U. N. the facts about Chinese Communist intervention.

December 8, 1950: Prime Minister Attlee and President Truman issue statement declaring "there can be no thought of appeasement or of rewarding aggression, whether in the Far East or elsewhere."

December 19, 1950: Chinese Communist delegation at U. N. departs for Peiping, after having refused to meet cease-fire committee and having denounced General Assembly for failing to declare United States an aggressor.

January 2, 1951: U. N. cease-fire group sets forth conditions stipulating that supervision of any cease-fire, "shall be by a U. N. commission," which "shall have free and unlimited access to the whole of Korea."

January 17, 1951: Secretary Acheson discusses cease-fire proposals, stating: "If satisfactory arrangements for an independent and democratic Korea are put into effect, there is no longer any reason for maintaining U. N. forces in Korea."

February 1, 1951: General Assembly of U. N. brands Chinese Communist Government as aggressors, and affirms "determination of the United Nations to continue its action in Korea to meet the aggression."

June 23, 1951: Malik, of Russia, proposes cease-fire agreement based on thirty-eighth parallel.

June 26, 1951: Acheson says halt around thirty-eighth parallel means successful conclusion of war.

July 10, 1951: Cease-fire negotiations begin after United States spokesmen say achievement of peace and security in Korea would be sought as a political objective rather than as a military measure.

Years and years of palaver—and Korea is not yet free. And now how many more years of the same sabotage of the pledged word?

Gold Stars Only for Mothers Whose Sons Died Killing Fascists—Not Communists

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. SIEMINSKI. Mr. Speaker, a recent Associated Press release discloses that "only widows and mothers whose sons were killed during world War II may be issued official Gold Star lapel buttons."

In other words, those whose kin died killing the Axis Fascists of Hitler, Mussolini, and Tojo can wear the button, while the kin of those who died wiping out Stalin's Red aggressors in Korea are denied the honor.

If this exclusion is not altered, may I suggest, if it is agreeable to those concerned, that the United Nations issue an appropriate remembrance for our Korean war dead?

Hero's Welcome Awaits Medal of Honor Winner at His Mountain Home

EXTENSION OF REMARKS

OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gerald Griffin from the Louisville Courier-Journal of May 20, 1951:

HERO'S WELCOME AWAILS MEDAL OF HONOR WINNER AT HIS MOUNTAIN HOME

(By Gerald Griffin)

KENVIR, Ky., May 19—There's more than a hundred frying chickens up at Edd Dodd's house, waiting to be sacrificed on the altar of a hero's homecoming.

The altar, in this case, happens to be mom's kitchen stove. The hero is First Lt. Carl H. Dodd, who was awarded the Armed Forces' highest decoration today in Washington.

This decoration, the Congressional Medal of Honor, places Dodd in a select group of heroes that includes Sgt. Willie Sandlin of Leslie County and Sgt. Samuel Woodfill of Fort Thomas. The two Kentucky sergeants won theirs in World War I.

Dodd won his medal recently in fierce battlefield action in Korea. Like the two Kentucky sergeants of World War I, Dodd earned his decoration when, single-handed, he wiped out an enemy machine-gun nest.

A hero's welcome awaits this Harlan County boy who enlisted in the Army in 1943, won a battlefield commission in recognition of his leadership, and now is coming home on leave. He will return wearing a Silver Star and a Purple Heart, along with his Medal of Honor.

And Carl's parents, Mr and Mrs Edd Dodd, hardly can wait for him to arrive. He is their first-born of a dozen children, 10 of whom still are alive.

The Black Mountain Coal Co., which once employed the hero as a shot-fire, attempted to get him on the telephone today at Washington. They wanted to find out exactly when he is coming home. Company officials and just about everybody else in the coal town of Black Mountain, which has a post office called Kenvir, want to stage a big homecoming for him.

Dodd's parents didn't go to the ceremony in Washington. It takes a good deal of money to do that, and Edd Dodd is a poor man. So they will just wait at the little mountain home where Carl lived when he joined the Army, and they'll give him a mom-made welcome, garnished with fried chicken.

Mr and Mrs Dodd had been notified of the high honor won by their son but hadn't seen anything about it in the papers. They were greatly pleased to receive a copy of this morning's Courier-Journal. They clipped out the story and added it to the clippings they have of his other exploits, including the time he captured a hill in Korea.

Carl was born April 21, 1925, at Evarts, where Edd was a motorman in a mine. The family moved to Black Mountain—Post Office Kenvir—when Carl was 3. There he went through grade school, then high school for 2 years at Evarts.

"Carl's been a good boy all his life," his mother said. "Why, he could put on a clean pair of overalls and a clean shirt on Monday and they would be clean as a pin at the end of a week. He's been so nice and as particular as could be, even as a little bitty boy."

The parents agreed that Carl was always a little peculiar in that he wanted to be alone most of the time. "He was a lone wolf," his father said, "and he always went to school by himself and he came back by himself."

Carl always was well-behaved, they said, and never picked a fight, but he never ran away from one.

"One time when Carl was 16," his father declared, "he and I were in a truck going up Grassy Creek Road when four fellows in an automobile pulled around in front of us and started to make trouble."

"They ganged around the truck and we got out. One of them stood there not doing anything, but he was looking straight at me while the others were jawing at Carl. This man had a gun, I'm certain, but I didn't see it."

"Then the other three jumped on Carl. Before I could get to him, he had stomped two of them and knocked the other one down. Then all of them ran away from there."

Mrs. Dodd broke in to tell about Carl attending church and Sunday school at Kenvir Baptist Church. He always was interested in church plays and he enjoyed church singing.

Carl's 16-year-old brother, Earl, was listening to the conversation in the Dodd living room. He had just finished currying the family horse that serves as a mount as well as a plow horse. He wanted it to be known that Carl once was a Boy Scout, star class, in Kenvir Troop 77. So is Earl.

Carl made good grades at school, his mother said, and he played football at Evarts High School. But when he registered for the draft, he quit school and went to work in the mine. His job there was a bit risky. He fired

the explosive charges that break up the coal seams.

Then he enlisted. After World War II ended, he returned home, discharged as a sergeant. That was in March 1946. The following September, he reenlisted with his former rank and, after a period at Fort Knox, was sent to Korea. Later he was transferred to Hawaii but returned to Korea with the Fifth Infantry Regiment when the present war began.

In November 1947, he married Miss Libby Rose, Anderson, Ind., a native of Williamsburg. They have no children.

Carl's father and mother naturally are mighty proud of their son.

"After he grew up a little," Edd said, "I never tried to act like his daddy. I tried to treat him like a man. And he always helped me a lot on the farm. He was a mighty good worker."

And Edd needed the help. He hasn't been able to do much hard work since he suffered a broken back in a mine slate fall in 1947. He was machine man then. Since his injury, he said, the mine officials have given him light work to do.

But with six growing youngsters at home, it is somewhat of a struggle to support them. Still, nobody goes hungry at the Dodd house. Edd has all the land he can tend. The boys help. He has a work horse and a garden. His wife has her chickens. She won't have quite so many when the hero returns.

The Dodds are not complaining people. They are friendly and, like all mountaineers, proud and hospitable.

Statehood for Alaska and Hawaii

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. BARTLETT. Mr. Speaker, the Alaska and Hawaii statehood bills were passed by the House of Representatives in 1950. They failed of action in the Senate that year.

New statehood bills were promptly introduced in the Eighty-second Congress and have been reported favorably by the Senate Committee on Interior and Insular Affairs. No further action has been taken. The issues have been thoroughly debated in past Congresses. Both major parties have endorsed statehood. The public is for statehood. Public opinion polls demonstrate that preponderant majorities of all the people in the country believe statehood should be granted without delay to these two Territories. If these bills were brought to the floor it would not take more than a few days to pass both of them. This should be done without further delay.

As Mr. Walter Walker, publisher of the Daily Sentinel, Grand Junction, Colo., pointed out in an excellent lead editorial on July 11, there is a real obligation upon both the Democratic and Republican Parties to redeem their platform pledges in respect to statehood. In the editorial this question is asked:

Has either party employed any noticeable energy, during the sessions of the Eighty-second Congress, toward keeping these (and several other) platform pledges?

That question answers itself.

The Sentinel's editorial is printed in complete text here:

OR NO ETHICAL VALUE

Perhaps there will never be such a thing as ethics in politics. But even so, is it illogical for the electorate to demand that political party platforms be more than a compilation of pledges devised solely as voter bait with no serious intent on the part of those devising them to keep the pledges? As we recall, both major party platforms, presented to the electorate during last national election, pledged statehood for Hawaii and Alaska. Both endorsed and either directly or by implication pledged their candidates, if elected, to work for civil rights. Both definitely pledged their successful candidates to submit to Congress a constitutional amendment on equal rights for women.

Has either party employed any noticeable energy, during the sessions of the Eighty-second Congress toward keeping these (and several other) platform pledges? Ask Hawaii and Alaska—or those in our land who still do not enjoy all the civil rights the Constitution guarantees.

We are fast approaching another national election campaign. As far as political platforms are concerned the parties can just present the ones put out in the last campaign, since most of the same old pledges, yet unfulfilled, would be found in any new platform issued. Neither the public nor the parties put very high ethical value on these documents though they are deemed campaign necessities. How seriously they are taken by their authors may be discovered in the peculiar coalitions that have been formed in our Congress in recent years.

Iuka, Miss., the Town of the Month

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the Record, I am inserting an article that appeared in the July issue of Good Housekeeping relative to the selection of Iuka, Miss., as the town of the month.

No greater tribute could be paid to the enterprising Christian women of any community than this simple story of the accomplishments of these ladies in their concerted efforts to make their home town a better place in which to live.

The article referred to follows:

TOWN OF THE MONTH: IUKA, MISS.

Three Aprils ago, in little Iuka, Miss., 19 women began what became a civic snap-the-whip. These women, all members of Iuka's Twentieth Century Club, were chatting in the living room of Mrs. Kermit Rushing's home when Mrs. Minor Nixon, president of the club, arose to call the meeting to order.

"Instead of following our usual procedure," she said, "I would like you all to listen to a most interesting communication." She read the rules and regulations of a Nation-wide "Build a Better Community" contest, sponsored jointly by the General Federation of Women's Clubs and the Kroger Co. "First prize is \$10,000," she concluded crisply.

For a split second, you could have heard a cotton blossom drop. Then the old conversational dam burst.

"We'll clean up that old garbage dump across from the church," said Mrs. J. E. Thomas.

"We'll build a merry-go-round for Mineral Springs Park," cried Mrs. J. L. Dean.

"Let's plant dogwood trees along our highways," suggested Mrs. Rushing.

"Yes. And clean up Jay Bird Park. It's a disgrace," added Mrs. Berry Lee Pruitt.

"Our schools are old, dilapidated, too small. Let's do something about them," urged Mrs. P. L. Sweeney.

The room vibrated with ideas. Iuka needed a doctor, more schoolteachers, better playgrounds, historical markers, a dial-telephone system. The county's poor children needed free clinic services. Public buildings wanted landscaping. People wanted good music, and a concert series was indicated.

"Well," exclaimed Mrs. Nixon, after an exhausting hour or jotting down suggested improvements for the little town, "I reckon the \$10,000 is ours."

"Yes, indeed," chorused the ladies, and from that moment on they never had a doubt about winning the prize.

Iuka, named for an Indian chief, is a town of 2,000 people, in the rolling purple hills of Tishomingo County, northeastern Mississippi. It is surrounded by cotton fields and pine woods, and flanked on the north by TVA's huge Pickwick Lake. Historically, the town has much to be proud of. Six mineral springs, which are shaded handsomely by century-old oak, sweetgum, beech, and birch trees, had once, in ante bellum days, brought Iuka great fame as a health resort. But the War Between the States brought it a kind of grim fame, too; three major engagements were fought within the city limits and almost annihilated the little spa. Citizens like to point out that only twice in history have the waters of mineral springs failed—once when General Grant's army drank it dry, and again, more recently, when a horde of Yankees descended on the park for a giant barbecue.

Civically, Iuka couldn't hold its head so high. TVA's building of Pickwick Dam and the county's prospering gravel pits gave Iuka a glow of economic health, but not much of this glow was visible to a beauty-seeking eye. A scrubby part separated weather-beaten Front Street from the railroad and highway. Railroad ties lay in untidy piles on one side of the park. Unpaved side streets straggled off to the north, leading occasionally to a handsome ante bellum mansion but more often to unprepossessing cottages. A garbage dump, big as half a city block, rose high in the center of town. No, Iuka could hardly be described as a magnolia-scented, wisteria-shaded, picture-post-card town.

The general citizenry of Iuka first learned of the Twentieth Century Club's build-a-better-community stratagem one dewy morning in May 1949. Nineteen women, dressed in blue jeans, slacks, or overalls and carrying hoes, rakes, and hedge shears, briskly paraded down Front Street toward Jay Bird Park. "We were all shapes, forms, and fashions," one of them reminisces. "The men just gaped."

The men were still gaping when, 5 or 6 hours later, the women walked back toward their respective homes. Jay Bird Park had changed considerably. Weeds had been pulled out of the ground, hedges trimmed, grass mowed, flower beds planted, shrubs tended. The pavilion was sparkling with a coat of fresh paint. For 6 days, the ladies labored on their first project; at the end of that time, the whole town knew what build a better community meant—a lot of hard work and a lot of people to help the 19 women if they were going to win that \$10,000 prize. Jay Bird Park was lovely now, trim and sweet; and the railroad ties were in straight, tidy stacks. But everywhere else, the town still looked shabby.

At this point, the contest ceased being a Twentieth Century Club affair and became

an all-out Iuka concern. "Every man, woman, and child in this town helped us win that prize money," says Mrs. Everett Cutshall.

When the ladies next appeared in their laboring clothes, this time at the garbage dump, the town was there to help them. Talmadge Jourdan, owner of the midtown lot, offered it to the club for a parking area if the women meant what they said about cleaning it up. County road supervisor Bill Gardner volunteered the use of two trucks, a bulldozer, and a grader. Bob Towery, editor of Iuka's weekly newspaper, Viddette, stood in the rain all one day taking photographs, to record for incredulous posterity the knowhow and energies of Iuka womanhood. For a week, the ladies shoveled, graded, graveled, and marked the lot; then they built a gleaming white fence around it. At the end of their labors, 80-year-old Fisherman Brown invited them to the City Cafe for coffee. "You gals got more spunk than anybody in this town," he said mistily.

For nine whirlwind months, these 19 Iuka women waged war against ugliness, dirt, apathy, and skepticism. They wrote 500 letters, one to every registered voter in Tishomingo County, urging voters to visit the county schools and see for themselves the appalling inadequacies there. They recommended a \$50,000 bond issue for school improvements and repairs. On voting day, they drove into the county and taxied scores of voters to the polls. They won a thundering victory: 35 Tishomingoans voted against the bond issue; 465, for it.

Today, Iuka's big new gymnasium in one school serves as a meeting hall, dance pavilion, and general community center for the entire county. A brand-new school gleams perkily atop a hill at the south end of town, its grounds landscaped and its interior painted by the students themselves. Teachers from four States applied for jobs in Iuka's schools.

Dr. Harry Cosby, hearing that Iuka had no doctor, established his practice there and built a new 17-room hospital and clinic. A dial-telephone system was installed in the town. All through hot summer weather, the town was regularly sprayed with DDT, to conquer flies and mosquitoes. Annual play nights for Iuka's children were inaugurated. A handsome historical marker and a gaily painted merry-go-round went up in Mineral Springs Park. More than three hundred dogwood trees were transplanted from Tishomingo County hills to the three and a half miles of highway leading into Iuka. A concert series, with imported artists, sold out to Iukans. The pavilion in Jay Bird Park got additional coats of paint. Stores along Front Street began experimenting with fresh paint, too. "Credit?" says Kermit Rushing, local druggist. "Give it to those 19 dynamos who call themselves the Twentieth Century Club. If they didn't do the work, they saw that it was done."

"Those 19 dynamos" planned, performed, and completed 52 different community projects, including a 175-page report of their doings, illustrated with 250 "before" and "after" snapshots. "We all had to learn to take pictures," Billie Burke Thomas remarks. "How else could we prove to the contest judges way up in New York that we had done all these things?"

In April 1950 Iuka was proclaimed Mississippi's "Build a better community" award winner (prize money, \$300), and club members knew that at any moment national contest judges would steal into town to see what the new Iuka was like. Thus alerted, they goaded the townsfolk into a tidying-up tempest that made earlier clean-up efforts look like finger exercises.

Mrs. Thomas and Mrs. Sweeney met the two Kroger Co. representatives at the airport in Jackson. They drove the men straight to Mrs. Thomas' home and plied

them with coffee until Mayor John Stormont gave them the "all clean" signal. "You can let them out in 15 minutes," he telephoned Mrs. Thomas. "We've got just one alley to go."

As Mrs. Thomas says, "Iuka was without doubt the cleanest spot on the globe that day. Mayor Stormont had street sweepers and sprinklers working most of the night. Housewives all over town had raked their lawns, scrubbed their porches, clipped their hedges, painted their yard furniture. Business people downtown had polished and swept and mopped until Front Street glistened like a Walt Disney toy town. We were lovely."

In May Iuka was named one of the nine regional contest winners (prize money, \$5,000). And one fine morning in June the immaculate little village awoke to find itself the envy of all American small towns—the national winner (total prize money, \$10,300) of the year-long "Build a better community" contest. July 6, 1950, was designated Iuka Day by Gov. Fielding Wright. And when the day came he looked out over the cheering throng gathered there and estimated the crowd at 10,000 people. "If it were a political crowd," he said, "I'd estimate it at 15,000."

Iuka has hardly drawn a relaxed civic breath since then. Half an hour after Kroger President Joseph B. Hall presented Mrs. Minor Nixon with a check for \$10,000 the ladies had it photostated and deposited in the Iuka Guaranty Bank.

"What are we planning to do with it?" asks Mrs. Nixon. "We don't know yet. Perhaps a community house, perhaps a swimming pool. Anyway, something that will be here forever. Right now it's all we can do to live up to our reputation—to consolidate our gains, you might say."

President Hayes Gave Detroit Good Advice on Governmental Debt

EXTENSION OF REMARKS OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. SHAFER. Mr. Speaker, a newspaper article in the Detroit Free Press of July 14, 1951, announcing that President Truman will attend Detroit's two hundred and fiftieth birthday party, July 28, also stated that Mr. Truman will be the sixth President of the United States to visit Detroit while in office. It named as the other Presidential visitors James Monroe, Andrew Johnson, Woodrow Wilson, Herbert Hoover, and Franklin D. Roosevelt.

As a matter of historical record, and particularly because of the interesting subject matter of an address delivered at the Detroit Fair Grounds, I should like to call attention to the visit of still another Chief Executive to Detroit during his Presidency. I refer to the visit of President Rutherford B. Hayes, September 18 and 19, 1879.

A detailed account of this visit is found in the files of the Battle Creek (Mich.) Journal, whose editor and publisher, the late Hon. George Willard, was a Member of this House for two terms, from 1873 to 1877. Mr. Willard was also a member of the joint committee which devised the

Electoral Commission as the agency for settling the Hayes-Tilden disputed election.

In his Detroit address, President Hayes gave this report on the fiscal condition of the Nation:

Of the debt incurred by the war for the Union, about one-third has been paid, and if the policy of extinguishing the present national debt be adhered to, the paying of \$33,000,000 per year upon the principal, or into a sinking fund for that purpose, will within 33 years leave us free from debt as a Nation.

This favorable outlook, so far as the national debt was concerned, prompted President Hayes to observe that "that which is sound policy for the Nation and State in regard to debt, is wise policy in local and private affairs." And the President proceeded to offer some more detailed advice on the matter of local governmental debts. He cited statistics to show that the local debts of 130 cities increased from \$221,312,000 in 1866 to \$644,378,663 in 1876, or a percentage increase of about 200 percent in 10 years, while the property—valuation—in those cities increased but 75 percent and their population 33 percent during the same period.

Observing that "in many cases the interest paid by cities on their debts is almost equal to their total tax levy for local government," President Hayes said:

Municipal borrowing is the parent of waste, profligacy, and corruption—money that comes easily, goes easily. In this career or reckless extravagance, cities build and buy what they do not need, and pay exorbitant prices in every case.

How shall we deal with these large and increasing local debts? The best answer is. Do not have any. Let it be embodied in the constitution and laws of every State that local authorities shall create no debt, that they must pay as they go, and make suitable provision for the extinguishment of existing debts.

It is interesting to speculate on what President Hayes would have to say on the subject of governmental debt—National, State, and local—if he were to speak at Detroit's two hundred and fiftieth birthday party.

It would be especially interesting to compare his views on governmental debt with the views and record of the President of the United States who is scheduled to speak in Detroit later this month.

Tribute to Katharine Lenroot by the Washington Post

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record a very fine editorial from the Washington Post of July 15 entitled "Children's Friend." This is a well-deserved eulogy of the very

splendid work in behalf of "the welfare of children and child life among all classes of our people" rendered by Katharine Lenroot through a period of 32 years. She has been an outstanding public servant and has earned the gratitude of the people of this country. I share with the Washington Post sincere satisfaction that Miss Lenroot is to be succeeded by Dr. Martha Eliot. As the Post has stated, the Nation's children will continue to be in good hands.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

CHILDREN'S FRIEND

The Children's Bureau was in its infancy when Katharine Lenroot joined it as a special investigator 36 years ago. It had been established to report "upon all matters pertaining to the welfare of children and child life among all classes of our people . . ." and had found a sorry picture of needless mortality among mothers and babies. It was estimated from the limited reports available that throughout the country 61 mothers died for every 10,000 live childbirths, and for every 1,000 live births the country lost 100 babies during their first year of life. In 1949, the maternal mortality rate was down to 8, and infant mortality to 29.

Such vital statistics afford but a partial insight into the intertwined careers of the Children's Bureau and of Miss Lenroot who has been its chief for the past 17 years. With the passage of the Social Security Act in 1935, the Bureau assumed administration of title V, providing for grants to the States for development of maternal and child health services, services to crippled children, and child welfare services. In 1938, it undertook responsibility for the child labor provisions of the Fair Labor Standards Act. From 1933 to 1947, it handled the emergency maternity and infant care program, under which Federal funds were used to pay for medical, hospital, and nursing care during childbearing for over 1,200,000 wives of the men in the Armed Forces, and for the care during illness of more than 200,000 children of servicemen.

Few public careers could have provided richer rewards than Miss Lenroot must have gained from the accomplishments of the Children's Bureau. "The children of this country," President Truman wrote in accepting her resignation, "are better off for your having been in the Government. What greater satisfaction could anyone take into retirement?" What higher accolade could any public servant earn? It is a matter of great good fortune for the country that the President has already selected Dr. Martha Eliot as her successor. Dr. Eliot herself has served the Children's Bureau for a quarter century, directing some of its most important research work in the field of child health and working with Miss Lenroot as associate director. The Nation's children will continue to be in good hands.

Union Pressure for Controlled Economy in the Direction of Socialism

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, last week President Green, of the

American Federation of Labor, and Vice President Carey, of the CIO, were invited to the Capitol to put pressure on Members of Congress at a meeting called for that purpose. They have not helped their cause by the tactics used. As part of my remarks, I am including an editorial that appeared in the Washington News and which clearly calls the turn on the strategy employed by these pressure groups:

THEY AREN'T HELPING

Top union leaders display doubtful judgment when they deliver to Congress such ultimatums as some of them did yesterday.

President Green of the AFL, Vice President Carey of the CIO, and other union officers served notice that labor will no longer submit to wage controls unless effective price controls are enacted.

The fact is that labor, as represented by Messrs. Green, Carey, and other members of the United Labor Policy Committee, has not been submitting to wage controls in any real sense.

As Bernard M. Baruch says, it is "bunking" the public to contend that wages can be increased without raising price levels.

Yet members of the United Labor Policy Committee, by threats to withhold support from the mobilization program and by using their influence with President Truman, who puts high value on their political support, have made wage controls little more than a joke.

The practical certainty that they will continue to do just that is one of the big reasons why many Members of Congress sincerely doubt whether any price-control law would long be effective.

Congress should enact price controls and wage controls that can be enforced and that will be effective.

But the tactics of the top union leaders are more likely to handicap than to help those Members of Congress, and those officials responsible for the defense mobilization and economic stabilization program, who are trying to obtain strong and sound legislation.

Help the Czech and the Slovak Underground at the Proper Time To Overthrow the Communist Regime That Enslaves Them

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, the Slovak people lost all possibility for their freedom and independence when the Soviet troops marched into Slovakia early in 1945 and when, with the help of the late President Benes, the so-called people's democracy was introduced in that unfortunate country, which later, after the coup of February 1948, became totally Communist.

Since that time Slovakia suffered as much as any other enslaved nation behind the iron curtain. But there is no other country in the Soviet orbit which has a better underground movement than heroic Slovakia resisting communism through its two underground or-

ganizations: The Liberty Legion and the White Legion.

The stirring cry for the freedom of the Slovaks has the sympathy and friendship of the American people who have always been ready to assist the downtrodden and the oppressed. Since the Slovaks stand on self-determination and since they demand free elections or a plebiscite under United Nations supervision, as clearly stated by Dr. V. S. Krajcovic, chairman of the National Committee for Liberation of Slovakia, in the New York Times, February 27, 1951, in order to choose their own form of government and to establish their own state or its association, if any, with other nations, I have set forth these objectives in introducing into the House on July 4, 1951, House Concurrent Resolution 139—a resolution to assist the Slovaks in their struggle for democracy and freedom.

This resolution expresses the friendship of the American people with the Czech and Slovak peoples whom it places in every respect on the same basis of equality enjoyed by any nation of Central or Eastern Europe whether they are Poles, Rumanians, Hungarians, or Lithuanians. Each of them has the basic right for self-determination and the right to set up its own state, or association with others, if any. Such is the meaning of the House Concurrent Resolution 139.

The resolution, therefore, calls upon the President of the United States to direct its United Nations representatives to demand that free elections be held in Slovakia under police supervision of the United Nations so that the Slovaks may freely decide their national future without any outside pressure.

The National Committee for Liberation of Slovakia, the Slovak underground affiliated with it, and the American Slovaks should urge the House Committee on Foreign Affairs to give favorable consideration to this resolution in order to formulate a practical program of assistance to the oppressed people of Slovakia. Since the Slovaks themselves have helped to win our fight for American independence some 175 years ago through the noble efforts of their own champions of freedom who fought with us—Maurice Benovsky serving with General Pulaski and General Kosciusko, at Savannah—we shall not fail the Slovaks in their own struggle for the same freedom and independence.

The text of the House Concurrent Resolution 139, which was referred to the House Committee on Foreign Affairs, reads as follows:

Whereas the American people have long accepted the basic principles set forth in the American Declaration of Independence of 1776 in the following words: " * * * that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its

powers in such form, as to them shall seem most likely to effect their safety and happiness.": and

Whereas the American people believe these principles are universal and apply to all men, everywhere, at all times, and under all forms of government; and

Whereas these principles flow from certain essential truths, among which are—

That the Creator is the author of every human being and the source of his rights and that neither the state nor any other human agency has jurisdiction to exploit any human being or violate his rights;

That the state is a servant to mankind and not its master and may not pervert its administrative and police powers so as to make of them a weapon to violate human rights or to terrorize the people;

That there is a brotherhood of men but only under the fatherhood of God; and

Whereas communism wears a humanitarian cloak and poses as the messiah of social justice but in reality has given rise to the most reactionary regime of our time based on barbarism and slavery as a result of its immoral doctrine founded in malice setting man against man, class against class, and all men against God; and

Whereas communism thrusts itself beyond civil government and political philosophy, claiming the whole man, denying all spiritual values, denying his inalienable rights, and seeking to transform all human beings created by God in His image into soulless biological units, fitted into a military and economic machine designed for a world revolution, and

Whereas the Communist regime in the Soviet Union destroyed all possibility for the freedom and independence of the Czech and Slovak peoples following World War II, and plunged Czechoslovakia into communism, by inducing under deceitful pretenses the exile Czechoslovak Government to enter into a treaty with it in December 1943 pledging friendship, reciprocal noninterference into domestic matters, mutual assistance, and postwar cooperation and then by subsequently violating the letter and spirit of the treaty in innumerable instances and in the most flagrant manner, such as forcing the Czechoslovak Government to forfeit Ruthenia to the Soviet Union against the wish of the Ruthenian people; by proscribing and eliminating some traditional political parties, particularly the farmers' Agrarian Party, the largest political party in Czechoslovakia, the National Democratic Party, and the Peoples Party in Slovakia, in order to form a "coalition" government in which the Communists seized the key governmental and administrative positions; by imposing rigid and centralized state control on practically all industry and the entire economy in the interests of the Soviet industrial and military machine in complete disregard of the welfare of Czechoslovakia; following in all this the one aim of seizing absolute control of the political, economic, and moral bases of the Czechoslovak state; and

Whereas the Communists after thus gaining control of the key positions in the government ultimately destroyed all opposition and seized complete power in Czechoslovakia by intimidating and undermining from within the existing political parties opposing the Communists: the Nationalist Socialist Party, the People's Party, and the Social Democratic Party and by helping to create subservient political parties such as the Slovak Democratic Party, and the Slovak Freedom Party, by terrorizing and immobilizing the people with frightening demonstrations of power and force incited and conducted by Communist action committees, and finally in the so-called February coup of 1948, by the use of force and threat of Soviet armed intervention, seized control of all media of information, arrested members of parliament and of the Government, and, forcibly instal-

ling themselves in all governmental and administrative positions, they took over complete control of the state; and

Whereas communism has taken the lives of untold numbers of human beings in Czechoslovakia, and has employed unspeakable brutalities to enslave the population—

By robbing peasants of their farms and transforming them, even where left in nominal ownership of the land, into agricultural robots manipulated by the state, and by forcing them into Communist-controlled cooperatives as a transitory stage to complete collectivization of the land; and by degrading them into mere imitations of the Soviet model;

By chaining workers to their factories and transforming them into industrial robots, by subjecting them to arbitrary and competitive forced standards in work, by regimenting them in state-controlled labor unions perverted from their proper function to instruments of the most ruthless state capitalism the world has ever known;

By depriving intellectuals and all people of freedom of creative work and thought and transforming them into servile slaves of the state;

By suppressing the freedom of the press by means of tyrannical control and censorship of any news or information in any way critical of the Communist regime in power, and by subjecting to persecution those who attempt to report the true facts inside of Czechoslovakia, the latest example of which is the mock trial of the American Associated Press correspondent, William N. Oatis,

By submitting untold numbers to the subhuman conditions of mass imprisonment, and forced labor camps;

By murdering the best of Czechs and Slovaks in order to extinguish the last spark of man's longing for undivided and national freedom, and to destroy the Czech and Slovak traditions and cultures; and

Whereas communism is in the process of destroying the institution of the family in Czechoslovakia in inordinate control of the children and their forced indoctrination in communism, and by setting members of the same family against one another through fear and terror; and

Whereas communism after the brutal torture and mock trial of the three Slovak bishops, Jan Vojtassak, Dr. Michal Buzalka, and Pavol Gojdic, and the persecution and dispossession of Archbishop Josef Beran and other religious leaders, is in the process of destroying religion in Czechoslovakia by fostering schism, by encroaching ruthlessly on the freedom of religious worship and religious expression, by subjecting to political control the discharge by clergymen, priests, and bishops of their duties as preachers of the Word of God and spiritual counselors of man, by imprisoning, intimidating, and terrorizing the duly authorized leaders of the Christian religion which has been the priceless heritage of the Slovak and the Czech people, by seeking to establish schismatic religious associations and to disrupt from within and control from without the freedom and independence of the churches, destroying religious schools and eliminating the religious instruction of the children, by introducing Marx-Leninist doctrine into theological seminaries and by deifying Stalin, the leader of the Red regime; and

Whereas communism is destroying the substance of Czechoslovakia by ravaging the farmlands, by stripping it out of its resources, by transforming the Czechoslovakian Army into a tool of communism and by forging the entire country of Czechoslovakia into an arsenal for further Communist aggression; and

Whereas communism in order to extend still further its tyranny concentrates its efforts on promoting artificial hostile feel-

ings between the friendly and peace-loving Czechs and Slovaks and the people of the United States and of other free nations whose basic aspirations as human beings are identical, and who have no real conflicting interests; and

Whereas agreements made by any one or more of the free nations with the Moscow Communist regime that now enslaves the Czech and Slovak peoples or with the Czechoslovak puppet regime nominally headed by Klement Gottwald, and recognition of this puppet regime as a legitimate government, materially and morally strengthens the tyranny in its power, weakens the resistance of the Slovak and Czech people to Communist tyranny and dims their hopes for liberation; such agreements being used by the Communist regime only to its advantage for the purpose of accumulating greater strength, and to the disadvantage of every other country seeking honorably to compose differences with it, it being one of the prime techniques of communism to disregard truth and honor and the obligation of agreements whenever opportune; and

Whereas in contrast to the treacherous fifth columns that operate in the free countries of the world to enslave them to international communism, there exist in Czechoslovakia potential forces for freedom—especially the underground forces in Slovakia now in action—composed of a great majority of the people who yearn for liberty, which forces, if further activated by the encouragement and positive aid of free peoples of the world, will strengthen them under the Communist tyranny and prepare the way for their eventual liberation and thus help place mankind on the path to peace, and

Whereas past tragic mistakes in the policies of certain of the free nations toward Czechoslovakia, including that of the United States, based on the assumption that collaboration with the Communists was possible, and a failure fully to understand the true nature, extent and enormity of communism's aggressive designs, have substantially contributed toward the strengthening of the Communist regime in Czechoslovakia and toward the placing of the international Communist conspiracy in a position where it is now a clear and present danger to world peace and the free progress of mankind, compelling the United States and other free nations again to undertake a vast program of rearmament, and

Whereas, while we rearm with reluctance and would prefer to devote our energies to peace, we are determined to defend our freedom; and

Whereas rearmament alone coupled with an attempt to compose differences with the Communist regime by treaties and agreements leaving undisturbed said regime and its present enormous conquests of aggression will, over a period of years, place a crushing burden of armaments upon the free world that eventually could well, of itself, destroy freedom, and such agreements and treaties would tend to stabilize said regime in its conquests and give a benediction to a way of life that has declared war on all human nature under its control; and

Whereas the world cannot long continue to exist half slave and half free: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the Congress of the United States hereby reaffirm the historic friendship of the American people with Czech and Slovak peoples between whom there are innumerable ties of kinship and concerning whose mutual aspirations for democracy, liberty, and justice there has always been an alliance; that the American motives for the aspirations and this alliance lie deep because the United States of America was founded and was built largely by the oppressed peoples from all countries.

SEC. 2. (a) The Congress of the United States hereby expresses the firm conviction of the American people that the Czech and Slovak peoples have each the right of self-determination to be governed by their own consent based on the free expression of popular will in a free election; and that no nation may deprive them of their territory by force or threat of force and that no nation may keep their territory by force.

(b) It is further expressed to be the firm conviction of the American people that the Czech and Slovak peoples have the right to the basic freedoms for which they have long struggled and for which in World War II they together with other free people, shed their blood, among which freedoms are—

(1) The right of peasants to their own land, to work it as they see fit and to dispose of the fruits of their labor as they see fit;

(2) The right of the workers to select freely the type and place of their employment, and to obtain equitable wages and decent working hours and conditions through the organization of their own truly independent trade unions,

(3) The right of intellectuals to freedom of scientific and artistic creation, to freedom of cultural intercourse with the whole world, and to the establishment of educational, scientific, and cultural institutions independent of state control,

(4) The right of political prisoners of all classes to immediate liberation and aid in rehabilitation;

(5) The freedom of religion, of speech, of thought, and of the press;

(6) The right of the people peaceably to assemble, to be secure in their persons, houses, papers and effects, against unreasonable searches and seizures,

(7) The right of the people to life, liberty, and private ownership of property; the right of an accused to a speedy and public trial in accordance with principles of law and justice

(8) The freedom of movement within the country and of travel abroad and upon the high seas, together with the freedom to engage in commerce and pursuits of private enterprise and in all peaceful activities,

(9) The freedom of families from the Communist way of life and from undue state interference and control, and of parents in the education of their own children,

(10) The freedom of the armed forces to defend the legitimate interests of the Czech and Slovak peoples, the right and obligation of the armed forces to protect the people from the Communist tyranny, and the freedom of the armed forces from being used by the Communist tyranny as an aggressive force both against its own people and against peaceful nations

SEC. 3 To give meaning to their historic friendship for the Czech and Slovak peoples, the Congress of the United States hereby expresses the strong hope of the American people for the early liberation of the Czech and Slovak peoples from their Communist enslavement. To assist in bringing this liberation about at the earliest possible date, the President of the United States is hereby requested—

(1) To formulate a new and stronger foreign policy which among other things, recognizes the essentially evil nature of the international Communist regime, bent on the destruction of the United States and of the free world and distinguishes between this regime and the people enslaved by it and a policy which excludes all further agreements with, commitments to, and recognition of the Communist regime in Czechoslovakia;

(2) To direct our representatives in the United Nations—

(a) To demand that the United Nations charge the Communist regime of Russia with internal aggression in Czechoslovakia

in violating of the basic charter and principles of the United Nations, for robbing Czechoslovakia of its freedom, independence and territorial integrity in violation of treaty obligations, international agreements and of international law and justice;

(b) To demand the withdrawal from Czechoslovakia of Soviet secret police, military and civilian officials and other open or secret agents of Soviet imperialistic domination whose continued presence constitutes a breach of domestic peace and security and a threat to international peace and security;

(c) To demand that free elections be held for the Czech and Slovak peoples under police supervision of the United Nations in order that they may freely decide, without outside pressure, whether to establish a common or separate states, and to organize their own government founded on such principles as to them shall seem most likely to effect their safety and happiness and to secure to themselves the blessings of liberty.

(3) To explore the methods whereby the American people through their Government, and by private means with government assistance and otherwise may offer aid and moral support to active fighters now struggling for the liberation of the Czech and Slovak peoples and other Communist-dominated countries.

Narcotics Addicts in New York Put at 45,000 to 90,000

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of July 16, 1951:

NARCOTICS ADDICTS IN NEW YORK PUT AT 45,000 TO 90,000

NEW YORK, July 16.—The mayor's committee on dope addiction estimated today that between 45,000 and 90,000 persons in New York City are using illicit dope.

Based on the city's population of 7,835,099 (1950 census), that would be 1 out of every 87 or 1 out of 174 persons.

The committee said narcotics addiction, especially among teen-agers, is increasing in the city.

The report called for more severe penalties for dope sellers, and for wholesale revisions of Federal and State penal statutes relating to sale.

The New York State Legislature recently enacted more stringent penalties.

The committee, appointed by Mayor R. Impellitteri last December 11, made the recommendation in a 75-page report on "study on drug addiction among teen-agers."

The committee was under direction of Thomas F. Murphy, former city police commissioner and newly appointed Federal judge.

As one means of combating dope addiction, the report proposed that—"consistent with civil liberty"—all known narcotics addicts be subjected to "compulsory treatment without stigma of criminality, much as is done with insane persons."

The committee estimated there are up to 3,000 dope sellers in the city. This was based on the number of arrests.

Notes From European Capitals

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. BENDEP. Mr. Speaker, maybe this is what the Soviet Union has been bargaining for. First reactions to the Korean cease-fire talks emanating from London indicate a disposition to cut British defense spending. Minister of Raw Materials Stokes has already said that the big spending may not be so immediately necessary as it had appeared. Shinwell, Minister of Defense, said, "At the slightest sign we should be only too willing to curtail our defense activities." There is talk of trying to wangle a ticket for Red China to the United Nations out of the deal in British circles, and some Labor Party leaders hope that a cease-fire will end American opposition to British trade with Communist China.

In France, too, the multiplicity of domestic problems, together with the large degree of Socialist and Communist influence, makes almost any news of an end to active fighting the signal for a pronounced let-up in defense preparations and spending. France does not relish the prospect of arming Western Germany, and the news out of Korea may dampen her ardor still further.

Throughout Europe, General Eisenhower's task is made all the more difficult. The fact becomes clearer day by day. Europe regards the big show-down as an American responsibility. It will cooperate so far as it is able, but it will not be the all-out, completely determined ally that we should like, until war guns boom over the boundary lines between east and west.

Merited Commendation

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks I include the statement of commendation adopted July 12, 1951, by the board of directors of the Michigan Farm Bureau:

The board of directors of the Michigan Farm Bureau, in session at Lansing, July 12, heartily commends Congressmen Jesse P. Wolcott and Fred L. Crawford for their aggressive and courageous leadership in fighting for sound fiscal policies and indirect controls for stopping inflation. Their strenuous opposition to direct price and wage controls and their fight against excessive Government borrowing is a most timely protection to our free enterprise system.

We highly commend the other Michigan Members of Congress who are stanchly fighting direct controls and wasteful, destructive Government financial policies.

The battle waging in Congress over the re-enactment of price and wage controls is

fundamentally a conflict between the forces of centralized big government and the true representatives of a free people. Prominent Members of both political parties have joined their efforts to stop the further encroachment of bureaucratic power over the lives of American citizens.

The Michigan Farm Bureau considers the unwarranted attempt to inflict direct controls on our productive effort under present conditions as another long step toward socialistic regimentation of the farmer, and the destruction of efficient production of food and fiber.

These deteriorating policies reduce farm production by lowering the standards and output of the efficient farmer to the level of the inefficient producer. They progressively destroy the type of productive farm enterprise upon which our Nation and the people of other lands have to depend for their food. They destroy the initiative and incentive of the farmer and lead straight to Government subsidies and rationing.

The Michigan Farm Bureau is unalterably opposed to subsidies and high support prices for agriculture. Michigan Farm Bureau members want a fair opportunity to derive their income in the market place and not at the hands of Government paternalism.

The objective of the direct-price controllers is evidenced by the fact that some of the officials who are misleading the consumers by pressing for direct economic controls as a remedy for inflation are simultaneously urging the promoting wasteful expenditures and excessive Government borrowing which increase inflationary pressures.

The budget now before Congress must be drastically reduced by the elimination of all unnecessary and defensible projects. The efficient management of both defense and nonmilitary expenditures and operations is imperative. This Board of Directors considers the employment of an army of price-control personnel an illegitimate use of the taxpayers' dollars and a further unwarranted increase of inflationary pressure.

We hereby instruct Executive Secretary C. L. Brody to convey the foregoing statement to all Michigan Members of Congress.

MICHIGAN FARM BUREAU, BOARD OF DIRECTORS,
C. L. BRODY, Executive Secretary.

What's Happened to Charlie?

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes:

WHAT'S HAPPENED TO CHARLIE?—CHARLES E. WILSON'S FIGHT FOR EFFECTIVE ECONOMIC CONTROLS MAKES MANY FORMER BUSINESS ASSOCIATES UNHAPPY

(By Thomas L. Stokes)

It used to be said of the late Franklin D. Roosevelt by certain people that he was a traitor to his class.

That was when he pitched in, sleeves figuratively rolled up, to put through the New Deal program of economic and social measures to give a better break to millions of citizens in this country too long neglected. That cost money, which means taxes, and was resented by many of the well-favored and privileged. To them Franklin Roosevelt, himself one of the well-favored and privileged, seemed with all this reform busi-

ness to be stepping out of character as the squire of Hudson Valley.

Charles E. Wilson, Defense Mobilization Director, though certainly no reformer, is getting a taste of this same sort of displeasure from his big-business friends, who can't understand why the former head of General Electric is putting up such a strong fight for controls which they so abhor. It is not yet bitter as was the deep-seated hostility to Mr. Roosevelt, but a sort of bewildered "What's happened to Charlie?" attitude.

Eric Johnston, businessman and four times president of the United States Chamber of Commerce, is in the same sort of situation because of his vigorous support of controls as Stabilization Director. His former business associates are unhappy about him.

What's happened to Charlie and what's happened to Eric is what happens luckily most of the time when outstanding American citizens accept a call in an emergency to leave their private affairs and serve their Government. They recognize immediately that in their new positions they represent all the people and all groups and the interests of the Nation as a whole. Within human bounds, of course, for they still remain human beings. There is no intention here to be Pollyannaish about the two men, but there is the intention to reflect pride that we have a country where that still happens when we get into a fix.

It happens also with our Presidents when they suddenly become charged with the welfare of all of our millions and millions of people. It was so with Franklin D. Roosevelt who did not wreck the Nation as his critics prophesied, as their own flourishing state today shows—though some still are bitter. It was true also with Harry Truman, so unexpectedly catapulted to the anxious seat of authority. This is no better exemplified in his case, incidentally than on one issue which has stirred up so much bitterness toward him—civil rights. On this matter he recognized, when he moved into the White House that he was President of all our people, all races, all colors, all creeds. He recognized, furthermore, that our Nation had assumed leadership in a world of all races, all colors, all creeds, had become a beacon to which all people everywhere of all races, all colors, all creeds had become a hope, and that our own light must be as well-trimmed, as clear and as clean as possible.

Some weeks ago Charles E. Wilson was under bitter attack from labor. Eric Johnston has been through some stormy sessions with labor, too. Now labor is supporting them in their stand for controls to check inflation, and business is restive and complaining. Next week, or next month, the two men may, in the course of their duty, find themselves again the target of labor or some other group with the change of circumstances. That's all in their jobs.

Ordinarily Mr. Wilson is not for such controls on the economy as he advocates now. Nor is Eric Johnston. But these are not ordinary times. They feel that such measures are necessary to meet a crisis in our national life of which both have a grasp and an understanding from their positions on the inside.

There was an incident some weeks ago illustrative of the metamorphosis through which men go when they leave their businesses and become public servants. A delegation representing business organizations, including the United States Chamber of Commerce, went to see Eric Johnston to present their case for restricting the wage disputes and not including also disputes affecting other issues between industry and labor, as labor was urging. John Gall, lawyer and labor expert for the United States Chamber of Commerce, spoke up at the conclusion of the presentation:

"Eric, I am sure you agree with this."

"If I were sitting on your side of the table I would support you entirely," Mr. Johnston replied; "but I am not in business now. I am representing everyone who is interested in this question."

It's too bad Congress doesn't have that attitude.

How To Tell a Communist

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Richard Armour, from American Legion magazine for July 1951:

HOW TO TELL A COMMUNIST

(By Richard Armour)

A Communist is a person who can read the handwriting on the wall—if it is in Russian. He believes in American free enterprise, which he takes to mean freedom for him to carry out any enterprise that will help to destroy America.

A Communist is enthusiastic about life in Russia, but if you suggest that he go back where he came from, he either admits he has never been there or breaks out in a cold sweat and clutches you by the knees. He draws a fine line between expansion by imperialism and by popular revolution; it is known as the party line.

A Communist believes in streamlining government by reducing political parties to one. He would likewise cut down the complexity of balloting by 50 percent; on all propositions involving a vote of "Yes" or "No," the "No" would be eliminated.

A Communist wants peace in all the countries of the world—a piece of this country and a piece of that one. His great ambition is one world—all Stalin's.

You can tell a Communist, but you can't tell him much.

Oil From Shale

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. BARING. Mr. Speaker, I would like to insert in the Record an article from the Christian Science Monitor of Thursday, July 12, 1951, entitled "Oil From Shale." I would like to call attention to the author of the article, Mr. Harlan Trott, that the State of Nevada, too, has many vast rich oil shale deposits. It would be interesting to know if the Union Oil Co. will have to pay royalties on patents under the process to be used. I offer this article for the interest of the Members of the House of Representatives. It follows:

OIL FROM SHALE—PROJECT STEPS NEARER FOR COLORADO

(By Harlan Trott)

WASHINGTON.—Start of the Nation's first large commercial synthetic liquid fuels plant

may be imminent, according to information here.

The Union Oil Co. of California is discussing arrangements with the United States Bureau of Mines for a commercial-sized plant near Rifle, Colo., which would distill oil from shale.

Shale oil is particularly good for making jet aviation fuel.

Bureau of Mines officials hope the Union Oil Co. will go ahead with the first 10,000-barrel-a-day unit. Eventually, it is understood, the Union Oil Co. hopes to have a shale operation producing between 400,000 and 600,000 barrels of crude a day from the vast rich Colorado deposits which yield as high as 50 gallons of shale oil a ton of oil shale.

The first unit would, it is said, produce 10,000 barrels a day.

The shale rock would be distilled in a resort which the Union Oil Co. has developed in a Government pilot plant at Rifle.

DISPOSAL OF SHALE

Union's plant, it is understood, would be located at Grand Junction, Colo. The spent shale could be disposed of there easier than at Rifle. You take down the mountain, melt the oil out of it, and put the mountain back again. Union owns large oil shale deposits in this section of Colorado.

Reports indicate that the company is figuring on taking the mountain to the distillery by rubber-belt conveyor.

The Goodyear Tire & Rubber Co. has perfected this type of conveyor which is in wide use as a coal carrier in Ohio and West Virginia.

Bureau of Mines officials say they have held discussions with the Union Oil Co. about building a pipeline from Rifle to its refineries at Wilmington.

Such an undertaking, counting mining, haulage, an oil-shale distillery, and corresponding refinery capacity, would cost roughly \$2,000,000,000, it is estimated.

Profits could be enormous for ultimately it would be much cheaper to produce oil-shale gasoline than petroleum gasoline. The supply of oil shale in Colorado would last for centuries.

BENEFIT FOR AIR FORCE

Shale oil is superior to petroleum for many present-day uses.

The jet-powered Air Force would benefit especially by the use of shale oil.

A jet plane uses about five times as much fuel an hour as a propeller-driven plane.

Presumably the important defense factor in the development of shale would enable any commercial oil company to receive Government help in financing the undertaking.

Reports have been prevalent in oil-industry quarters here for some months that some of the large insurance companies are interested in backing expansion of domestic-oil production.

Government officials say the company is planning to refine and market the output of its original distilling unit in the western Colorado area.

Current negotiations between the Bureau of Mines and the Union Oil Co. touched off political overtones.

OTHER SHALE DEPOSITS

For a long time the party in power has said to have been getting votes from western Colorado on its promise to bring about a tremendous industrial development there in the distillation of shale.

Many other States have vast rich oil-shale deposits, notably Ohio and Indiana, and Kentucky. But the synthetic-fuel advisers in the Interior Department concentrate on Colorado.

It is also claimed that they do not mention the controversial possibility of distilling coal instead of oil shale. Coal was an important source of oil during World War II in Japan and Germany, according to official reports published by the Bureau of Mines.

The Interior Department is warning the country of an impending oil shortage that may result in gasoline rationing for American motorists, and the question is raised by the partisans of oil-from-coal and shale development outside Colorado as to whether these should be given more serious consideration.

The Junior Order Always Stands for America

EXTENSION OF REMARKS

OF
HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. JENKINS. Mr. Speaker, all the fraternal organizations of our great country are patriotic, but the Junior Order of United American Mechanics, commonly called the Junior Order, is especially dedicated to teach and practice and insist on Americanism. This organization has membership in practically every State in the Union. It is always alert to the best interests of America and is quick to condemn all un-American activities. Likewise it is always alert to the activities of Communists and any other groups of Reds or pinks wherever they may be.

The National Council of the Junior Order in its recent session adopted a number of resolutions which express the views of this great organization on many important public questions.

The following are some of the resolutions adopted on June 19 and 20, 1951, at the session held at Old Point Comfort, Va.:

RESOLUTIONS ADOPTED BY THE NATIONAL COUNCIL OF THE JUNIOR ORDER UNITED AMERICAN MECHANICS AT ITS BIENNIAL SESSION HELD AT OLD POINT COMFORT, VA., JUNE 19-20, 1951

Resolution No. 3 recited the fact that it had been about 6 years since World War II had stopped, and that universal peace is a thing most earnestly desired and urgently needed to compose the people and allay their fears, and that the national council recorded its desire for full and complete peace treaties to be negotiated and signed at the earliest possible date, and that copies of this resolution be sent to the President of the United States, to the Secretary of State, and to the Senators of the 48 States.

Resolution No. 4 expressed opposition to the employment of any person in either the State or National Government who has ever been a member of the Communist Party, or who has been a supporter of the Communist Party as editor-publisher of any Communist magazine, or who has gone about the country teaching the doctrines of communism, and that strict screening and examination should be made of all applicants for public office, and that those should be weeded out who are now employed by the State or National Government and no mercy to be shown to those who are employed if they have been guilty of membership in the Communist Party or other subversive activities.

Resolution No. 6, World Government: This resolution expressed the sense of the national council to the effect that we cherish the freedoms and our right to self-government as a most precious heritage from our forefathers, and that we want to see the same protected and defended by every pa-

triotic American citizen; and that we stand whole-heartedly for all of our freedoms, including the freedom of individual conscience and freedom of religion and the right of self-determination in government, and that, in our opinion, the entering into any world government program or federation will lead the people of America down the road toward a world-Socialist and pro-Communist government, with losses of basic freedoms which we now possess. It affirmed our stand for the right of democratic liberty both political and religious, and stressed opposition to the ideology of world government and such organizations and federations as sponsor and promote it.

Resolution No. 8 expressed approval of H. R. 4261 which would require the Attorney General of the United States to compile and maintain a list of all subversive organizations in this country.

Resolution No. 10 expressed the approval and support of the national council to the doctrine of separation of church and State.

Resolution No. 11 favored a law being enacted which would forbid the continuous display on school buildings of any flag constituting the emblem of any nation, or group of nations, other than that of the United States.

Resolution No. 14, Membership in the United Nations: Due to the record which Russia has made since the United Nations was established, this resolution expressed the considered opinion that Russia should be disbarred as a member of the United Nations.

Resolution No. 15 contained a solemn warning to State councils, officers and members of councils, and to societies composing the fraternal system and membership in the National Fraternal Congress, and church people generally, to beware of signing Stockholm peace appeal, on the ground that any one who signs this appeal is supporting Russia and her imperialistic designs to promote and extend communism, and in signing it they are doing a great disfavor to America and its institutions.

Resolution No. 16 called for strict and rigid regulations to be adopted and promulgated by the Department of Justice, through the Bureau of Immigration and Naturalization, warning Chinese and other students who are pursuing courses in American colleges and institutions, that there must be no affiliation whatsoever with any group, cell or activity which is favorable to or promulgates communism, and that those who violate such regulations shall be speedily deported.

Resolution No. 17 demanded that any and all nations which have been guilty of using money supplied to them by the United States to aid their economy, or otherwise to use said funds received from the United States to supply materials for Russia to make up munitions of war to be used against us, that any further aid shall be denied nations that have been guilty of trafficking with Russia with our funds.

Resolution No. 18 expressed opposition to the introduction of subversive literature for school children to read and demanded that literature which is being used in the public schools should be thoroughly examined, and that any and all such literature which is subversive, or carries subversive ideas, be immediately discontinued. The national secretary was directed to send copy of this resolution to the superintendents of education of the 48 States of the Union.

Resolution No. 19 expressed the firm conviction that teachers and others required to take the loyalty oath, should take the simple oath of allegiance of the United States, the same as is provided by the Constitution and is taken by the President and others holding public office. The secretary was directed to send a copy of this resolution to the Attorney General of the United States and to the members of the Senate and House Judiciary Committees of the Congress.

Resolution No. 20, Federal aid to education, expressed opposition of members of the national council to the enactment of any law that would make Federal aid to education available to any other than the free public school system, and also opposed such legislation as grants Federal control of education in the several States, or control of the funds appropriated for education in the States. The secretary was directed to send copies of this resolution to the House and Senate committees of Congress having charge of school legislation, and to forward copies of the same to the State superintendents of public instruction of all the States.

Resolution No. 21 demanded rigid economy in appropriations by Congress for public purposes, in order to relieve oppressive taxation.

Resolution No. 22, on the subject of immigration, expressed opposition to any and all immigration over and above the number provided under the present quota system, and that immigration by special legislation, or by unused quotas, and by Executive orders be discouraged and discontinued.

Resolution No. 30 expressed unanimous and enthusiastic support of the Internal Security Act of 1950, and called upon the Department of Justice to enforce its provisions strictly without fear or favor, and directed the secretary to furnish copies of this resolution to the Department of Justice, the Immigration and Naturalization Service, and to the Judiciary Committees of both the House and Senate of the United States.

Harlan Folk Turn Out To Welcome Medal of Honor Winner, Carl Dodd

EXTENSION OF REMARKS

OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Gerald Griffin, from the Louisville Courier-Journal:

HARLAN FOLK TURN OUT TO WELCOME MEDAL OF HONOR WINNER, CARL DODD—PARADE HONORS FORMER MINER

(By Gerald Griffin)

EVARTS, Ky., May 26.—Even Caesar, making his triumphant return to Rome, never had a warmer welcome than the one given by the home folks to their hero, home from the wars today.

It was homecoming day for an Army man who grew up in the Harlan County coal fields. He was a coal miner before he enlisted. So is his father.

Harlan County, particularly the communities of Evarts and Kenvir, turned out a royal welcome for First Lt. Carl H. Dodd, Medal of Honor winner.

He was decorated last Saturday in Washington by President Truman in the White House. He won't talk about how he won his award but records show Dodd is one of the greatest heroes of the Korean war.

But he didn't mind talking about how glad he was to get home.

"It's wonderful," he said, "to be back home and among people you know."

YEARNS FOR FRIED CHICKEN

The lieutenant, who won a battlefield commission in Korea—he was discharged in 1946 as a sergeant and reenlisted a few months later—flew into Harlan Airport shortly after noon.

His father, Edd Dodd, Kenvir, beaming with pride and sporting a pink rose in his lapel, was waiting there when the plane settled down. Father and son greeted each other casually with a handshake.

Also waiting were four of the lieutenant's younger brothers and his baby sister. But his mother wasn't there. She was at Anderson, Ind., with Carl's wife. Both will be home in a few days and Dodd is glad of that. He said he is getting mighty hungry for some of mom's fried chicken. He will get it, too, for he plans to spend a week at the little mountain home of his parents.

Introducing his father to visiting dignitaries who came to honor him, the lieutenant said, "Don't call him my dad. He's my partner; he's my buddy." Edd just grinned.

From the harbor airport all the way to Kenvir and back to the Everts High School football field, it was a triumphant procession in honor of the one-time mine "shot-firer."

It was a long motorcade, headed by State police. Carl and his father rode in an open convertible despite an occasional shower.

Through Loyall, Brookside, Everts, and Kenvir went the line of automobiles, police cars heralding Dodd's approach.

In the towns the streets were lined with people, most of whom knew him as a boy. Store windows bore welcome signs for him.

"Howdy, Carl. Welcome home," they shouted. He waved back and smiled in response. An occasional soldier along the way saluted.

There were banners over the streets and in every town there was a uniformed high-school band and an American Legion guard of honor. Even the Boy Scouts turned out to welcome Carl, a former scout himself.

A Legion firing squad fired a three-gun salute as Dodd entered Everts, where he went to high school 2 years before enlisting in the Army. Everts even had a float, used yesterday in the mountain laurel festival at Pineville. It bore half a dozen pretty girls dressed as coal miners, who waved and smiled.

HONORED AT BANQUET

The homecoming was climaxed with a formal ceremony here. Dodd gave a brief talk, expressing his appreciation of the welcome. Gov. Lawrence Wetherby gave him a commission as a Kentucky colonel. Senator EARLE C. CLEMENTS praised his exploits. So did Congressmen CARL PERKINS and JAMES GOLDEN. They were introduced by Circuit Judge Astor Hogg, Harlan Mayor J. D. Housley welcomed him back home.

The Reverend Roscoe Douglas, pastor of Black Mountain (Kenvir) Baptist Church, delivered the invocation.

Harold McKnight, American Legion commander at Kenvir, gave Carl a life membership in the Legion. Ray O. Shehan, Harlan attorney, was master of ceremonies.

The unassuming lieutenant was honored further tonight at a banquet in Harlan, at which commonwealth's attorney Daniel Boone Smith was toastmaster. The banquet brought Dodd to a city he doesn't

know well, for, as a member of his family said, "He never did go around much." But the county-seat citizens wanted to join in the celebration for the man who, as Smith said, "has everything that goes to make manhood."

Comparison of Retail Food Prices in Washington, D. C., on June 15, 1950, and July 5, 1951

EXTENSION OF REMARKS OF HON. REVA BECK BOSONE

OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mrs. BOSONE. Mr. Speaker, I am placing in the RECORD at this time a comparison of retail food prices in Washington, D. C., on June 15, 1950, and July 5, 1951. This comparison was prepared by the women's division of the Democratic National Committee and released at a press conference recently by Mrs. India Edwards, vice chairman of the committee. To my mind, the figures speak for themselves:

A comparison of retail food prices in Washington, D. C., June 15, 1950-July 5, 1951*

Commodity	Unit	June 15, 1950		July 5, 1951		Percent change	Commodity	Unit	June 15, 1950		July 5, 1951		Percent change

Hon. Alben W. Barkley

**EXTENSION OF REMARKS
OF**

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. PERKINS. Mr. Speaker, under unanimous consent, I enclose in the Appendix of the Record the following story by Robert L. Riggs, Washington bureau of the Louisville Courier-Journal, July 8, 1951, about a great American entitled "Don't Figure BARKLEY Too Old To Run in '52; the Vice President Is Ready for Any Job":

DON'T FIGURE BARKLEY TOO OLD TO RUN IN '52; THE VICE PRESIDENT IS READY FOR ANY JOB

(By Robert L. Riggs)

WASHINGTON, July 7.—Please do not count ALBEN W. BARKLEY among those who feel that our Vice President is too old and too ailing to be considered a factor in the presidential election of 1952.

At 73, with his clothes cut back to allow for the 25 or 30 pounds he took off a few months ago, and with his face filled out to remove that emaciated look which goes with quick reducing, BARKLEY obviously feels there is nothing wrong with him that couldn't be remedied if he'd take a month off for an operation to remove cataracts from his eyes.

This is not to intimate that the Kentuckian is doing any angling for next summer's presidential or vice-presidential nomination.

For him to do so would be entirely out of character. His friends couldn't even get him to do anything in his own behalf in 1944 or 1948.

But it is the intention here to hazard a good strong guess that if the Democratic Party, at its convention in Chicago a year hence, again chose him to be Harry S. Truman's running mate, BARKLEY wouldn't feel that his physical condition imposed upon him any obligation to decline.

For that matter, should it work out that the party selected him for the No. 1 spot, the Kentuckian, if he is feeling as fit next July as he is this month, would have no inclination to step aside on the ground that his health was not good enough.

What brings on all the current speculation about BARKLEY's future is the fact that more and more politicians are coming around to the view that Harry Truman is going to run again.

Most of them had accepted that idea some weeks ago. Some, who recognized that you can't keep a President from getting the nomination if he wants it, had been clinging to the forlorn hope that Truman might be persuaded to step aside for Gen. Dwight D. Eisenhower.

But political developments within the last 10 days make it clear that Eisenhower would not be inclined to take a Democratic nomination, that he regards himself as a Republican, and that if he ran for President it would be as the Republican nominee.

Of course, should the Democrats nominate a new face for President, the question of what to do about BARKLEY would not arise. It would follow as a matter of course that another new face would go in the No. 2 position.

But if Truman is to be nominated, there is no simple and logical way to drop BARKLEY if he shows the slightest desire to hold to the Vice Presidency.

Out of this situation, Time magazine, whose journalistic achievements often puzzle many of us engaged in the same business, has discovered a political plot to cut BARKLEY's throat, figuratively speaking.

Time's thesis is that whenever Washington politicians want to undermine an opponent, they leak uncomplimentary facts about him to newsmen.

FOR THE DEFENSE

Such a leak, said Time, caused Columnist Robert S. Allen to write that BARKLEY's cataracts have put him in danger of going blind because he has refused to take time off from his job to have them removed.

Actually, the Allen piece was most friendly to BARKLEY, pointing out his devotion to duty and saying that, with the exception of his eyes, his physical condition is excellent.

But it aroused a BARKLEY defender in a strange place. John Crosson, a city hall reporter for the New York Daily News, part of the McCormick-Patterson empire, came out swinging on behalf of BARKLEY.

New York Democrats, led by James A. Farley, said Crosson, were aroused by the attempt to ditch BARKLEY. If they tried to dump him in favor of a younger man, such as ESTES KEFAUVER, Crosson promised, Farley would do battle upon the convention floor on behalf of the Kentuckian.

Washington reporters haven't been nearly so successful in finding a plot to get rid of BARKLEY as have those who do their writing in New York. Nonetheless, there has been a good deal of finger pointing at the age bracket of the country's top political leadership.

Truman himself is 67. The man who would succeed him if he died today is the 73-year-old BARKLEY. If anything happened to BARKLEY, the next in line would be 69-year-old Speaker RAYBURN, of Texas. Behind RAYBURN would come 82-year-old KENNETH McKELLAR of Tennessee, President pro tempore of the Senate.

It frequently is pointed out that if the Democratic ticket is the same in 1952 as it was in 1948, Truman would be 68 and BARKLEY just a few weeks short of 75 at election day.

As to BARKLEY's eyesight, his vision is as good today as it has been at any time during the last 8 years. In 1943, he underwent an operation for abscess on his eyes. But, at the Democratic convention in 1948, he read his keynote speech without glasses and could repeat the performance again today.

He is reluctant to recognize that he now has cataracts, but he cheerfully accepts the fact that he may have to have an operation to remove them.

DOESN'T THINK HE'S OLD

BARKLEY is well aware of the discussion going on about his age. But it is so foreign to his nature to consider himself old that he has difficulty realizing that he is the 73-year-old Vice President they are talking about.

It likewise is foreign to his nature to consider himself out of public life. Not that he would lack something to do. With Mrs. Barkley's encouragement and clerical assistance, he has embarked upon an ambitious project of writing about his years rich in experience in political affairs.

He could put in a full-time career for several years attending to his literary chores. Hence, there is no need for anyone to concern himself about what BARKLEY would find to do to pass the time.

But there can be little doubt that if you put the decision up to BARKLEY, he'd be more than willing to tackle for another term the job of being Vice President.

There is equally little doubt that he wouldn't hesitate to take on the man-killing job of being President.

**AP Lends Itself to Propaganda Line of
the Administration**

**EXTENSION OF REMARKS
OF**

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. SHAFER. Mr. Speaker, on July 15 the Honorable JESSE P. WOLCOTT, my colleague from Michigan and ranking minority member of the House Committee on Banking and Currency, issued a statement to the press in which he showed that the House action on pending control legislation "is being badly misrepresented to the country by the bureaucrats and certain irresponsible elements of the press and radio." This statement by Mr. WOLCOTT has been inserted in the Appendix of the Record by the Honorable THOMAS B. CURTIS, of Missouri, and is to be found on page A4410, July 16.

As a former newspaper publisher, editor, and one who has handled thousands of news releases, I considered Mr. WOLCOTT's statement extremely newsworthy, and I took it upon myself, in view of the campaign of misrepresentation which Mr. WOLCOTT so ably described, to examine the treatment of this particular story.

I am pleased to report that the New York Times, which lists itself as an independent Democrat paper, carried a lengthy page 1 account in its issue of Monday morning, July 16, of Mr. WOLCOTT's statement, reporting its essence fairly and objectively.

I am distressed to report that the Associated Press on the same date saw fit to act otherwise. As carried in the Baltimore Sun on page 4 of its issue of Monday morning, July 16, the Associated Press chooses to report that a "lawmaker—who—would not permit use of his name," had said the Truman forces in Congress had fought the good fight and decided they could not win on controls and therefore would "check the verdict to the voters." The story praises "the Truman forces" for "fighting tooth and nail" to get the bill through Congress, but asserts that Congress has "chopped hunks out of the requested powers."

The story goes on in this vein for 12 long paragraphs until finally it devotes a few meager sentences to the statement by my colleague, Mr. WOLCOTT.

In my opinion, the Associated Press story amounts to no more than a Truman party-line propaganda story, and I invite comparison by Members of this House of the New York Times account and the Associated Press story. The comparison will seem to bear out Mr. WOLCOTT's assertion that the House action is being "misrepresented" to the public.

I think the directors of the Associated Press might ask themselves a fundamental question about this particular story. The story plainly states that the

alleged information is based on statements by a lawmaker who would not permit the use of his name. If the lawmaker will not lend his name to such propaganda, why should the great Associated Press lend its name and its prestige to promoting the administration line?

The New York Times account follows:
(By Clayton Knowles)

WASHINGTON, July 15.—The Republican leadership of the House of Representatives sought today to hold party membership in line as the hour neared for the start of record voting on the defense production bill.

Representative JESSE P. WOLCOTT, of Michigan, top Republican spokesman in the House on economic matters, charged the position of the Republicans was being badly misrepresented to the country by the bureaucrats and certain irresponsible elements of the press and radio.

He declared this campaign of untruth and calumny was deliberately planned to make it appear that Members of the House, including an overwhelming majority of Republicans and not a few patriotic Democrats, are sabotaging price, wage, and credit controls.

The real truth, he said, is that his party merely is seeking to weed out socialistic power grabs sought by the administration in asking for 2 years of strengthened economic controls during the peak of the defense mobilization effort.

The Wolcott statement, issued as the House prepared to start voting tomorrow on controversial price-, wage-, and credit-control features of the administration program, was construed as an effort to prevent a possible break in Republican ranks.

Major amendments pending include one that would strike out authority for any further roll-backs in food prices, canceling out in the process the original 10 percent cut-back in beef prices, and another revamping the Wage Stabilization Board and stripping it of authority in labor disputes.

During preliminary stages of the voting on any major bill, the House membership sits as a Committee of the Whole and the votes that shape the bill are not recorded. When the Members return to the House for final action, however, record votes can be demanded.

Thus, it often happens that certain Members will vote one way in the Committee of the Whole, and then will switch in the House where they are subject to roll-call votes.

In the present situation it is possible, albeit improbable, that decisions on the controls bill tentatively won by the Republican-southern Democrat coalition might be reversed on record votes in the House.

BREAK ON MEAT POSSIBLE

Should a break in the voting develop at the roll-call stage, administration forces might be able to restore quotas on livestock slaughtering, held by stabilization chiefs to be necessary for enforcing price controls on meat. They might also be able to prevent curtailment of the authority sought by the administration to deal with the stabilization of prices and wages.

In denouncing bureaucrats, the press, and radio, Mr. Wolcott did not mention names. The two top men in the mobilization picture are Charles E. Wilson, Director of Defense Mobilization and former president of General Electric Corp., and Eric Johnston, Economic Stabilization Administrator, who formerly headed the Chamber of Commerce of the United States.

Both are Republicans and both support the Administration's program for stronger production incentives and stabilization measures.

Mr. WOLCOTT, taxing the administration once again with delay in imposing price control, said many of the new powers it sought were "totally unrelated to the consumer's problem of price, wage, and credit controls." He said he had voted for the last controls bill and would vote for this one after "pet socialistic schemes" were eliminated.

The House leadership hopes to obtain a final vote on the controls bill by Thursday at the latest, but it will set aside the pending bill briefly tomorrow for several important votes, one of them on a special food-relief appropriation for Kansas and Missouri.

Another vote scheduled is on a bill setting uniform minimum and maximum sentences for violations of narcotics laws.

The Senate, also set to vote tomorrow on food relief, will act this week on a measure to cut annual leave for Government employees, a feature of the economy drive in Congress, and on a proposal to increase Federal grants to the States for public assistance.

With Senate hearings on the new tax bill continuing, Senator EDWARD MARTIN, Republican, of Pennsylvania, said today he felt safe in predicting that the Senate Finance Committee, of which he is a member, would report a bill in which increases "not only fall below the President's \$10,000,000,000 request but will be cut under the \$7,200,000,000 figure in the House bill."

The Associated Press account as carried in the Baltimore Sun, July 16, follows:

WASHINGTON, July 15.—A speed-up of House action on the economic controls bill is in prospect this week. The reason given is that administration backers who have known for days they couldn't really win have decided the record is now clear for the voters to read in 1952.

That summation of the outlook was given by a leading supporter of President Truman's much-mauled plans for tighter curbs to combat inflation and speed defense production. The lawmaker would not permit use of his name.

Up to this point the Truman forces have been fighting tooth and nail as first the Senate, then the House Banking Committee, and for the last week the House itself, chopped hunks out of the requested powers.

MEMBERS PUT ON RECORD

That process consumed time and broke up plans to get final action on the new defense production measure last week. It also put the Members on record, and the Congressman said that is one reason his side kept it going.

Now the schedule calls for passage, perhaps by Thursday, of whatever the administration can get to replace the original law. That act, carrying powers for wage and price control, materials allocation and other such measures, was due to expire June 30 but is kept in force for this month, with some curbs on action under it, by a congressional resolution.

The decision by administration men to take what they can get and check the verdict to the voters is not expected to head off a fight tomorrow over a proposed ban on farm price roll-backs. It is more likely only to cut down the time spent on the issue.

WOULD FORBID FARM ROLL-BACKS

Representative COOLEY, Democrat of North Carolina, chairman of the House Agriculture Committee, plans to bring up the proposal, sponsored by his committee, to forbid any future roll-backs on farm products and also to cancel the existing 10-percent cut in ceiling prices for beef on the hoof.

The meat matter, because of its direct effect on everybody's pocketbook, has been adopted on both sides of the controls battle-line as a sort of symbol of the more general

issue. Members whose constituency is dominated by farm interests want a full record on the point as much as the backers of tight controls do.

Administration forces concede privately they have no hope of getting much more than that out of the fight.

WSB PROPOSAL TO COME UP

Another issue likely to be a speech-producer is the proposal by Representative LUCAS, Democrat of Texas, to reform the Wage Stabilization Board so that public members have control and take away the Board's power over disputes. At present the Board, set up by Executive order, is evenly divided among public, labor, and management members. It can recommend settlements in labor disputes referred to it by the parties or certified to it by the President as affecting national defense.

Most House leaders believed the roll-back fight would take too long for that issue to come up tomorrow.

SAYS TRUMAN ENDANGERS CONTROLS

Representative WOLCOTT, Republican, of Michigan, said today the Truman administration "has endangered the entire controls program by attempting to use the current emergency to grab new powers that would be palatable only to a British Socialist."

WOLCOTT predicted in a statement that the House will pass the controls legislation but only after the socialistic power grabs which this bill contains have been weeded out, and price, wage, and credit controls have been strengthened. He added:

"I shall vote for it, and countless of my colleagues will do likewise."

He denied that a Republican-southern Democrat coalition is sabotaging price, wage, and credit controls by voting down administration-backed amendments to the House bill.

Count the Cadence, 1931-51, More Morality in Government Today Than 20 Years Ago

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. SIEMINSKI. Mr. Speaker, 20 years ago, this September 18, 1931, the Japanese crossed the Yalu River and set the East on fire with the Mukden incident. Herbert Hoover was President. His Secretary of State, Stimson, invoked the Pact of Paris, called upon the nine signatories to put the fire out and send the Japanese back, south of the Yalu. No one answered the call. The Lytton report of the League of Nations bore no action. Ten years later, we were slaughtered at Pearl Harbor. Such was the morality in Government in the early thirties.

Count the cadence. Twenty years later, Red aggressors cross the thirty-eighth parallel. Harry Truman is President. His Secretary of State, Acheson, slaps the Reds down, calls upon the United Nations to put the fire out and send the Reds back across the parallel. The United Nations answered the call. The Reds have sued for peace.

Morality, 1931-51? Count the cadence. Morality in government is on the march.

Voting Down Inflation

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. REED of New York. Mr. Speaker, can inflation be prevented under an unsound currency system? Even Holy Writ condemns fraudulent measures and weights:

Thou shalt not have in thy bag divers weights, a great and a small. Thou shalt not have in thy house divers measures, a great and a small. But thou shalt have a perfect and just weight, a perfect and just measure shalt thou have. (Deuteronomy xxv: 13, 14, 15)

Today our currency is diminishing in purchasing power thus defrauding the farmer, the wage earner, the pensioner, the annuitant, and the insurance policy holder. It is destroying endowments and expanding our national debt and increasing our taxes.

Sound Republican doctrine has ever been for a sound currency under which there can be no runaway inflation.

The money of the United States, and every kind or form of it, whether of paper, silver, or gold, must be as good as the best in the world. It must not only be current at its full face value at home, but it must be counted at par in any and every commercial center of the globe. The dollar paid to the farmer, the wage earner, and the pensioner must continue forever in equal purchasing and debt paying power to the dollar paid to any Government creditor.

Controls cannot solve the problem of inflation caused by an unsound currency. Under leave to extend my remarks, heretofore granted, I am inserting an article by William Henry Chamberlin which appeared in the Wall Street Journal July 16, 1951, as follows:

VOTING DOWN INFLATION—YOU CANNOT AVOID THE EFFECTS OF INFLATIONARY POLICIES BY JUST ENACTING A STATUTE TO MAKE THEM ILLEGAL

(By William Henry Chamberlin)

There have been two Nation-wide debates on foreign policy during the current year, and now a debate of equal or greater importance has begun on questions of internal economic policy, with the curbing of inflation as the key subject of argument.

One grave misconception, assiduously propagated by official and unofficial administration spokesmen, should be scotched at the outset, in the interest of fair play and reasonable discussion. This is that there is in legislative action some magic cure for high prices, that it is possible to banish inflation by passing a law against it.

Starting from this assumption, it is easy to brand every Congressman who opposes legislative patent medicine looking to price controls by administrative fiat as a betrayer of consumer interests and a selfish squanderer of the people's savings. But the assumption is false. One would think that in a country with the highest college and high school attendance in the world there would be enough

general familiarity with elementary economics to know why it is false.

LESSON OF EXPERIENCE

There is the plain teaching of experience through the ages, in America and in many other lands. The lesson of experience, tested on innumerable occasions and under very different circumstances, is that no government ever created, even if armed with the arbitrary power of life and death over its subjects, is strong enough to decree effectively the prices at which goods should be bought and sold.

One could only wish that such a complicated phenomenon as inflation would yield to the simple treatment of passing a law forbidding it. Unfortunately there is not the slightest indication that legislation providing a strait-jacket regimentation of prices and wages would produce this effect.

Most of the continental European countries experienced inflation of varying degrees of severity after the war. They cured or alleviated this situation not by piling on more controls, but by relaxing existing controls and applying old-fashioned economic remedies, aiming at balanced budgets, raising interest rates, taking a stand against wage increases that were not matched by increases in productivity.

What may be represented as just a little control upsetting the normal equilibrium of a free market is apt to have the effect of "just a little drink" for a dipsomaniac; it leads logically and almost inevitably to more and more. To control the finished product, whether of farm or factory, and to leave uncontrolled the prices of some of the materials which enter into the making of this product is to invite all sorts of distortions in the price structure.

The logical end of a price-control system is an arrangement under which the Government, through some fantastically powerful bureaucratic organization, would undertake to prescribe what could be charged for every item, large or small, offered for sale and also what every individual should receive for his labor. But such an arrangement would break down from its inherent unwieldiness, leaving a trail of economic havoc and ruin behind it. The Roman Emperor Diocletian introduced such a system, backed by the death penalty, which was rather freely meted out at that time, more than 1,600 years ago. It proved a fiasco and was soon abandoned.

ONE OBVIOUS CAUSE

One of the most obvious causes of inflation is the tremendous increase in the money supply of the country during the last two decades. This currency supply was about \$38,000,000,000 in 1933, about \$180,000,000,000 at the present time. Our national output has substantially increased during this same period, but not by four and a half times. Is it possible to conceive of a law that would pump any considerable part of this \$180,000,000,000 out of our monetary veins?

There are many things that could be done to reduce the inflationary impact of enhanced war preparation. But these are not along the lines of trying by legislative or administrative fiat to establish rigid price and wage controls.

The universal trend to extravagant spending at National, State, and municipal levels could be reversed. Congress could establish a hard-and-fast limit, and at a considerable lower figure than the present, for nonmilitary Government spending. The fetish of cheap money could be thrown overboard. More liberal terms for Government bondholders, especially in the field of tax exemption, could divert a good deal of money from spending to saving.

America's trump card against the worst consequences of inflation is increased production. The results that have already been achieved in this field are impressive, as the following roll call for 1950 shows: 8,000,000 automobiles, 1,350,000 houses started, 14,500,000 wireless sets, 6,000,000 electric refrigerators, 7,500,000 washing machines, over 92,000,000 rubber tires, over 23,000,000 men's suits, etc.

A VALUABLE ASSET

No country in the world has a per capita record comparable with this; and this tremendous outpouring of consumer goods went hand in hand with increased arms spending and substantial aid to foreign countries. It would seem that the free market and personal incentive system which made possible this vast output is a pretty valuable asset, for peace or war.

This thought is worth remembering at a time when we may expect intensive pressure for measures which, however well intentioned, are calculated to injure both. Nothing that paralyzes the impulse to produce can be any help in the fight against inflation.

Do We Need a Realignment of Our Political Parties for 1952?

EXTENSION OF REMARKS OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of a debate between the Senator from South Dakota [Mr. MUNDT] and the Senator from Minnesota [Mr. HUMPHREY], on the subject Do We Need a Realignment of Our Political Parties for 1952? broadcast over the radio on the program the American Forum of the Air, on July 15, 1951.

There being no objection, the text of the debate was ordered to be printed in the RECORD, as follows:

DO WE NEED A REALIGNMENT OF OUR POLITICAL PARTIES FOR 1952?

ANNOUNCER. Good evening * * * tonight the American Forum of the Air presents a discussion of the vital topic Do We Need a Realignment of Our Political Parties for 1952? Here with us this evening to discuss this problem are Senator KARL E. MUNDT, Republican, of South Dakota, who says, "A coalition of Republicans and southern Democrats controls the legislative program in Congress in many instances. By uniting in a new political party, southern Democrats and Republicans can elect a President of their choosing in 1952."

And Senator HUBERT H. HUMPHREY, Democrat of Minnesota, who says, "For an election to be meaningful, our political parties must stand for specific issues. Only when each party stands by a clearly defined platform can we be certain of Government by the rule of the majority."

And now, here is your moderator, who 23 years ago, founded the American Forum of the Air, Theodore Granik.

Moderator GRANIK. Both Republican and Democratic Parties have started to prime their heavy artillery for the election of 1952. The target is you and your individual vote. Before every election, efforts are made to

strengthen party unity. But Senator MUNDT, in a forthcoming Collier's article, advocated formation of a new political party, with southern Democrats joining Republicans. Now, how would such a proposal affect our national life? Could a new party elect a President and control Congress?

Tonight the American Forum of the Air discusses this unusual political proposal so that you, the voter, may decide.

Now, Senator MUNDT, would the new party you suggest mean the end of the Republican Party, as such?

Senator MUNDT. Ted, if by the use of the words "as such" you mean the Republican practice of becoming the champion of lost causes in each of the Presidential elections, I would say I hope, "Yes."

If you indicate, on the other hand, it is going to mean the end of the influence of the Republican Party, I would say quite the contrary would be the result.

What I anticipate is to have the Republican Party combine with like-minded Democrats of the South in a Presidential campaign, positions which for a long time now have been upheld in Congress by a nameless but working coalition, of southern Democrats and northern Republicans. It seems to me that the existing Republican and Democratic Party alignments have become pretty confusing and comparatively meaningless to the average voter, because actually today the differences within the two parties are in many instances greater than the differences between the two parties.

What I envision is working out some kind of political formula to form an alliance in 1952, so that people in this country who think alike can vote alike for President regardless of where they live or to which particular party they happen to pay their allegiance.

Moderator GRANIK. Senator HUMPHREY, what do you think of that alliance?

Senator HUMPHREY. Mr. Granik, I say Senator MUNDT's proposal makes some sense in the nature of proposing that we get the political parties cleaned up or cleared up on the basis of issues. Yes, I am for a realignment of political parties, but I am not for a realignment of the political parties on the basis of a section of the country or a regional basis. I am not, for example, saying, "Let's realign the political parties by having the Republicans and southern Democrats get together, because there are all kinds of southern Democrats and there are all kinds of Republicans, as the Senator from South Dakota has pointed out, and very rightfully so."

Differences within the political parties are frequently greater than they are between the parties. I think that is very true particularly in the Republican Party, and I think it was equally true in many instances in the Democratic Party.

So I would just say this: If the Senator from South Dakota is proposing that he take the Dixiecrats of the South, who were able to carry four States in the last election, and put them in the Republican Party, as a Democrat—as a new-deal Democrat, a Roosevelt Democrat—I would welcome that. I would say more power to you, and the sooner that you can do it, the better.

If he is saying that what we ought to have is a strong two-party system in every State in the Union, I would say that is a distinct political contribution and I would say I would support his hand in it. Every State needs a strong two-party system. That means the growth of the Republican Party in areas where the Republican Party is weak, and it means the growth of the Democratic Party where it is very weak.

Moderator GRANIK. Senator MUNDT

Senator MUNDT. I think there is some difference between my definition of a southern

Democrat and that of Senator HUMPHREY when he speaks of an alignment along geographical lines. I simply use the term "southern Democrat" because that is the place in which most of the Democrats who are voting with the Republicans happen to live. We also understand there are some Democrats in the North who think more like Republicans than do some of the Republicans in the North. It is a classification by issues. I do not know what Senator HUMPHREY means by a Dixiecrat. I have a definition of my own of a Dixiecrat. The word "Dixiecrat" is spelled with two i's, and I think that a Dixiecrat is a Democrat who has had his eyes opened, so that he sees more clearly than an ordinary Democrat.

Senator HUMPHREY. I would like to give my definition of a southern Democrat. A southern Democrat is a conservative Republican with a southern accent.

Let us just get down to see whether or not this realignment that the Senator from South Dakota suggests would do what he wants it to do. Let us direct it to particular areas of the country. I happen to believe that some of the most positive liberal leadership in the United States Congress comes from our States in the South. I think that Senator HILL and Senator SPARKMAN, from Alabama, deep in the South, are giving the type of progressive leadership which is a great tribute to the whole political background and culture of the people of the South. That is the kind of Democrat I want in the Democratic Party. That is the kind of Democrat who builds for his section of the country.

What would this coalition that the Senator from South Dakota mentions now offer to the South? I think we ought to just think about that a little bit, because he is recruiting, you see, from the South.

Moderator GRANIK. What do you have to say, Senator MUNDT, about your recruiting?

Senator MUNDT. I will tell you what it would offer in the South. In the first place, the South is in a very unhappy position today since it lost the two-thirds rule in the Democratic National Convention in 1936. The southern Democrat is no longer at home in his own party convention because he has lost his veto power and his influence. So he goes to the convention and has to accept a platform which he does not approve. He has to support a candidate with whom he is not particularly happy. Consequently, when he leaves the convention he feels he has had very little impact upon the trend of national affairs. Then comes November and October, the months of the Presidential campaign, and neither major party sends a candidate for President into the deep South.

The Democratic Party says, "We've got the South for nothing; why should we work for it?" The Republican Party says, "We can't get the South anyhow; why waste our time and talents?" So the people of the South, who are among the best and most patriotic citizens of our country, are practically disfranchised when it comes to an election of the candidates for President. I think the first thing this proposed new alliance would give the South is an impact on the selection of a candidate for President and, more and more, the selection of the correct government for emergency and peace, going in the correct direction.

Moderator GRANIK. Let me quote from an article in the New York Times of June 29, 1951:

"Paul E. Fitzpatrick, Democratic State chairman, speaking in the presence of William M. Boyle, Jr., national chairman, and after a recent conference with the President, attacked the Dixiecrat congressional group as 'infamous reactionaries' partners in an 'unholy alliance' with the Republicans, and foes of the welfare of the people."

Would you care to comment on that, Senator HUMPHREY, or Senator MUNDT?

Senator HUMPHREY. I would make this general comment. It is perfectly true that in this Eighty-second Congress a number of really truly conservative Democrats of the South have joined together with a number of the conservative Republicans of the North, and as such they are the majority within the present Congress. I do not think there is any doubt about that. That is why your price-control program is being scuttled, that is why you are having trouble today with your foreign-aid program. That is why we are having trouble with a number of other projects in the Congress, because on the basis of political philosophy, this group that is referred to in the article from which you quote—a group that agrees with the position of the minority leader in the Senate, Mr. WHERRY—it is a group that agrees with with the basic conservative philosophy of the Republican Party.

I say that the Senator from South Dakota is surely performing a service if he says they should go into the Republican Party, because, frankly, the Democratic Party does not need them and the Democratic Party will be able to gain new strength in other parts of the country, standing as a truly progressive and liberal party.

Moderator GRANIK. Senator MUNDT would you care to comment on this "unholy alliance"?

Senator MUNDT. Yes. That so-called unholy alliance which is a constructive alliance which is making great progress. We will be willing to accept and welcome into our party, any Democrats Mr. Fitzpatrick is trying to read out of his party. If Mr. Boyle and Mr. Fitzpatrick do not want them in their Democratic party, I feel they could form the nucleus of a mighty strong Republican-Democratic alliance to elect a new national administration.

I agree with Senator HUMPHREY from Minnesota, in his respect for Senator HILL and Senator SPARKMAN, of the United States Senate, but I would say that I am confident that the leadership of the South, as exemplified by Senator GEORGE and Senator RUSSELL, of Georgia, and Senator BYRD, of Virginia, and a number of others, is the kind of leadership that would appeal to larger multitudes of Americans in the South.

I would like to add to the statement that Senator HUMPHREY made about what this alliance has done about price control. It is also this alliance that stopped the Brannan plan, it has stopped the socialization of medicine, it has stopped the public housing program from taking over all housing in all areas; stopped the socialization of industry as proposed by Senator BENTON the other day during the price control legislation. This alliance has tended to maintain the rights of the people and the rights of the States as against the strong overpowerful central government.

Moderator GRANIK. Senator HUMPHREY

Senator HUMPHREY. Senator MUNDT made a brilliant and powerful statement there. Let us take a little more critical examination of what great things could come and will come from this coalition that you are talking about. On the basis of the philosophy that is represented, for example, there would have been no TVA for my dear friends south of the Mason and Dixon's line had this coalition been the fact. Shall we say there would have been a growth of monopolies because some of my friends in the South, who are liberal, like Senator LONG, of Louisiana, Senator KEFAUVER, of Tennessee, have led the fight against the basing point bill. I maintain the South has a great deal to gain from the Democratic Party. It gained

an agricultural program which the Republican Party never gave it when it was in control of Congress. The South gained a great deal in housing, and some of the most adamant champions of cooperative housing, low-rent housing, come out of the South to clean up their slums and also from the northern cities, to lead their fight for both low-rent housing and the minimum wage, to better the lives of the working people of the North and South.

I say that both the South and the North have a great deal to gain from a truly progressive, forward-looking Democratic Party, and I welcome the day (I hope the Senator will be able to convince every American by his article in Collier's that those who are of the vintage that believe in monopoly, those who believe in the bill to fix the freight rates, those who have opposed public health facilities, those who have been opposed to the foreign policy of this country, those who have been opposed to minimum wage) let them get into the Republican Party, that is where they belong.

Moderator GRANIK Senator MUNDT.

Senator MUNDT. The first basic concept of political philosophy, which I think would bring the North and South together, is that they concur in the fact that the doctrine of States rights is a mighty important American concept for good government. The difficulty with these New Deal, Fair Deal proposals is that they gradually take away from the people increasing amounts of their money and increasing elements of their power and transfer those to the control of a few politicians here in the Capital City of America. It is that which we propose to eliminate, providing in its stead constructive Federal Government leadership, but having the implementation and the direction and management of these things in the hands of the people and in the hands of the Governors and the legislatures of our respective States.

I would presume that probably this new alignment of political concepts in America would revolve around how large a Federal Government you want, whether the Federal Government should be empowered to do such things as public medicine, for example, or whether it should be done through incentives on the part of the Federal Government, by local individual initiative, or by the support and cooperation of State groups.

Senator HUMPHREY. I believe that the Senator from South Dakota states his point of view with vigor and force, and I am happy he does, because this type of sharp debate on basic political philosophy is exactly what we need in this country. I want to outline again that had the kind of coalition the Senator from South Dakota is talking about been in this country in the past 20 years, the following things would not have happened:

First of all the per capita income of the people in the TVA area would not have doubled; they still would have been down in the depths of economic despair. I also would tell my friends of the deep South that had this coalition existed, they would not have had the flood control, the public works, the canals, the public power, that has made their country today into a thriving, growing, prospering community. It is public power that has helped the South and the far West and the Midwest, and it is this kind of an over-all program of welfare and the assistance of the Federal Government to the States and to the people that has made it possible for all parts of America to grow and expand.

Moderator GRANIK. Senator Mundt.

Senator MUNDT. It seems to me that what is involved is the fact that neither political party under its present name has a consistent and understandable basic political concept. I think we can see in the disagreement between Senator HUMPHREY and myself tonight that there are two points of view shared by a good many Americans. One

feels the central government should be empowered to provide nationalization of power, nationalization of health, nationalization of housing, or education and what not, and my point of view is that such socialistic controls are not the business of the Federal Government. The Federal Government is to umpire, to provide the prods and penalties and induce the State legislatures and individual businesses and corporations to do those things which are right and proper. I think had we had this kind of realignment in charge of the Government the past 20 years, there are some other things we would not have had, either. We would not have a \$260,000,000,000 national debt that we now have, and we would not be passing the large tax bill, the largest in the history of America. We would not have our huge bureaucracy and would not have government of edict and mandate, but government by legislation, which was the concept conceived by our forefathers in Philadelphia 150 years ago.

Senator HUMPHREY. I think we had better look into that. First of all, I do not think that either the southern Democrats or the Republicans could have stopped the debt. There happened to be a fellow around by the name of Hitler and another by the name of Tojo who had something to do with the war. They had brought on \$250,000,000,000 worth of that debt.

Senator MUNDT. That was on the other side of the ocean. FDR and Harry Truman had something to do with that, too.

Senator HUMPHREY. I gave him his time, and I will take my time, too.

The Senator makes these broad statements about whether we would not have had this debt. The debt is a war debt and he knows it as well as the Senator from Minnesota.

He says we have the choice of nationalization of health, and education, and housing. That is not the choice at all. The choice is whether or not the Government of the United States, which belongs to all of the people under the terms of the Constitution, is to help other people to lift their housing levels, to lift their educational levels, to lift their health standards. This is not the choice of nationalization or local health authority; it is a choice of whether or not you are going to have good health in this country, or poor health; a choice of whether or not you are going to lift the standards of education, a choice of whether or not you are going to have housing for human beings or no housing.

Senator MUNDT. May I put a little better definition on this choice? I do not propose that this realignment of political parties would place the northern Republicans and southern Democrats on platforms favoring disease and bad health at all. I do not think that is at all the choice America confronts. I think we both want to help needy people. It is a question of how to help them. Are we going to help them by a strong central government by direct contact to interfere with the lives of the individuals on farms or in homes, or wherever they find them? Or are we going to help them by expanding opportunities to enable them to do the things they would better like to do, by their own power and for themselves?

Take the Missouri Valley, for example, where I live. There we are harnessing the river, providing hydroelectric power, providing soil conservation. But we are doing it by keeping control of it in the hands of the people in the valley. As against that in the TVA, the whole business is controlled by directors appointed by the President. The question is: Where does the ultimate authority rest? With the people in the valley, or in the White House?

Moderator GRANIK. Do you want to answer, Senator HUMPHREY, before we take questions from the audience?

Senator HUMPHREY. The Senator has heard, I am sure, about the Bureau of Reclamation and the Corps of Engineers, the Federal agencies that are handling the Pick-Sloan program and the Missouri Valley development, and he knows the States have nothing to say about it one bit. He knows it is a Federal program. The difference is whether or not you have a coordinated, integrated program like the TVA, or a hodge-podge like you got out there, which the Hoover Commission said was costing double what it ought to cost because of conflict between the agencies. The Senator knows that.

Senator MUNDT. There is one other thing I know. You are talking about construction of projects and I am talking about the administration of the project when it is completed; that I want administered by local direction.

Moderator GRANIK. Gentlemen, in a moment we will take questions from the audience.

Moderator GRANIK. Now we will have the first question from the audience, a young lady, a very charming young lady. Go ahead.

Question I am Bernice Teuteberg. I am a placement officer at the National Production Authority. My question is for Senator MUNDT. Do you consider the general attitude and policy of the southern Democrats to be typical of basic Republican policy?

Senator MUNDT. By and large, I would say "Yes." Of course, I agree with Senator HUMPHREY that you cannot take an area of geography and say that everyone in one area agrees with everybody in that area and disagrees with everybody in some other area. But I would say there is a greater affinity of interest between the southern Democrats and the northern Republicans than there is today an affinity of interest between the average southern Democrat and big-city machines and left-wing fringe groups that have come to control the New Deal Democratic Party of the North.

Moderator GRANIK Senator HUMPHREY.

Senator HUMPHREY. I was just going to pick up that last comment. I am quite interested in that last comment of the Senator from South Dakota.

Moderator GRANIK. About the fringe comment?

Senator HUMPHREY. The fringe comment. I would just say if the Republican Party is going to accept the political philosophy and policy that has been enunciated by the Dixiecrat element of the southern Democrats, then the Republican Party tonight on this program is saying there will be no civil rights, because that is why they walked out of the Democratic Party. The Republican Party tonight is simply saying there will be no more of the Federal assistance in terms of public health; there will be no more assistance in terms of vocational education; no more assistance in terms of public works programs developing in the South and making it into one of the garden spots of America, as they justly deserve.

I want it quite clear that if the Republican Party wants to embrace that kind of philosophy we will be delighted to join the issue in 1952, because on that issue the Democratic Party will be back in power, with a true majority in Congress and a President in the White House.

Moderator GRANIK. Do you want to comment on that, Senator?

Senator MUNDT. Yes, indeed, because Senator HUMPHREY, while he does not seem to want to join this alliance, would like the privilege of helping to write this platform.

Senator HUMPHREY. I helped on the last one.

Senator MUNDT. And some of the Democrats walked out and they may stay out of your party as a consequence this time. But, of course, that is not going to be our program at all. My proposal would give the

American voter an honest choice between two legitimate positions in government. My position is that the rights of individuals and the rights of States are closely allied, and if you build a great big, strong superstate government in Washington which infringes upon the local autonomies of the States and the local rights of individual citizens, you are marching directly down the trail of national socialism. That we want to stop in America before it is too late.

Senator HUMPHREY. I think I ought to make a comment on that because my friend from South Dakota gets these words that just dramatize some sort of theory or legend he had of his "monster government," this "great bureaucracy" that he talks about. Let us face up to it. What has the Federal Government done through its program of grants-in-aid, which is the State, the New Deal program? What has it done? Lifted up the whole educational structure of every State in this land. What else has it done? Helping soil conservation to replenish the soil of this land; made possible electric power to 80 farms out of every 100 in America, making possible reclamation of the land and irrigation of the land. And I tell you there is no freedom lost in that; only the freedom to starve and freedom to be in misery.

Senator MUNDT. I say now that every one of those programs was also supported overwhelmingly by the Republicans in Congress.

Senator HUMPHREY. Of course, that is not true.

Senator MUNDT. Indeed, it is; those were supported and have been supported time after time by Republicans. As a matter of fact, I have sat in the House time after time when by unanimous consent of both Republicans and Democrats, without even a roll-call vote, millions of dollars were appropriated for soil conservation and appropriated for REA and things of that kind.

But I was talking about the Brannan plan, about socialized medicine. I am talking about the things which the Senator from Minnesota is ducking in this debate.

Senator HUMPHREY. The Senator from Minnesota is not ducking a thing. The Senator from Minnesota is saying that when REA came up for vote in 1935, 77 percent of the Republicans in Congress voted against it. Now, of course, they are for it? Why not? It works. When the TVA was up in Congress 66 percent of the Republicans voted against it. Now, of course, they have approved it because it works.

The same thing is true of the George-Barden Act, that has two southern names on it. When it was up before Congress the Republican Party voted against it. And today they get the same new names against the same old names for the same old programs.

Moderator GRANIK. We have about 30 seconds for one more question. Can you give it to us quickly?

Question. My name is M. Victor Rosenbloom. My question is for Senator HUMPHREY. Don't you believe that what we as a country need is not so much a new party realignment against politics but a strong, courageous conviction for basic party principles in the national interest?

Senator HUMPHREY. I believe that is very important because I think, as my friend from South Dakota pointed out very well tonight, that actually a party must stand for something.

Senator MUNDT. The big difficulty is now, as illustrated in 1948, that less than half the people go to the polls. Why? Because most of them felt there was not any great choice between the two platforms and two candidates. The average American feels he is entitled to a choice when he goes to the polls.

Moderator GRANIK. It is time for summary. Will you continue with your summary, please, Senator?

Senator MUNDT. In the 1 minute I have to summarize let me say I think the South

would benefit from this proposed realignment program because it would be given a chance to use its great influence in the nomination and election of candidates for President and in the selection and determination of national policy. I think it would be beneficial to the Republican viewpoint because instead of being a sectional party, as we now are, operating in 36 States, trying to win a horse race with a three-legged horse, we would operate in every State in the Union, the way political parties ought to operate in America.

Primarily, however, the American citizen would benefit because he would get a clear-cut decision in Government, between some form of national socialism, regardless of the fancy name you call it, and our established American concept of self-government. But when you place in the hands of a strong Federal Government control of increasing amounts of the peoples' money that they earn and the authorities that they have, you move in the direction of socialism. If a voter favors that, one party would move him in that direction. If he opposes it, the other party would move him away from it. That is an extreme way of stating the basic dividing line which it seems to me would operate to separate the two parties under the kind of political realignment I envision for America.

Moderator GRANIK. Thank you.

Now, Senator HUMPHREY, your summary.

Senator HUMPHREY. Rather than get into the realm of theory, as my friend from South Dakota takes us, as he stated in his "extreme" way, let me tell what I think would happen by the facts in the record of this kind of realignment. First of all, it would be wholesome because for the first time the American people would really know the Republican Party stood for the following things:

Opposed to American labor, because the Dixiecrat-Republican combination would stand for that; opposed to the extension of social security, because the Republican Congress fought social security, as did the Dixiecrat element of Congress, opposed to soil conservation, because in the Congress of the United States there has been a continuous attack upon that kind of great program; opposed to development of public power, which we had witnessed again just within the last week of Congress, where the Dixiecrat and Republican elements again voted against it.

I say if that is the kind of realignment we are going to have, I welcome it because I would like to have the American people truly know what the political parties stand for.

Moderator GRANIK. Thank you, gentlemen.

You have been listening to a discussion on Do we need a realignment of our political parties for 1952? Our speakers have been Senator KARL E. MUNDT, Republican, of South Dakota, and Senator HUBERT H. HUMPHREY, Democrat, of Minnesota.

Return of the Key to the Bastille

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a broadcast which Mr. Charles Farmer made today from radio station WMBG, Richmond, Va. In this broadcast Mr. Farmer calls for a return of the key to the Bastille as

a gesture of friendship to the people of France.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

FARMER FROM WASHINGTON

(By Charles Farmer)

You've been to Mount Vernon, haven't you? Recall seeing, hanging in a case inside the doorway, the iron key to the Bastille? (The French Government prison) You may remember, from your student days, that exactly 162 years ago last Saturday the French populace stormed the Bastille, releasing political prisoners—who had spoken and fought for liberty for the masses.

Thomas Paine, the American patriot, was in Paris during the uprising. Later, the Marquis de Lafayette entrusted the key of the Bastille to him to give to our George Washington—this Paine did. There, in Washington's home, hangs the key today.

Do you think it would be a gracious gesture of friendship—a century and a half and more old—if we returned that key to France? Just as we of the United States of America love to contain within our borders visible mementoes of our struggles for freedom, surely the French Republic would like to again possess the key to the Bastille—a symbol of the freeing of men's minds in France.

No, not even the gentlest whisper of a suggestion, that this be done, has come from France. The leaders of that nation are too civilized to make such a move, but when President Auriol, of France, was this Nation's guest, a few months past, he was taken on a tour of Mount Vernon. His eyes gleamed, when he beheld the key to the Bastille—but he said nothing. That, of course, would have been a great moment in which to take down the key and present it to the people of France—our friends.

That was an act, on our part, which had been overlooked. Perhaps because we, as a Nation, had forgot the presence of the key—to us a portion of the furnishings, of a great national shrine.

Now we do recall it—as another Bastille Day—France's Fourth of July—passes into history.

It may be well to remember that Mount Vernon is the actual property—more or less under Government supervision—of a private organization—the Mount Vernon Ladies' Association—comprised of patriotic gentlewomen from the 48 States.

A suggestion from some person or group of national renown, to the members of this association, would call to their attention the great power they hold—the power to make a gift to our friends, the people of France, in the name of liberty—a liberty which France, in our most crucial hour, enabled us to achieve.

That hour? Today we think of the Normandy and the astounding Inchon landings as outstanding military achievements, which they are. But there was another conflict when France—by a miracle of land and sea coordination—came to our aid at the moment when victory hung in the balance.

This was at the siege of Yorktown, the decisive moment of the American Revolution, an action which took place within less than an hour's flying time of Mount Vernon, on the Peninsula of Yorktown, where Lord Cornwallis entrenched his forces; here he faced Washington and Lafayette and Rochambeau on land, while De Grasse moved in with his armada by sea; Cornwallis surrendered; the war was over; thanks to the priceless aid, to us, of our French friends.

The surrender of Yorktown took place on the 19th of September 1781, would it not be appropriate to return to the people of France the key to the Bastille on the 19th of September 1951, in token of an undying friendship? asks Farmer from Washington.

The Central Arizona Project**EXTENSION OF REMARKS
OF****HON. CARL HAYDEN**

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. HAYDEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Ohio and the Arizona Project," published in the Youngstown Vindicator, a great Ohio newspaper, on July 15, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OHIO AND THE ARIZONA PROJECT

Eastern States, which pay most of the United States Government's revenue, say the biggest Federal projects go to Western States which provide a much smaller part of the Treasury's funds. There is truth in the charge, but it is also true that some of the western projects will increase Federal income and thus ease the East's tax burden.

This appears to be true of the long-discussed central Arizona project, to irrigate 725,000 acres. The object is to develop another such region of citrus, produce, and livestock as that in the Phoenix area.

True D. Morse, president of the Doane Agricultural Service, Inc., of St. Louis, reports after a study that in 75 years the project would not only repay 98½ percent of the cost to the Federal Government but would develop Federal income tax ranging from \$4,000,000,000 to \$7,800,000,000 over the pay-out period. Taking the minimum figure, the tax benefit to Ohio is estimated at \$197,000,000.

The study shows the good sense of Congressman MICHAEL J. KIRWAN's broad view of public improvements. He helped his own district (by getting such vital projects as the Berlin and Mosquito Creek reservoirs), but he did not stop there as most Congressmen do. He became interested in conservation on a national scale, realizing that whatever helps one part of the country strengthens the whole Nation.

The central Arizona project has passed the Senate, but faces a bitter fight in the House. The water would come from the Colorado River, and Californians charge that it would take part of their State's rightful share. However, the bill provides that nothing shall be done until the Supreme Court has passed on the rights of the various Southwestern States to the Colorado's water. Indeed, the purpose of the bill is to provide a means of getting the issue before the Court. This seems fair enough. If California is so sure that her rights would be invaded, she should be not only willing but eager to have the Court examine the question.

FEPC Gains in Minneapolis**EXTENSION OF REMARKS**

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "FEPC Records Minneapolis

Gains," published in the American Jewish World of June 22, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEPC RECORDS MINNEAPOLIS GAINS

Before Minneapolis enacted a fair employment practices commission (FEPC) ordinance back in the fall of 1947, there were no Negro sales clerks in the city's department stores. Today—some 3½ years later—every major department store in the city employs Negro sales clerks.

Prior to FEPC in Minneapolis, insurance and other financial institutions in the city employed few, if any, Jewish or Negro clerical workers. Today a number of these concerns are employing Jewish and Negro workers in office and clerical positions.

Widespread discrimination by employment agencies on the basis of religion was the practice in pre-FEPC days. Today questions on religion are absent from application forms and discrimination on that ground has been substantially reduced.

These are among the high lights of the annual report of the city's FEPC commission, of which Amos S. Delnard is chairman.

The report is an impressive recitation of gains in the utilization of workers' highest skills—without discrimination because of race, creed, color, or national origin—and a striking demonstration of how an FEPC law can be administered, without the fuss and fury that opponents of State FEPC legislation so fearfully apprehend.

In all the many cases that have been called to the attention of the Minneapolis fair employment practices commission, the report says, every one has been settled by the commission without necessity for public hearing or resort to prosecution.

It is of more than passing interest to note that FEPC is a two-way tool; it serves the interests not only of workers but also of employers. In 30 percent of its cases the commission has protected employers or others against unfair charges of discrimination, the report reveals.

Some of Minneapolis' leading citizens—Harry A. Bullis of General Mills, Donald C. Dayton of the Dayton Co., Bradshaw Mintener of Pillsbury Mills, George M. Jensen of the Maico Co. Inc., and others—are on record in the report testifying to the fairness and advantages of FEPC in the city.

The commission is entitled to the highest praise for the exemplary work it is performing. As Mayor Eric Hoyer says, "it is of deep significance that in recent years interest in FEPC work has grown throughout the country because of the valuable and courageous groundwork established by the Minneapolis FEPC."

One Hundred and Seventy-fifth Anniversary of the Declaration of Independence**EXTENSION OF REMARKS**

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. LEHMAN. Mr. President, Mr. George J. Chryssikos, a New York attorney long active in Greek-American affairs, has written an interesting brochure entitled "Fourth of July: the Cosmohistoric Event of 1776," prepared on the occasion of the celebration of the one hundred and seventy-fifth anniversary

sary of the Declaration of Independence.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOURTH OF JULY: THE COSMOHISTORIC EVENT OF 1776

(By George J. Chryssikos)

It is the custom in Europe to say that the history of the newer times began in the period of the French Revolution. The truth is that its beginning was the 4th of July 1776. It is usually said that the French Revolution, and its effects, awakened the peoples of Europe to a love of liberty and freedom. However, the fact is often overlooked, that the American Revolution, the mother of the French Revolution, fostered and nurtured this love of freedom in the hearts of the downtrodden and enslaved peoples of the world. The 4th of July 1776 was indeed the beginning of the emancipation of mankind from tyranny and slavery. It was the great and decisive turning point in history, the beginning of an evolution which has been continuing from that time on, having as its ideal the high and undeniably humanitarian sanctity of man throughout the world, as so nobly set forth in the Declaration of Independence.

The outstanding characteristic of that historic document is its philosophical basis. It does not declare, simply, the determination of the American people to fight for freedom and liberty. It justifies this determination with unassailable logic. It bases the right of national independence upon the rights of the individuals who constitute the Nation, and proclaims that political conditions which deny the rights of the individual are unbearable.

This great truth was transplanted from the Declaration of Independence to the Constitution of the United States, which, ever since, has governed the political life of this country. Liberty would have been an insipid fruit, an empty and useless word, if it had been limited to the emancipation of America from England and were a mere substitute for English authority, just another form of government, so to speak, independent externally but federated internally. National independence alone is not the supreme goal. Its indispensable supplements are internal liberty, equality of citizenship, and the security of citizens within the sovereign state. Solidification and protection of the rights of each citizen are the only real liberty, and it is this form of liberty that the founding fathers bequeathed to the American people.

As we all know, this benefit did not exist in every free country in times past. At present, the United Socialist Soviet Republic and all communistic states under her dominant influence have reduced their citizens to mere robots, or spokes of a wheel of the integrated chariot of its leader. The word "liberty" is eliminated from the lexicon of those countries. They are not governments of the people, by the people, and for the people, but rather slaves of a foreign power.

However, we should gather wisdom and inspiration from the lessons of the American Revolution and from the American Constitution, which shelters the political structure of the Government of the United States. The leaders of the people of the early English Colonies of the New World were men of great learning and accumulated wisdom, and not simply men of professional education. They were baptized in the pool of wisdom of past centuries. They were men of eminence and of extraordinary abilities. Through Thomas Jefferson, they bespoke in the Declaration of Independence the experi-

ence and political philosophy of past history. That great American drew abundantly from the spiritual treasures left by ancient Hellenism to be the common property of the world. Their influence on his heart, soul, and mind prompted him to declare the sublime principles of that historic document, in which he justified the Revolution. For those ideas and ideals he continued to struggle ever afterward, as is apparent in all his political, official, and private papers.

Thomas Jefferson was a great representative of the American people in the revolutionary era, and he laid out the road along which Americans have since followed. A profound student of history, he played a very important part in the birth of the United States, a vital nation in a vast country endowed by nature with almost unlimited riches. He envisioned the enormous growth of the newly born democracy of 5,000,000 persons in 13 States. Not only did he anticipate such a gigantic country, but he aspired to make it such, as one is convinced from a reading of his papers in connection with the Louisiana Purchase. He visualized the creation of a nation exceeding the Roman Empire in size, power, and vitality. However, he was deeply attached to the form of the Athenian State. He did not dream of a republic of the Roman type, monopolized by patricians, who held the people in an iron grasp and thereby tortured by constant social and political upheaval and antagonism. He visualized a republic worthy of its name and destined to stretch from the Atlantic to the Pacific Ocean and from the Canadian border to the Gulf of Mexico and the Rio Grande River. Thus, he aimed to build a democracy of the United States with Athenian material.

It is strange, but nevertheless true, that the Revolution of 1776 owes something to England against whose authority the American people fought. A great epoch in the history of England—and we can say in the history of the civilized world—was the struggle for the support and consolidation of the English Constitution. From the time of Oliver Cromwell, progress had been slow toward real esoteric liberty, toward the security of the rights of the citizen, and toward equal political rights. However, England was the first country to take the lead toward the acquisition of equal political rights, and thus demonstrated a great and important example for all civilized peoples. For Americans of the former Colonies, who had their family roots in England, the struggle of English people for political rights was a racial tradition. It was natural for them to desire that English people should possess the same rights. England wanted the American colonists to be humble and obedient citizens—dumb actors politically, without rights or pretense, although they were taxed without acquiring corresponding benefits. Therefore, the only way by which the Americans could acquire the benefits for which the English people had struggled, and which they had secured, was to become independent and self-governed. The colonists therefore revolted, declaring their independence on July 4, 1776.

When Constantinople fell to the Turks in 1453, it seemed for some time that the flame of civilization would be extinguished forever, except in Byzantium, in the midst of the darkness of the Middle Ages, which covered the Old World.

The flight of the Greek sages to the west brought on the Renaissance by the spreading of Greek culture and sciences. The people of the west could have said to Hellenism, which seemed dead, "Your death gave us life." After the fall of Constantinople, the most important cosmo-historic saga was and still remains the American Revolution.

Without the American Revolution, without America, which has become so vast a

country since 1776, without the spirit which animated this mighty democracy of the United States, without the love of the American people for its freedom and without its readiness to stake everything for its noble ideals, there would not be a free world today. Without the support of this magnanimous, invincible, and glorious country, the anniversary of whose birth we celebrate today, neither in the First World War nor in the Second World War would freedom and liberty of the world have been saved, nor the check of communism and Soviet imperialism have been possible. The world outside the iron curtain would have been deprived even of leadership, not only political and military, but also of moral, so essential in repelling the Slavo-communistic danger which now threatens the world from the east.

Educational Advances Under UNESCO

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the New York Times of Friday, July 6, headed "UNESCO's pilot plant." I agree that "\$20,000,000, spread over 12 years and six far-flung areas, does not seem like much money in these days." However, this is a most heartening project, and Dr. Torres Bodet, UNESCO Director General, is to be congratulated on it. I well remember his great campaign when he was Minister of Education in Mexico, to which this editorial refers, and which I had a chance to observe when I served as a delegate at the Chapultepec conference in 1945. With his leadership, and with encouraging results in the early years, I would like to hope that this most promising project can be greatly expanded long before the 12 years have gone by. If this project is to be merely a "pilot plant," we in the Congress must be prepared to back its expansion as soon as the world recognizes the potential significance of the great results anticipated by Dr. Torres Bodet and his colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNESCO'S PILOT PLANT

Twenty million dollars, spread over 12 years and six far-flung areas, doesn't seem like much money in these days. Yet, spent as the United Nations Educational, Scientific, and Cultural Organization plans to spend it, this sum can leave its mark on the lives of countless millions of human beings. UNESCO, meeting in Paris, has unanimously endorsed a plan for "a world-wide drive against illiteracy and low living standards." Specifically, it proposes to set up educational centers in Latin America, the Far East, equatorial Africa, the Near East, and southeast Asia, in which teachers will be trained for work in the field. If the pattern already established at the Mexican training center of Patzcuaro is followed, teams including an elementary teacher, a physician, and a vet-

erinarian may be sent into remote villages to help the people.

The present project comes out of the pioneer work of Dr. Jaime Torres Bodet, former Minister of Education in Mexico, now Director General of UNESCO. Dr. Torres Bodet attempted "a simultaneous attack on illiteracy, ill health, and soil erosion"—three of the basic causes of rural poverty. UNESCO is now in a position to extend this attack to all sectors of the earth where its representatives are allowed to operate. Several hundred trained recruits a year, each one capable of training others, will go into this bloodless battle against misery.

The drama in this adventure is not the drama of drums and trumpets. But what if projects like these save multitudes from blindness or death, what if many who have always been hungry learn how to produce enough to eat, what if a little light shines for those who have been living in medieval ignorance. UNESCO's \$20,000,000 and 12 years will not bring these blessings to all who need them, but the new program is at least what Dr. Torres Bodet called his Mexican experiment—a "pilot plant," a landmark on the road toward a happier future.

Arabian-American Oil Co.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 12, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Christian Science Monitor, Boston, Mass.:

NEW DAWN IN OIL PARTNERSHIPS BREAKS ACROSS ARABIAN DESERT

(By Grant C. Butler)

The wave of increasingly strong and sometimes violent nationalism making itself felt throughout the Middle East is rapidly forcing the western nations to adopt a new outlook toward that crucial area.

There is a growing realization that if the west is to continue to do business in the Middle East it must take into greater account not only the needs of the individual peoples but their national attitudes as well.

Fortunately, in Saudi Arabia a fairly good start in this direction seems to have been made.

There the United States, and more particularly the Arabian-American Oil Co., seems to have established a working partnership with the local government and population which is proving extremely beneficial to everyone concerned. This policy has combined to bring a prosperous and growing oil industry to one of the world's most ancient countries.

Although both King Ibn-Saud and Aramco are able to point to far-reaching physical achievements in Saudi Arabia, the most important developments are those not visible to the eye. They are measured, rather, in mutual trust, cooperation, and a rising standard of living in an area where poverty has hitherto been chronic.

For it would be hard to overemphasize the importance of affording the Arab visible proof of how Aramco's activities have assisted him—and his country—through the utilization of the vast oil resources. If western ideals are to appeal to the Arab, then he must see beneficial application of them within his own country.

Today the Saudi Arab can see the new construction in his country. He knows that sanitation projects have raised the health standards of his country. He knows that agricultural projects are flourishing in the desert. He sees a new life ahead.

He sees a previously nonexistent middle class of entrepreneurs developing, ice plants, power and utility installations, garages, and furniture plants owned and operated by Saudi Arabs for Saudi Arabs but a few of the new commercial enterprises constantly increasing in number and variety.

A 350-mile railroad is being built from the Persian Gulf into Riyadh, the center geographically of the country and the political capital. Here the King and his numerous progeny reside. On the eastern end of the railroad, at Dammam, a 7-mile pier and wharf is being built into the Persian Gulf. For the first time Saudi Arabia will have adequate deep-water unloading facilities and regular low-cost transportation into the interior.

Public works projects of this type can be seen and their advantages appreciated by all Saudi Arabs. The airports, the water systems, the lighting facilities, and the communications improvements are affecting more and more inhabitants.

But even greater advantages will be gained from the technical and industrial training programs being carried on by Aramco and the other American firms now operating in Saudi Arabia.

These training programs, designed to produce more than 100 different types of skills, are helping to bring industrialization to Saudi Arabia at a faster rate, perhaps, than any other country in the world. Technologically, the country has leaped decades in each of the past few years.

Aramco also has realized the importance of one Arab talking to another in the desert about the company and its operations. Such conversations will be multiplied 10,000 times. It is equal in importance to one American reading his newspaper, multiplied by millions.

Recently a group of Saudi Arabs who had taught their native language to Americans at the Aramco training school in Riverhead, N. Y., went on the air in Jeddah to broadcast views and opinions of life in America.

Americans and Saudi Arabs have both learned valuable lessons at the training school. The Saudi Arabs come to America on a rotating schedule to teach their native language to those Americans heading for Saudi Arabia. They attend night classes in various subjects, and they are taken on escorted tours to great American industrial centers.

Before they return to Saudi Arabia the young instructors have absorbed an amazing amount of Americana. Many learn to play baseball with the students. The majority develop a seemingly insatiable appetite for American movies. Most return home to better jobs as the result of their schooling.

The Americans learn to understand the Arab, his customs, and his culture. They learn to evaluate the great upheaval going on in the Middle East, the slow changing of a culture which goes back several thousand years.

In the years since 1933 when the first Americans arrived in Saudi Arabia, there is evidence that a bond of friendship has developed between the peoples of the two countries. The Arabs seem to like and trust their American friends.

Aramco's public-relations policy has helped to remind Americans continually that they are guests in a country which deserves credit and respect for its basic adherence to the use of world freedom and peace. Americans soon learn that the Arab is unsurpassed in politeness and hospitality.

Perhaps in the future Aramco will devise a method of presenting the cultural and spiritual side of America for the Arabs to evaluate. This need is evident throughout the entire Middle East. It is a gigantic task, but it can be done.

Observations and Recommendations on Our European Defenses

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. BROOKS. Mr. Speaker, upon returning from Europe recently after conferring with Gen. Dwight Eisenhower, Supreme Commander of European Allied Forces, I prepared and submitted to Hon. CARL VINSON, distinguished chairman of the House Armed Services Committee, a report upon our European defenses. Under leave to extend my remarks in the RECORD, I offer for inclusion a copy of the report which I have submitted:

JULY 3, 1951.

Hon. CARL VINSON,
Chairman, Armed Services Committee,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN: In reference to my recent trip to Europe along with other Members of Congress from the Foreign Affairs Committee, Appropriations Committee, and the Armed Services Committee, I desire to submit to you several observations and recommendations. At the outset, I wish to state that the short time which this group of Congress spent in Europe was not such as to permit an exhaustive examination of the subject of European economy or European defenses. Nonetheless, it was long enough to give us some definite ideas along this line within the free countries of Western Europe. I am writing this memorandum with the thought by placing these observations before you, to some extent, our program of joint national defense might be strengthened by timely and proper constructive suggestions and criticisms.

ECONOMIC RECOVERY

In the briefings which I received as well as my own personal observations I was impressed by the remarkable economic recovery being made by the free nations of Western Europe. While the group I visited consisted of England, Norway, Holland, Belgium, France, Italy, and the American and French zones of Germany, the reaction was similar wherever I turned. Nor did I rely entirely upon briefings and upon my own personal observations. Insofar as I did converse with local people, I found almost a completely unanimous sentiment to the effect that the home country had progressed along the road to a wholesome and stable economic recovery. Just how much of this recovery was due to our own efforts and how much to the natural courage and perseverance of free people in Western Europe is difficult to say, but certainly the progress has been such as to justify serious thought and consideration of the program of an immediate reduction in ECA expenditures and the elimination of them at an early date.

As is the case in this country to a much lesser degree, inflation in Europe is a great and grim fear. There is no doubt that this

fact has delayed recovery and it is only after the economy is anchored to a definite level of value that economic progress timidly raises its head and attempts to set the stage for real wholesome recovery. I was shocked to realize, for instance, that the French franc, which in the days of World War I was one of the strong currencies of Europe and worth something like 23 cents per franc in American money, had sunk to a low point where it is roughly exchanged at one-third cent per franc. In the competitive market the franc is worth even less than this figure. In spite of this rank inflation of currencies, where the values remained constant for an extended period of time, business has had the tendency to move toward normalcy, shops to fill with wares for merchandising, and customers seem eager for the bargain counters.

COMMUNISM

With the return of a more stable economic condition, the fight against communism has apparently been pushed ahead. More than any other country visited in Europe, France presented the spectacle of an internal struggle to free itself of communism. Our party was in Paris on the day of the election and the day following. Some of us even visited voting places unofficially to observe the serenity with which the French conducted their elections. Although we left France too early to pass judgment upon the results of the election, subsequent events have clearly indicated that slowly, with a painstaking effort, the great people of this country are repudiating communism and placing their trust in more stable parties, doctrines, and a more patriotic element of their population. It is true that the Communists still produce the greatest popular vote of any party; but the so-called center parties, together with the remarkable strength of the DeGaulist factions, make it obvious that the majority of the French people still stand true to their democratic traditions. I believe with an artful handling of this situation and full cooperation by our people, the Europeans will respond to democratic doctrines in the future as they have in the past.

MILITARY POSTURE

At this juncture, I wish to emphasize that I detected throughout Europe the budding desire of its people to be more adequately armed to defend themselves. It is obvious that this national-defense movement is growing in these countries and is indicated by the building of military organizations and the effort to obtain equipment for defense purposes. England, being located on an island, presents, of course, a different situation. It has maintained its navy and a semblance of an army and air force. On the European Continent, every country visited showed our group by active determination and by military maneuvers and in other ways its desire for immediate national defense; and the physical attitude and moral ability to handle organizations and equipment intended for that purpose. I was impressed by the eagerness of the young men in Norway, Belgium, the French zone, and other places to learn to handle the equipment presently available and to work in cooperation for a larger defense effort.

GENERAL EISENHOWER

Easily the most appealing figure in all Europe is that of Gen. Dwight Eisenhower. He has the enthusiasm of a much younger man, the experience of his great command in World War II, and the prestige of a man who enjoys a unique place throughout the world and especially in Western Europe. With tireless energy, great organizational skill, and a relentless enthusiasm, he is bringing together the leaders of the free people of Europe into a cooperative effort at national

defense. Wherever the name of General Eisenhower is used, the impression upon Europe is apparent.

Illustrative of this fact are the attacks the Communists are making upon him from time to time and his fine work throughout Europe. The satirical cartoons from Communist sources of his landing in France constitute the beginning of a campaign of abuse and misrepresentation and attacks upon him which have continued to this present hour. I was very much impressed by the frank and logical manner in which the general has put together his ideas for a logical program of European military cooperation in defense of democratic Europe.

ENGLAND

The group spent a day visiting the air bases in England. The British bases, of course, were built in World War II but are in excellent shape at the present time. The American bases being built are to be engineered along the familiar lines of bases within the United States and are to be paid for under joint arrangement by the United Kingdom and this country on a 50-50 basis. Without any definite contracts as to the length of tenure, it seems to be agreeable that they be occupied by the troops of this country as long as is necessary to meet the exigencies of this present emergency.

I noted especially in England, and throughout Western Europe generally, the trouble which each base is having with the shortage of spare parts for mechanical equipment. I talked with members of British B-29 crews who told me at different times that this was a great problem. Some of the crew members complained about engine trouble and mechanical disorders of the B-29, and in doing so they exhibited a lack of complete understanding of the mechanism of this great plane. All complained of inability to obtain spare parts, but they also indicated this situation was improving. It was with a matter of pride I learned that not a single B-29 had cracked up during its use by the British aviators.

As to spare parts, it seems to me that in most instances some arrangement could be worked out whereby these parts might be obtained overseas. Arsenal are available in England, Belgium, France, and other places for the making of spare parts and the very fact that these arsenals, machine shops, and foundries are located near at hand, will make the matter of spare-parts production a simpler one and bring about greater efficiency in the proper maintenance of the complicated machines and equipment overseas. This problem should be worked out as soon as possible in the interest of a better European defense.

COMMUNISM

The early returns gave the Communists a popular vote of 5,001,618 with a reported 103 seats definitely captured by them. As against this, the De Gaullists polled 4,039,887 votes with 115 seats. The center parties polled in excess of 7,000,000 votes with a total in excess of 376 seats and 21 seats were left to independents. This gives some idea of the political situation existing in France and gives some idea of the struggle through which this country is going at the present time.

GERMANY

Everybody in Europe realizes that Germany is the key to the European situation. More than ever, today Western Germany is necessary to a proper solution of our problems. We were told the Ruhr problem had largely been solved and that coal mining and steel production are progressing reasonably satisfactorily. The French zone still has some pressing economic problems which are at once apparent to one who talks to the people living in that zone. Until Germany

finds its proper place in the field of affairs among the free people of Western Europe our difficulties in this direction will continue.

It has been proposed that out of Western Germany we attempt to set up a small army of perhaps 250,000 persons, carefully controlled and with special equipment. This army might be called the German constabulary or it may be a part of our Army, or it may be as an independent force. Properly handled and properly controlled such a force might add a great deal to the stability of Central and Western Europe, but great care should be used to avoid a return to anything like the militarism which preceded World War II in Germany. I might state that since Germany has been shorn of a large part of its eastern provinces and has been divided between the Soviet and Western Powers, the European fear of a consolidated militant Germany is greatly reduced, if not eliminated.

AMERICAN TROOPS

My time while in Germany was spent largely with American troops in our occupied zone. I went by train from Wiesbaden, headquarters of the Air Command, to Grafenwohr with Maj. Gen. Paul Dahlquist, then commanding general of the First Division, but now recently made Corps Commander. The Fourth Division was there moving into Germany and one of the great problems which it had encountered was the housing problem.

This is getting to be a most serious problem in numerous places in Europe. The ability to obtain housing is not as fluent now as it was immediately after the end of World War II. People have become settled in their homes and are not easily dispossessed. The influx of some 5,000,000 of people from the Russian occupied zone in the east and from other countries has made the housing problem a difficult one. In advance of the coming of the Fourth Division an effort was made to satisfactorily arrange for housing; but in spite of great efforts made, as additional troops are brought into the occupied zone of Germany our housing troubles mount. It may become necessary that we build considerable housing in our occupied zone of Germany even at this late date.

I spent time inspecting units of the First Division, especially the Sixteenth Infantry. I am glad to report that I found this division cared for with modern mechanized equipment, including tanks, machine guns, rifles, trench mortars, and modern artillery. Moreover, the commanding officer has thought wise to utilize the old German maneuver areas available to their maximum possibilities. Not only do local units of our troops use these maneuver areas constantly, but units from all parts of Germany and from Austria are brought in for training there.

In spite of the present size of the maneuver area, our troops badly need additional acreage for that purpose. As more troops enter the occupied zone for large-scale maneuvers the need becomes more pressing and in time we may really suffer from lack of available training areas.

Both in the field and in the billet morale of our troops seems to be high. The improved methods of procurement and distribution are helpful to the company and battery mess and at the same time a limited amount of food, especially fresh foods, may be purchased locally. Of course additional facilities for recreation are always desirable but the need for it is nothing like as great as it is in places such as in Stevensville, Newfoundland, where the long winters and inaccessibility of the bases make outside entertainment practically impossible.

POSITION OF SPAIN

Wherever we went in Europe the question was asked as to the possible position of Spain in reference to the military recovery of that

continent. In every instance where military men were requested opinions, they almost invariably were to the effect that Spain constituted a tremendous asset which was being overlooked. I think what attracted the military so much were the armies of Spain. Poorly equipped, it is true, but with seasoned manpower available and dependable for emergency purposes.

The view of the United Kingdom, and to like extent that of France, is against the association of Spain into any organized defense of Europe. The fear was manifest in some quarters that the association of Spain into an organization for the defense of Europe would be an element of weakness which might indicate in the minds of many that the Pyrenees rather than the Rhine was the 1951 "Maginot line of defense." There is no doubt but what the view of people such as this should be desired and should receive consideration. At the same time, if the over-all purpose of our being in Europe now is to build up defenses, it is difficult to understand just why a large nation such as Spain, with a comparatively large army available, can be completely ignored.

FRANCE

The French occupied zone presents a startling contrast to that of the American occupied zone. Under ECA expenditures we have primed the factories and workshops of our occupied zone in Germany and as a result progress is seen at every turn. People are busy, in fact bustling. The land is being tilled to the very limit of available acreage and crops seemed to be good when we were in the area. Smokestacks belched smoke and the prevalence of the dinner pail in the hand of the worker gave irrefutable evidence of employment. At the same time no systematic effort is being made to rebuild the bombed out plants and homes. People still live in houses with one or two walls crumpled up into a pile of debris, roofs with openings to the sky in places and floors warped and unstable. Until the German people feel assured that the Russians will not come in and take over, they are withholding reconstruction on a large scale.

In the French zone employment is not at the level of the American zone. The air of industry and of assurance does not prevail. The people dress more shabbily and the lack of large governmental expenditures by the occupying powers is evident.

On the other hand, the maneuvers of the French troops while in this zone presented a spectacle of alert activity. The young men in the unit on maneuvers used tanks with facility and confidence of training and enthusiasm. The marksmanship was excellent.

One of the great problems of the future which must be met is the pay of troops of this country. Of course, the pay of our own soldiers is far higher than anything else in Europe. So low, in fact, is the pay of soldiers from other countries that often this is a source of much friction. A movement is now on to attempt some equalization of pay among the European countries. Such a program cannot and should not affect the pay of the American soldiers.

On the other hand, when the economies of the free countries of Western Europe will permit, some increase in pay might be fully justified. It is not hard to train an unskilled man and produce out of him an excellent mechanic and artisan. With low pay the difficulty comes in trying to keep him in the armed services after he has acquired a technical skill needed in civilian industry. Army careers are broken short by lack of pay and career men are forced to turn to civilian fields for funds needed to maintain their families and meet their responsibilities.

In making these suggestions, however, I know that pay is one of the heavy expenditures in any defense program. If the European nations themselves are to meet this

problem they are going to be required very soon to raise to a much higher level their own expenditures for national defense. I believe it would be unfortunate if our country attempted in the organizing of the defenses of Europe to enter into the pay problem. Our people are the highest paid and Canada comes next, with others in the descending line. This is one problem which is pushing for an early solution.

While presenting this idea, I was interested in the program sponsored by high commanders in our occupied zone for a savings program for American troops. Our staff officers are encouraging not only the enlisted men but the officers to set aside funds for the proverbial rainy day when they may be needed by American soldiers for themselves or their families. I was surprised at the very high percentage of savings in some of the areas in the American zone and I especially commend the commanding officers who have sponsored and carried on such a program with the results obtained. With inflated markets overseas in many instances and the dollar lacking the purchasing power it normally should have, our troops do not make a mistake in setting aside funds for use when they return to their homes in the United States.

Respectfully yours,

OVERTON BROOKS,
Member of Congress.

Security in the Home

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine address delivered by Hon. Samuel M. Bemiss, of Richmond, Va., before the Virginia Conference of Social Workers, on May 2, 1951, in Roanoke, Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SECURITY IN THE HOME. WHAT DOES IT MEAN?

If some of us fall from time to time into that elastic and plebeian category embracing the American businessman, it is quite natural that we should possess a curiosity as to the origin of the species, and a personal interest in the place assigned to us in our evolving American society.

The American businessman, as we know the species, came out of the Atlantic Ocean in vessels not much larger than Venus' scallop shell, and landed on a mud flat on Powhatan's River which they named Jamestown after a stupid English King. One hundred and eight of them (adventurers they were called) arrived on three wondrously small ships in the spring of 1607. By fall 45 percent of them were dead.

How the rest survived and what they did to and with the Indians is handed down to us in a fanciful narrative by one John Smith, who was not a businessman and who departed soon for England. He was, however, a man of infinite imagination and apparently was the only one of this first company who had time to keep a diary and write his memoirs. He recorded this observation: "No man is entitled to a place in America. He must make his own." Later John Rolfe, anticipating the constitutional

guaranties of the Bill of Rights by 160 years, wrote that in Virginia every man is enjoying the fruits of his labor, insofar as he has earned them. And here, if we realize it, was sounded the keynote for the first free election on the North American continent. In a marvelously short time these practical people, seeking practical solutions for their problems, laid the economic, political, and social cornerstones for a great nation, and cast the mold for the American businessman which has been modified very little in subsequent years.

I cannot tell you why this paragon or Beelzebub, dependent upon your point of view, has accomplished so much more than his counterpart elsewhere in the world, but I think that the liberty and freedom which he earned and preserved by sweat and blood has contributed to make this Nation the wealthiest on the face of the earth, and his social consciousness has contributed to the greatness of the people.

Of course, this liberty led to great excesses and produced the great opportunists—the Goulds, the Fisks, etc. Piracy seemed for a while to be transferred from the Caribbean to Wall Street. These excesses were counteracted by a great national social consciousness and in an astonishingly orderly manner a great people adjusted themselves to a changing world and a developing society. Ownership of the great services and means of production was transferred from a few proprietors to many, and the direction of industry went to trained businessmen employed by the many owners. A revolution was accomplished and, marvelously, liberties and freedom of action were preserved, and still we enjoy the fruits of our labor. As eloquent evidence of this revolution and the preservation of opportunity you have the careers of Charles Wilson of General Electric, of Walter Gifford of the Telephone Co., of Benjamin Fairless of the United States Steel Corp., and many others.

This development is really quite appalling. One great company owned by a half million people paid in 1950 a billion and a quarter in income taxes, two billion in wages, and seven hundred and forty million in dividends to its owners. With all, it is a free enterprise directed by businessmen, as are the rest of the great and small enterprises in this country. They produce the goods, they pay the wages, and they pay the freight to carry this great Nation, and all more abundantly than any arrangement ever devised by man's ingenuity.

I cannot answer the question posed by the subject assigned to us for discussion. If I attempted to, many of you would disagree. You would also disagree with any definition of security in the home. I suggest that we stand under the shelter of our disciplined society for a moment and watch the straws which are carried along in the hurricane of our amazing development for an indication of its direction and intensity.

The right of the Federal Government to levy income taxes became the law of the land in 1913. The normal tax that year was 1 percent on incomes over \$4,000 and graduated up to 6 percent on incomes over \$500,000. In 1950 the normal tax was 18 percent after allowable deductions and graduated up to a maximum of 91 percent. The Federal budget in 1913 was \$684,755,276.20. Today it is in excess of seventy-one billions. The Federal debt consisted of a small issue of bonds to secure bank circulation. Today the debt is two hundred and sixty billions, and I suppose that the University of California has more students than were enrolled in all the universities of the land in 1913.

We have fought two great wars and the world looks to us to keep it out of the third. In the last few years we have developed a national plan for social security. In addition,

our industry has generally accepted the principle that it is good business for industry to take care of its own and has adopted private plans for augmented old-age pensions, hospitalization, sick benefits, unemployment insurance, paid vacations, the 40-hour week, etc. The cost of these benefits is a part of the cost of the production of goods and services and there is no other source which can provide it. The cost of these so-called fringe benefits amounts on the average to about 17½ percent of our industrial payroll and our scale of wages is the highest ever to exist.

Time and space do not permit even the most superficial survey of the expansion of governmental activities. I just ask you to think of them. Suffice it to say that we have achieved great benefits for the mass of our people without national socialization and without eliminating the right of man to enjoy the fruits of his labor.

It is not for us to say that socialism has failed in England. We don't know what those people want, but we are reliably informed that the sick have trouble in getting medical attention, that labor produces less and gets less, that the people are cold and hungry, and that the Empire is disintegrating. Their effort, however, is valuable, for they are effectively demonstrating to us that prosperity and security cannot be achieved by means of panaceas, inflated currency, and confiscatory taxes, and that security for the family must, like the house it lives in, be built from the ground up and not from the sky down. In our generation we have witnessed currency inflations which have destroyed families and great nations, and it has been ever thus.

And so I come back to the subject of our discussion—to our first American businessmen who believed in elementary arithmetic, who believed that the prosperity of the community depended upon the security of the family and the family security depended in a large measure on family enterprise, and that it is a government's function to protect this security. I reaffirm my belief in the soundness of these precepts, that family security everywhere means prosperity for all, and it is based on security of productive opportunity and a sound national economy.

Importation of Mexican Labor

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Wetback," relating to the Mexican labor importation bill, which appeared in the Washington Post this morning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WETBACK

The President's reluctant approval of the Ellender-Poage Mexican labor importation bill puts a mistaken gloss on a piece of sectional and special interest legislation of the very worst kind. As it stands, it is a naked subsidy for a limited number of large-scale Southwestern growers and food processors. It flies in the face of every warning contained in the report of the President's Commission

on Migratory Labor. It contains no adequate safeguards against the illegal entry of a fresh flood of poverty-stricken Mexican farm workers—"wetbacks" as they are commonly called—or against leaving legally admitted Mexican workers stranded here to aggravate the already serious American migratory farm labor problem.

The President made his own misgivings about the measure quite plain. "I could not have given my approval to this act," he said, "had I not been assured by congressional leaders that supplementary legislation and appropriations would receive prompt consideration at this session." We hope that these assurances will be realized. We have our fingers crossed, however, in the light of the act's legislative history. The stalwart efforts of Senators CHAVEZ, DOUGLAS, and HUMPHREY to incorporate rational safeguards were either defeated on the floor or jettisoned in conference. Even Senator DOUGLAS' amendment, providing for a fine and prison sentence for employers of illegal aliens, was stricken by the conference committee. In its place a meaningless substitute was adopted permitting the contracting of Mexican wetbacks who have been in this country for more than 5 years. The measure serves, in short, to legalize the wetbacks already here and to bring in more of these helpless people.

Four supplementary measures are sought by the President: (1) legislation providing penalties for harboring or concealing aliens who have entered this country illegally; (2) authorization for immigration officials to inspect places of employment without a warrant, (3) appropriations to step up the enforcement work of the Immigration and Naturalization Service; (4) funds for the Farm Placement Service of the Labor Department to survey market needs and recruit workers to fill these needs. The last of these is indispensable if any solution of the migratory farm labor problem is to be reached.

Unless the supplementary measures requested by the President are adopted, the Mexican migrants and domestic farm workers will both suffer. Mexican-American relations can only be impaired by a continuance of the ruthless exploitation of Mexican workers which has taken place in the past. And the establishment of decent wages and working conditions necessary to attract American farm workers will be frustrated. In the interest of good neighborliness in the Western Hemisphere as well as in the interest of American agricultural workers—and the long-range interest of agricultural employers—Congress ought to adopt the President's recommendations without delay.

European Unity

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarkable column of July 7 in the New York Times written by Anne O'Hare McCormick. She is quite right in her references to Mr. Paul Hoffman and his efforts along the lines now advocated by General Eisenhower. My own background with the British economy makes me un-

derstand why General Eisenhower's appeal was not more warmly applauded by the English speaking union in London. Yet, he, like Paul Hoffman, who advocates proposals which seem to me essential for the future of Western Europe—proposals for sweeping away the barriers that divide Europe, proposals which were heard for the most part in silence, according to the New York Times London correspondent.

I ask permission to insert this column by Mrs. McCormick not only because of the rare insight which is characteristic of her columns, but because of the high praise which is implicit in her column for General Eisenhower, and for his present leadership, Mrs. McCormick comments that—

Seldom, if ever, has General Eisenhower spoken so forthrightly on a political theme. * * * His address in London was, not one of his spontaneous utterances * * *. It surprised and discomfited his hearers because he was saying, in effect, that unity was the missing ingredient.

Paul Hoffman, in an address of comparable historic significance, called for integration. General Eisenhower now calls for unity, and he points out that European unity would mean early independence of aid from America.

Mr. President, I think that this column by Mrs. McCormick is one of the most important newspaper columns or reports which I have ever called to the attention of the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MISSING ELEMENT IN EUROPE'S DEFENSE

(By Anne O'Hare McCormick)

Those who listened to General Eisenhower's appeal for European unity to the English-Speaking Union in London were struck by the fervor with which it was delivered and the coolness with which it was received. The Supreme Commander of the North Atlantic Treaty Organization is a very popular figure in Britain. Hailed by Foreign Secretary Herbert Morrison as "the first citizen of the Atlantic," he was tendered the warmest kind of personal ovation at the beginning and end of his address. But his proposals for sweeping away the barriers that divide Europe "were heard for the most part in silence," reports the Times' London correspondent. Prime Minister Attlee limited his comment to remarking that "it was a speech of wide sweep" which needed careful study. The general press reaction reflected Mr. Morrison's cautious view that the Atlantic organization should take precedence over the unity General Eisenhower had in mind.

Even Winston Churchill, whose name the American invoked as the sponsor of the idea of United Europe, responded with unusual reserve. The first step toward the goal, he said, was solidarity between the British Commonwealth and the United States. The unification of Europe was "the second stage," he asserted, and could be founded only upon the first.

BRITISH ISOLATIONISM

It is quite obvious, indeed, that even the immense prestige that General Eisenhower commands in Europe, and especially in Britain, could not arouse enthusiasm in a British audience for the cause he pleaded. Other American advocates of European union, including Paul Hoffman, have run into the same resistance. The Labor government is

opposed on principle to any surrender of sovereignty that might restrict state controls and impinge on its domestic program. And while Conservative leaders support a unified Europe in theory, when it comes down to cases they shy away from the practical steps that would make it possible.

The British attitude toward the Council of Europe and the Schuman plan is based neither on party differences nor concern for the partnership of the Commonwealth, which is strong and close enough to permit Britain to make any other ties her interests dictate. Her reluctance to join Europe springs from a feeling not unlike the old American isolationism, and equally outdated—a feeling that she does not belong to the continent and does not wish to be "federated" into it.

General Eisenhower understands British sentiment as well as anybody. He was fully aware that he was striking an unpopular note when he addressed the representative audience gathered to welcome him and bear witness to Anglo-American friendship on the eve of the Fourth of July. It took courage to take John Bull by the horns, so to speak, and come out boldly for a project that has been smothered, he said, by "procrastination, timid measures, slow steps, and cautious measures."

Seldom, if ever, has General Eisenhower spoken so forthrightly on a political theme. It can be taken for granted that he did not speak without purpose. His address in London was not one of his spontaneous utterances, it was carefully prepared. It surprised and discomfited his hearers, because he was saying in effect that unity was the missing ingredient in the compound he is commissioned to weld together.

He made it very clear that he was not referring to unity in the abstract sense of common purpose and combined action in emergency, but to a workable European federation that would do away with territorial fences, tariffs, the costly encumbrances, and duplicated burdens imposed by a multiplicity of national governments.

AN ACT OF FAITH

But it was as commander of a multinational defense force that his appeal was most significant. General Eisenhower paid tribute to the spirit of cooperation he has encountered in his task. "I have no doubt as to the capacity of the North Atlantic Treaty Organization to surmount even the formidable obstacles imposed on us by the political facts of present-day Europe." But in this act of faith he added a warning that reveals why he appealed for British support in achieving European unity. "With the handicaps of enforced division, it is clear that even the minimum essential security effort will seriously strain the resources of Europe."

This is not the American speaking, though he observes that European unity would mean early independence of aid from America. This is the organizer of NATO, expressing a conclusion forced on him by his experience in working to create a unified defense system. He is not urging European union as a political ideal or an economic necessity, like Winston Churchill, Paul Reynaud, Paul-Henri Spaak, Paul Hoffman, and other distinguished advocates of the concept. General Eisenhower argues, with a conviction that impels him to challenge British opinion, that union, real and practical union, is the first necessity of European security. His words must be read, moreover, in connection with the shift in American policy in regard to German rearmament. The idea of a European army is gaining ground, not for the French reason of preventing the formation of an independent German force, but because it is becoming increasingly apparent

that the plan offers the best way of coordinating national units and forming the united defense front General Eisenhower is laboring against enormous national obstacles to put together.

Matchless Forest Saved by a Great Citizen and a Great Congressman

EXTENSION OF REMARKS

OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. YORTY. Mr. Speaker, I should like to include in our RECORD a news story from the New York Times, which describes the beautiful primeval pine forest in California which it now appears will be preserved. I am also asking that we include an article by Florabel Muir, which appeared in the Los Angeles Mirror on July 12, 1951. Florabel Muir is an excellent writer, and her column is a favorite one in Los Angeles.

Although many persons deserve credit for helping to save the majestic pine forest, I believe all will feel that two men are more responsible than others for the success of this worthy endeavor. First and foremost is the great California statesman, Mr. John B. Elliott, whose many outstanding services are too numerous to describe in these brief remarks. Congress can, however, claim some part in shaping his attitude toward public matters, because earlier in his life he represented the Associated Press on the floor of this House. The other person I feel I am justified in singling out for praise is our colleague, the Honorable CHET HOLIFIELD, who has spent many hours during many busy days in arranging for the indispensable Federal participation in the preservation plans. Mr. HOLIFIELD is loved and respected by all Californians. He is noted for his sincere and conscientious service to the people whom he represents. Certainly he has good reason to be proud of his part in saving the great pine forest. California is proud of our Congressman for doing this, and proud of John B. Elliott for being the prime mover in the long and sometimes discouraging fight to prevent destruction of a forest which can be matched no place in the world.

An unusual incident played an important part in the conservation drive. Mr. Gene Wilbur, then a member of Mr. Elliott's staff, was anxious to find a 1927 Federal statute, providing for transfer to the State of California of a corridor area between the North Calaveras Park and the proposed South Calaveras Park. Fortunately, Mr. Wilbur was not a lawyer and went about the matter by actually looking up the word "Calaveras" in the index of the United States Code. He was not surprised, although any lawyer would have been, to find that the word was in the index, and this led to the discovery of a statute passed in 1909, which statute authorized the Secretary of

Agriculture to preserve part of this great Calaveras grove by giving to the private owners of the forest equal stumpage in other areas owned by the Government. This statute has proved vital to the conservation effort—title 16, United States Code, section 494. It became a law during the second administration of Theodore Roosevelt, and at a time when Mr. James Wilson of Iowa was Secretary of Agriculture.

The President of the United States, the Honorable Harry Truman; the Secretary of Agriculture, the Honorable Charles Brannan; and the Governor of California, the Honorable Earl Warren, have all cooperated to carry the conservation plan forward to the present stage which makes complete success probable. Dr. Frederick Law Olmsted, the famous conservationist, has been most helpful. Dr. Willard G. Van Name and Mr. Irving Brant have also made valuable contributions. There are many others whom I would like to mention if time permitted.

The matchless trees will stand as a monument to the fine people who have preserved them as an inspiration to all of us. I should like, Mr. Speaker, to include in my remarks at this point the newspaper story and article which I mentioned a moment ago:

[From the New York Times]

PARK PLAN PRESSED FOR ANCIENT PINES—TREES IN NOTED FOREST EAST OF SAN FRANCISCO MAY BE BOUGHT FOR USE AS PUBLIC RESERVE

LOS ANGELES, July 14.—A 3-year campaign fostered by conservationists from coast to coast, to preserve a unique stand of pine trees, centuries old, in California took on new impetus this week as negotiations went ahead for acquisition by the State of two key tracts of land.

The trees involved are purple-barked sugar pines, some towering as high as 250 feet, with cones as much as two feet long, and dating, quite a few of them from before Columbus' discovery of America.

They are concentrated principally in a 400-acre section of sequoia, pine and fir forest 120 miles east of San Francisco in the Stanislaus River-North Fork Gorge section of the Sierra Nevada Mountains. The site is in the heart of the gold-rush country celebrated by Mark Twain and Bret Harte, and is a scant 25 miles from Angels Camp, the scene of Twain's jumping frog classic.

On the northwest side of the river is Calaveras State Park, comprising a notable grove of sequoia trees. The sugar pines lie southeast of the river, in Beaver Creek Valley, close to another sequoia tract, in an area owned partly by the Government and partly by private interests, principally lumber companies.

The sugar pines, of which there are several thousand large and small, are a type now found only in southern Oregon, California and lower California, the State's peninsular offshoot that belongs to Mexico.

This stand, which qualified naturalists have pronounced the finest known, is on land of the Pickering Lumber Corp. of Kansas City, Mo., major owner in the terrain southeast of the river.

In 1948 it became known that the corporation, in its logging operations in the so-called South Sequoia Grove, was getting closer and closer to the sugar pines.

NINETEEN HUNDRED ACRES IN THE PROJECT

A movement to preserve them as a war memorial park was started by John B. El-

lott, Los Angeles oil operator. The movement has gained the support of scores of leading outdoor and civic organizations and a multitude of citizens in California and elsewhere. The leading eastern campaigner has been Dr. Willard G. Van Name, a retired member of the staff of the American Museum of Natural History, in New York City.

At the same time other groups began promoting State acquisition of the entire south grove, covering about 1,900 acres, as a logical addition to the State park.

The lumber concern indicated its willingness to part with both the sequoia and sugar-pine tracts for suitable compensation.

The intervening 3 years have been occupied with complicated negotiations among the State Department of Parks and Beaches, Gov. Earl Warren, and various Federal agencies.

"CORRIDOR" PARK LIKELY

This week a somewhat complicated program for acquisition of the desired lands began to take shape.

The State department of parks and beaches has allocated about \$1,000,000 for application to the transaction.

Governor Warren has just forwarded to the Secretaries of Interior and Agriculture formal application for the transfer of 1,200 acres of federally owned land between the present State park and the south grove, to form, ultimately, a connecting "corridor."

The value of this "corridor" land, it was announced, can be applied toward the required matching of the State's outlay for purchase of the south grove of sequoias from the lumber concern. The prospective size of this transaction has been conjectured to be on the order of \$1,750,000.

Meanwhile, toward ultimate acquisition of the sugar-pine tract, an arrangement has been outlined whereby the lumber interests would give it to the United States Forest Service in return for commercially equivalent Federal timberland close by, whereupon the Forest Service could turn the pine land over to the State.

The San Francisco regional office of the Forest Service announced this week that it had blocked out tentatively an exchange tract, and that the lumber concern was inspecting it preliminary to "firm" negotiations within possibly a fortnight.

[From the Los Angeles Mirror of July 12, 1951]

FLORABEL MUIR REPORTING

"Getting and spending, we lay waste our hours:

Little we see in Nature that is ours"

These lines by William Wordsworth always come to me when I tramp through our California forests and particularly I think of them when I contemplate the destruction of our stand of sugar pine trees.

At the rate they are being cut down for profit we'll have none left in too, too short a time unless friends of these rare and beautiful trees come to their rescue.

We've saved the redwoods, so why not do something for the sugar pines?

About 4 years ago John B. Elliott (you wouldn't think he'd give a darn about a tree, he's such a practical politician) was driving with Representative SAM YORTY through a lush growth of these pines up north and he fell so in love with them he began a campaign to stop the woodman's ax.

Being practical, he didn't just talk about it. He laid out about \$60,000 of his own dough in the campaign. He is still trying, but needs help.

In the July Westways magazine another lover of the sugar pines reveals himself. He is Superior Judge William J. Palmer. He took the time from his busy life to write a long article on these trees for a little boy

named Victor Lanini, 1173 Nevada Avenue, San Jose.

The kid wrote the judge a letter saying: "Our class is studying pine trees. I read in a book that you have information on what we are studying. Would like it very much if you would send us information on sugar pines."

Here is one paragraph Judge Palmer wrote: "If you ever see a sugar pine standing somewhat by itself on a ridge or a mountain crest, so it is silhouetted against a blue sky, with a white cloud here and there, the arms of the tree reaching out as if they were trying to touch the horizon, and from their tips the long cones hanging like Christmas-tree ornaments, you will see a picture of such striking beauty it will never leave your memory."

Victor Lanini isn't likely to be a boy who'll be hanging around street corners smoking marijuana. He'll be seeing much in nature that is his and will grow into a good citizen because of this interest.

Reign of Terror in Hungary

EXTENSION OF REMARKS OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. BENTON. Mr President, I ask unanimous consent to have printed in the Appendix of the RECORD a remarkable dispatch from the chief foreign correspondent of the New York Times, Mr. C. L. Sulzberger. This dispatch gives further information on the terror let loose in Hungary by the mass deportations of pensioners, small merchants, intellectuals, priests, class enemies, and former civil servants following a notice of from 5 to 24 hours. I first called this terror to the attention of the Congress through a letter from Mr. Laszlo Boros, distinguished editor of Ameri-Kai Magyarasag, of Bridgeport, Conn.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUNGARIAN IN A LETTER DEFIES REDS TO HAIL THE FREE WORLD—CITES FRIENDSHIP OF PEOPLE FOR WEST AND POINTS TO DEPORTATIONS FROM BUDAPEST

(By C. L. Sulzberger)

PARIS July 5—There are very few chinks in the Iron Curtain, and it is rare that an honest breeze blows through in a westerly direction. For this reason, it is of interest to publish excerpts of a letter received by this correspondent from a Hungarian who had the temerity not only to type out his thoughts but to arrange for their posting to the free world.

He goes by the name of Gustav Magyar, and explains that this is not his real name. His missive, dated Debreczen, June 25, was postmarked from Budapest, June 28, with a patently false return address. It was typed out carefully in Hungarian.

It commences with the following clause, perhaps pompously worded, but nevertheless heartrending, if one considers the risks taken by Mr. Magyar, formulating his thoughts in a country town rigidly ruled by the Communist police:

"Wanting to address a great and free Nation of humanity, the soul feels as if it

had reached halfway between earth and God."

The text itself covers 36 tiny pages of thin paper. It is sent to the people of the United States of America and, in a separate note in English, the author explains that it contains the friendship and good wishes of the Hungarian people to the American people for the one hundred and seventy-fifth anniversary of the Declaration of Independence.

Requesting that the New York Times should publish his views in its July 4 issue, the author expresses "the gratitude of the Hungarian people to your newspaper for the services and helps (sic) being done in these days."

CITES FRIENDSHIP FOR UNITED STATES

What type of message does this anonymous Hungarian friend wish to communicate to the American people? He stresses that the Hungarians, "with the exception of those few who endeavor to plant foreign ideas and foreign hatred in our soul," feel friendship toward all peoples of the world, including those of the United States and "do not wish to be involved in war against any nation, neither American nor Yugoslav." "God witnesses the sincerity of this statement," he adds.

He then draws certain comparisons between the existing state of affairs in Communist Hungary and the democratic United States. For example, he dares to state:

"We believe that it would be excluded in the United States that 100,000 people should be deported from the capital without any legal judgment, simply because they are labeled 'undesirable elements'."

Precisely such a sad forced emigration is now being conducted in Budapest by the police of Matyas Rakosi, Hungarian Communist leader.

As Mr. Magyar contends, "pensioners, small merchants, intellectuals, priests, class enemies and former civil servants have been deported following a notice of from 5 to 24 hours.

"They are only allowed to take a few necessities with them," he writes. "They are stuffed into cattle cars and first deported to distant regions of our country on an initial pretext of population transfers, but there can be no doubt that the ultimate aim is 'liquidation'."

Mr. Magyar asks if this does not indeed violate paragraph C of the second article of the United Nations Convention outlawing genocide, which Communist Hungary signed. Then, after thousands of pathetic words, he adds:

"We are aware that in the United States no forced labor exists. There are no concentration camps. The American economic system doesn't rely on the work of ten to fifteen million forced laborers.

"We wait for the new Lincoln to be born in Asia who will liberate these unhappy people. We wonder if at such a time a new Liberia will be created where those liberated slaves will be permitted to form a new state.

"We are aware that an American citizen doesn't need a police permit and that the American people do not require the right to eat meat, the right to wash with soap, and the right to live in the Capital City; that there are no food-ration tickets.

"We do not believe that the American secret police or political police is approximately as large in size as the Army. We also know that in America there is no need to stage trials against members of the Government, general or church dignitaries such as are taking place in certain other countries.

"Finally we do not believe that problems of education, of art, and of music are resolved in the United States either by the Democratic or the Republican Party. * * *

HAILS FREE ECONOMIC SYSTEM

"We also know that in the United States a free economic system is in force, that the American worker labors only 40 hours weekly and gets for this a sufficient salary and doesn't have to volunteer free hours of work.

"We know that the American miner often earns more than cabinet ministers in certain European lands. We hear that an American workingman can buy a pair of shoes with a day's wages. * * * We have also heard about the strength and independence of the American unions.

"We consider that 30,000,000 automobiles, 85,000,000 radio receivers, 9,000,000 television sets, and 4,000,000 telephones are not the exclusive privilege of the ruling classes. * * *

MENTIONS KOREAN WAR

"We know above all that the American people have lost several thousand heroes who fell in Korea for the defense of peace and for the realization of the principles of the United Nations.

"We know what a tremendous effort and what sacrifices the American people have experienced for victory in World Wars I and II to vanquish dictatorship and assure victory of freedom for the peoples of Europe and Asia."

It is impossible for practical reasons of space to cite more than a fraction of the tragic opinions Mr. Magyar risked his life to send to the west. But his faith is clearly and unswervingly attached to one prediction.

"A few fanatics have the vision of forcing millions and millions to live according to their principles, to keep millions and millions under arms. The vision of this limited group means the deportation, the liquidation of millions and millions.

"But we know that this vision will never come true. It is impossible."

The Christian Answer to Communist Aggression

EXTENSION OF REMARKS OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. HAND. Mr Speaker, by unanimous consent, I am including in the RECORD a sermon recently preached in the Central Baptist Church, of Millville, N. J., by the Reverend Everett Cary Crimmings. This thoughtful approach to the problem of communism has been met with wide acceptance and enthusiasm in southern New Jersey, and I include it for the information of the membership:

THE CHRISTIAN ANSWER TO COMMUNIST AGGRESSION (ISAIAH 59: 19; ZECHARIAH 4: 6, 7 2 CHRONICLES 7: 14)

In the year 1848 Karl Marx and Frederick Engels began their now famous Communist manifesto with the words: "There is a specter now haunting Europe—the specter of communism." Today, a century later, that specter is haunting, not just Europe, but the whole world. Communism is on the march, and it is marching to war. It is marching in Poland, Hungary, Rumania, Czechoslovakia, East Germany, France, Italy, Turkey, and Iran. It is marching in China, Korea, Burma, Malaya, the Philippines,

Tibet, Japan, and in many, many other nations of the earth. Everywhere folk hear the tread of its armed feet and everyone wonders what lies ahead.

Our response to the specter of communism has often been that of children running panic-stricken from a haunted house—a response compounded of terror, hysteria, and fear. Such a response is dangerous because frightened people are not capable of making intelligent decisions or of adopting stern and consistent policies to combat the evil.

The first answer to communism, then, is to divest it of its spectral qualities—to see it as it really is and to understand it fully, for communism is not an invisible ghostly power. It is a movement created by man, operated by man, and subject to the same limitations and frailties as all other man-made movements.

Everywhere in the democracies, particularly in America, do we find opposition to communism; but there is an amazing ignorance as to what communism really is, what it believes, how it works, what it proposes to do, and the source of power which has led to its present position in the world. Opposition to it, therefore, is often blind and ill-informed. If a medical doctor is to combat a disease intelligently he must first know the nature and working of it. With that information in mind he can begin to fight it. So it is with communism. Therefore, if we are to approach the Christian answer to Communist aggression we must first inquire what communism really is, what it stands for, and what it proposes to do.

I. WHAT IS COMMUNISM? WHAT DOES IT PROPOSE TO DO?

The word "communism" originally referred to systems of social organization under which goods were held in common. In this sense, some form of it may be said to have been practiced by the early Christians. In Acts 5 we have the tragic story of Ananias and Sapphira. The Church members held all their goods in common. This very definitely was a venture into communism, but it soon faded away.

Communism, as the word is usually used today, has a political, social, and economic meaning. It refers to a society in which the economy is owned by the state and controlled by a "dictatorship of the proletariat," or the common people.

Present day communism is the outgrowth of the industrial revolution of eighteenth and nineteenth centuries. As a result of that revolution, the working man no longer worked in his own shop in his own home, owned his own tools, was his own boss, or had any right to the products of his own labors. He began to feel himself almost as anonymous a factor in the process of production as the machine which he tended. He worked for someone else in a big factory, was huddled into filthy slums and industrial areas, and was paid a starvation wage. The rich were getting richer, and the poor were getting poorer. The result was a deep and searing discontent, always threatening to burst out in open violence.

Such people found ready champions in Karl Marx and Frederick Engels. In 1864 Marx helped found the International Workingman's Association, or the First International. This movement was the predecessor of the Bolshevik Party and the Comintern (the third International) under Lenin. In his pamphlet *State and Revolution* (1917) Lenin stated flatly: "The replacement of the bourgeois (the middle class of people) by the proletarian state (the wage-earning, laboring class) is impossible without a violent revolution." That is still the plan, program, purpose and procedure of the Communist Party. We would do well to bear this in mind as we continue with this discussion.

Communism, the philosophy of world revolution, the revolt against the capitalistic

system, and the determined effort to stamp out religion, has ingrown by leaps and bounds, particularly since the end of World War II. Today it has reached the proportions of a world menace. Today nearly half the world lies in slavery behind the Communist curtain, and the rest of the world is threatened by the awful ghost of it. Communism is the organized effort to overthrow by violence the greatest triumvirate of all history—the economic principle of capitalism, the political principle of democracy, and the spiritual principle of religious freedom.

We must recognize that the Korean situation and the march of communism in East Germany, Iran, Greece, Italy, China, and other countries are not disassociated and isolated events. They are all part of one great world revolution which is being instituted and agitated by Communist Russia. Russia could call upon her satellites in a dozen different countries of Europe and Asia and tomorrow morning the world would see a dozen more Korean situations. Russia doesn't have to start another world war, nor does she have to declare war against the United States; she has only to bide her time and to call upon her satellites to start a rebellion which will involve us and which, by being prolonged, will bleed us white. Then when we are reduced to impotency, which will be in the next decade and a half, or surely before two decades have passed, if we keep on going as we are going now, she can sweep over the world and conquer it without losing a Russian division.

Communism has advanced as a result of promising two things to the proletariat. These things we must know if we are to fight it intelligently.

1. It has promised that it will create a new world, a new social order, in which justice and brotherhood are enshrined. It pledges a society of plenty for everyone, with no unemployment, no insecurity, no exploitation of man by man, no famine, no pestilence, no sword, no racial bitterness, or class hatred.

2. The second promise that communism makes is not so well known. It must be known and fully understood if we are to combat it successfully. It promises to make a new man, a new race of men and women. It promises to liberate man from all the evils, the viciousness, and the weaknesses at present manifested in human personality. The results, it claims, will be a new, finer, nobler, more upright, more unselfish, and more brotherly man than the world has ever known before.

In a word, communism promises to redeem mankind from sin and weakness, and to create a new world in which the redeemed man shall live. Its promises, you will note, are strikingly similar to God's plan for the human race. He has promised through Christ to make a new man and through that new man a new social order. Paul, in writing to the Corinthians (2 Corinthians, 5: 17), says: "If any man be in Christ, he is a new creature. Old things have passed away; behold, all things have become new." The Communist would substitute the word "Communist" for Christ in this text and would read it (if he read it at all) like this: "If any man be a Communist, he is a new creature; the old order of things has passed away; behold, all things have become new." Communism is Satan's substitute for God's salvation.

Communism proposes to create the new man and the new social order by world revolution. The existing order of things must be overthrown. Again I refer you to Lenin's statement in *State and Revolution*: "The replacement of the bourgeois by the proletarian state is impossible without a violent revolution."

The first ingredient out of which communism expects to make its new man and new society is atheism. Atheism was the basic axiom of Marxism from its concept to its termination. Lenin, in his pamphlet *Lenin on Religion*, begins with these words: "Atheism is a fundamental portion of Marxism, of the theory and practice of scientific socialism." Lenin also said: "Religion is the opiate of society." One cannot be a Communist and not be an atheist. The first institution to be destroyed by the Communists is the church, and the first persons to be liquidated are the Christians. This we must remember if we are to combat it successfully. The struggle between communism and democracy is the greatest struggle between light and darkness, righteousness and iniquity, God and Satan, that has ever taken place in the history of mankind.

II. WHAT IS THE CHRISTIAN ANSWER TO COMMUNIST AGGRESSION?

I would suggest to you today that there are just four answers to the menace of Communist aggression. I shall not dwell at length upon the first two, but shall emphasize the last two as being the most important. These four Christian answers are: 1. Reason, 2. resistance, 3. repentance, 4. revival. Let us look at them for a few minutes.

1. Reason: We must face the facts about communism. We must use our heads and minds and the intelligence that Almighty God has given us. We must learn that we cannot compromise with it, nor can we appease it. It is a deadly force which will conquer us unless we conquer it. The principles of it have not changed from Karl Marx to Joseph Stalin—they have only developed and brought forth fruit. Do you know that when Mr. Stassen interviewed Mr. Stalin on April 9, 1947, that Stalin said to Stassen: "Lenin is our teacher, and we Soviet people are his disciples?" Stalin said on another occasion: "I am only a disciple of Lenin, and it is my whole ambition to be a faithful disciple."

What did Lenin teach? In addition to teaching that "religion is the opiate of society" and that the "replacement of the bourgeois by the proletarian state is impossible without a violent revolution," he said in his collected works: "As long as capitalism and socialism remain we cannot live in peace. In the end one or the other will triumph—a funeral requiem will be sung either over the Soviet Republic or over world capitalism. * * * There is no alternative. Either the Soviet Government triumphs in every advanced country in the world, or the most reactionary imperialism triumphs * * * There is no middle course." In his last speech, Lenin said: "Gather strength and strike the bourgeois as is necessary. Strike it only in the chest when you are sure of victory." This is the man and this is the teaching that Stalin so devotedly follows. Let us answer this threat of communism first of all by facing the facts about it and by understanding what it is and what its unwavering policies are.

2. Resistance: I shall not dwell but a passing moment here. We of the free nations of the world must resist communism whenever and wherever we find it. This must be done by a thorough understanding of its purposes, by an unwavering faith and trust in God, and by the force of arms. I believe that the United Nations was right in going to the aid of the South Koreans. Unless the free nations of the world fight communism wherever its festering sores break out it will overcome us. If it were true in Lincoln's day that "this Nation cannot long remain half slave and half free," it is equally true today that the world cannot long remain half slave and half free. A decade hence it will be all slave or it will be all free.

3. Repentance. Now we begin to get to the heart of the solution of the problem. It is known that communism flourishes best where corruption is most rampant. Just before World War II broke out in Europe in September 1939, Winston Churchill said in the British Parliament: "The clouds of war are hovering over us again and are about to break upon us. When the war does come, it will be the judgment of God upon us, for we have sinned." If that were true of Britain then, it is even more true of Britain, Germany, France, Italy, and the United States today. I am concerned only about America just now. We have sinned. We have broken God's laws, we have cast Him out, we have prostituted the divine law upon which our culture rests. Let me cite a few figures for you.

The crime reported in our newspapers involving rape, murder, robbery, and violence of all kinds takes \$15,000,000,000 a year from the American income. Criminals have reached an all-time low in age bracket. Teen-agers now comprise the largest number of criminals.

Thirteen billion dollars are whisked away by the gamblers of America each year, and the gambling menace is now permeating the home, the schools, the business world, and politics.

Americans are the most drunken people in the world. Someone estimated awhile ago that 60 percent, or about eighty million, of our people drink either moderately or heavily. We spent \$9,000,000,000 a year on liquor. Think how much good could be done if this amount were spent on home and foreign missions. There are 2,500,000 alcoholics in the United States, and many of them are women, and many are mothers.

Add to this the FBI statement that America's No. 1 problem is juvenile delinquency; that one out of every three marriages today ends upon the rocks of the divorce court, that *Coronet* magazine for September 1950 declared that there are 8,000,000 homosexuals in America; that an estimated 10,000 babies are born illegitimately each year; that the greatest cause of insanity in our country is syphilis; that the estimated cost of insanity due entirely to syphilis is in excess of \$500,000,000 each year; that the latest estimates indicate that 500,000 new cases of this disease appear annually in the United States; and that more than 1,000,000 new cases of gonorrhea are treated by physicians each year. Add to all this the true and terrible revelations of the Kefauver crime investigating committee and we don't have a very pleasant picture to behold.

The Russians don't have to attack us. They have only to wait 10 or 15 years until we have rotted at the core as the result of our own internal moral and spiritual corruption. It is possible that this great Nation of ours will fall. We are no more highly favored in God's sight than was Israel of old. We cannot sin and get away with it any more than she could. Senator TOBEY said at the New York crime investigation hearing "The only thing that can save the United States of America is the second coming of Christ." On March 14, 1951, when two officials of King's County, N. Y., described efforts of gamblers to corrupt the school children of Brooklyn, Senator TOBEY could stand it no longer. With tears streaming down his face, he quoted from Whittier, "Solution there is none, save in the heart of Christ alone." Then he added: "When the hearts of men and women are touched, they take their inspiration from the master of men. Then we will have a righteous and a new America * * * a nation in which dwelleth righteousness. And, before God, it is high time." I agree wholeheartedly with Senator TOBEY. Unless we repent, we as a nation and as a people are going to go the way of Egypt, Babylon, Carthage, Nineveh, Greece, Rome,

and the British Empire. Never was there a greater need for repentance than now.

4. Revival: True repentance always leads to revival. Whenever the Israelites truly repented of their sins God raised up a deliverer and the people were restored. A revival of true, born-again Christianity is absolutely necessary if we are to fight communism and live. Communism is a spiritual force and it must be met by a spiritual force. Communism is a religion and it must be combated by a religion. The thing the Communist hates most is the true religion of Jesus Christ because it is the only thing he fears and the only thing he knows can fight him successfully. The more truly Christian a nation is the less likely it is to be communistic. There are evidences that a revival may come. We are encouraged by the campaigns of Billy Graham and others. God is giving us our last chance. Armageddon is next unless the revival comes. Yes, Armageddon is just around the corner and we don't know how near the corner is.

This revival at home must take the form of a revived and greatly increased missionary effort abroad. It will do little good to have a revival at home if there is no revival abroad. It must be a world-wide revival or it will be incomplete and inadequate.

That nation that has conquered communism more than any other land, Japan, is the nation that has more fully than any other country, including America, employed the only means of combating it successfully. Gen. Douglas MacArthur repeatedly called for millions of Bibles and Testaments. He appealed constantly to all denominations of Christians to send missionaries and evangelists to tell the people of Japan about the Saviour, Jesus Christ. The tragedy of his removal is not so much military and political as it is spiritual. The one man who did more to open up a country to the gospel of Christ than man since Carey, Judson, and Livingstone has been called home, and there is no one to replace him in that spiritual capacity. Only true, born-again, Christianity saved Japan from the fate of China, and only born-again Christianity will save it in the future. "It must be of the spirit if we are to save the flesh."

Thus I have tried to outline to you the Christian answer to Communist aggression, which I believe is the only answer to it. If the Christian answer isn't the answer, then there isn't any, and we are doomed. We must answer it by reason. We must know what it is, what its background is, and what its plan for the future is. We must answer it by resistance; a resistance based upon faith and trust in God and upon the use of all the armed might of all the free nations of the world. We must answer it by repentance of our sins. No deliverance ever comes to those who do not repent. And we must answer it by revival—a revival of true born-again Christianity—and a revival of missionary emphasis on a level unprecedented in the annals of Christian history. We must be as zealous in proclaiming the gospel of the saving power and grace of Jesus Christ as the Communist is in proclaiming the gospel of revolution. It is revival or revolution, Christ or chaos, Christianity or communism, evangelism or enslavement, life with Christ or death with communism for the whole world. Ours it is to choose and to choose now. It is much later than we dare to think. "If My people, which are called by My name, shall humble themselves, and pray, and seek My face, and turn from their wicked ways; then will I hear from heaven, and will forgive their sins, and heal their land." "Not by might, nor by power, but by My spirit, saith the Lord of hosts."

"My good blade carves the casques of men;

My strong lance thrusteth sure.

My strength is as the strength of ten,

Because my heart is pure."

WHAT MAKES A NATION GREAT?

"Not serried ranks, with flags unfurled,
Nor armored ships that gird the world,
Nor hoarded wealth, nor busy mills,
Nor cattle on a thousand hills,
Not sages wise, nor schools, nor laws,
Not boasted deeds in freedom's cause—
All these may be, and yet the state
In the eyes of God be far from great.
That land is great which knows the Lord,
Whose songs are guided by His Word;
Where justice rules 'twixt man and man,
Where love controls in art and plan,
Where, breathing in his native air,
Each soul finds joy in praise and prayer—
Thus may our country, good and great,
Be God's delight—man's best estate."

—Alexander Blackburn.

How Congress and People Can Be Kept in Touch

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MULTER. Mr. Speaker, I am happy to direct the attention of our colleagues to the following editorial which appeared in the *Courier-Post* of July 11, 1951, about our very distinguished colleague, the gentleman from New Jersey, PETER W. RODINO, JR. If every Member of Congress did as he did, there is not a doubt in the world that this Congress would pass a much stronger controls bill than that urged upon us by our President, instead of cutting to ribbons the one before us.

HOW CONGRESS AND PEOPLE CAN BE KEPT IN TOUCH

That was something more than a publicity stunt pulled the other day by Representative PETER W. RODINO, JR., Congressman from New Jersey's Tenth District, which embraces part of Essex County.

The publicity Rodino received from it will not do him any harm, but we would prefer to believe he did not pull it for that reason, but for the sounder one he professed, which is one other public officials would do well to emulate.

That was to find out the reaction of the public—the average man and woman—by direct personal contact, to a matter of public business and of legislation.

In this case, the matter of business and legislation was prices and inflation, specifically in regard to meat.

The Congressman knew what the cattle growers and the packers and distributors had to say on the subject. He had been kept well informed of their views by their high-powered lobbies.

But the housewife and meat consumer have no comparable lobby to operate on their behalf. (Just as the general public on any item of legislation, has no comparable lobbies to voice its views as against the views of the special interests.)

RODINO wanted to find out what the public thinks about meat prices, about the proposed roll-backs on beef, and so on. He decided the best way to get the real grass-root facts was to put on a butcher's apron and work behind a meat counter for a few hours.

And that, thanks to the cooperation of a supermarket, is what he did.

RODINO found out that housewives unanimously thought prices were too high.

They were in favor of the roll-backs.

They weren't buying expensive steaks except for special occasions which were few and far between, and weren't going to at present prices.

They have learned they can get along quite nicely without them, thank you, much as they would like to have them on the table more often.

One Congressman's findings on the question may not have much effect on the current police control battle in Washington, and might not in any similar legislative controversy.

But if more of them would copy RODINO's direct methods the effect would be strong—and beneficial.

The public would be served, the public that hears so many promises at campaign time but so seldom sees them fulfilled, simply because it is inarticulate and unorganized compared with the highly vocal and well-heeled lobbies for a multitude of private interests.

Of course, it is impractical for every Congressman and every Senator to go out in the field as RODINO did and get public reaction on every piece of legislation that comes along.

There is one way, however, for Congressmen and Senators to get public opinion at all times—and believe us, they will be influenced by it if it is expressed clearly enough, as it can be.

That way is strictly up to you, dear reader.

It means writing your two United States Senators and the Congressman from your district whenever you want them to know your views, and be guided by them, on any subject of national legislation. Write them short letters, or even postcards.

This Nation Under God

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1951

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Pratt (Kans.) Daily Tribune, issue of Monday, July 2, entitled "This Nation Under God."

We are privileged to live in the greatest and most progressive country on earth, founded upon justice under God, liberty under law, and freedom under democracy.

I believe it is our duty as citizens to protect and preserve this matchless heritage, which came to us through blood and tears and endless sacrifice. It is the most precious thing we have.

Into our Nation and people have been built the prayers and struggles and selfless service of millions of Christian men and women. To them we owe much of our belief in freedom, much of our American dream of equality of opportunity, much of our constitutionalism with its responsibility of the governors to be governed.

If these religious springs of action wither, the days of our national strength are numbered.

I recommend to the Members of the Senate the reading of this editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS NATION UNDER GOD

For years we have been guarding the editorial column for what it is intended—the voice of the ownership and management of that newspaper—but now and then someone comes up with a gem that warrants publication, not just as a quotation, but as the editorial expression of the newspaper as well. We have received from a friend and contemporary, Rolla Clymer, of the El Dorado Times, the résumé of a sermon delivered in the Methodist Church at El Dorado a week ago last Sunday by Rev. Leonard J. Smoot, the pastor. Here is a sermon which we believe should be read from the rocky shores of Maine to the sandy beaches of southern California and from Puget Sound to Biscayne Bay, for here is a sermon that puts on the line in unmistakable and undeniable terms what America needs today to offset and to overcome the total lack of leadership which is dragging America down inch by inch to the level of foreign countries instead of holding high the torch of leadership for others to follow as administrations of the past did for generations up to not too many years ago.

Reverend Smoot likened today's conditions to the days when the immortal Lincoln delivered his memorable Gettysburg Address. He did so in a masterful fashion. Here is the résumé of that sermon:

"Fourscore and seven years ago—November 19, 1863—the President of the United States stood on an improvised platform in the midst of what was only recently a bloody battlefield and dedicated that field as a national cemetery. The opening sentence of his dedicatory address was these words: 'Fourscore and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty and dedicated to the purpose that all men are created equal.' Less than 3 minutes later he concluded his address with these words: 'that this Nation under God shall have a new birth of freedom, that government of the people, by the people, and for the people shall not perish from the earth.'

"We stand exactly the same distance from Lincoln's Gettysburg Address as Lincoln stood from the Declaration of Independence Address. Is it not time for some stalwart figure to stand and to declare to our Nation that this Nation under God should have a new birth—a new birth of righteousness, of morality, of integrity, and of spiritual values; for without these all of our materialistic and scientific gains mean nothing? The ancient wise man was right when he said, 'Righteousness exalteth a nation, but sin is a reproach to any people.'

"After hearing the Kefauver committee reports, these words of Paul written in the first century come resounding down the corridors of the centuries to us with a strangely familiar sound. They seem strangely pertinent to our day when we have trusted so much in the flesh—man's wisdom and his ability to create and manipulate things for himself—and we have trusted so little in God. The voice of the flesh, materialistic things, etc., has spoken so enticingly that our ears have become more and more tuned to them until it is well-nigh impossible for us to hear the still small voice of God. 'Be not deceived; God is not mocked; for whatsoever a man soweth, that shall he also reap. If to the flesh, he shall of the flesh reap corruption; if to the spirit, he shall of the spirit reap life everlasting.'

"The question of what we can do about it is one which is always uppermost in our minds. What can we do about it? First of all, we must put our own house in order for who am I to point an accusing finger at someone else who is dishonest if I, too, am dishonest, and who are you to accuse

another of a lack of personal integrity if you have sold out yourself? We must put our own house in order—to be still before God until we see ourselves as He sees us and then bring our lives into conformity of what He expects of us.

"Second, we must seek to discover what God is trying to do in this community and join Him in doing it. The great British statesman, Gladstone, once stood before Parliament and said, 'The primary duty of government is to discover what God is trying to do within the next 100 years and use every resource to help Him.' You and I must seek to know what God is trying to do in this world and use our resources in helping Him.

"Third, we can pray. For only through prayer can we put our own house in order, find the strength and the courage and the help we need to put our house in order. Only through prayer can we discover what God is trying to do. Only through prayer can we find the courage and the consecration to use all of our resources in helping Him. This Nation under God must have a new birth of righteousness, of morality, of integrity, and of spiritual values, and these must begin in each one of us."

Republicans and Controls

EXTENSION OF REMARKS

OF

HON. DONALD L. O'TOOLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. O'TOOLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 18, 1951:

REPUBLICANS AND CONTROLS

The Republican minority leader of the House, Representative MARTIN, and the principal spokesman for the Republicans on economic issues, Representative WOLCOTT, contend that the position of those who are fighting the administration's economic-control program is being egregiously misrepresented to the public.

Representative WOLCOTT is particularly strong in his denunciation of what he calls the campaign of untruth and calumny being conducted by the bureaucrats and certain irresponsible elements of the press and radio. These critics of the antiadministration bloc, says the Michigan Representative, are trying to make it appear that an overwhelming majority of Republicans and a few patriotic Democrats are sabotaging price, wage, and credit controls. This, he declares, is sheer falsification. All that these Representatives are trying to do is to weed the socialistic power grabs out of the new legislation which is to replace the Defense Production Act.

Coming from Mr. WOLCOTT, such a statement seems to us to reflect an almost cynical contempt for the public's intelligence. For it was this same Representative from Michigan who only a week ago proposed an amendment to the pending measure the adoption of which, in the words of Representative SPENCE, of Kentucky, would have scuttled the bill—would have nullified every provision it contains.

Representative SPENCE's charge was neither exaggeration nor misrepresentation; it was literally true. For the proposal of the Michigan legislator was nothing less than the substitution of indirect controls for direct controls. The amendment would have written into the bill the intention of Congress that none of the wage-price controls or con-

sumer or real estate credit control powers should be used unless other indirect means of effecting such controls and stabilization presently provided in other acts for use by the Secretary of the Treasury and the Federal Reserve Board have been utilized. Even then, the amendment stipulated, direct controls should be used only to the extent needed to supplant the indirect controls.

This was the master amendment offered by the opponents of the pending price-wage control measure. Fortunately, it was defeated. Had it not been, there would have been no necessity for most of the other controversial amendments now under discussion. For it would have knocked out of this anti-inflation legislation, for all practical purposes, the three titles which were the heart of the measure—the titles dealing with price-wage stabilization, settlement of labor disputes, and control over consumer and real-estate credit.

The proposed elimination of the last-named title, incidentally, may be said to represent the ironic high point of the amendment. Representative WOLCOTT, in this amendment, professed to favor "indirect controls," such as a strong credit policy by the Reserve System. Yet it showed that he was not even in favor of Federal Reserve control policy except in a purely theoretical sense. When Federal Reserve policy actually interferes with inflation in such areas as consumer credit or mortgage credit, then, in Mr. Wolcott's lexicon, it becomes a form of "direct control" and must be excoriated.

We think it is pertinent to point out that this is not the first time that Representative Wolcott has sought to chloroform an administration anti-inflation program by offering as a substitute a monetary "solution" which, though it sounded impressive, was really nothing more than a quack remedy. In the inflation debate of 1947 the Michigan Representative suggested that instead of burdening the country with an onerous system of direct controls Congress simply move to curtail credit by raising the gold reserve ratio of the regional Reserve banks from the prevailing 25 percent to 40 percent. The proposal had an alluring sound to those who like controls which are more effective on the blackboard than they are in practical operation. Unfortunately for this particular suggestion, it did not even meet the blackboard test. Someone was unkind enough to take pencil and paper and figure out just what effect the raising of the gold reserve ratio would have in constricting the credit supply. The computation showed that after the change there would still have been sufficient "free gold" left in the banking system for credit expansion to continue without interruption at the alarming rate then in progress for slightly more than 11 years.

An economist has one thing in mind when he distinguishes between direct controls and indirect controls, but the Michigan Representative seems to have quite another. It is difficult to avoid the conclusion that when Mr. Wolcott says he is in favor of "indirect controls" he means that he is in favor only of those controls that do not actually interfere directly with the individual's right to the pursuit of business as usual.

No Improvement

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following editorial from the Lowell (Mass.) Sun of July 13, 1951:

NO IMPROVEMENT

The postal service in the United States is still being operated in an obsolete and inadequate manner despite the revealing comments made by the Hoover Commission which showed that the service had not been modernized to any great extent since the pony express used to carry the mails through to the wild and woolly west.

The result of the Hoover report findings prompted some officials near the top of the postal service to put into effect certain economies which have reduced the amount of service given to the people. That was done so that the Post Office Department might come closer to being a division that could pay its way. But the thought of modernization was pushed to one side; that type of economy which would decrease the cost of operation and provide better service at the same time was not to the liking of these officials.

The employees of the Post Office Department are working in an archaic division which refuses to accept advice on improvement—thus they are not paid adequately because they are working for a backward organization.

Equal Justice Under Law

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, carved in stone over the entrance to the magnificent marble home of the United States Supreme Court in Washington are the words, "Equal justice under law."

But here in America the New Deal, has in spirit and in practice, destroyed that principle. While, for political purposes, it has campaigned for what it is pleased to term "civil rights" for all, it has at no time made a consistent, sincere effort to establish or enforce that doctrine.

Perhaps the most flagrant violation is shown by its lack of protest of the lawlessness of certain labor leaders and their tools in the union. Some unions have been infiltrated by Communists, a fact well known not only to prominent labor leaders but to those high in authority in the administration ever since the beginning of 1937.

As long ago as 1925 John L. Lewis, after a painstaking and thorough examination through a committee of the United Mine Workers, condemned the attempt of the Communists to infiltrate into American labor unions.

Later, this same John L. Lewis, when organizing the CIO had, and it used many Communists. At the moment, I recall one, Gus Hall, now being sought by United States authorities for incarceration in jail under a sentence recently imposed and which grew out of his Communistic activities, who was then prominent in organizing various unions.

Not so long ago the CIO, because of public sentiment, was forced to expel

certain of its affiliates because they were dominated by Communists. It was only a year or two since President Truman, here in Washington, openly came to the aid of a union whose officers were Communists and who brazenly refused to repudiate their Communistic affiliations.

Over the years it has been customary, not only for the national administration which has had the political support of many a prominent labor leader and organization, but as well as for State and local authorities to completely ignore the principle that justice should be administered without partiality.

Oftentimes, the plea is that the local authorities are not capable of suppressing organized union violence. In some instances that is true. But the local authorities have at their command State and Federal aid, if and when they ask for it, and if and when State and Federal law-enforcing officials are willing to carry out the principles enunciated in the Constitution and give protection to the average law-abiding citizen as he goes about his daily task.

That lawlessness can be easily suppressed and that without undue bloodshed, has been demonstrated many times. Perhaps the two most notable instances are those where Grover Cleveland, a Democrat, enforced the law in connection with the Pullman, Ill., strike; where President Coolidge, as Governor of Massachusetts, told striking policemen that the law would be enforced.

Investigations held by the House Committee on Labor, by the House Committee on Expenditures in the Executive Departments, and by their subcommittees during the sitting of the Eightieth Republican Congress demonstrated that apparently, for political reasons, many a State, and certainly the national administration, by inactivity, had encouraged mob violence when occurring in connection with labor disputes or strikes.

To this procedure there were, no doubt, some local exceptions. One of which I had personal knowledge was that of the law-enforcing authorities in Berrien County in the Fourth Congressional District of Michigan.

In that county H. Kubath is, and has been, sheriff for some time; Joseph E. Killian, a native of my home city of Allegan, is the prosecutor. The Honorable E. A. Westin is circuit judge. There, after several instances of violence, local union leaders who had been unduly influenced by organizers from the parent organization were advised by Sheriff Kubath and Prosecutor Killian that the laws which applied to the average citizen and which made it an offense to assault another, except in self-defense, or to maliciously destroy property, would be enforced.

That is to say, that the fact that one who assaulted another or maliciously destroyed property was the member of a union or that the assault or the destruction of property occurred during the course of a labor dispute or strike, or on the picket line would not be any excuse for a violation of the law.

Now, as everyone aware of the facts connected with labor disputes in Berrien

County well knows, the local members of the union are decent, law-abiding citizens, many of them own their own homes. Many of their sons have fought abroad, as have many members of the union. Unfortunately, unduly influenced by such men as John T. Gojack, an "imported" union man, a few of the gullible labor men were led to commit acts which they never would have thought of doing had they followed their own judgment. One of their leaders, Thomas J. Flynn, openly defied Sheriff Kubath. After warning, he incited some of his followers to overturn an automobile which attempted to run a picket line. Now, Flynn knew that the automobile might, and probably would, be damaged. Under the Michigan statute, if the damage to personal property exceeds—I think it is \$100—the offense is a felony and punishable by imprisonment. Disregarding the advice of Sheriff Kubath, Flynn incited some of the pickets to overturn an automobile. The result is briefly and concisely told in a recent issue of the News-Palladium and the Herald Press—the first published at Benton Harbor, the second at St. Joseph in Berrien County. The news story reads as follows:

**FLYNN MUST SERVE TERM—LABOR LEADER
LOSES FIGHT**

Thomas J. Flynn, former Sawyer resident and militant UAW-CIO union leader, has lost a lengthy fight to escape serving a year and a half to four-year prison sentence resulting from a strike at the Nylen Products Co. plant in August 1948.

Flynn was sentenced to prison and fined \$750 by Judge E. A. Westin after his conviction by a jury on a charge of malicious destruction of property. He was sentenced on October 8, 1948.

Flynn appealed unsuccessfully to the Michigan State Supreme Court which upheld the verdict on April 3, 1951.

The State supreme court issued a stay order on April 6, however, pending his appeal to the United States Supreme Court. Failure to complete the procedure for his appeal to the Nation's highest court within a specified time ended his long fight to escape sentence.

The State supreme court in action earlier this week set aside and vacated the stay order.

Prosecutor Joseph E. Killian was to petition the Berrien County circuit court to set aside a like stay order in the case, and will seek a bench warrant for his arrest and commitment to the State prison of southern Michigan at Jackson.

Flynn was arrested by Sheriff H. Kubath on August 18, 1948, while directing picket-line activities during a strike at the Nylen Products Co. plant on the Lake Shore Drive. He was alleged to have ordered pickets to tip over a car driven by Albert Howard, a worker returning to his job in the plant. The car was damaged when it was overturned and Howard was shaken up.

He was brought to trial on September 22, 1948, and was found guilty on September 24 by a jury. He was later sentenced by Judge Westin, but was granted a stay pending his appeal to the State supreme court.

Attorney Nicholas Rothe of Detroit, a top attorney of the UAW-CIO, handled the appellate matters in the case, filing a petition for a writ of certiorari with the United States Supreme Court as his final action.

Flynn is now a resident of Brighton, Mich. He will be taken into custody probably this week end and taken to Jackson Prison.

Mr. Speaker, the lesson to be drawn from this incident is that when local officials perform their duty faithfully, as did Kubath, Killian, the jurors, and the judge, labor disputes will be more quickly settled, law and order maintained, and there will be for all citizens—union and nonunion men, wage earner and employer—equal justice under law.

The jurors who heard these Flynn cases in Berrien County; Sheriff Kubath, who made the arrests and obtained the witnesses; Prosecutor Killian, who filed the complaints and followed through from local justice court to the United States Supreme Court; Judge Westin, who proceeded fairly without fear or favor and who imposed sentence as his judgment dictated, are entitled to the wholehearted commendation of the people, not only of the State but of the Nation. Not because they performed more than their duty but because, under the present national administration, public service in official positions is at an all-time low.

Well Done, Admiral

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the Lowell (Mass.) Sun of July 13, 1951:

WELL DONE, ADMIRAL

The soft words of the United Nations have finally been changed. While the Red Chinese and Communist Koreans were throwing their weight around in the past week and while the U. N. command in Korea apparently was taking it like a lamb, the democratic world began to wonder what was going on. Why should the Reds be swaggering around like conquerors and making excessive demands on the subject of how the cease-fire conference should be run?

It was unquestionably the policy of General Ridgway to avoid controversial developments as much as possible so that the discussions leading toward peace might get off to a favorable start. The general knew just how far he could go in this way, and he has gone just about as far as possible, short of following a placating attitude all the way.

The lofty manner in which the North Korean and Chinese officers stopped a convoy of newsmen short of the Kaesong area has proved the straw that broke the camel's back. It has prompted Vice Admiral Turner Joy, senior U. N. negotiator, to send a stern message to the leading Communist negotiator, advising him that such high-handed Red measures are not going to be tolerated. To emphasize his point, he temporarily held up negotiations.

The Reds have named the time and place of the cease-fire talks. They went beyond that by stating that no formal news coverage would be permitted by them. That seemed to have been tacitly accepted by the U. N. negotiators, although no formal consent was issued. The non-Communist world, accustomed to free speech and free press, was stunned by the apparent success of the

Reds in driving home this communistic condition.

But the surprise is past as the facts now come out. Admiral Joy would never have been so forceful and final in his actions if he did not have full consent of his superiors in the United Nations.

Regardless of what the outcome of this may be, there is reason to cheer the fact that one of the basic elements of life outside of the Communist sphere has been cited as an essential part of continued talks which may lead to peace in Korea.

We cannot sacrifice nor minimize such things as free speech and a free press—that is what the democratic world is trying to preserve right at this time. That is why U. N. forces have been fighting in Korea—in what might otherwise have been a local civil war.

**The Reading Crime Probe—Two Evil
Monsters Exposed: The Crime Dragon
and the News Monopoly Dragon**

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. RHODES. Mr. Speaker, in my district there was a crime probe and hearing conducted by the Senate Crime Investigating Committee. The newspaper monopoly there, masking as a champion of clean government, made a strong plea for the probe and hearing.

After the hearing was conducted, I issued a statement but it was suppressed by the news monopoly. I am accustomed to press black-outs but I never expected such a brazen insult to the intelligence of the citizens of Berks County.

People have the right to know what their Congressman is doing in Washington, especially on a matter of such great interest to the citizens of our community.

A policy of news suppression, silence treatments, distorted and colored news and deceptive headlines is dishonest and dangerous because it leads us down the road to totalitarianism and disaster.

Yesterday I made a radio address over Station WHUM on this matter, and I am putting it in the RECORD. It should be of interest to other Members of Congress. What is happening in my district may be a pattern of what is happening in other parts of the Nation.

Today, ladies and gentlemen, I will confine my remarks to the recent crime probe and matters pertaining to the probe. I will also speak out to Mr. Herbert Kohler, editor of the Reading Times.

Many events of great importance are now taking place, about which I would like to speak. But time does not permit me to discuss those matters at this moment. In a previous broadcast I mentioned the losing fight that liberal Democrats are making in the Congress against superior forces of the Republican-Dixiecrat coalition, which are seeking to kill all controls except those restrictions on wage earners and low-paid salaried workers whose pay envelopes are frozen.

If the Republicans, with the aid of the Dixiecrats, succeed in killing controls on rising prices and speculation, it will cause great

suffering among middle- and low-income families, and especially on retired people who must live on small fixed incomes, social security, pensions, and railroad retirement benefits. I am one of the liberal group now fighting the selfish interests trying to kill the controls. I will discuss that issue at some future time. Tonight I will speak on another matter of interest to the people of our community.

Today my discussion will be on the crime probe, and the attitude of the local newspapers. Bear in mind, however, that there is a connection between the crime probe and the attitude of the newspaper monopoly, and the fight of the people to protect their living standards and the fight of the liberal forces against the might and greed of selfish and powerful monopolies.

In the recent Reading crime probe and hearings, I saw a determined effort to gain political advantage by a group which has always opposed liberal legislation and policies which would promote the well-being and happiness of the people. I saw a newspaper monopoly withhold news about the probe. I saw things that were not fair and I protested.

Dishonest editors, armed with poison pens, devoid of principle and armed with the might of a monopolized press unfortunately have a strong influence on public opinion.

A newspaper has the means for readily reaching and influencing the public. It has the power to suppress the voices and opinions of all with whom they disagree or to give all the news and views. It has the power to use the news columns to play up certain groups advocating sales taxes and to black-out other groups and statements favoring liberal measures or it can be fair by treating all groups alike.

The press has the power to build up public officials who serve the selfish interests of the monopoly. It can smear and try to crush those it cannot control. That is a corrupting influence which breeds confusion, suspicion, disunity, and which lowers the ethical and moral standards of a community.

A newspaper, with an honest desire to wipe out organized rackets in a community, could be a more powerful force for good than all the probes and all the law-enforcement agencies combined. But dishonest newspapers have never made an honest attempt in that direction.

Like the gangland chiefs, they too have a desire to control public officials. They, too, have selfish interests to promote, interests which are usually in conflict with the public welfare.

The gangland racketeers want permission for law evasion. The respectable gentlemen of an unfair press are more clever. They want to control the people who make the laws and those who administer them.

We were told in a Reading Eagle editorial that the dragon is not yet dead, meaning the crime dragon. It wants you to support good candidates, meaning their candidates. I say there are two dragons in our midst. If these dragons put on a fake performance of fighting each other, some of us might lose sight of the real stakes involved in this fight, and of the real issues which the smoke screen is expected to hide.

If we are fooled by this show it will be a costly performance for the average citizen, and especially for the most needy among us. Neither of these mighty dragons care about the things that mean a decent livelihood for the people. Neither cares about decent homes for the citizens. Neither of these dragons care about skyrocketing prices which rob our most needy people and the low and middle income families. Neither cares about our cherished freedoms. The

monopolistic dragon wants free speech for itself, and only blows about it for others. It wants the power to bind and gag and club those who dare to challenge the monster's ruthless might and power.

I despise the crime dragon and the underworld characters whose influence has always favored my Republican opponents each time I was a candidate for Congress. That is common talk everywhere in this community and something that Mr. R. P. S. McDonnell, of the Senate investigating committee staff, undoubtedly knows.

Any person of normal intelligence knows that the crime syndicates can operate only because a mayor or a governor will not act, and because newspapers never have shown an honest interest in the matter. Once we kill the crime dragon it will be less difficult to expose the other dragon and actually the most dangerous one.

The crime dragon does not care who is in Congress. But the other dragon does. The crime dragon will do anything to please the local or State law enforcement heads. It will support or oppose any candidate to win the favor of those who control the machinery of law enforcement. And I can assure you that neither the mayor nor the governor wanted to have me elected to the Congress.

The crime dragon seeks a free hand for its racket operations. The other dragon hates liberal legislation and all those who fight for liberal causes. It fights the things I believe in. The monopoly dragon fights the things I voted for in Congress—things like improved social security and railroad retirement benefits, public housing and a fair tax measure which will not pile an unfair burden on those less able to pay. I may be the target, but the people who benefit by liberal laws are the intended victims.

I have spoken out against rackets, illegal and legal ones, which conflict with the public welfare. I have spoken out on the Reading crime probe, not only because I want crime syndicates wiped out but also because I saw the other dragon at work—the monopoly dragon—hoping to benefit by a well-worked-out plan to take over the city and county government while the people were watching the crime show and the so-called attack on the crime dragon. I saw the clever maneuvering of the monopoly dragon to smear and weaken its mortal foes.

And now comes that great champion of the free press, the self-appointed authority on morality and clean government, Mr. Herbert Kohler, of the Reading Times. All the time when I was speaking out on the crime problem, the news monopoly, of which he is a leading part, suppressed my statements. They wanted to silence me and now, in saintly fashion, Mr. Kohler demands that I speak out.

How are Eagle or Times readers expected to know what I have said about this probe so far, Mr. Kohler? You are talking about things I said, but my statements were suppressed in the Eagle and Times.

So where am I to speak out, Mr. Kohler? Is it in your paper or is it over this radio station, which you apparently must frequently tune in to get the news that your paper suppresses?

Who do you think you are fooling, Mr. Kohler? Have you no respect for the readers of your newspapers? I assure you that they are much smarter than you think. Don't you think it is about time you gave an apology to your readers? Tell them, if you dare, why my statement on the crime probe was suppressed by the Eagle and chopped to pieces and buried in the Times. Tell your readers that I offered to appear in a panel radio discussion with civic and religious leaders, and with you, too, Mr. Kohler, and

your friend, the great investigator of the Senate staff, Mr. R. P. S. McDonnell.

I received a courteous reply from all but you and McDonnell. The telegram asking Carroll Winters to join in the discussion was returned to me with a note that he was not home.

I have reasons to believe that those who were courteous enough to reply declined to accept because they have discovered by this time the presence of a second dragon, and they apparently are not going to permit themselves to be used for any selfish advantage.

Again, I want to repeat what I said many times—that the representatives of the clergy was one group which I know were sincere in all they have done. To them I say, again, I am ready to fight the gangland syndicates and their corrupting influence. But I insist that we keep our eyes on both dragons.

And now, Mr. Kohler, you ask me to speak up. You ignore my challenge to debate, you suppress my statements, you black out me—of my activities in Congress, you put a gag in my mouth, you try to silence me—then you pierce me with your poison pen, hit me with your monopolistic club, and demand that I speak out.

I said plenty already, Mr. Kohler, but there is so much more to say. I will speak out some more. But are you going to continue to suppress my statements?

How can I speak out on your news outlet? Fortunately for the good citizens of Berks County, you do not have complete control of all the sources of news and information.

Yes, Mr. Kohler, there are a lot of things I would like to say. I would like to talk about Mr. R. P. S. McDonnell, whom I am told was in frequent touch with you during the probe here. I understand that McDonnell is no longer with the Senate staff. I never took the trouble to call to find out whether he quit or was fired. I don't care, but I do know that he should have been fired for his disgraceful and contemptible conduct here and the totalitarian practices he pursued. Perhaps the great investigator had poor advice and was a victim of some politicians who are far more interested in destroying the social gains of the people than they are about combating organized crime.

It might be well if Mr. Kohler speaks out now and repeats his praise for the great investigator. Tell us, Mr. Kohler, what your real objective is. Try to explain to the people the reason for your policy of news suppression.

Tell your readers, if you dare, why they are not permitted to know what their Congressman is doing in Washington. Tell them why my statement on the crime probe was suppressed by the Eagle-Times. I know the people are eager to know.

You like to talk about red herrings, Mr. Kohler, but you are the champion when it comes to dragging them across the trail.

Speak up, Mr. Kohler, let your readers know if you expect them to believe your editorials and have faith in what your crowd is doing.

And if you dare to let me speak, if you dare to let me use the column you used to attack me on your front page, I will speak and I'll say plenty more that has not yet been told. But I don't want you to tell me what I must say. I want to speak without censorship just as you always do, and I expect the same space as you used to attack me.

Will you let me talk, Mr. Kohler, or do you want to continue with your present act? It is a clever show, but a lot of people are getting wise.

That's all, folks, until tonight when I will discuss another matter of importance to the people of Berks County or until Mr. Kohler lets me speak through his columns.

Cost of Foreign Aid**EXTENSION OF REMARKS**

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. HOEVEN. Mr. Speaker, in accordance with permission granted in the House of Representatives, I am including herewith figures prepared by the Legislative Reference Service to show the full impact of our foreign-aid program on the 12 counties and the 5 largest cities of my congressional district. This distribution has been made in accordance with the per capita average for each man, woman, and child throughout the United States and it brings home to the people of my district the tremendous size of the load of debt the people of my district must bear because of our foreign-aid program for the years July 1, 1940, to June 30, 1952:

Total cost of foreign aid apportioned on a Nation-wide per capita basis as applied to the population of counties and cities of 5,000 or more in the Eighth Congressional District of Iowa:

Area (counties and cities)	Population	Share of all foreign aid proposed and provided, July 1, 1940, to June 30, 1952
Buena Vista County.....	12,113	\$8,438,831.46
City of Storm Lake.....	6,930	4,770,740.60
Cherokee County.....	19,052	13,115,777.81
City of Cherokee.....	7,696	5,298,080.32
Clay County.....	18,103	12,462,467.26
City of Spencer.....	7,421	5,108,764.82
Dickinson County.....	12,753	8,581,185.52
Ida County.....	10,697	7,364,028.74
Lyon County.....	11,097	10,117,708.74
O'Brien County.....	18,970	13,059,327.40
Osceola County.....	10,181	7,008,804.02
Plymouth County.....	23,272	16,007,141.81
City of Le Mars.....	5,846	4,024,503.32
Sac County.....	17,518	12,059,741.56
Sioux County.....	26,381	18,161,208.02
Woodbury County.....	103,917	71,538,541.14
City of Sioux City.....	81,035	57,871,371.70

¹ Apportionment is made on the basis of \$194,476,000,000 total foreign aid proposed and provided by the United States, July 1, 1940, to June 30, 1952. The \$688.42 per person is based on the total population of the United States, the number of troops overseas, and the population of 2 incorporated Territories (Hawaii and Alaska).

Source: County population figures were taken from 1950 Census of Population, Advanced Reports Series PC-8, No. 14-A (final). City population figures were taken from 1950 Census of Population, Preliminary Counts Series PC-2, No. 30, Sept. 1, 1950.

Collecting Money Under False Pretenses**EXTENSION OF REMARKS**

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1951

Mr. REED of New York. Mr. Speaker, the National Tax Equality Association, a tax-exempt racketeering lobby, has been collecting vast sums of money from businessmen and corporations by falsely stating to its victims that by taxing cooperative more than \$1,000,000,000

in revenue would result to the Treasury. This false statement so typical of the shady technique resorted to by the National Tax Equality Association to raise money stands exposed in the record of the hearings being held before the Senate Finance Committee on H. R. 4473, the revenue bill.

On June 28, 1951, Secretary Snyder appeared and testified before the Senate Finance Committee. Senator TAFT interrogated Secretary Snyder with reference to the amount of revenue involved in the taxation of cooperatives.

Senator TAFT. How many did you estimate, roughly speaking, or how much did you estimate that that would produce?

Secretary SNYDER. About \$25,000,000.

Senator TAFT. That is not this \$1,000,000,000 they have been telling us about?

Secretary SNYDER. It is not a great increase in dollars.

The editorial from the Swift County Monitor, Benson, Swift County, Minn., Friday, April 27, 1951, indicates the reaction of the press to the false and misleading propaganda of the National Tax Equality Association. I am inserting the editorial as a part of my remarks:

THEY, TOO, PAY TAXES

During the past several weeks this newspaper has published a series of advertisements sponsored by the Minnesota Associated Businessmen, Inc., wherein cooperative and mutual corporations have been depicted as being nontaxpayers.

We accepted these advertisements for publication because we feel that the columns of a newspaper should be open to free expression of ideas and opinions whether we are in agreement with those ideas and opinions, or not. It is a fundamental policy, inherent to the democratic institutions of our country.

In allowing free dissemination of ideas, a newspaper also has the responsibility of correcting misstatements of fact and to challenge ideas and opinions which, in its opinion, are detrimental to the public welfare.

In the series of advertisements mentioned, we have a good example of what we mean in the foregoing statement of policy. We published them, but we do not agree with the idea they convey. They are misleading. They convey ideas concerning the tax status of cooperative and mutual corporations that are not substantiated by the facts.

Specifically, these are some of the errors of fact we find:

1. "You pay more taxes because Congress continues to allow a favored few big businesses—meaning cooperatives—to pay little or nothing."

One of the biggest cooperatives in this area is Midland Cooperative Wholesale. The little or nothing that Midland paid in income, real estate, and personal property taxes for the years 1947 through 1949 was more than \$800,000. In our own community we have cooperatives that are listed year after year among the highest taxpayers.

2. The cooperatives are called big businesses.

It is true that regional cooperatives, made up of scores or even hundreds, of local associations, have impressive accumulations of assets and do a big volume of business. But, in the sense that Americans think of it, they are not big businesses. If all the cooperatives in the country were combined they would not equal, in assets or business volume, the size of any one of a number of giant American corporations. Furthermore, since when is bigness a crime in the American scheme of things?

3. "Congress lets them escape nearly a billion dollars a year in income taxes by granting them special exemptions."

This statement has been flatly contradicted by an investigating committee of the House of Representatives. The fact is that only one-sixth of the cooperatives in America qualify under the law as being exempt from paying income taxes. These are agricultural cooperatives, and the congressional committee found that, in the case of these relative few that are exempt, the aggregate amount of income retained is relatively small. No appreciable amount of revenue would accrue to the Government if income taxes were levied on these amounts. Five-sixths of the cooperatives pay income taxes on exactly the same basis as other corporations.

4. The ads would have the public believe that cooperatives are expanding on tax-free profits.

Cooperatives expand on the savings and investments of their member owners just as other businesses expand on the invested savings of their owners.

Here in Minnesota we have seen the great advantages that have come to our State and to our communities because our farmers have had the good sense to organize cooperatives. Within the last 15 years we have witnessed electrification of rural homes all over America by farmer cooperatives. By bringing a vitally needed service to rural people, they have enhanced the individual income of farmers, and have provided billions of dollars of business for business people in towns and cities.

The result, income-tax-wise, has been, and will continue to be, a broader base for income-tax levies both for the farmer and the businessman who profits by the farmers' purchases of electrical merchandise and services. Other taxes that any other business pays must, of course, also be paid for all real and personal property the electric cooperative owns. Surely, there is no lessening of tax revenues in a deal like that.

The late J. V. Weber, when editor and publisher of the Murray County Herald at Slayton, saw the issue clearly. He wrote in the Herald of January 31, 1946: "Cooperatives have made great contributions to general prosperity. They have made Minnesota one of the great egg, butter, grain, and livestock States, and through their abiding interest in 4-H Club and similar work, they have made farm life more attractive. They have done a great job, they have saved their patrons money, and they have enlarged the vision of most rural people."

In the cooperative-tax controversy instigated by the National Tax Equality Association and Minnesota Associated Businessmen, Inc., we want to be shown sounder arguments, backed by solid facts, than have been brought forth to date before we will let a campaign in such as they are now engaged, and in which they infer by innuendo and repugnant pictures that our cooperatives are tax dodging, "tax IV-F," unpatriotic organizations, go unchallenged.

Comments on Drew Pearson by John J.**Cornwell****EXTENSION OF REMARKS**

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 18, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent that there be

printed in the Appendix of the RECORD an article by John J. Cornwell published in the Hampshire Review for June 6, 1951, relating to comments by Drew Pearson regarding Mr. Cornwell.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KNOCK ABOUT NOTES
(By John J. Cornwell)

ROMNEY, W. VA., June 6, 1951.—Two days in succession last week my name appeared in Drew Pearson's syndicated column, The Washington Merry-Go-Round, the last time in a statement that I resigned the position of general counsel of the Baltimore & Ohio because I did not approve of the adjustment plan the company filed in a Federal court in Baltimore in 1945. The Pearson statement is absolutely false in every particular. I did not retire until March 1, 1946, and not because I disapproved of the adjustment plan but because I was long past the age of retirement and wanted to quit. As a matter of fact, retirement was delayed a year because I wanted to see the end of the court proceeding which was necessary to put the plan into effect. This personal statement is made here in order that any of my friends who read the Pearson articles may know the facts, may know the falsity of his statement and, I may add, that statement has as much truth in it as all of his other statements and insinuations regarding the Baltimore & Ohio's negotiations with the Reconstruction Finance Corporation.

Pearson's publicizing of charges made by one Phillips, a New York publicity-seeking, self-styled financial adviser, casts a reflection not only on the members of the United States Circuit Court of Appeals, who passed on the case, but on the Supreme Court also. Phillips had his day in court, many days, even many weeks. He got many thousands of dollars of free advertising in the news columns of the metropolitan papers while attacking, before the court, not only the financial soundness of the plan but the motives of those who proposed it. After exhaustive hearings, covering a period of several months, the court found Phillips' charges, now echoed by Pearson, absolutely groundless. They found the plan to be not only in the interest of the Baltimore & Ohio Railroad but in the interest of the public and approved it. Twice Phillips and his coconspirators went to the Supreme Court of the United States, which, after investigating the record, refused to review the case, thus giving their approval to the decision of the lower court.

I am in favor of free speech and a free press. I have exercised those rights and defended them throughout a long lifetime, but one of the penalties we have to pay for that privilege is that it permits radio commentators and columnists who have wide audiences, like Drew Pearson, to cast reflections on honest men and to disseminate charges made by irresponsible people against them. Nobody ever questioned my integrity, not even Drew Pearson, for the implication of his stories are that I was one honest official in the Baltimore & Ohio Railroad. As far as I know no responsible person ever questioned my word.

I was a director of the Baltimore & Ohio Railroad for more than 25 years and its general counsel for nearly 24 years. I have reached the age where if I were in the habit of prevaricating I would hesitate to do it now, for soon I must stand before the bar where not only men's actions but their motives are given final judgment. And this I want to say—that nowhere did I ever find finer and more decent men than those who were responsible for that company's policies.

Reign of Terror in Lithuania

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, July 18, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement of protest against the Communist reign of terror now said to exist in Lithuania. This statement was prepared by the American-Lithuanian Community, of Stamford, Conn., comprising Americans of Lithuanian descent. It is a most forceful statement and indeed it is one which could well be used by the Voice of America. I plan to send to Mr. Edward Barrett, the Assistant Secretary of State in charge of the VOA, a copy of this statement for possible use by his program directors.

There is little doubt that the charges set forth in the statement are in large measure true. They are the familiar pattern the Soviet Union follows toward nations and peoples they have conquered. There are many Americans of Lithuanian descent in my State of Connecticut. They are among our most industrious and respected citizens. This statement, today entered in the CONGRESSIONAL RECORD, enables me publicly to acknowledge their protest against Communist terror tactics, and also enables me to express my sympathies and concern for Lithuania, not only the nation and its people who now suffer oppression under Russia, but those of its exiles who sorrow for their lost homeland.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A PLEA TO ALL FREEDOM-LOVING AMERICANS

JUNE 17, 1951.

HON. WILLIAM BENTON,
Washington, D. C.:

At the June 17, 1951, meeting of the American-Lithuanian Community of Stamford, the following letter was drawn up, as a plea to all freedom-loving Americans, in protest against the tortures and barbaric cruelties inflicted on the Lithuanian nation since 1940 by Soviet Russia and its secret police. It was unanimously agreed to make every effort possible to bring this before the attention of all fellow Americans.

Beginning with June 15, 1940, the very same Stalin-Red hordes of annihilators which are at present murdering our finest American manhood deliberately and callously broke five written peace agreements, devoured Lithuania with a satanic gulp, and systematically began to eradicate every Lithuanian.

From June 14, 1941, on Stalin, the hangman of nations, with the help of the precision-like bayonets of the secret and serpent-like NKVD police, began the most cruel and barbaric torture ever seen, that of forceful deportation of vast masses of Lithuanian people, to the icy graves of Siberia and the horror-filled slave-labor camps of Kazakhstan, and the sadistic murders of thousands of political Lithuanian prisoners.

Up to the present time there have been annihilated and forcibly ousted from their na-

tive land about 900,000 Lithuanians, from a population numbering 3,000,000 people.

Infants, children, women, people of all ages, the sick and the dying, were packed and squeezed into freight boxcars, boarded up with planks and spikes, and transported thousands of miles without water or food. Yes; packed and left for death to devour them—all pitifully and broken-heartedly without hope.

What was their crime? This: A belief in God, love for their native land, a thirst for freedom, and a longing to own their own little home with a tiny piece of farming land.

We firmly, vigorously, and beseechingly protest before all cultured and civilized nations of the world this systematic annihilation of our nation, which is being perpetrated by the Kremlin czars of Soviet Russia.

We plead with all the free people of the world, for the sake of their own preservation and well-being, to listen to the dying pleas of innocent victims of Stalin's hangmen, and to gaze with pity at the bloody tears of women and children dying for a freedom which is such a precious gift of God.

Brother Americans, raise your voices with us against this terrible injustice and inhuman treatment of a peace-loving people.

Free Americans, be prepared so that our American girlhood and womanhood, our children and our parents, would not experience the same horrors and satanic cruelties and indignities that the Lithuanian people suffered from the Soviets for the past 10 years.

In our locality, in our midst, we have witnesses, those who have heard as well as seen the plans and conspiracies against the remaining free nations of the world—a perfect plan of torture and human eradication; and first in line being the annihilation of all Americans who hate communism.

In remembrance of this past terrible and terror-filled decade, we feel that it is our solemn duty and obligation to warn you, now, of impending disaster—you Americans who hold freedom dear to your hearts.

SIMON CHULSKAS,
Mrs. A. BARTWECK,

Committee of the Meeting.

Inflation

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, July 18, 1951

Mr. O'CONOR. Mr. President, the dangers of inflation are a matter of real concern to the people of our country, and the factors which might help to bring about or reduce the threat of inflation are not generally recognized and understood.

A series of articles dealing with this involved but most important phase of our economy has been undertaken by Mr. Rodney Crowther, a well-informed authority, and who is a member of the Washington bureau of the Baltimore Sun, and the articles have been appearing daily in the Sun.

I ask unanimous consent that the first of this series of articles be reprinted in

the Appendix of the RECORD as a contribution toward more widespread understanding of the economic factors now operating.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR MONEY: IT'S IN DANGER OF LOSING MORE BUYING POWER, ECONOMISTS WARN—NATION FACES NEW INFLATION THREAT, WITH DOLLAR SUPPLY OUTSTRIPPING THAT OF GOODS

(By Rodney Crowther)

WASHINGTON, July 8.—The economists agree with the people—there is no general shortage of goods in sight.

Generally, the stores are bulging with goods and the warehouses are packed. The supply of things is the biggest in history.

Nevertheless, warn the economists, the Nation does face a very real inflation threat.

While there is a vast supply of goods, there is a vaster supply of dollars.

And the supply of dollars will grow bigger and bigger as the Nation's defense program expands. The supply of goods will dwindle.

MILLIONS HAVE NO EXCESS

Millions of individual citizens, the economists agree, have no excess of dollars—in fact, they do not have dollars enough to provide actual necessities.

While no individual will admit that he has any excess, the whole economy—business, Government, the people altogether—does have a vast supply of dollars.

What is more, this huge pool of surplus dollars will grow, the economists point out, unless steps are taken to drain off the surplus.

Unless the public awakens, unless Congress acts, unless the people and the Government together attack the problem, say the economists, then another colossal inflation may be piled on top of an already very huge inflation.

HAD BIG INFLATION

Just after the war—in 1947 and 1948—the country had a very big inflation as a result of the accumulated excess of dollars piled up during the war.

Last year, after Korea, the country had another big inflation—more than \$15,000,000,000 of price increases.

Between June 1950 and April 1951 the cost of living jumped 8.5 percent.

The cost-of-living index, computed by the Government, rose from 170.2 in June to 184.6 in April.

That huge increase occurred not because there was any shortage of goods—goods output was constantly expanding in almost every line—but because there was an excess of dollars bidding for goods.

FEARED SHORTAGES

Everybody—businessmen, manufacturers, housewives, speculators—was in a hurry to stock up with goods after Korea. They feared future shortages, or anticipated turning big profits.

But, people ask, where did the excess purchasing power come from?

Out of current incomes and accumulated savings and loans, answer the economists.

Private bank credit in a year expanded over \$13,700,000,000.

Wages and salaries rose steadily during the year after Korea. They are still rising.

In the first quarter of 1950 they were running at an annual rate of \$141,000,000,000. But in the first quarter of 1951 they had risen to a rate of \$162,000,000,000 a year. That put billions of additional dollars into the spending stream.

But people also had billions of dollars of liquid savings—bonds, savings deposits at the

banks, building and loan stock and other savings which they could quickly turn into money.

On top of that, millions of people during the post-Korea buying scare bought on the cuff, that is, on credit. Installment buying rose many billions of dollars. Consumer credit rose over \$3,000,000,000.

Businessmen and manufacturers also bought heavily in order to be sure they would have enough raw materials.

This great spending spree, inventory accumulation and speculative buying sent prices kiting. But it made no noticeable dent in the supply of goods because manufacturers expanded production and shoved goods out to dealers.

PRODUCTION NOT CUT

"Civilian production was not cut back in 1950 as a result of the defense programs," declares the Department of Commerce.

"In fact, civilian production available for civilian use increased steadily in each quarter of the year."

The fact is, the squeeze on the supply of civilian goods has not come yet.

It is in the future. And it is to the future that economists point when they warn about inflation.

Here and there some little shortages are creeping in—as, for example, in brass fittings and copper products generally.

"The first effects of the diversion of materials to defense production are now beginning to be apparent in the consumers durable goods industries," the Department of Commerce recently announced.

HAD RECORD VOLUME

Last year the industry turned out a record volume of passenger cars, refrigerators, electric ranges, television receivers, and other household products.

It is only necessary, the economists say, to look at the inventory charts—one of which appears in an adjoining column—to see that there will be few pressing shortages this year.

"Our studies indicate," said Dr. Ralph Robey, economist for the National Association of Manufacturers, "that there will be a generous supply of consumer goods through the current year—a supply approximating 1948, which was a very good year."

"However, this does not indicate that the total purchasing power will not exceed the supply of goods."

"Probably purchasing power will run well ahead of consumer goods as the defense program grows."

SEES SURPLUS

Dr. Donald H. Wallace, Princeton economics professor, and during the war an adviser to OPA, sees an inflationary surplus of dollars ahead for later this year. He said:

"An inflationary surplus of purchasing power over available consumer goods is probable later this year, unless spending is greatly cut below planned levels."

Charles E. Wilson, Director of Defense Mobilization, in a report to the President last Wednesday, made clear why this is going to be so.

Production of goods by actual volume expanded about 9 percent last year and much of that gain was for civilians.

But this year production for the Government will expand, while output for consumers—mainly of durable goods, such as automobiles, refrigerators, washers, and electrical appliances—will decline heavily.

"Our plans," Wilson told the President, who turned the report over to Congress, "call for an increase for national security defense spending from about \$35,000,000,000 a year to \$65,000,000,000 a year from now."

"The additional defense spending will drive up incomes and the desire to spend without adding to the supply of civilian goods."

"This increase in demand, which outruns available civilian goods, is the crux of the inflation problem facing the American people."

Warning to Silver Producers: Silver Users' Lobby Making Another Concerted Drive to Secure Treasury Silver Below World Market Price and Repeal All Silver Legislation

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. WOOD of Idaho. Mr. Speaker, in a speech delivered in San Francisco on July 12, 1951, before the Mirror Manufacturers' Association, Rear Adm. Donald J. Ramsey, United States Navy, retired, who now directs the lobbying activities of the Silver Users' Association in Washington, D. C., made a pusillanimous attack on Robert Hardy, president of Sunshine Mining Co., of Kellogg, Idaho; on Congressman WALTER S. BARRING, of Nevada; on that grand old man of the mining industry, Francis H. Brownell, former chairman of the board of the American Smelting & Refining Co.; on the Mexican Government; on American silver producers in general, and urged repeal of the Silver Purchase Act.

My executive secretary, John McBride, author of a distinguished book on money and economics titled "Money Makes the Mare Go" and coauthor of the sound-money bill of 1950—H. R. 2573, Eighty-first Congress—has answered Admiral Ramsey in the following statement:

STATEMENT BY JOHN MCBRIDE

The Silver Purchase Act of 1934 authorized and directed the Secretary of the Treasury to purchase silver for monetary purposes until silver comprised one-fourth of our monetary stocks of gold and silver, but as of this date, silver comprises less than one-tenth of our monetary stocks.

Despite the fact that the Secretary of the Treasury has purchased less than half the amount of silver he was directed to buy, the net profit to the Treasury under the Silver Purchase Act is \$1,500,000,000; and would have exceeded that amount but for the fact that the Treasury lend-leased 400,000,000 ounces to foreign governments for monetary purposes. Even on such a small item as the minting of 5,000,000 Booker T. Washington Memorial half dollars, the Treasury is realizing a net profit of \$1,619,000, representing the difference between the purchase price of the silver and the \$1.38 per ounce the Treasury receives in payment for these coins.

But Admiral Ramsey and the Silver Users Association want the Silver Purchase Act repealed.

Why? Because the silver users and fabricators—the manufacturers of silverware and silver jewelry—want to continue to buy silver below the cost of production. For selfish, sordid, commercial reasons, they are willing to risk the destruction of the Ameri-

can metal-mining industry, depreciate the purchasing power of more than half the people in the world, and wipe out the last remaining vestige of a sound monetary system in the United States by repealing all silver legislation.

Now let us analyze just what their proposal means. Silver is the money of that three-fifths of the world's population residing in the Orient and Middle East; also of Mexico and some other countries. The price of silver regulates their purchasing power. When the price of silver is depreciated, their purchasing power is proportionately reduced.

THE DEPRESSION OF 1929

The depression of 1929 was precipitated when the price of silver was deliberately and artificially forced down from 65 cents per ounce to 26 cents per ounce. That wiped out 60 percent of the value of the money of more than half the people in the world. You simply cannot destroy the purchasing power of over half the people in the world without bringing on a world-wide depression—a depression from which we have never recovered, in fact. It was war—and war only—that brought back full employment and full production; and wars and rumor of wars that have kept our economy going. This deplorable situation will continue until we adopt a sound monetary system and stabilize the prices of gold and silver where they correctly reflect the present depreciated value of the dollar. (Based on the present value of the dollar, gold is worth \$56 per ounce). Gold and silver must be joined, at fixed and proper ratio, to insure adequate monetary reserves to guarantee the redemption of paper currency, at face value, on demand because there is not enough gold in the world to do it alone. Currency that is not redeemable is fiat money; and will eventually become worthless unless redeemability is restored.

Admiral Ramsey suggests that a price of 90 cents per ounce for silver is too high. A silver price of 90 cents per ounce today is equivalent to only 33 cents prior to 1934 when the American people were denied the right of redemption of their currency; so in actual value, or purchasing power, silver is worth little more now than the 26 cents price which precipitated the 1929 depression.

A FRIGHTENING SITUATION

It may startle most Americans to know that of the more than \$26,000,000,000 of United States paper currency in circulation, only silver certificates (less than 10 percent) are redeemable in anything but debts. The law requires that for every dollar of silver certificates in circulation, there must be 77 percent of an ounce of silver back of it to insure its redemption, and while that amount of silver is worth only about 70 cents at present prices, it is certainly a lot better than the debts backing the balance of our paper currency now in circulation; and there is a probability that silver will continue to advance in price. The safest hedge against inflation is some silver certificates in your safety deposit box.

Admiral Ramsey's speech is a warning to the American people that the silver users are getting ready to make another drive to drain silver from the United States Treasury. Just 5 years ago, we experienced a similar drive. At that time, the world price of silver had risen to approximately \$1 per ounce; and they made a desperate effort to enact legislation that would permit them to buy Treasury silver at 71.11 cents per ounce by extending the Green Act. It was currently reported that they had a fund of \$3,000,000 to achieve this objective.

THE OLD PRAIRIE-FIRE TECHNIQUE

Unable to get such legislation through the proper channel—the Senate Banking and Currency Committee—they attempted to accomplish it through the unorthodox method of tacking this legislation on to the Treasury appropriation bill in the Senate. To stampede the Congress into accepting such legislation, they caused quarter-page ads to be placed in many large newspapers in key States absolutely misrepresenting the facts and appealing to the prejudices of the people, denouncing silver producers as seekers for subsidies and even telling servicemen that the mining industry was trying to force the price of silver up so they would be unable to buy silver pieces to add to the silverware they had received as wedding presents, and similar rot. They were very careful not to sign these ads, but ran them in the name of some reputable local jeweler, and each ad carried the names and addresses of Senators and Congressmen, and readers were asked to write, urging extension of the so-called Green Act. As a result, a deluge of letters reached Senators and Representatives in Washington. This is known as the old prairie-fire method of whipping Congress into line through letters from their constituents. Many of these letters were referred by Members of Congress, who received them, to the Committee on Coinage, Weights, and Measures, and the chairman of that committee inserted a letter in the CONGRESSIONAL RECORD of April 15, 1946, exposing the whole racket.

SENATE APPROPRIATIONS COMMITTEE HIFARING

In hearings before the Senate Appropriations Committee it was conclusively proven that the retail price of silverware and silver jewelry ranged all the way from 4 times the value of the silver content of the article to 40 times the value of its silver content, and, therefore, the price of silver had little or nothing to do with the price at which silverware and silver jewelry is sold to the public. As a matter of fact, the silver users would be benefited, rather than hurt, by stabilizing the price of silver at its real value, because it would give more character and stability to their products.

Aside from silverware and silver jewelry, which are luxury or semiluxury products, the industrial uses of silver are largely limited to commodities in which the amount of silver used is relatively small in comparison with the price or value of the commodities, such as mirrors, moving-picture films, electric refrigerators, and automobiles. For example, about 3 cents' worth of silver is used as wiring in small thermostatic controls for electric refrigerators and automobile heaters. Surely no one will contend that it will have any appreciable effect on the price of a \$200 refrigerator or a \$2,000 automobile whether that silver costs 3 cents or 10 cents.

THE PRICE OF SILVER NOT THE ISSUE

But, fundamentally, the price of silver or gold is not an issue. The real issue is a sound monetary system; and that is the only honest approach to the subject. Since the American people were denied the right of redemption of their currency in 1934, the dollar and all fixed-dollar-value securities, including savings, pensions, and life insurance, have lost 63 percent of their value. Prices are high because dollars are cheap; and prices, costs, and taxes will continue to rise so long as the dollar depreciates in value. Surely no one will admit that is a healthy situation; and it is the more tragic because it could be corrected in 90 days without cost to the American taxpayers and without economic disturbances of any kind, merely by making operative legislation that has been on our statute books for 57 years: Section

311, United States Code Annotated (ch. 8, 26 Stat. 4).

SILVER IS THE MAGIC METAL

Silver is the magic metal that can solve most of the world's social and economic problems if we have the brains to use it intelligently. Today, we are importing 25 percent of our copper and 30 percent of our lead and zinc; and paying exorbitant prices for them, despite the fact that these metals can be produced right here at home at a much lower cost.

Ninety percent of all silver produced in the United States is a byproduct of our lead, copper, and zinc mines, and the price of silver is a controlling factor in whether these mines can operate or not. Every year thousands of tons of ore containing lead, copper, and zinc are left in the mines or tossed on to the dumps to be lost forever, because they cannot be profitably mined, milled, and smelted. Most of these ores carry three or more ounces of silver to the ton; and if silver were remonetized and priced at its real value, this great waste could be saved. In addition, there are millions of tons of lead, copper, and zinc ores—actually mountains of ore—which could be profitably mined if silver carried its fair share of the cost of production. This would bring about the employment of thousands of men at good wages and usher in an era of the greatest prosperity America has ever known.

GREATEST CONSERVATION MEASURE EVER ENACTED

Moreover, the remonetization of silver would be the greatest conservation measure ever enacted by the Congress because it would make possible the profitable mining of millions of tons of marginal ores and reduce the cost of production of the all essential metals—lead, copper, and zinc, besides supplying us with many strategic metals for which we are now dependent from foreign countries. It would also increase the wealth of our closest neighbors, Canada and Mexico, both large producers of silver. Just what is wrong about increasing the wealth of Canada and Mexico so they can absorb more of our surplus production? And what is wrong with giving the world a sound monetary system so that so-called backward nations can set up a sound economy of their own? To vote \$8,500,000,000 to help backward nations while we are a party to the continuance of a monetary system that keeps millions in poverty is an unpardonable waste of the American taxpayers' money.

BIMETALLISM MOST PERFECT MONETARY SYSTEM WORLD HAS EVER KNOWN

For more than 2,000 years gold and silver, based on a ratio reflecting the relative production of these two precious metals, were the monetary units and measurements of value throughout the civilized world. When our young Republic set up our monetary system in 1792 we adopted the Spanish milled dollar then current throughout the world as our monetary measure of value. This was the famous "pieces of eight," so called because it was often cut into eight parts called bits to provide smaller coins. We even carried out this idea by minting quarters and half-dollars which appropriately were called two bits and four bits, but we added something entirely original by adopting the decimal system of 10 dimes in a dollar. This dollar contained 371.25 grains of pure silver with a hardening alloy of 10 percent added, so that the dollar weighs 412½ grains. That has never been altered to this day. At that time the ratio between gold and silver, based on their relative production, was 15 grains of silver to 1 grain of gold, so the amount of gold constituting the dollar was one-fifteenth of 371.25 grains or 24.75 grains of

pure gold. In 1836 the ratio between gold and silver was changed to approximately 16 to 1, and the gold content of the dollar reduced to 23.22 grains. Since there are 480 grains in an ounce, simple arithmetic shows that this pegged the price of gold at \$20.67 per ounce and the price of silver at \$1.29 per ounce.

It was with this kind of money we carried our commerce to the seven seas, expanded the original Thirteen Colonies into our present great Nation extending from the Atlantic to the Pacific and from the Great Lakes to the Gulf of Mexico, adding the Louisiana Purchase, the Oregon Territory, California, Texas, and Alaska; fought a disastrous Civil War; settled our great West; expanded agriculture; developed many of our mines and other natural resources; built most of our railroads; and started the industrial development that has made us the envy of the entire world. Yes, we did pretty well with that kind of money.

ABSOLUTISTS CONSPIRE TO DESTROY US

But the absolutists of the world, then as now, were envious of our progress because our system of government is a threat to all forms of absolutism, whether it masquerades under the name of monarchy, fascism, communism, internationalism, or the welfare state, and sought ways to destroy us then as now.

By 1873, most of the world's gold was concentrated in the banks of England, Holland, and Germany, while silver was scattered among the peoples of the world, so these three countries entered into a conspiracy with the international bankers to bring about the demonetization of silver in what will ever be known as The Crime of 1873. Their objective, of course, was to exploit and pillage the silver-money countries of the Orient and Middle East and the silver-producing countries of North and South America by being able to manipulate the price of silver; and while they temporarily succeeded in their objective, they have created a Frankenstein monster that threatens to destroy them along with the rest of the world.

As a consequence, of the demonetization of silver in 1873, we were dragged through the disastrous panics and depressions of 1873 to 1877; from 1893 to 1896; 1929 to 1938; and through World Wars I and II.

Until we adopt a sound monetary system and restore redeemability to our currency, all the present frenzied efforts to achieve world peace, economic stability, and national security, are just so much sound and fury signifying nothing.

First things must come first; and the first and most important function of government is to maintain and protect the solvency and integrity of the people's money.

Sir Henri Deterding, brilliant financier, economist, and head of Royal Dutch Shell Oil Co. made the statement in 1933 that if silver were remonetized and joined with gold, the purchasing power of the Orient and Middle East would be restored; and the depression ended in a matter of months. But we ignored his advice; and what a mess we got into.

A debauched, manipulated, irredeemable paper currency such as is now current throughout the world is more dangerous and deadly than the atomic bomb, more fruitful of human misery than war, pestilence, and famine; and has brought more injustice than all the bad laws ever enacted. It also supplies the tools with which subversives work and the vehicles on which they are riding to power.

Those who oppose or would delay the adoption of a sound monetary system are playing right into the hands of the Communists and their internationalist racketeering allies who are selling America down the river; and those who are indifferent to this matter and fail to do something about it,

should stop complaining about high prices, high taxes, and the fact that their sons are being drafted to fight more foreign wars, for they have no one to blame but themselves.

Honest money will do more to prevent war, establish justice, insure economic stability, and promote peace and harmony among nations than all the United Nations, Bretton Woods monetary agreements, Marshall plans, Atlantic pacts, and point 4 programs ever devised.

Marshall, Man of Mystery

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 13, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD two editorials entitled "Marshall, Man of Mystery," published in the Bristol (Pa.) Courier, part 1 on July 5, 1951, part 2 on July 6, 1951, and part 3 on July 7, 1951.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Bristol (Pa.) Courier of July 5, 1951]

MARSHALL, MAN OF MYSTERY—I

If you will go over the evidence, we believe you will come to agree with us that sometime around the summer of 1938, which is the period when General Marshall was summoned to Washington and put in line for United States Chief of Staff, there were revolutionary changes in the political strategy of the Roosevelt administration.

Prior to that, the tactics had been commonplace. It took no genius to elect the late New Deal President on a bring-back beer platform back in 1932. He went in on the rebound from prohibition and depression. Thereafter for 6 years he followed a pattern of the mingled concepts of starry-eyed idealists and greedy political machine bosses—the sort of pattern you would expect from a committee of advisers in which Harold Ickes and the late Harry Hopkins were key figures.

This strategy reelected President Roosevelt in 1936, but by 1938 it had proved itself a failure. Such political maneuvers as vote-buying with the WPA, the court-packing project, and the reorganization scheme, had backfired badly. More important, though harder to perceive at the time, was the fact that the whole economic approach of the New Deal, which in 1937 appeared to be vindicating itself ("we planned it that way"), by 1938 had demonstrated its incapacity to put the country back on its feet.

Just what part General Marshall played in the evolution of a new and wholly different political approach, in the days when, from the New Deal point of view, the bottom was going out of their hopes (Pennsylvania, for example, was in the process of tossing the Little New Deal out of Harrisburg), is not something which can be inventoried down to the last item.

As subsequently was testified over and over again in the course of the Pearl Harbor hearings, the inner conferences between President Roosevelt and his closest advisers were sacredly guarded secrets. The talkative first brain-trust which came in with the New

Deal had been replaced by men who could and did hold their tongues.

Nevertheless, in a great many of the daring and brilliant pieces of political strategy which have held the New Deal Presidents in command at Washington since those days, even when it has been demonstrated over and again that there is no real majority sentiment supporting them in this Nation—in one after another of those bold and imaginative measures and acts, Marshall's part has been freely acknowledged.

To name some examples, the so-called Marshall plan was one of a series of projects by which General Marshall personally rescued the Truman administration, put it back on its feet in the year 1947 (after the 1946 Republican landslides had captured both Houses of Congress) and enabled it to squeak through to reelection in 1948.

Again, back in 1944, when the Army Board report on Pearl Harbor pilloried the Roosevelt administration (including Marshall himself) for incapacity and lack of vigilance in connection with the defense of Pearl Harbor, most of the Roosevelt spellbinders shivered visibly in their boots waiting for the blasts from Republican nominee Dewey, who was known to have this document in his possession and to be preparing to use it.

But General Marshall was the man who went personally to Dewey, and, depending upon your point of view, either intimidated him or appealed to his patriotism—talked him out of making any reference to this devastating official report.

Going back to 1938, by the latter half of that year it was beginning to become obvious that the New Deal had failed to find a peacetime solution to the depression, and that the one desperate answer remaining was to gear our economy into the world war then developing.

Only those who were politically active in that period, or who had ringside seats, can fully appreciate what an undertaking it was to deliberately set out to swing this country, at that time completely unsympathetic to the militaristic trends abroad, and largely convinced that our entry in the First World War was a colossal and costly mistake, over into a program of war preparation headed directly toward entry into any major conflict which might eventuate.

Innumerable references have been made by New Deal writers to this gigantic feat, in such terms as to indicate the Roosevelt administration undertook the program in cold and deliberate awareness of where it would eventually lead. Indeed, some have been so bold as to hail the accomplishment as a major demonstration of great statesmanship, and to profess themselves unable to comprehend the resentment of those who have asserted that the program was a complete denial of the first principles of self-government.

[From the Bristol (Pa.) Courier of July 6, 1951]

MARSHALL, MAN OF MYSTERY—II

Early in the year 1940, Republican hopes were probably higher than at any other time in the last two decades. The late Glenn Frank had written a complete textbook on how to win the coming campaign. The third-term issue looked like a sure-fire bet, and the Democrats had wound up in a position where, as the Republicans then viewed it, they had nothing in sight save the suicidal course of renominating Roosevelt for his impossible third-term bid.

But only a month or so before the Republican convention, the Republican Party was blitzed by a series of steps revolving around a project which General Marshall had prepared. That was his rearmament program, drawn up by him as Chief of Staff—which position, moreover, it has never been disputed he owned to the personal choice of President Roosevelt.

Obviously, no one can tell us today just what went on in the political conferences which preceded and led up to the bombshell defense address of President Roosevelt. Most of the principals in those discussions now are dead, almost certainly no authentic records were kept, and the testimony of any one participant probably would be challenged by others. None of the survivors, unfortunately, is in a position where his veracity might not be questioned.

Therefore one can only guess whether Marshall's brain (which, after all, is not too distantly related to that of Chief Justice John Marshall, who so profoundly affected the course of the United States Government with his own thought processes a century and a half ago) first visualized the political impact of the defense program being suddenly laid before the American people, coupled with a bid to several outstanding and susceptible Republican leaders to join the Roosevelt Cabinet.

This much is beyond question: Never in the whole previous course of the Roosevelt regime had anything so electrifying, so bold, and, if we are to put the cards on the table, so sinister, cold-blooded and calculating, been tossed into the political arena, as this Bismarck-like proposal that we ungar our Nation from the ways of peace, and step forth into the international arena where one country after another was gliding for inevitable war.

No individual has ever claimed authorship of that project. Granting that it cannot be proven this plan was entirely the brainchild of General Marshall, we will respectfully submit this proposition. That we have noted no other brain except Marshall's at work in either the Roosevelt or Truman administrations which we consider to have the capacity to have worked out that scheme—the same fertile and uninhibited brain which saw almost at a glance the plausibility of the billions of foreign spending under the Marshall plan, and simultaneously, their irresistible political and economic impact at home, giving President Truman his one faint chance for reelection in 1948.

As poets have noted, great brains have not always been put to great purposes, and in our admiration for the capacity of an intellect which can think in such mighty and unfettered terms, we must not lose sight of the fact that the ultimate purposes of whatever General Marshall had had to do in politics seem to us to fall into two small and narrow channels—first, to keep in office those Presidents who had singled him out for their confidence and distinctions; and second, ever since 1941, to keep buried in the background what must be, from the point of view of George Catlett Marshall, the almost unbearable humiliation of realizing that his own part in the Pearl Harbor disaster was censurable and deficient.

Not for all the wealth of Croesus, we imagine, would any proud and able man voluntarily take upon his conscience such an onus of inadequacy, even of failure; and permit himself to be driven to such a point that he had to take refuge in most implausible loss of memory.

Marshall was deep in the conniving which went on as a preliminary to the Pearl Harbor episode. Not only was he author of the rearmament program of 1940 (regardless of whether he blueprinted the political phases of this program), but he also was close in the confidence of President Roosevelt during the ABCD period—the year or more before Pearl Harbor during which, as the testimony amply proves, representatives of America, Britain, China, and the Dutch Republic played checkers with Japan in the Pacific Ocean, trying to force Japan into attacking the United States, and thereby bringing us into the war without the administration having the onus of taking us in.

The "greater good" complex is one which mankind has used to justify the most devious courses of conduct, but even it wears threadbare at times, and we should imagine that part of the unassailable personality of this great behind-the-scenes factor, General Marshall—part of the strange and compelling urge which makes his character such a strange mixture of brilliance and failure—lies in his awareness of the constant threat of titanic collapse of his projects.

Just as the ABCD manipulations produced their desired result, that of Japanese attack, but on a scale and in an unforeseen direction which immobilized our Pacific defenses for months, and protracted the war possibly for years, so the Marshall plan, for example, may eventually turn out to have saddled the American people with unredeemable debts beyond their capacity to carry, the Atlantic pact may boomerang into disaster, and the placid sell-out of the Chinese people to the Reds, over which transaction General Marshall has been presiding for several years, may wind up confronting us with a hostile world of dimensions far beyond our capacity to conquer.

[From the Bristol (Pa.) Courier of July 7, 1951]

MARSHALL, MAN OF MYSTERY—III

The career of General Marshall has many oddities. For example, we know of no convincing explanation ever being given for one of the great puzzles of his life—why it was that he permitted General Eisenhower, at virtually the last minute, to step almost unprepared into supreme command of the invasion, with all its opportunities for acclaim and world prominence—when all indications are that he coveted, and had fully expected for months, to accept the personal direction of that expedition.

There is an interesting point for speculation. If, as seems most plausible, President Roosevelt personally insisted that Marshall remain in Washington, what motive could the President have other than wanting to continue to lean on a trusted and ingenious adviser. That line of reasoning would much strengthen the conjectures made in this article that Marshall eventually came to be the number one confidante and brain-truster both of Roosevelt and Truman. Certainly it is interesting to note that just at the time when Marshall was unable to leave Roosevelt's side, Harry Hopkins, usually considered the principal "brain-truster," was bouncing cheerfully about all over the world—Russia, England, etc., etc.

Quite different is attempting to fathom the motives which led the general to permit his wife to publish an intimate biography of his life during the political crisis of 1946, when his own reputation as a result of the Pearl Harbor matter was in its most shaky stages, and when the Truman administration was dropping to what possibly was the lowest point ever reached by that up-and-down regime.

Offhand, we can think of no other world-prominent figure who was biographed by his wife while he was still alive and still active. The question of taste cannot be avoided. Very few of the world's great men would have cared to face that question, under similar circumstances. Why did Marshall do so? Was there some compelling motive for the book's publication which made it necessary to get an explanation or defense across at that particular moment—perhaps the singularly lame explanation which Mrs. Marshall made for the general's inattentiveness to the American interests on the occasion of Pearl Harbor (she had broken four ribs several weeks earlier, and says he was preoccupied with her condition)?

But dropping questions of taste, and reverting to political considerations, the concept of answering certain embarrassing

questions, and getting certain laudatory propaganda across in a semi-official manner without himself revealing his interest, is a concept entirely in keeping with the mental capacity of the man who dreamed up the multibillion Marshall plan and who "balled out" President Truman after the 1946 Democratic Party disasters.

Mrs. Katherine Tupper Marshall's book, Together, bears no reference to professional assistance in its preparation, yet it is beyond credibility to think that none was given. General Marshall surely would not have trusted his own judgment, nor that of his wife (no matter how able), with a critical national election only months away. It would not have been fair to his "Chief," Mr. Truman, for him to have done so. And the internal evidence is that the book is professional from cover to cover.

A completely modest man would never have permitted the innumerable laudatory passages, no matter how ingeniously phrased, to be printed in such a fashion; and the world is full of outstanding men who would have refused point-blank to allow their wives to write about their lives and careers. Why Marshall chose to do so is one of the major enigmas about him.

Regardless of the date on which General Marshall became a key political figure in the New Deal, there certainly is no question that eventually he did achieve that important, though largely secret, responsibility.

Twice President Truman has drawn him out of semiretirement to rescue the flagging fortunes of the Trumanites. One was the occasion referred to earlier, after the 1946 Republican landslide, when Marshall broke precedence by becoming the first professional soldier to undertake the functions of Secretary of State during times of peace.

Once the Democratic regime was safely past the crossroads of the 1948 Presidential election, General Marshall stepped down again (he then was 78 and, according to his own account, had been eager for years to retire). But the profound reaction against President Truman and Secretary of State Acheson during 1950 resulted in another hurry call for General Marshall. Once again he is in there pitching, and once again President Truman has been lifted out of the hole he seems always hurriedly to dig for himself whenever General Marshall turns his back.

What is cooking on the back of the stove for the up-hill task of keeping the New Dealers in power in Washington next year remains to be seen. Likewise it remains for the future to determine how many of these future lines of defense and strategy will prove eventually to be the handiwork of General Marshall.

One thing is exceedingly clear, no matter who planned what, in the turbulent events of the past 6 months, with surprise following surprise, and the shocks still continuing, not a single key event, not a single vital decision, took place without General Marshall being right at the President's elbow.

In our opinion, for whatever it may be worth, the most outstanding and sensational accomplishments of General Marshall are not to be sought for in the field of military accomplishment, nor of diplomatic achievement either, but in the field of politics.

For years we have believed, and think so more than ever today, that he has been the New Deal Talleyrand, has been the power behind the throne of two successive New Deal Presidents for at least 12 years.

It has taken something akin to magic to keep these two administrations in power. We believe the magic came from the brains of General Marshall.

But we believe that the cost has been frightfully, incredibly great to the American people.

We believe that the financial results of the Marshall plan and the other vast spending schemes in which General Marshall has had a finger have so undermined our national economy that continued inflation is a foregone conclusion, and that we never will be able to return to a condition of gold-standard solidarity and confidence which we once possessed.

We believe that the trick of dragging this Nation into the recent World War through the back door, contrary to wishes of the people, was a destructive force brought to bear upon the will and capacity of our citizens to govern themselves, which may in the long run destroy our Republic and leave us no choice but that of a military dictatorship along welfare-state lines.

We believe that the successive cold-blooded manipulations of world affairs has destroyed any possibility of a successful United Nations, has needlessly and unscrupulously betrayed the faith of almost unaccountable countries which relied upon our good will and our promises—betrayals that date as far back as our failure to stand up boldly on behalf of Latvia, Estonia, Lithuania, and Ethiopia even before the World War began, that reached then crescendo at Yalta where Marshall was the closest of Presidential advisers, and still continue with the efforts of our State Department to throw Formosa over to the Chinese Communists.

The seeds of a third world war, in which our survival is no more than a gamble, have been sowed recklessly during the political maneuvers of reelecting New Dealers, along lines, we believe, charted by General Marshall!

Challenging the Right to Interfere With Free Speech

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. JONAS. Mr. Speaker, on Saturday, June 2, 1951, there appeared in the Chicago Daily Tribune an editorial entitled "A Citizen's Right."

I believe this editorial is particularly effective in that it emphasizes the importance and the sacredness of free speech. The editorial laws stress on the fact that freedom of expression is a precious heritage handed down to us by our forefathers.

Americans today should never lose sight of the fact that our forebears guarded free speech most zealously, and were ready to protect and defend it with their lives. Free speech has always been a boon to liberty-loving people, and on the other hand, a thorn in the side of despots and demagogues. It is wholesome and encouraging to note that Americans today still look upon free speech as a forthright blessing.

The editorial makes it clear that American citizens resent any move or effort made to impinge on the right of free speech. The editorial stresses that any gesture in that direction will immediately meet with a definite challenge. I most highly commend the editor of the Chicago Daily Tribune for taking this

position. Any position that is indicative of back-tracking or surrender relative to the preservation of free speech at this or any other time is an abdication of an important facet of our sacred Bill of Rights. A definite challenge such as this editorial portrays is the only means whereby we can preserve a trust that has been made sacred by our Constitution.

Mr. Speaker, under unanimous consent to extend my own remarks in the RECORD, I include therein the Chicago Daily Tribune editorial entitled "A Citizen's Right." The editorial follows:

A CITIZEN'S RIGHT

The New Deal insistence that all men in uniform think and say only what the administration finds it convenient for them to think and say has produced two more incidents. Unlike MacArthur, the other officers are not professional military men, but citizens in uniform, and their cases raise a basic issue relating to freedom of speech.

Lt. (jg) W. A. Evans, serving aboard a naval ship in the Korean war zone, has been stripped of his commission and relieved of duty for writing a letter critical of the "pro-Soviet" State Department, the "pro-Soviet one-world administration of ours," the United Nations, and Roosevelt's surrenders at Yalta, abetted by Alger Hiss. He said that one hand of the Americans fighting in Korea was tied by Acheson and the other by U. N.

Lieutenant Evans sent his letter to Alfred Kohlberg, chairman of the American China Policy Association, and authorized him to print it. He said he shared Kohlberg's views on the activities of the administration since Yalta and that all officers on his ship "feel the same way I do." The Navy contends that Evans' shipmates disagree with him. This is to be doubted. As Annapolis regulars, they may feel it prudent not to go on public record, whereas Evans, as a civilian reservist, could afford to do so, for he was not obliged to protect his Navy status as permanent career men are.

A second instance of attempted suppression of expression involving a civilian officer was recently brought to light by Brig. Gen. Julius Klein, commanding officer of the One Hundred and Ninth Antiaircraft Artillery of the Illinois National Guard. General Klein was criticized by Maj. Gen. Harry L. Bolen, Governor Stevenson's State guard commander, for statements supporting General MacArthur and for protesting when the honor of firing a gun salute in MacArthur's honor during the general's Chicago visit was taken away from the One Hundred and Ninth Brigade. General Bolen suggested that General Klein either remain silent or resign from the guard.

It should not be debatable that a civilian officer, in a period not governed by any official declaration of a state of war, retains the rights of citizenship accorded him by the Bill of Rights, among them, of course, that of liberty to express himself. Lieutenant Evans and General Klein are not, as the New Dealers try to represent, reduced to stooges of Mr. Truman and his cause simply because they are patriotic enough to volunteer their services to their country.

The attempts of Truman's agents in the National and State Governments to silence officers who have the courage and independence to voice sentiments held by the majority of their countrymen show that the New Dealers are in a panic. Fortunately, most Americans have no intention of yielding their right to hold and voice opinions in opposition to the administration's course, and they will certainly speak most loudly from now on through the ballot box.

Inflation's Ally: The Politician

EXTENSION OF REMARKS

OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. COLE of Kansas. Mr. Speaker, add politics to an already bad situation, and it always gets worse. Add politics to inflation and we will have more inflation. Like war, inflation is the sort of crisis that politicians thrive on. In this third and final article on controlling inflation, I want to show how political price and wage freezes form a glacier behind which inflationary dollars pile up, only to come thundering upon us when the glacier crumbles.

In my first article, Ed, the baker, and Joe, the defense worker, illustrated how this torrent of dollars originates in, first, deficit spending; second, runaway bank credit; and third, shortages of materials. In short, inflation is caused by adding money to the economy without adding equal amounts of goods. The Government paid Joe out of borrowed money. Ed borrowed money from a bank to buy machinery. Borrowed money is created without production of goods. So the new money only serves to bid up prices of the available goods. That is why prices rise when inflation turns out new money.

Now then, suppose Ed and Joe have used their extra money to bid up the price of meat. They do not know exactly why the price of meat has gone up, but they do not like it. So the politician rides up on a white horse and freezes the price of meat. Ed and Joe then pay ceiling prices for meat, and proceed to use their extra money to bid up something else. The politician has to freeze the price of the something else. Eventually the Government has everything frozen. Joe and Ed still have extra money. Remember that price and wage controls do not stop Joe from getting paid at the defense plant, and do not stop Ed from borrowing at his bank. What are they to do with their extra money?

If they use the money to buy things they would not buy otherwise, demand for goods goes up and shortages develop. Suppose they just buy more and more beef at the ceiling prices. They could afford steaks twice a day. But we do not have that much beef available. So the politician rides up on his horse and starts rationing beef. Ed and Joe are glad to have the supply distributed equally, but that leaves them extra money again. So they buy something else, and in no time everything has to be rationed. When controlling starts, it has to go all the way, or someone gets caught in the pinch.

Suppose Ed and Joe put their extra money into savings. Then the Government can never remove price ceilings. If it did, all those piled-up dollars would pour out onto the market and prices would be flooded out. Compare prices now with prices in 1941, remembering that we operated under price controls

during the Second World War. You can see that controls did not stop inflation; they only postponed it, to descend upon us in greater price increases.

The reason is simple enough. The money was backed up behind the price-freeze glacier. Money just does not evaporate. If we use price and wage controls in our long-range mobilization, we will pile up such a flood of inflationary dollars that we will never be able to return to a free economy.

Unfortunately, the voter is not much impressed when the politician rides up to the Federal Reserve Bank and restricts bank credit. In fact, the voter probably would not connect it with inflation control at all. So the politician rides up to the meet counter instead. It comes down to this:

The American people want inflation stopped. Price controls do not stop inflation, but they can be made to look like something effective. Indirect monetary controls can stop inflation, but unless they are carefully explained to the voting public, they do not appear to accomplish anything. The administration chooses to saddle the economy with price and wage controls, forever if necessary, in order to impress the voters with vigorous action.

I outlined in my second article the indirect controls that will stop inflation—not just hide it. They are: First, economy in Government spending; second, pay-as-we-go taxation on a sensible budget; third, control of bank credit through the Federal Reserve System and Treasury Department; and, fourth, high production encouraged by freedom in our economy.

These controls go to the roots of inflation. They are the ones we must have. We will have them if the American people understand them. We can kill inflation, but we need you Americans behind us.

Price Control

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. ANFUSO. Mr. Speaker, I wish to further extend my remarks on price control placed in the RECORD yesterday.

The people of the United States are tremendously concerned with the specter of inflation. Perhaps we do not always refer to inflation by name. We may speak of high prices, or the high cost of living, or the way the dollar is going down in purchasing power. But however we may refer to it I think most of us know what inflation is. I am sure all of us realize what inflation can do.

Inflation eventually would make our money worthless. Inflation can wipe out our savings, lower our standard of living, impose hardship upon all of us with fixed incomes. We know that in other countries where it has reached

runaway proportions it has wrecked the entire economy.

This question of inflation is not one of mere academic interest. It involves the bread the people eat, the clothes they wear, the houses they live in.

Inasmuch as it is of such importance and inasmuch as we all recognize the dangers of inflation, the only way I can account for the apparent failure of many of our people to come to grips with it is that they do not believe it can happen here.

They have been lulled into a false sense of security by a few soft spots in various markets, and some surplus inventories in specific fields. They watch negotiations for peace in Korea and think we as a nation can go back to business as usual.

We cannot go back to business as usual. I think it is generally agreed that the shadow of a ruthless aggressor is too black and threatening for us to even dream of slackening our rearmament program. And so long as we are irrevocably committed in this rearmament program, we are in peril, in grave peril, of inflation.

The New York Times explained why this was so when it said:

The Government pours new billions into the economy to buy guns, tanks, planes, and other tools of war. The billions, as profits and wages, expand civilian purchasing power. But at the same time, arms production is cutting into the supply of civilian goods. When civilian demand exceeds supply, prices are bid up. When prices rise, the workers demand higher wages, resulting in higher production costs, and still higher prices. The Government has to pay more for its armaments. After a few turns in this cycle the situation rapidly gets out of hand, and the economy is in grave danger.

Unless we take vigorous measures, we face that danger today and tomorrow. We cannot afford to let the situation get out of hand.

We have already experienced some of the effects of inflation. What happened in the 8 months after we went to the rescue of South Korea? According to the consumers' price index of the Department of Labor, prices went up 1 percent a month for the housewife. Individually, of course, many of them went up far more. Look at wool rugs. They went up 33 percent. Hamburger, that staple of food for many people, went up 20 percent; salmon went up 45 percent; lard, almost 50 percent; men's overalls rose almost 23 percent; men's wool suits 11 percent; table model radios, 14 percent.

We all have seen inflation at work in the stores we visit and on the price tags of the things we buy.

By moving promptly and effectively we stopped the trend. Within a month after prices were frozen in January, results could be seen.

The Office of Price Stabilization through its general ceiling price regulation and its subsequent orders has helped curb inflation's destructive force. Whereas retail prices rose 8 percent from June 1950 until February 1951 when price control began to take effect, they rose only nine-tenths of 1 percent from February 15 to May 15. Wholesale prices, which rose 15 percent between Korea and

the general freeze, dropped four-tenths of 1 percent from February to June 19.

Such a condition today, however, must not blind our eyes to the fact that many of the causes of inflation in a defense economy are just now beginning to be felt. During the coming months, they will grow even stronger.

In place of the present expenditure at the rate of \$35,000,000,000 a year for national security, we expect to be spending at a rate of about \$65,000,000,000, a year from now. With that increased expenditure will come some curtailment of civilian goods.

It is impossible to measure accurately just what the gap will be between civilian goods and the available funds to spend on them. According to the Director of Defense Mobilization, it may well be between \$10,000,000,000 and \$20,000,000,000 a year. This huge sum will be pushing relentlessly upon prices. Only strong and effective measures will hold that force.

That price control must be strong, because it must curb a strong force. It should permit roll-backs where roll-backs are necessary, to even out distortions. We must aim at stabilizing the economy now—not at the level we may reach 6 months or a year from now. We must remember that every 1 percent rise in the cost of living takes \$2,000,000,000 out of the pocket of consumers and makes our defense program much more costly.

We must face up to the fact that the classic conditions for inflation will be at hand in the months to come. We must be prepared to stop it.

Hand-Out to Farmers

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 18, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Local Farmer Gets a Hand-Out," published in the Janesville (Wis.) Gazette of July 7, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOCAL FARMER GETS A HAND-OUT

When a local farmer receives a windfall check from Uncle Sam and doesn't want it, a few taxpayers might start a private investigation. They might find out how many thousands of dollars the local office of the United States Production and Marketing Administration is passing out to farmers for working their own land for their own profit.

Of course there is no Santa Claus in this wasteful squandering. The money comes directly from the pay checks of the taxpayers; but political henchmen are using their hard-earned dollars for political profit to themselves.

A year ago, this farmer was told to cut down his corn acreage, although he had 300 hogs to feed. This year, the agricultural planners told him to extend his crop production, which he has been planning to do for some time.

Last year he spent \$1,100 clearing several acres for crop production which he figured would bring him a good profit. He did so on his own volition as an investment in his own property, to improve his farm and assure a better future.

Now comes a check from the Janesville office of the Production and Marketing Administration for over \$200 to compensate him for clearing land for pasture, for lime and weed control. The farmer did not ask for the payment. He does not figure that he earned it. He does not want it. He spent his own money to clear his land for his own profit. He does not think that the taxpayers of Rock County should be taxed to give him a hand-out for work he was already planning to do.

How many other farmers in Rock County and Walworth County and Jefferson County and Green County, among the richest in the Nation, are receiving such payments from the Production and Marketing Administration, the agricultural conservation program, etc.? What excuse is there for Washington politicians to continue this PMA program, which makes Uncle Sam look like a sap?

Taxpayers are complaining about the deductions from their weekly pay checks. They face much higher taxes, which they know will be squandered, in part at least, by the Production and Marketing Administration, by the Wisconsin State Employment Service, by the Rock County free-lunch school program, and by a hundred other unnecessary services which can be cut—and now.

No one in Government, especially no one in Washington, is going to save the taxpayer a nickel. Next week and the week after and the week after that, part of every pay check will be deducted to pay for an octopus of Government that ought to be hacked and trimmed of the fat, which Members of Congress admit they cannot locate in the bills before them.

The State of Wisconsin is squandering taxpayers' money in an FM radio network that can be heard by fewer than 20 percent of the potential radio-set listeners.

With all this waste, President Truman challenges any American to find a way to save the taxpayers some money. He has done his best, he says.

When will taxpayers rise in wrath? When will they decide to stop working 2 days a week for Washington?

President Truman, et al., declare that we must have controls to stop inflation, but they refuse to cut the inflated dollars out of their own squandering. They are producing inflation, and the taxpayers are paying for it.

It's time for action.

Federal Pay Bills

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MULTER. Mr. Speaker, the following is a statement I made to the House Committee on Post Office and Civil Service regarding Federal pay bills:

Mr. Chairman and members of the committee, I am very pleased to have the opportunity to present to you my views with respect to the pending legislation, providing additional compensation for postal and other Federal workers.

Many years ago I served as a railway mail clerk, and I know from personal experience in that service, and my close contact in subsequent years with the many postal and other Federal workers in my district, that

they are one of the most loyal groups in our country.

I feel it is an obligation of this Congress to provide adequate compensation for these employees. Certainly it would appear that we are neglecting that duty if we do not provide for Government employees compensation comparable to that which we insist is needed by private employees to live decently. I am sure this committee does not need additional statistics on the greatly increased cost of living which is depriving this group of even an average standard of living. I urge this committee to report on a bill providing adequate compensation for these employees.

I have repeatedly urged that this Congress enact legislation which will begin to do justice by all Federal employees. I again express the earnest hope that Congress will grant them the increases they have earned without further delay.

The Italian Peace Treaty

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1951

Mr. RODINO. Mr. Speaker, Mr. Heinzen, the editor and publisher of the *Nutley Sun* has had vast experience as a news correspondent. He spent over 25 years on the European scene and knows rather intimately the focal points. More than once he has called the turn.

In his editorial of July 13 he urges for very urgent compelling reasons why immediate action should be taken toward a revision of the Italian Peace Treaty of 1947.

Under leave to extend my remarks, I wish to include it herein:

REVISE THE ITALIAN PEACE TREATY

The Italian Government, over the bitter opposition of Italian Communists, has formally authorized the leasing of Leghorn port facilities, on the peninsula's west coast, to the United States with a grant of transit rights across Italy for American military supplies for the central European "cold front."

The Italian Cabinet, in confirming the agreement made by Foreign Minister Carlo Sforza, stressed that the accord fits in the framework of collective defense and mutual assistance as visualized by article 3 of the North Atlantic Pact.

Leghorn thus becomes an American bridgehead, an alternate route into central Germany and Austria to Bremerhaven, the northern German port. The Leghorn route to central Europe is shorter, more easily defensible. Long ago American strategists have realized that the natural gateway to Austria—the port of Trieste—would be lost in the event of war with the Communist axis. Powerfully installed in Albania, the Communists could seal off the Adriatic in the narrow straits of Otranto both by submarines and by planes based in Albania.

The grant of the rights at Leghorn, therefore, gives Eisenhower, as supreme commander of the mutual defense forces in Europe, the alternate route he needs so badly. In weighing the action of the Italian Government, we should remember that Leghorn suffered great damage at the hands of American and British bombers during the war and yet there was no scar to cause even minor hesitation. We should remember, too, that the Italian Government acted in face of violent Communist opposition.

Our own intelligence sources in Washington have reports that the Kremlin has alerted the Italian Communist fifth column to the strategic importance of the Straits of Taranto, the heel on the Italian boot, to counter the Leghorn grant. The Italian Communist Party is making a determined political offensive aimed at getting absolute control of the straits.

In the recent Italian elections, the Communists captured administrative control of the major seaport of Brindisi on the Straits of Taranto, directly across the narrow waters from Albania. According to intelligence reports, the Kremlin blueprint for war contemplates a Russian bridgehead in the Brindisi area where Soviet paratroopers would grab the port and open a pipeline from Albania for men and military supplies.

Revise the Italian Peace Treaty; now more than ever.

Here Is Why Farmer's Share of Loaf of Bread Is Only 2.85 Cents or Even Less

EXTENSION OF REMARKS OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. GROSS. Mr. Speaker, in a further effort to combat vicious propaganda that farmers allegedly are to blame for high food prices, I am placing in the *Record* an article from the June 1951 issue of the *Co-op Grain Quarterly*, official publication of the National Federation of Grain Cooperatives, St. Paul, Minn.

The article documents a recent news story that the farmer's share of a loaf of bread is only 2.85 cents by revealing seldom-publicized costs of marketing and distribution—and profits—after wheat leaves the farm. Please notice that the computation is made on the basis of a loaf of bread selling for 15 cents at retail. In many areas, the retail price of a loaf of bread is from 1 to 4 cents higher than 15 cents, in which cases the farmer's share is even less than 2.85 cents.

I call your particular attention to the transportation costs—24½ cents to ship a bushel of wheat from Minot, N. Dak., to Minneapolis, a comparatively short distance; and 51 cents to ship a 100-pound sack of flour from Minneapolis to Cleveland.

The article follows:

CONGRESS TOLD FARMER RECEIVES 2.85 CENTS OF LOAF OF BREAD

The newspaper headline above tells the whole story. The farmer gets only 2.85 cents for the wheat that goes into a loaf of bread today.

The retail price of bread has gone up 19 cents a pound loaf since June 1950. If this increase were due entirely to the rise in the price of wheat, the farmer would be getting \$1.25 a bushel more than he does now.

Actually wheat today has gone up only about 18 cents a bushel above the pre-Korean war price. The national average June 15, 1950, was \$1.93, compared with the May 15, 1951, average of \$2.11.

The table which follows shows the financial transactions involved in wheat and flour. It was prepared by the Minneapolis Grain Exchange. This example is based on current

shipments made in 1950 and represents average figures for a number of companies. The figures were gathered before the two-cent rise in the retail price of bread. Today the wheat farmer's percentage share in a loaf of bread is even less than shown by the table.

Marketing cost of wheat from Minot to Minneapolis

No. 1 dark northern spring wheat 14 percent protein produced in Ward County, N. Dak., delivered by producer to country elevator at Minot, N. Dak. (bushel)-----	\$2 00
Country elevator gross margin for accumulating, storing, loading and shipping to market-----	.06
Railroad transportation costs from Minot to Minneapolis-----	.24½
Commission merchant's charge for selling carlot to terminal elevator, handling, inspection and weighing details-----	.02½
Selling price net terminal elevator f. o. b. boxcar-----	2 33
Terminal elevator charges, unloading, 125 days' storage, turning, conditioning, insurance, and loading out-----	.07
Selling price net to flour miller f. o. b. boxcar-----	2 40
<i>Production and distribution cost of flour</i>	
2.35 bushels or 141 pounds of \$2 40 wheat required to produce 100 pounds of flour, 40 pounds millfeed, 1 pound shrink (cwt.)-----	\$5 64
Depreciation, insurance, interest, taxes, etc-----	.06
Power to operate mill-----	.04
Mill and elevator labor, repairs, supplies, etc-----	.32
Administrative expenses, salaries, etc-----	.11
Main office and branch office selling expense, etc-----	.21
Margin of gross profit miller anticipates-----	.06
Miller's total manufacturing expense (cwt.)-----	.80
Byproduct recovery 40 pounds of millfeed at \$40 per ton bulk Minneapolis, or 2 cents pound (deduct, cwt.)-----	.80

Cost of sacks, 100's, paper (cwt.)-----	5 44
Railroad transportation expense to Cleveland, Ohio-----	.51
Delivered cost of 100 pounds straight flour in sack to baker in Cleveland (cwt.)--	6 26
<i>Production and distribution cost of bread</i>	
Cost of 20 pounds added ingredients: fat, milk, yeast, etc., and 60 pounds water-----	\$2 16
Total raw material cost 180 pounds or 2,880 ounces dough (this equals 160 18-ounce loaves)-----	8 42
Raw material cost of baked loaf bread per pound-----	.05¼
Shop labor and overhead-----	.02½
Administrative, selling and delivery expense-----	.03¾
Double wax wrapper-----	.01
Margin of gross profit anticipated--	.00¾
Wholesale selling price per loaf to grocer-----	.13
Retail grocer's margin, including all expenses-----	.02
Retail price per loaf-----	.15

Selling price to consumer, 160 loaves (to produce this bread required 2.35 bushels wheat and 80 pounds of other ingredients—20 pounds plus 60 pounds of water)-----\$24.00

Taxation of Household Appliances

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 18, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "So This Is Housekeeping," by Shirley Stuart, published by the DA Syndicate, in which is discussed the taxation of household appliances.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SO THIS IS HOUSEKEEPING (By Shirley Stuart)

After tossing a few brickbats in recent months at certain Government groups for treating essential household appliances as luxuries, I want to turn around and offer a bouquet.

It goes to the House Ways and Means Committee, which recently voted to exclude washing machines and sewing machines from the list of products to receive new or added excise, or so-called luxury taxes.

The washing machine and the sewing machine are more than merely labor savers—they are definite money savers, particularly for the middle- and low-income brackets.

Now that we have this concrete example of the realistic approach some men in Washington can apply to the home and its make-up, I certainly wish the House committee could get together with the Federal Reserve Board.

The latter has adopted credit controls which I think need more than a little readjustment.

Without going into any long economic discussion as to the why's and wherefore's of credit controls, I'd like to bring up two things about present controls that throw me completely for a loss.

First—why is it that when Jeff and I decide to trade in our old car on a new one, the Federal Reserve Board says the trade-in value can be applied against the required down payment, but when I want to trade in my old washer, the same principle doesn't apply?

Instead, the Board says, the trade-in value of my washer must be subtracted from the new model's selling price, and then I must pay down 25 percent of the balance remaining.

If it were handled the same way as automobiles, the \$50 I got for my old washer would take care of the down payment required for a \$200 new one. The way it is now, I not only trade in my old machine, but I have to pay an additional \$37.50 in cash before I can get delivery on the new model. This would mean in effect a down payment of \$87.50—or nearly 44 percent.

Second, why does the Federal Reserve Board say that you have to make a 25 percent cash down payment on an installment purchase of a washing machine, or another appliance, while only 15 percent is necessary for a Louis XIV sofa?

I regard my washing machine as more necessary than the living-room davenport, and I'm sure you do, too.

Perhaps members of the Federal Reserve Board have been spending too much time on their own davenports. If they'd get up and visit the homemaker at her washing machine, maybe they'd make their credit controls a credit to their intelligence.

Daniel Calls Pearson on Tideland Oil Blast

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. THORNBERRY. Mr. Speaker, the Austin American, of Austin, Tex., on July 16, 1951, published on its editorial page a reply to Drew Pearson's Merry-Go-Round of July 9, 1951, on the subject of Tidelands. The reply was written by the distinguished attorney general of Texas, Hon. Price Daniel. This reply emphasizes that Texas devotes all of the income from its submerged land to the public school fund of our State and that Texas when it entered the Union had a solemn contract with the United States by which it retained all its public domain.

The reply as published in the Austin American is as follows:

REPLY TO MERRY-GO-ROUND—DANIEL CALLS PEARSON ON TIDELAND OIL BLAST

HON. DREW PEARSON,
Washington Merry-Go-Round.

DEAR MR. PEARSON: Your column of July 9 on tidelands legislation contains the most misleading and inaccurate information I have seen during my 3 years of acquaintance with this controversy. Your informants on this subject are giving you prejudicial propaganda which, if given the opportunity, I can and will prove to you to be false.

For instance, your column says that the Walter-Gossett bill would restore submerged lands to only three States. This is untrue. A mere reading of the bill will reveal that it restores ownership of lands beneath navigable waters within the respective State boundaries to each of the 48 States. Every State in the Union has thousands of acres of submerged lands, the revenues from which are being used for public education and other State functions. These lands and revenues, held and used by the States in good faith for over 100 years, would be taken by the Federal Government under the theory of the tidelands decisions, expressed in your own words as:

"The theory that . . . the navigable waters of the United States belong to the Federal Government, not the individual States."

For over 100 years the courts held to the contrary and said the lands belonged to the individual States.

Forty-four Governors, 44 Attorneys General, and a majority of the Members of Congress from every State want these lands and revenues to be restored to or confirmed in the 48 individual States and that is exactly what the Walter-Gossett bill would do. It applies to Minnesota and its iron ore and to Maine and its kelp and fish the same as it does to Texas and its oil. Any Congressman who votes against the bill is voting

against continued State ownership of submerged lands within his own State. I have yet to find any State official so anxious to get a one forty-eighth share of Texas' oil as to surrender title to, and revenue from, the submerged lands of his own State.

Again, your column would leave the impression that oil companies wrote and are sponsoring the Walter-Gossett bill, and that a vote for it is a vote for the oil companies. This is not true. Together with other State officials, I helped Congressmen GOSSETT and WALTER prepare this bill, and I know that no oil company representative worked on it. In fact, the oil company representatives have stayed neutral ever since Federal officials promised to ratify their State leases in Federal legislation.

The Attorney General of the United States told the Supreme Court this would be done as a matter of equity to good-faith purchasers. Every Federal control bill and every State ownership bill introduced in Congress during the past 3 years has provided for ratification of these leases. Therefore, the oil companies will not lose their leases regardless of which Government ends up with the land and the royalties.

That leaves the present issue solely between the Federal Government and the States (and their local subdivisions). I know of no oil company representative who is now working or lobbying for the Walter-Gossett bill. I do not believe you can find one. On the other hand, you will find that the real sponsors of State ownership legislation are the following organizations, which I list and hope you will publish:

The Council of State Governments; the Governors' Conference; National Association of Attorneys General; National Conference of Mayors; American Association of Port Authorities; American Municipal Association, (representing 10,510 municipalities in 42 States); the American Bar Association; American Title Association; United States Chamber of Commerce; United States Junior Chamber of Commerce; National Reclamation Association; National Water Conservation Association, and the National Institute of Municipal Law Officers, representing 1,051 cities.

In all fairness, I do not believe you can call these groups an "oil lobby," and I know you will not find any oil lobbyists directly or indirectly influencing their actions on tideland legislation.

A vote against State ownership of submerged lands by each of the 48 States is a vote against the views of these organizations, which have the interests of the people and their States at heart as much as anyone who advocates Federal nationalization of this property.

Your column supports Senator LISTER HILL's plan to divide tideland oil royalties among all the 48 States for Federal aid to education. You say those who vote for State ownership are against using the proceeds for education. This is not true. Texas devotes all of the revenues from its submerged lands to its public school fund. Most of the other States make the same or similar use of the revenues from this type of property. It is to protect our educational system as well as the principles involved in this Federal land grab that we so vigorously support the Walter-Gossett bill.

Texas has collected a total of approximately \$7,000,000 from leases on the tidelands within its boundaries. That has meant a great deal to our school fund, but divided among 48 States, it would have been a mere pittance of \$145,833 per State. I doubt that any State has collected less than that amount from its own submerged land resources, whether they be iron ore, sand, gravel, fish, gas, coal, gold, or oil.

If these Texas leases (350,000 acres) had been leased under the present Federal Min-

eral Leasing Act, they would have brought only \$17,000 as compared with the \$7,000,000 under State leasing. This is because Texas has averaged \$20 per acre for leases under its sealed-bid system, while the Federal Government receives only 50 cents per acre from its first applicant. The States also receive higher rentals and royalties from their leases.

This brings us to the reason that some oil interests are opposed to state ownership and are now fighting against the Walter-Gossett bill. They are the 1,031 Federal lease applicants who have blanketed the coasts of California, Texas and Louisiana with Federal applications at 25 cents per acre (the amount payable under Federal law before the 50 cent amendment).

On the list you will find the name of I. A. Smoot, of Salt Lake City, Utah, whom you mentioned in your column of April 18, 1949, as having complained to President Truman about the "tidelands oil lobby." You described him as "Salt Lake City's dignified, white-haired postmaster" and said the result of his visit to the President was Mr. Truman's assurance that "As long as I am President, I will never permit the submerged oil lands to go back to the States."

Did you know that Mr. Smoot was himself lobbying with the President of the United States in support of his own Federal oil lease application? Whether or not he forgot to tell you and the President about it, I. A. Smoot is an applicant for a Federal lease on 800 acres of land off the coast of Long Beach, Calif., which he hopes to get for \$200 under the 25-cent per acre Federal Leasing Act in effect when he filed. It is now worth \$1,000,000, according to the California Land Commission.

Former Senator Burton K. Wheeler and James A. Murray, son of Senator JAMES E. MURRAY, of Montana, are registered lobbyists and attorneys for some of the Federal lease applicants. They are doing all within their power against the State ownership bill, but you fail to mention their activities.

Actually, it was former Senator Wheeler, attorney for Federal lease applicants, who expect to hit the Jack-pot if the States lose their fight, who first drug out the plan of dividing up the submerged land royalties for Federal aid to education. It was presented in 1948 through the then attorney general of Montana. It was later espoused by Harold Ickes, a firm friend and witness for the 25-cent per acre Federal lease applicants, and it is now being advocated by Senator LISTER HILL and the others named in your column.

The plan for Federal aid to education through seizure of submerged lands of the States has been rejected by State officials and congressional committees every time it has been brought up. It will never be approved as long as the majority in Congress opposes dividing up the wealth of the States by placing everything under Federal ownership and control.

No one will deny that the States were believed to own the lands beneath navigable waters within their boundaries for over 100 years. They were in good faith in their ownership, possession, development, and improvement of these lands and in the use of the revenues therefrom for public purposes. It is only fair that this good faith ownership be restored and confirmed by Congress rather than implement Supreme Court decisions which take away these lands without compensation. This is especially true of Texas, which had a solemn contract with the United States by which it retained all its public domain. We get more from the property than the Federal Government would receive under present laws, and we use it all for public education.

If you really want to help the States shoulder their burden of educating their children, help us retain our property and present revenues rather than weakening our

local governments and making us wholly dependent upon the Federal Treasury.

Because of your powerful medium of expression to the people of the Nation, please present our side of the case along with the other side and distinguish honest and sincere State officials from the oil lobby which you write about. If you will give me the opportunity, I will present you the evidence in support of all statements made in this letter.

PRICE DANIEL.

An Interoceanic Canals Commission, the Best Solution of Panama Canal Problem

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. MARTIN of Iowa. Mr. Speaker, for several years I have followed closely the interoceanic canals question in collaboration with responsible congressional leaders of both political parties with special reference to its grave implications to the security of the United States and our national resources. In the course of my studies I recognized a definite pattern of propaganda which is obviously a part of an organized drive to secure authorization for the construction of a virtually new canal at Panama of so-called sea-level design to replace the existing waterway.

In an extension of my remarks in the Record of July 13, 1950 entitled, "Panama Canal—Propaganda for Sea-Level Project," attention of the Congress was invited to the nature of this drive.

Since then there have been several apparent attempts to arouse public interest in this project, the most recent example being a news story, in the Chicago Daily Tribune of June 13, 1951, part 2, page 1, by Jules Dubois.

This story, which originated in the Canal Zone and utilizes verbatim quotations from a report by former Gov. J. C. Mahaffey, of the Panama Canal, under Public Law 280, Seventy-ninth Congress, was obviously inspired.

In the opinion of informed Members of Congress, it is a grossly inadequate, if not misleading, treatment of the problems involved, tending to confuse rather than clarify. Moreover, it conforms to the established pattern of propaganda which, since 1945, has consistently emanated from the Canal Zone, stressing the dangers of A-bomb attack as dictating the launching of the vast sea-level project and brushing aside as matters of slight importance the essential and long overdue major operational improvement of the existing Canal.

The report mentioned above was transmitted by President Truman to the Congress on December 1, 1947, and significantly, without comment or recommendation. There is was referred to appropriate committees of the House and Senate which did not direct its publication as is customary in such cases. Fa-

avorable consideration of it by the Congress is not deemed likely.

Hence, the sole dependence of indiscriminating writers upon it as their primary source of information will not beneficially contribute toward the comprehensive public consideration of this subject that is sorely needed. Rather, it may mislead and confuse.

During the past few years, however, a large number of informative articles on various aspects of the canal question have been published. Some have been republished in extensions of remarks in the CONGRESSIONAL RECORD by distinguished Members of Congress, as listed in a selected bibliography on the Isthmian Canal Policy of the United States, by the gentleman from Texas, Representative CLARK W. THOMPSON, in the RECORD of August 25, 1949.

These, together with other pertinent articles published subsequently to 1949, form an illuminating mass of literature by informed, competent, unbiased, and unselfish experts on the canal situation who possess a high degree of integrity and independence. Their views and utterances on this subject diametrically oppose those set forth in the indicated report under Public Law 280, Seventy-ninth Congress, which were repeated in the news story under discussion.

Special attention is invited to the notable address delivered on April 19, 1948, before the celebrated Cosmos Club of Washington, D. C., by Representative Willis W. Bradley, of California, and published in the RECORD of April 21, 1948, entitled "What of the Panama Canal?"

Representative Bradley is a naval officer of distinction with an extensive background of administrative, ordnance engineering, and navigational experience in various parts of the world, and who has made an intensive study of the problems of the Panama Canal. At the time of his Cosmos Club address he was chairman of the Subcommittee on Ship Construction and Operation of the House Committee on Merchant Marine and Fisheries. As such, he actively participated in the congressional consideration of the ex-Governor's report which was referred to his committee, and was fully informed as to the nature of its contents. His paper, which treats clearly and forcefully with the fundamental issues involved in the modernization of the Panama Canal, is generally considered the best exposition on its subject in records of Congress and merits the closest study.

As pointed out by Representative Bradley, Public Law 280, Seventy-ninth Congress, was drafted in the Canal Zone. Its enactment was sought by those who, when later supervising its execution, subjected the act to an extremely narrow interpretation of the military factors of the law—"security" and "national defense." Thus, by means of extreme interpretation these military factors were made the controlling features of the inquiry under the fallacious assumption, that only a "sea-level" canal would be "secure."

During the course of the investigation, sustained and biased propaganda, often

originating within certain engineering groups in the Canal Zone, seized on the A-bomb as a psychological lever to alarm and influence officials in the executive branch of the Government, the people of the Nation at large, and their elected representatives in the Congress itself, to accept the exaggerated views of the "sea-level" proponents. The fundamental and long-time function of the canal as an agency for transporting ships from one ocean to the other was almost lost sight of in the ensuing general hysteria over the A-bomb.

Instead of encouraging the fullest public discussion of all the main issues, as should be expected under a republican form of government, these advocates consistently attempted to prevent the public expression of views in opposition to their own, thus depriving the Nation, the Congress, and the Executive of full information on a subject to which they were entitled.

Fortunately, the timely publication of many authoritative articles concerning the atomic bomb, subsequent to the submission of the 1947 report, served to counteract the effects of the previous scare propaganda and to remove that terrifically destructive weapon from its position as the dominating influence in public thinking relative to the planning of navigational improvements for the Panama Canal.

In many extensions of my remarks quoting these articles, I emphasized that the time has come to stop deceiving the people with the idea that an impregnable canal can be constructed at Panama or elsewhere. So I now repeat what I have stated many times before that the defense of any type of canal, wherever located, is an over-all governmental responsibility, and that its defense like that of the seaports, airports, railroads, highways, and productive centers of the United States depends upon the combined industrial, military, naval, and air power of this Nation as obtained in both world wars, and not upon passive defense measures, such as may be embodied in inherent characteristics of canal design.

Depending, as the Dubois news story does, upon the ex-governor's report which the Congress refused to consider, the article inevitably reflects a number of fatal flaws embodied in that report.

Basic among these is the emphasis on the potential danger of the A-bomb causing prolonged interruption of transit in the existing canal through demolition of locks and dams with the loss of Gatun Lake followed by lingering radioactivity requiring the abandonment of the present lock sites. In contrast, the article minimizes the interruption to transit in a canal of sea-level design as being of short duration—only a few weeks. Nor does it explore the effects of A-bomb attack on the many miles of earth dams, spillways, diversion channels, and tidal locks in a canal of sea-level design, or the effects of lingering radioactivity on these structures or the contiguous terrain, including the terminal cities.

Competent engineers and atomic warfare authorities who are independent have accordingly challenged the averred military superiority of the sea-level idea as a glaring misstatement of fact. They also challenge the basic assumptions in the ex-governor's report as fallaciously premised, and state that the adoption of its recommendations would be extravagant of national resources.

In view of these facts I must characterize the arguments of the proponents of the sea-level project on this score as fallacies of the first order and, whatever may have been the purpose, have the effect of deception.

The independent experts, to whom I refer, also question the cost estimates given in the report. They state that the estimate for completing the authorized third locks project improved by its modification to include the Terminal Lake plan is greatly exaggerated and that for the sea-level undertaking grossly underestimated.

The news story, moreover, wholly ignores the gravely important problem of a new treaty with the Republic of Panama which undoubtedly would be required for the sea-level project. What such a treaty would cost in over-all indemnity and perpetual annuities no one can predict; but these items would have to be added to the prodigious cost of constructing a canal of such design which, if adopted, might well merit the characterization so often bestowed upon it by experienced and informed engineers as constituting a boondoggling venture of monumental dimensions.

Another serious omission in the story is its failure to deal with the suspended third locks project which was authorized in August 1939 as a defense measure under Public Law 391, Seventy-sixth Congress, and stopped in May 1942, only 6 months after the United States entered World War II.

This project, which was started by the Panama Canal organization, was later shown by maritime authorities of the Government to be navigationally hazardous and operationally unsound. As a result of these disclosures it was subsequently disavowed after some \$75,000,000 of the taxpayers' money had been expended on what, in the light of the operational experience and knowledge, must be accepted as an error in fundamental planning. Fortunately, the excavations accomplished can be utilized in connection with the Terminal Lake plan. But if not so utilized it would appear that the whole third locks venture will prove a total loss.

From the foregoing summary it is clear that the sea-level drive under Public Law 280, Seventy-ninth Congress, served to obscure the third locks fiasco by reviving an irrelevant movement which, when historically viewed, is nothing but a repetition in a modified form of the 1906 controversy as to the type of canal, with a rehashing of most of the old arguments and a total ignoring of economic consequences.

It has long been evident in informed congressional circles that the proper

resolution of the interoceanic canals question cannot be obtained through routine Government agencies, especially those which would benefit from their own recommendations, and that it must be resolved by a wholly independent organization under congressional authorization.

The first step toward this end was the creation on July 1, 1951, under Public Law 841, Eighty-first Congress, of the Canal Zone government and the Panama Canal Company—the latter a business-type organization recommended by the President on January 31, 1950—House Document 460, Eighty-first Congress—to replace the previous predominantly military organization known as the Panama Canal. This action, by emphasizing the Panama Canal as an artery of marine transportation and by forcing the first major organizational improvement in the Canal Zone since 1914, cleared the way administratively for the next move, which is the determination of the form of the future canal, or canals, that sooner or later will be required for increased traffic needs.

As indicated in my extension of remarks of July 13, 1950, the drive for the Panama sea-level project undoubtedly gets much of its force from a combination of manufacturers of heavy earth-moving machinery, dredging and contracting interests, and a limited group of civil engineers, both civilian and military, associated with them. This fact requires that the Congress and the Executive be alert to the unique situation presented.

The interoceanic canal problem is too vast an undertaking and its consequences too far-reaching to be treated in a casual manner. Its determination is too momentous to be dominated by a routine administrative agency or professional group which in the very nature of the case are immune against their own errors, however grievous or costly they may be. The interests of the overburdened taxpayer, and the shipping which uses the canal and has to pay tolls, must be considered.

The best way and, in the opinion of experienced congressional leadership, the only way by which the canal question can be satisfactorily met and solved is by means of an independent, broadly based, predominantly civilian, and strictly nonpartisan Interoceanic Canals Commission, composed of the best qualified men available to make a thorough, objective, and up-to-date study and appraisal of the entire subject of interoceanic canals, and to submit its conclusions and recommendations in the premises.

The solution of this grave question necessarily transcends all considerations of professional or personal character for the grim realities of the situation must be faced regardless of how they may affect individual or group reputations. It is not a matter of condoning error or face-saving but solely of doing what is best for the American people and the world at large.

Let's Be Sensible and Safe

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Paterson (N. J.) Evening News:

LET'S BE SENSIBLE AND SAFE

The administration is throwing all its economic guns into a last-ditch fight for retention of inflation curbs. The show has the look of an offensive with its arsenal of argument, propaganda and plea; actually it is a desperate defensive, in which the Government seems to have a slim chance of success.

Yet if controls are scrapped, even materially stripped down, the country is headed straight for a new inflation crisis which will probably strike in the fall or next winter.

Nobody likes Federal regulation over prices, credit, wages, supply, rents or profits. We don't like Washington dictation, which obviously has been mushrooming year after year. We are suspicious that national bureaucracy seizes on one factor after another to announce a "crisis"; that it manufactures "crises" to keep extending its influence increasingly over our lives.

There has been far too much truth in these apprehensions. But the tendency to expanding Federal domination must not blind us to the hard facts of economics. We are in a period of major defense production, which soon will take some \$4,000,000,000 out of American production for armament. This will mean a tremendous impetus for new inflation.

Economic Stabilizer Eric Johnston has declared that the Nation can look for a much cheapened dollar, worth much less than its 1939 buying power, if controls are dumped. Mr. Johnston is the Government's chief lieutenant on the firing line to secure passage of controls legislation in Congress. His boss, Mobilization Director Charles E. Wilson, gave similar warning. The President has repeatedly asked extension and strengthening of controls.

Stabilizer Johnston asserted that if Congress voted extension of present controls "we can hold prices for the rest of the year." That is probably an exaggeration. We don't believe that would result. But realistic curbs can brake the pressure of new inflation trends materially—and new inflation stresses are certainly going to strike.

What the administration is seeking to do is not politically popular. Just now there is a leveling off in prices, and the prospect of truce in Korea inclines the public to discard controls. Congress knows and responds to this sentiment.

The Senate after bitter debate refused most of the changes the President asked, and weakened present authority by barring future roll-backs. Now the House is debating its bill, which prohibits roll-backs on farm products and may do so on all prices. The Senate bill has virtually been rewritten by amendments.

Strong blocs are at work to destroy the curb laws, particularly agriculture groups which want to be kept free from controls, although this is discriminatory and food prices are the major hazard in the inflation picture.

For all the red tape, agency bumbling, and hateful restrictions inherent in eco-

nomics controls, unless we keep and enforce reasonable curbs during the peak of defense production, the Nation is heading into an inflation peril with throttle wide open.

Complements of Navy Ships

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following self-explanatory communication from Admiral Forrest Sherman, Chief of Naval Operations:

DEPARTMENT OF THE NAVY,
OFFICE OF THE CHIEF
OF NAVAL OPERATIONS,

Washington, D. C., July 13, 1951.

HON. JACK Z. ANDERSON,

The House of Representatives,

Washington, D. C.

DEAR MR. ANDERSON: There appeared in the CONGRESSIONAL RECORD recently (on page A4164 of the Appendix) an extension of remarks by yourself under the heading "Wasting manpower." Although no comment by the Navy Department on your remarks has been requested, I believe you would be interested in a somewhat fuller explanation of the subject.

I want to state emphatically that the Navy does not feel that it is wasting manpower in its ships—LST, Liberty (cargo), or others. The complements of Navy ships are the result of long experience. To cut those complements would result in serious inefficiency. Every man is on board for a definite purpose.

It is true that the military ship carries a larger crew than a comparable ship in the merchant marine. Any commissioned vessel of the Navy is manned on the premise that it must be largely self-sustaining and capable of operation over long periods of time. In contrast, merchant ships are contracted for point-to-point transportation and with the expectation that up to 30 percent overtime wages may be paid the crew.

More specifically, the naval vessel must have personnel aboard: (1) To accomplish most of the ship's routine maintenance while under way, at home bases, or at isolated anchorages, whereas the civilian ship depends upon shore establishments in port for such work; (2) to do its own stevedoring in out-of-the-way ports and to transfer cargo at sea, a task not required of the civilian ship; (3) to maintain a 24-hour radio watch with facilities for handling coded messages, a watch not required of civilian ships; (4) for medical, supply, added combat equipment, disbursing, military training at sea, extensive damage control, reprovisioning and fueling at sea which are requirements not applicable to civilian ships.

To discharge its responsibilities, the Navy must prepare our ships to be ordered anywhere, for any length of time. Hence, Navy ships must be self-sustaining insofar as we can make them so. That takes more men than for merchant ships. The requirements of a civilian ship could hardly be compared to those of similar Navy ships either in peace or war.

I hope that you will find the foregoing comments helpful.

Cordially yours,

FORREST SHERMAN,
Admiral, United States Navy.

Taking Advantage of Luck To Claim Nonexistent Virtue

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD the following editorial from the Rochester (N. Y.) Democrat-Chronicle of July 17, 1951.

Mr. Paul Martin recently pointed out in a dispatch to the Gannett newspapers that in the past 11 years the administration has miscalculated Federal tax collections by \$65,000,000,000. Now Secretary of the Treasury Snyder is claiming credit for a surplus, although the surplus is simply the result of the administration's inability to place defense contracts as fast as the money for them became available. The surplus is sheer illusion, as the administration well knows. With great magnanimity, the editorial writer says that in less exalted circles Secretary Snyder's claims to an illusory surplus would be called demagoguery.

Mr. Speaker, demagoguery is demagoguery in high or low places and a betrayal of the public interest. The editorial follows:

DASH OF DEMAGOGUERY

Paul Martin, of our Washington bureau, has just written an entertaining discussion of the administration's record as a financial prophet. He finds that in 11 years, the administration has miscalculated Federal tax collections by \$65,000,000,000. For the most part, it underestimated the returns, indicating a refusal to believe the productive force of the country is as strong as it really is.

This is more interesting than important, we believe. The estimating of income and outgo is a great business game all over the country and it is a safe guess that there is no business executive who has been able to measure income against outgo without some ludicrous errors. Nothing short of a magic mechanical computer, fed with the exactly correct data, could hope to foresee all the changes, good and bad, which speckle the years.

But the report wins some special attention in Rochester because of a speech made here last week by Secretary of the Treasury John W. Snyder. The Secretary told his audience that the administration is not guilty of practicing deficit financing. He bolstered his argument by citing the current surplus in the national budget, and by going back to the first postwar year when we had another fat surplus of income over expense.

What Mr. Snyder did not say was that the current surplus blesses us because we couldn't sign up defense purchases fast enough, and that the money is as good as spent right now—with some more billions. Nor did he say that the other big surplus resulted from the fact that we did not have to carry through on war purchases for which the budget had provided.

That one should fail to guess the exact line between collections and disbursements is not surprising. That one should take advantage of luck to claim nonexistent virtue is another matter. In less exalted places, the Secretary's claims would be called demagoguery—or worse.

The Treasury Department Nullifies Controls by Its Bond-Buying Policy

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. PHILLIPS. Mr. Speaker, the power of the administration's propaganda machine is being exercised to persuade the American people that only unlimited wage and price controls can save them from inflationary disaster.

The President makes radio speeches and issues statements from the White House. Cabinet members and important bureaucrats scurry about the country, at the taxpayers' expense, making speeches and holding press conferences. Forty thousand press agents pour out releases to press and radio. The Democratic national chairman misuses a TV interview to issue a call for support by grass-root political workers. The circumstance that this propaganda has no basis in fact is ignored.

After listening to the barrage of administrative propaganda, it seemed to me that the propagandist protested too much. I got an idea.

Now ideas are not much good without facts to support them. Facts are the legs ideas walk on. Neither gets very far without the other. I went after the facts in the hope of getting my idea before the House in terms which would defy contradiction.

I discovered that many of the propaganda statements relating to the orthodox, indirect inflation controls are falsehoods; others are half-truths, even more misleading than the falsehoods.

The situation remains almost exactly what it was in 1945, when it was thought cheaper money was needed to prevent a serious deflation, as predicted by Henry Wallace and other administration advisers.

By act of Congress, on June 12, 1945, in order to increase the volume and velocity of credit, gold reserves behind the Federal Reserve notes were reduced from 40 to 25 percent. There they remain today, broadening the base for the issuance of currency.

By the same act, reserves behind the deposit liability of banks were reduced from 35 to 25 percent. There they remain today, broadening the base of the credit structure.

By the same act of Congress, the policy was made permanent, that banks did not have to put up sound commercial paper to secure the issuance of Federal Reserve notes. Instead, they could put up Government bonds, which are nothing but the outward semblance of Government debt. That provision remains unchanged today. What bank would accept from an individual borrower a statement of his liabilities as the security on which to grant an additional loan?

It is true, on various occasions, under pressure of the world-wide depression,

both Republican and Democratic administrations had found it necessary to permit the use of Government bonds to secure issuance of Federal Reserve notes—but always on a temporary basis.

When Herbert Hoover first used this means of mitigating the effects of a world-wide depression, in 1932, he demanded and obtained of Congress a strict limitation on the period of its use. After Roosevelt came in, the policy was extended continuously until 1945, when it was made permanent.

Thus the value of our currency remains tied to the Federal debt. The higher the debt goes, the cheaper the money, and the higher the prices of everything. Until the administration stops using the public debt to secure the issuance of more and more money and credit, we are going to have more and more inflation.

All of us here know how the national debt has increased since the early thirties. We know it is likely to go on increasing at an augmented rate, because of mobilization to meet the threat of a world conflagration. Who then will say, in the face of these incontrovertible facts, that the indirect controls have been given a fair chance to curb inflation?

The things I have spoken of thus far are well known. They are facts, but they are not all of the facts I have uncovered. Specifically, they are not the facts which serve forcibly to convey the idea I mentioned earlier.

In two respects the Federal Reserve Board appears to have made an honest effort to apply the indirect controls, which can save this Nation from inflationary disaster. It must be admitted, however, that the Reserve Board has not applied those controls with all the vigor the situation seems to warrant.

The Federal Reserve Board has boosted rediscount rates from 1 percent to 1.75 percent. This, in only slight degree, has kept member banks from rediscounting their commercial paper, and using the proceeds each time, after the manner of a revolving fund, to make new loans.

So far as the Government is concerned, creation of so-called credit currency, on the books of the commercial banks, goes on almost entirely unhindered. Money still is cheap at the 2½- and 3-percent rates at which big loans remain profitable to the banks.

Only the patriotic action of the commercial bankers by voluntarily restricting credit expansion, and hence the creation of new money, has been even slightly effective in this area of inflation control.

The Truman administration, of course, contends that orthodox, indirect controls are weak and have little value in curbing inflation. The administration either is uninformed, or seeks to mislead the American people, with respect to the power and potential effectiveness of these controls.

Any banker will tell you that the Federal Reserve Board possesses full authority to raise rediscount rates as high as 7 percent, right under the ceiling at which the usury laws operate. If the Reserve Board should ever do this, it

would put the American economy almost completely on a cash basis. Creation of new money, which under present conditions is the real cause of price inflation, would largely be stopped. A severe deflation undoubtedly would result.

Such is the real power of this particular method of inflation control; and such is the situation that exists today. Consumer goods pipelines are full to overflowing. Excessive expansion of the money supply is the chief cause of our inflationary troubles. Easy money and inflation remain the policy of the Truman administration.

If this were not true, why has the net result of Office of Price Stabilization operations been solely to redistribute profits, and to leave consumers with no relief? Where is the stabilization? Further price roll-backs would only dry up sources of supply. This is a late hour at which to seek price roll-backs. If the Office of Price Stabilization were honestly intended to do what the people are told is intended, there would be no talk of roll-backs. There would, instead, be an effort to stabilize prices.

The effective means of reducing prices, if that is the intention, lies within the province of the indirect controls. Less credit, and a smaller money supply; lower prices. To have OPS sitting on the price safety-valve, while other agencies of Government stoke the inflationary furnace, is an invitation to disaster; an explosion that would blow prices sky-high.

There is another means of curbing the expansion of money and credit, fully as important as those already discussed. This involves the management of the public debt.

All of you sitting in this chamber will recall that early last spring a controversy arose between the Treasury and the Federal Reserve Board. The Reserve Board announced it would no longer support Federal Government bonds in the open market, through operations of its Open Market Committee. The Treasury violently opposed this policy. Later, what appeared to be an agreement was reached, and it seemed that the Reserve Board, by and large, was to have its way.

This putative agreement eased the minds of many of us. It goes without saying that open-market support of Government public issue bonds at par or above is highly inflationary. It serves directly to encourage monetization of the public debt. Now I have some facts and figures to present to you; facts and figures provided by the Treasury and the Federal Reserve Board, which show what actually happened. They are disturbing.

These figures relate to the actions in recent months of the Treasury, with respect to the bond market and the status of the so-called Government trust accounts; and also to the actions of the Federal Reserve Board, with respect to market support of Government bonds.

We know that it has been Treasury policy to substitute so-called special issue, non-negotiable Government bonds for the cash in the trust accounts. Such

trust accounts, theoretically at least, are depositories for social security, unemployment compensation, and similar funds. There are 10 such trust accounts.

There has always been an argument over the investment of these funds. The point is not generally understood. The question is not whether United States bonds represent a good investment for trust funds; it is whether or not the money legally intended for a trust fund can properly be used to pay the operating expenses of Government under a deficit program. I suspect the treasurer of a corporation, under most State laws, would go to jail if he used trust-fund money, which the stockholders thought safely invested, to pay the current deficit of an extravagant operating policy. If the money from social-security taxes were put into special-issue bonds and used to pay off the national debt, it would be very different from the present administration fiscal policy of putting public or private issue bonds in the funds and then putting the money in with operating cash. The debt total today is \$254,727,000,000; the bonds in the social-security fund alone total \$14,000,000,000. These bonds are only promises to pay out of future taxes. The taxpayers must understand they will have to pay social security and similar assessments all over again when money will buy less than now. Economy during this period of investing in the trust-fund bonds or the use of the trust money to reduce the debt, would have prevented this double demand on the taxpayers.

Something happened to policies affecting Treasury management of these trust accounts beginning soon after the first month of the present calendar year. With the onset of the controversy between the Treasury and the Federal Reserve Board over open-market support of Government bonds, the Treasury began buying public-issue bonds instead of private-issue bonds for the trust funds. This had the same effect as though the Reserve Board's Open Market Committee had done the buying.

While the Open Market Committee was tapering off its purchases in support of the market, the Treasury was stepping in with purchases to offset the action of the Open Market Committee. The Treasury saw to it that certain classes of bonds were supported at par or above. The anti-inflation policy of the Reserve Board was nullified.

During the entire Government fiscal year 1950 Treasury purchases of bonds for the euphemistically titled investment accounts of the trust funds, in round figures, totaled \$401,800,000. In fiscal 1951, up to June 29, Treasury purchases of bonds for these accounts, again in round figures, totaled \$3,500,000,000.

In fiscal 1950 approximately \$2,400,000,000 was paid out in the form of military insurance dividends. Purchases in less than 6 months of fiscal 1951 totaled \$3,500,000,000. There was a difference of approximately \$1,100,000,000 between the two fiscal periods.

Certainly the income of the trust accounts did not increase so greatly in 1951, as compared with 1950, as to explain this difference of more than a bil-

lion dollars on any but one ground. That must have been the retirement of callable special-issue bonds for replacement with marketable, public-issue bonds, bought in the open market.

Should the inference I have just drawn seem hard to believe, listen to these additional figures: In January 1951 Treasury investment-account purchases of bonds for these trust funds totaled \$36,800,000; in February 1951 they totaled \$262,200,000; in March, \$482,700,000; in April, \$8,400,000; in May, \$22,800,000; and in June, the last month of the fiscal year, \$663,800,000.

The Treasury says that nearly \$604,000,000 of the \$663,800,000 worth of securities purchased in June consisted of non-negotiable special-issue bonds. This would leave approximately \$60,000,000 spent to buy other securities. It was said that a substantial portion of the \$60,000,000 went for securities issued by Government corporations—bonds that are neither issued nor guaranteed by the Treasury.

There are no actual figures available to show just where the \$60,000,000 went. We have only the word of Treasury and Federal Reserve Board officials, and evidently they were hazy on the subject. Nobody wanted to be quoted, nor to involve himself in any controversy.

You may be sure that with respect to these figures, as with those of other executive departments and agencies, Congress will be kept in the dark, so far as possible. Customarily the books of such departments and agencies can be looked at only under subpoena by a congressional committee. Even then, the President may be expected to instruct the administration officials involved to ignore the subpoena.

I suggest that possibly here is an instance where it would be well for one or another of the congressional committees interested in the integrity of our financial structure to seek an opportunity to look at the books, to determine just how and to what extent the investment accounts are being used to support the Government bond market.

Some figures quoted at the Federal Reserve Board, which handles the investment accounts under direction of the Treasury, purported to show that during June 1951 the Treasury acquired \$34,600,000 in marketable securities of the Government for the trust funds. An attempt was made to show that approximately \$30,000,000 of the \$34,600,000 went for postal-savings notes. Such notes customarily are short-term securities, running 60 or 90 days. On this basis, it was said that Treasury operations in the open bond market in June were so small as to have no effect on the market.

Somewhere, in the same conversation, it was admitted that a cursory examination of the records showed about \$25,000,000 unaccounted for out of the \$60,000,000 not used for special-issue bond purchases.

If either \$25,000,000 or \$34,600,000 was used to support the Government bond market in June, and I believe one or the other amount was so used, it must have been adequate. Market support mani-

festly consists less of large expenditures than it does of expenditures at strategic moments and under specific conditions.

Let me offer some figures to indicate the status of operations by the Federal Reserve Board's open market committee during the first 6 months of the present calendar year—January through June 1951.

In January, Federal Reserve bank holdings of marketable Government bonds stood at \$20,800,000,000; in February, \$21,500,000,000; March, \$21,900,000,000; April, \$22,900,000,000; May, \$22,500,000,000; and on last June 27, \$22,800,000,000.

These figures, of course, do not represent net transactions, but do represent the combined portfolios of the 12 regional Federal Reserve banks. Bond trading is done by these banks, under instructions from the Open Market Committee. Total net transactions are shown by the differences between holdings at the end of each month.

From these figures the conclusion may be drawn that early in the year—until the end of April—the Open Market Committee, through the 12 Federal Reserve banks, was supporting the bond market. Since the end of April the combined portfolios remained fairly constant. At the end of June the total had been reduced by approximately \$100,000,000 from the April peak.

In April, when Federal Reserve holdings were highest, Treasury purchases of bonds fell away to \$8,400,000. Since that time, as Federal Reserve support of the market was largely withdrawn, Treasury purchases moved upward. From this only one conclusion can be drawn.

As almost everyone has remarked on occasion, from time out of mind, the proof of the pudding has been in the eating. Therefore Government bond quotations, as published in the Wall Street Journal, the New York Times, and other leading newspapers, are pertinent here.

I shall not use up time with a recital of quotations for the entire list. Let me say, instead, that on July 3, the nearest available date to the closing of the fiscal year, long-term bonds generally stood well below par, ranging from 96.28 to 98.4. Shorter term bonds stood substantially above par, ranging in price from 100 to 108.

It is true that bonds tend to rise in price as they approach maturity, but an average of 104 for short-term bonds would indicate strong market support from somewhere.

Commercial banks, it should be remembered, tend to invest in short-term securities, while those securities with remote maturity dates tend to go to the insurance companies. Whatever else is true, there certainly is an explanation here for the continuing activities of commercial banks in monetizing the public debt, slowed only by private agreements among the bankers.

The figures I have given you were taken from the published reports of the Treasury and the Federal Reserve Board, supplemented by careful questioning of responsible officials. The published re-

ports are complicated, and confusion often is created by the habit of Government bookkeepers of combining the totals of two or more Federal agencies. Segregation of the figures in many instances depends upon the knowledge of some official. The books are not open for inspection.

I believe that such figures as were available, are enough to demonstrate the truth of my thesis. The whole thing adds up, in my own mind at least, to a situation in which the administration tells the public that the orthodox, indirect controls have failed to curb price inflation, while behind the scenes the administration takes steps to see that they do not succeed.

The Federal Reserve Board, which should be independent of the Treasury and of the administration itself, because it is lawfully responsible only to the Congress, is not independent. The Federal Reserve Board would seem to be helpless to make the indirect controls work.

It must be remembered, that not many weeks ago, withdrawal of bond-market support by the Open Market Committee, coupled with the agreement among commercial bankers to hold the line on excessive credit expansion, did bring about a temporary stabilization of prices. Now prices are on their way up once more. I think the Treasury is responsible for the fact.

Several days ago the House defeated the Wolcott amendment which would have compelled the administration to exhaust the orthodox curbs on inflation before proceeding to impose more price and wage controls. I think that was a mistake.

It is my conviction that this action should be reconsidered; that a strong provision should be written into the bill to make sure that indirect controls are applied as vigorously as the occasion warrants.

William Oatis

EXTENSION OF REMARKS OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. BEAMER. Mr. Speaker, under unanimous consent, I enter in the Appendix of the CONGRESSIONAL RECORD an exchange of telegrams:

Representative JOHN V. BEAMER,
House of Representatives,

Washington, D. C.:

Greatly appreciate efforts behalf my husband, William Oatis, imprisoned in Czechoslovakia. Hope for success in expediting his speedy release.

Mrs. WILLIAM OATIS.

St. Paul, Minn.

Mrs. WILLIAM OATIS,
St. Paul, Minn.:

I consider it a privilege and a duty to lend my efforts in behalf of your husband.

JOHN V. BEAMER.

The Spotlight on Drug Addiction

EXTENSION OF REMARKS OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Passaic (N. J.) Herald-News of July 17, 1951:

THE SPOTLIGHT ON DRUG ADDICTION

Drug addiction is one of the terrible curses of mankind, which destroys the user's character before death brings release from misery. Harry J. Anslinger, United States Narcotics Commissioner, describes it as a "communicable disease" more to be feared than smallpox, because one addict is likely to give the habit to as many as four other persons.

Nathaniel L. Goldstein, New York's able attorney general, did a great public service by calling hearings in Manhattan to determine the extent of drug addiction in the metropolis, especially among young people. His probing stimulated police activity. The public was aroused when it read that peddlers were selling deadly, habit-forming drugs to school children. Senate investigators, televising their hearings, put drug addicts on the witness stand to tell their stories to the public.

What Mr. Goldstein did about drug addiction might be compared with Dr. Thomas Parran's attack upon the venereal-disease problem. The former Surgeon General of the United States Public Health Service started by dropping the euphemism "social diseases" and by ignoring the taboo against mention of syphilis and gonorrhea. He gave these illnesses their proper names, called for frankness in dealing with them, and showed how they could be stamped out.

The inquiry started by New York's attorney general added nothing to our knowledge of drug addiction but it stimulated public awareness of a social problem, which was healthy and helpful. What good will come of it?

One immediate gain is that the boy or girl who might have been tempted by an addict or a peddler to try a marijuana cigarette, "just for the lift," or a heroin powder, for a greater thrill, knows now that the first step leads invariably to the second, and that soon there is no way back.

Another gain, already noticed, is that judges are dealing more severely with narcotics peddlers. Exemplary punishment will make drug "pushing" less attractive as a means of livelihood for amoral people.

The publicity given the drug traffic also may cause Congress to strengthen Mr. Anslinger's agency. An extra \$16,000 obtained for that bureau by Representative CANFIELD, when he was chairman of a subcommittee of the Eightieth Congress, enabled Mr. Anslinger to send some of his best men to Italy, Turkey, and Iran, where they broke up gangs which were smuggling opiates into this country. It is easier to smash an overseas headquarters, with foreign government cooperation, than to catch smugglers going through our customs.

Passaic has had no drug addiction problem comparable to New York's, despite our nearness to the great city. There are a few unfortunates, "terminal cases," living out miserable lives on legally rationed drugs, the withdrawal of which would bring agonizing death instead of a death that is no less certain, but merciful. There has not been a single reported case of child addiction since the

Passaic Children's Bureau was established in May 1937.

The Passaic Children's Bureau is thoroughly organized to deal with the problem of drug addiction among children should it arise. Passaic, for 14 years, has gone in for prevention, rather than cure, in dealing with juvenile delinquency. School principals and teachers are under instructions to note wayward tendencies in the classroom and the bureau, which Dr Boone supervises, follows up their reports, so that a boy who steals a bicycle does not drift into petty thievery and housebreaking.

Teachers can detect and report symptoms of drug addiction. Attendance officers, checking absences, would run down the "pushers." The bureau is geared for such work.

Fourteen years of preventive effort is paying off.

Night Before Yesterday, Soviet Film Seen in Red Korea, Exposes Kaesong Troop Withdrawal Demand

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. SIEMINSKI. Mr. Speaker, last November I saw a Soviet hate film in Hamhung, Red Korea, which should alert our U. N. negotiators in Kaesong, relative Communist demands for the withdrawal of foreign troops from Korea.

The Soviet film was named *The Night Before Yesterday*. It had been shown in Red Korea and taught people to hate military uniforms alien to Red regimes. Communist negotiators in Kaesong are on the spot.

Today's headline in the Washington Evening Star says, "One major item blocks truce accord—Issue believed withdrawal of foreign troops." The Kremlin counterpart of Gorbels seems to have embarrassed the Kaesong Reds. But they need not fear.

The U. N. doughboy rose to such an occasion during his stay in Red Korea last year that 3,000,000 Koreans went south with him for the Christmas holidays.

Neckyoke Jones Says

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, under leave to extend my remarks in the Record, I include a Neckyoke Jones Says column, published in the Sheridan (Wyo.) Press. The common-sense logic of Neckyoke Jones attracts a wide following in my home area,

and I commend his comments to the attention of my colleagues:

NECKYOKE JONES SAYS

"Looks like the rainmakers has been busy," I orates to Greasewood. "I dunno," he rezounds. "I still got a idee that ol' Maw Nature with the help of a Crow Injun medycine man has somethin' to do with it. However, it seems now that the bureycrats wants to git ahold of it—an' they want Congriss to put up a cupple billyun dollars to help 'em make rain. You know the bureycrats sure never misses a bet. They ain't nothin' makes a bureycrat hot under the crupper like findin' out that they have slipped up on a propysition on which they could spend some taxpayer's money. Now the stockmen who has been tryin' out this here rain-makin' ain't been askin' the goviment for nothin'. They was willin' to take a chance an' gamble on gittin' a few rain drops. If nothin' come outen it—they wouldn't have no holler comin'. You got to give 'em credit for wantin' to pay fer it themselves. But now the politishuns wants to set in the game—an' really go out to spend money in a big way. It's sure a great age in history—wooden legs, free castor oil—and rain. What's next?" Greasewood thinks Injun medycine men is aful smart fellers. Hopin' you are the same, I am.

Yure fren,

NECKYOKE JONES

Representative Meader's Plan

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the *Citizen Patriot* of Jackson, Mich.:

REPRESENTATIVE MEADER'S PLAN

The proposal of Representative GEORGE MEADER, of the Second (Jackson) District, that private industries be given a major role in the development of backward countries throughout the world merits serious consideration.

Representative MEADER would create a bipartisan commission (modeled on the Hoover plan group) to study the whole problem of aid to underdeveloped nations. His plan differs from the so-called point 4 program of President Truman in that the President urges a Government-financed, Government-run set-up. MEADER would have his commission draw up a master plan, then give to American business the job of building factories or developing mineral and farm land where needed.

Native workmen would be trained, native capital would undoubtedly participate and new leadership would be generated that would spearhead self-operated programs in the individual countries.

There are three primary advantages in Mr. MEADER's plan over President Truman's point 4 program in its present form. First, it would eliminate the semisocialistic aspects of point 4. Second, it would build up and reinforce the concept of free enterprise in nations that we must depend on in our ideological struggles against communism. And third, it would be financed largely with private capital instead of tax dollars.

A fourth advantage—one that might ultimately be the key one—is that MEADER would replace the too-often-fuzzy planning of bureaucrats with the hard-headed common sense of practical businessmen, men who would have to make the projects succeed or lose their jobs.

The greatest handicap that MEADER's plan would face, as we see it—aside from the fact that it is offered by a minority party member—is the twofold job of erasing the widespread antipathy in other lands against foreign capital and "exploitation" and eliminating the fear among American businessmen that they would build up a successful enterprise only to have it seized by the government on some pretext or other.

He offers programs to solve these problems; whether they would succeed remains speculative, although there is every reason to hope so.

Although chances of Representative MEADER's plan being adopted by the Democratic majority at this time are slight, that does not mean it should be pigeonholed and forgotten. Development of all countries in the world to a point where the people are prosperous, happy and self-sufficient is one of man's most challenging dreams. Many feel it is the greatest hope for eventual world peace—certainly, if the have-nots are eliminated one major cause for war will have gone by the boards.

The principal opposition to any such suggestion usually comes from those who say the people Representative MEADER and President Truman seek to aid are largely incapable of helping themselves. They assert that any money we spent would just be poured down a rathole.

It's all too easy for us to forget that there was a time when the United States was nothing but undeveloped land. Foreign capital financed the *Mayflower*, the Virginia colony, Pennsylvania, Maryland and all the rest.

Our Nation didn't grow and evolve in a day, in the process it had a full share of help. It's well to note, too, that practically all of this foreign capital came from private investors.

The Meader program is well worth keeping alive and supporting to the fullest extent. Its objectives may be far-distant, but they form a goal that is worth working and waiting for.

Loans on Homes Guaranteed by the Veterans' Administration

EXTENSION OF REMARKS

OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. JARMAN. Mr. Speaker, some time this week the House will vote on the provisions of section 106, subsection (c), set out on pages 44 and 45 of H. R. 3871, a bill to amend the Defense Production Act of 1950. Said subsection provides:

(c) Section 605 of the Defense Production Act of 1950 is amended (1) by striking out the period and inserting in lieu thereof the following: "And provided further, That no more than 6 percent down payment shall be required in connection with the loan on any home guaranteed by the Veterans' Administration pursuant to the Servicemen's Read-

justment Act of 1944, as amended, and the cost of which home does not exceed \$12,000"; and (2) by adding at the end thereof the following sentences: "Subject to the provision of this section with respect to preserving the relative credit preferences accorded to veterans under existing law, the President may require lenders or borrowers and their successors and assigns to comply with reasonable conditions and requirements, in addition to those provided by other laws, in connection with any loan of a type which has been the subject of action by the President under this section. Such conditions and requirements may vary for classifications of persons or transactions as the President may prescribe, and failure to comply therewith shall constitute a violation of this section."

For the consideration of the Members prior to their vote on this committee amendment, I have asked unanimous consent to have this statement printed in the Appendix of the Record.

A nonpartisan survey has been made by the Agricultural Development Service of the Oklahoma Agricultural and Mechanical College entitled "Effects of Regulation X on the Home-Building Industry in Oklahoma City and Oklahoma County, Covering the Period From December 1, 1950, to May 1, 1951." The results of this survey clearly show the need in this section of our country for the amendment under consideration.

Eighty-two percent of all home-loan applications were made by veterans. Only 15 percent of these veterans could qualify under the restrictions of regulation X.

Under regulation X, a veteran buying a \$12,000 house is required to pay \$1,900 down, plus loan closing expense. The great majority of our veterans do not have that kind of down-payment money. They need this amendment.

The text of the survey to which I have referred follows:

EFFECTS OF REGULATION X ON THE HOME-BUILDING INDUSTRY IN OKLAHOMA CITY AND OKLAHOMA COUNTY COVERING THE PERIOD FROM DECEMBER 1, 1950, TO MAY 1, 1951

(Prepared for the Oklahoma Home Builders Association, Oklahoma City, Okla., by the agricultural-industrial development service of the Oklahoma Agricultural and Mechanical College, Stillwater, Okla.)

PURPOSE

On October 12, 1950, the Federal Reserve System imposed a restriction on residential construction credit designated as regulation X. The purpose of the regulation was to tighten credit available for residential construction by increasing the amount of initial down payment and shortening the repayment period. The purpose of the credit regulation at the time of its promulgation was to reduce the volume of new residential dwelling units in the Nation during 1951 to approximately 850,000 units.

It was the feeling of the Oklahoma Home Builders Association that local effects of the regulation might differ greatly from those found at the national level and in other selected areas. Inasmuch as there has been little previous study of local or regional differentials in relation to national development in housing, the Oklahoma Home Builders Association commissioned the agricultural-industrial development service of the Oklahoma Agricultural and Mechanical College to make a study inquiring into such

differentials as might exist between the local experience and that at the national level.

Pursuant to that request, the agricultural-industrial development service has completed a study of the effects of regulation X on home building in Oklahoma City and Oklahoma County. The following report includes the pertinent data accumulated over a 5-month period from December 1, 1950, to May 1, 1951, and an analysis of their possible effects on the building industry.

THE DEMAND FOR HOUSING

The preliminary releases from the Bureau of the Census show a decline in 1950 of population for the State of Oklahoma as a whole; however, 90 percent of the urban and metropolitan centers in the State having a population above 5,000 in 1940 show substantial population gains in the 1950 census. Close examination of these facts, supplemented with population data gathered over a period of the past 3 years in connection with survey work being conducted by the agricultural-industrial development service, reveals that a major part of this loss in population has been from the rural areas. Farms in Oklahoma have continued to increase in size, thus causing a rather high rate of farm-home abandonment in the rural areas. Figures gathered by the service reveal that the rate of farm-home abandonment in the State as a whole averages around 35 percent, based on 1940 census figures. Consequently, although the State as a whole shows a loss in population, it is evident that the urban populations have actually increased and the demand for housing in those areas has shown the same increase. We must also add to this situation the fact that families on an average have decreased in size since 1940. The average size of families in 1940 was approximately four. The average size of families in Oklahoma today is approximately three.

The total population in Oklahoma City has increased 32.5 percent over 1940, while the number of dwelling units has increased only 29.8 percent. Taking into consideration the decrease in the size of families since 1940, the increase in the number of families in Oklahoma County has actually been about 43 percent. The housing-demand potential in Oklahoma County based on known population alone is sufficient to warrant the conclusion that housing needs in Oklahoma County have not been satisfied even for the current population.

RECENT DEVELOPMENT IN HOME BUILDING IN OKLAHOMA CITY

Tracing the history of home building and lot development in the Oklahoma City area from January 1, 1947, up to the present date, it is found that a substantially small part of the building development took place in 1947, 1948, and the early part of 1949. A major portion of the building in the area was completed the latter part of 1949 and continued at a high rate through 1950.

A comparison of building development in Oklahoma City with other cities of comparable size in the Nation reveals the fact that the peak of development in Oklahoma City was reached a year and a half later than the peak for other cities. In other words, the boom in building development in the Oklahoma City area got a comparatively late start and was nearing its peak at a time when building development in other cities was already beginning to level off. Consequently, regulation X caught building development in this area short of what would have been a normal fulfillment of the housing-market demand.

The history of development in the past 4 years also reveals the fact that there is normally a time lag of approximately 6

months from the time raw land is bought to the time it is developed for building. Information from the Oklahoma City builders and developers, supplemented by data from the Oklahoma City and County Planning Commission, reveals that since regulation X went into effect there has been an exceptionally small percentage of land development started. In fact, since October of 1950 there has been for the 7 months' period ending May 1, 1951, only 193 lots recorded for development compared with 2,269 lots recorded for development the preceding 7 months' period (table 1 attached). Preliminary figures from the 1950 census releases reveal that the number of housing units in Oklahoma City is barely adequate for the present population. Therefore, any increase in the present size of the Oklahoma City labor force will have the immediate effect of creating a housing shortage. This unfavorable condition coupled with the fact that lot development is definitely lagging could have the effect of creating a critical situation in a very short time.

IMMEDIATE EFFECTS OF REGULATION X ON BUILDING IN OKLAHOMA CITY

According to preliminary estimates by the FHA home building has been reduced in the Oklahoma City area by approximately 50 percent since regulation X went into effect. This percentage is even more significant when it is combined with the fact that a major part of the building since regulation X has been completed on lots bought under the "hardship clause," as interpreted by the Veterans' Administration. The fact that there has been a substantial amount of building carried out even under the "hardship clause" is due to the inertia of the building boom that was in effect at the time of the promulgation of regulation X.

Information based upon approximately 90 percent of the loan applications filed in Oklahoma County obtained from the major loan and finance agencies located in Oklahoma City reveals that only 21 percent of the people who made applications for loans from December 1, 1950, to May 1, 1951, could have qualified under the credit restrictions of regulation X with the indicated cash on hand (table 2 attached).

Breaking the information down by type of loans, i. e., FHA, conventional, and GI, or VA, it is found that 82 percent of all loan applications were GI or VA (table 2 attached). Only 15 percent of those applying for GI loans could qualify under the restrictions of regulation X. Looking at the applications from the point of view of home prices, almost 80 percent of the loan applications were for homes under \$11,000 in price (table 3 attached). More than 60 percent of the prospective purchasers who could not qualify for loans under regulation X were purchasing houses in the price bracket from \$5,000 to \$9,000.

THE EFFECTS OF REGULATION X ON FUTURE HOUSING DEVELOPMENT IN OKLAHOMA CITY AND OKLAHOMA COUNTY

Figures released by the Oklahoma Employment Security Commission show that 12 percent of the total employment in Oklahoma in 1949 and 1950 was in construction and related industry. The drastic reduction in building that is expected, based on preliminary study of the current local trend being brought about by the restrictions of regulation X will have an immediate effect on the State employment picture. In the smaller urban areas of the State where developments were not large enough to come under the "hardship clause" construction is already coming to a rapid halt. With any decrease in other areas of the State in construction employment, the two alternatives for that particular segment of the labor

force are either to seek employment opportunities in Oklahoma City or other potential defense centers in the State or to leave the State entirely to find employment elsewhere. Either of these two alternatives will have serious repercussions upon the State's economy. If employment opportunities are available in Oklahoma City, and the current downward trend in building continues, housing will become an immediate problem. If the labor force moves out of the State, then the potential productive capacity of the State in the present defense economy will be impaired.

The buying power of Oklahoma City families is low on a comparative basis with other cities in the industrialized East and on the west coast. The starting salaries in Oklahoma City's second largest single basic industry employing almost one-third of the total labor force is a little less than \$2,600 per year. The comparatively low buying power of Oklahoma City home buyers places the Oklahoma City area at a definite disadvantage with the other metropolitan centers in coping with the credit restrictions imposed by regulation X.

SUMMARY AND CONCLUSIONS¹

By way of summary, it might be well to point out again these facts. First, despite a decrease in total State population in Oklahoma, the population, and consequently the demand for housing has actually increased at a rapid rate in the urban and metropolitan centers. Second, the Oklahoma City area got a comparatively late start in the building boom and is at least 2 years behind other areas in satisfying the demand for housing. Third, the present trend of builder-developers in the area reveals a reluctance to start new developments under the present restrictions. This will have the effect of virtually stopping land development and the creation of building lots when the current inventory is exhausted. At the present rate of construction under hardship cases the lots will be exhausted by July of this year.

Further information from prospective home purchasers reveals the inability of the average income earner in the Oklahoma City area to make home purchases in any substantial volume under the present credit restrictions. The cash savings in the hands of individuals is found to be comparatively low. A major portion of the buying that has been done since regulation X went into effect has not come under the credit restrictions imposed by the regulation.

As stated before the purpose of this survey was to make a detailed analysis of the effects of regulation X on the home building industry in Oklahoma City and Oklahoma County. The results that we have found in Oklahoma County do not by any stretch of the imagination reflect the situation as it may exist in any other city or county in the Nation. It is a well known fact that each individual city has its own particular pattern of influencing economic factors. These factors, including individual incomes, buying power, savings in the hands of individuals, types of basic industry, location, etc., will always bring forth differing results and effects when any blanket regulation covering the Nation as a whole, such as regulation X, is put into practice.

Some of those adverse effects that cannot be readily foreseen are showing up in the

Oklahoma City area in the mortgage market. Due to recent changes in the Government bond market, insurance companies who are heavy bond holders are reluctant to cash them in. Thus the surplus investment capital that would ordinarily be available for purchasing mortgages is tied up. This, coupled with the fact that mortgages are available in the higher income areas of the industrialized East and the west coast at at less than 100 percent has had the effect of halting the sale of mortgages in the Oklahoma City area. The inability of builders to readily dispose of mortgages, the relatively low buying power of Oklahoma city families, and the lack of adequate lot development for future building has brought the Oklahoma City home building industry to the brink of collapse.

We have made no attempt in this study to present possible alternatives or substitute regulations that might alleviate some of the more unfair hardships that regulation X has imposed in some local areas such as Oklahoma City. However, in view of the information contained in this report, it is evident that certain effects of the regulation might be made less severe and serve a more beneficial purpose if limited modifications of the existing regulation were put into effect. These modifications would of necessity need to be made for specific areas based on a thorough knowledge of the existing conditions in those areas.

In the Oklahoma City area the modifications that would likely prove most beneficial from a long-run point of view would be the relaxation of credit restrictions on housing within a selected price range. If homes in Oklahoma County selling for \$11,000 or less were exempt from credit restriction the need for additional housing could be satisfied without seriously affecting the over-all objective of regulation X in the area. However, the most important result of this type of modification would be the lot development activity that would immediately go into effect. Steady and orderly raw land development is an absolute necessity for the continuation of even a restricted housing development program. This is not to say that regulation X will stop home building in the Oklahoma County area, but it is clearly evident that the regulation in its present form will create a time lag in raw land development that could prove detrimental to the area's program of future development.

If it were not considered feasible to make this type of modification, the same effect might be brought about by an allocation system based on a percentage of the homes built in the preceding year, or on the proven need for housing in particular areas. This type of housing program would appear to be the most equitable for two reasons: (1) It would give those cities in the Nation having a maladjustment in their housing demands and needs an opportunity to maintain their building industry on an equal basis with the more fortunate areas where regulation X has not affected the home building industry, and (2) it would enable the building industry to continue substantial operations during a period of time that may mark the difference between the future success or failure of a more severe mobilization economy. There is little doubt that there will be a maladjustment in the distribution of new homes built in the next few years unless some areas are given individual attention.

The national economy is at present being geared for greater defense production. The area of the Southwest and particularly Oklahoma City is available to become an important location for defense production. Restrictions that are placed on the home building industry in this area may in the

very near future have the effect of slowing down, or completely stopping, the defense program of the area. Until such time as we may enter into a full-time war economy, regulation of the building industry should be modified to meet local needs of the present defense economy. Otherwise the efforts that must be put into effect in the event of a full-time war economy may be seriously jeopardized.

Woman and Inflation: Neglecting Her Power To Prevent, She May Exercise It To Punish

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I insert the article entitled "Power of Woman Overestimated," by Mr. Lowell Mellett, as it appeared in the Washington Evening Star on Tuesday, July 17.

While there was a disappointment in Congress in the failure of the women of America to assert themselves in the battle to halt inflation, nevertheless, I feel that there was no necessity for them to do so. After all, they march to the polls on election day and send to Con-

gress their duly elected Representatives to fight for the security of the United States, to protect the best interests of the American home, the family table, and the economy of the Nation. The article by Mr. Lowell Mellett follows:

POWER OF WOMAN OVERESTIMATED—ANGRY AMERICAN HOUSEWIFE HAS FAILED TO DELIVER EXPECTED PUNCH IN BATTLE FOR PRICE CONTROL

(By Lowell Mellett)

They tell you never to underestimate the power of a woman. What they fail to tell you is that it may be possible to overestimate it.

The President, Messrs. Wilson, Johnston, DiSalle, and all the others engaged in the struggle to prevent runaway inflation, have counted heavily on the American housewife. Appalled by the prices she meets in the market place, they have expected her to rise as one woman and demand protection from Congress. There would be a flood of letters and telegrams, they thought, and the telephone wires would sizzle. There might even be a march on Washington by women wielding brooms.

But the great uprising has not occurred. Most every woman you meet seems to be angry at prices and thinks something should be done about them, but the anger isn't being organized and carried to the Congress. Busy lobbyists for special interests, according to House Majority Leader JOHN MCCORMACK, gather in the corridors outside the House to write amendments for House Members to offer. But there is no report of any of them being trampled, or even having an elbow jostled, by delegations of women aroused by the wrong being done them.

Come election time, a year from now, if things have got worse in the meantime, as seems likely to be the case, women may

exert their powers, but it will only be the power to punish, not to prevent.

This seeming or real indifference of the women doubtless is comforting to the Congress Members engaged in overriding the administration. It enables them to agree with Representative WOLCOTT of Michigan, master mind of the Republican-Dixiecrat coalition in this particular fight. Representative WOLCOTT protests "the campaign of untruth and calumny" designed to show that "the overwhelming majority of Republicans and not a few patriotic Democrats were sabotaging price, wage, and credit controls," whereas they are merely seeking to eliminate "socialistic power grabs."

Who is conducting this campaign of calumny, the Michigan man hasn't said. He may have the newspapers in mind. Most of those I see, which is a good many, are generally favorable toward effective economic controls and are not backward in reporting what is happening on the Hill. None is promoting any recognizable "socialistic power grabs."

He could refer to organized labor, the strongest advocate of controls. Able representatives of the big organizations have appeared before committee after committee, during the various stages of the fight, urging consideration of the consumer. They have given Congress the benefit of thorough studies and exhaustive statistics. And they have taken the issue to the workers through their own press, mostly weeklies, now with a total circulation high in the millions, and to the general public through the radio, on which they have established regular daily and weekly programs.

What labor will do if the fight for controls falls isn't being said. But there is no certainty that it will wait until next election to do it. Its acceptance of wage controls always has been predicted on price controls. Without proper price controls, widespread demands for further wage increases are certain to be made. Whether these demands will lead to strikes is anybody's guess. But organized labor, according to this week's CIO News, "will not accept a lopsided bill."

Red Cross Flood Relief

EXTENSION OF REMARKS OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. CANNON. Mr. Speaker, under leave to extend my remarks, I include a telegram from the Washington office of the American National Red Cross by its president, Mr. E. Roland Harriman, as follows:

WASHINGTON, D. C., July 16, 1951.

HON. CLARENCE CANNON,
House Office Building,

Washington, D. C.

Because of the unprecedented nature of the floods sweeping Kansas and Missouri, we have prepared this special report for the information of Members of Congress from these two States. The full resources of the American National Red Cross have been mobilized to help flood victims. Thousands of Red Cross volunteers in cooperation with governmental military and civilian agencies are doing everything possible to relieve suffering during this emergency period.

Ninety Red Cross disaster workers are assisting them. They have established 33 refugee shelters along rivers in Kansas and based on latest reports early today 18 shelters have been set up in Missouri. Our figures indicate that 37,203 families have been affected by floods in Kansas and 4,031 families affected in Missouri. Red Cross is feeding many of these people in shelters and is providing food for some who are staying with friends and relatives on high ground. Reports today indicate that all emergency needs are being met; meanwhile we are rushing preparation for long-term rehabilitation aid to those who will require continuing Red Cross help in repairing or rebuilding and refurbishing their homes. Traditionally, Red Cross provides this type of aid on the basis of need of all disaster victims lacking resources to reestablish themselves. Earlier today I increased the preliminary Red Cross allocation for this emergency from \$250,000 to \$750,000. Further financial assistance as required will be forthcoming from the national organization. Because of unprecedented extent of floods, I have asked Red Cross chapters in Kansas and Missouri to enlist the financial support of all citizens who wish to make special contributions for the relief of their stricken neighbors. Please assure your constituents that the American National Red Cross will go all-out in providing emergency relief and long-term rehabilitation assistance in the weeks and months ahead.

E. ROLAND HARRIMAN,
American National Red Cross.

Statement of Policy on Approval of ILWU Agreements by Wage Stabilization Board

EXTENSION OF REMARKS OF

HON. RICHARD B. VAIL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. VAIL. Mr. Speaker, as a cardinal example of unmitigated arrogance and flagrant defiance of the United States Government, I offer the statement of policy directed to Members of Congress by the Communist-controlled International Longshoremen's and Warehousemen's Union, headed by the notorious Harry Bridges, which sets forth in no uncertain terms its intention to enforce its aims through stop-work tie-up of water transportation if the Wage Stabilization Board declines to yield to its demands.

In my opinion the situation calls for an investigation by the Department of Justice and such action as may be necessary to establish to the ILWU that their threatened program, if initiated, will bring swift and severe punishment.

The above-mentioned follows:

INTERNATIONAL LONGSHOREMEN'S
AND WAREHOUSEMEN'S UNION,
San Francisco, Calif., July 5, 1951.
Hon. RICHARD B. VAIL,

House Office Building,
Washington, D. C.

DEAR CONGRESSMAN VAIL: The executive board of the International Longshoremen's and Warehousemen's Union, at its meeting of July 26 and 27, 1951, adopted the en-

closed statement of policy on approval of ILWU agreements by the Wage Stabilization Board, which we sincerely request be given every consideration.

We urge that you lend your efforts to secure the immediate approval of the agreements reached by our organization with the longshore employers on the Pacific Coast and in Hawaii.

Sincerely yours,

LOUIS GOLDBLATT,
Secretary-Treasurer.

(Enclosure: Statement of policy on approval of ILWU agreements by Wage Stabilization Board.)

STATEMENT OF POLICY ON APPROVAL OF ILWU AGREEMENTS BY WAGE STABILIZATION BOARD

The ILWU, nationally, internationally, and especially in Hawaii and on the Pacific coast in the maritime industry, has recently won notable economic victories at the bargaining table. Unity, determination, and the record of our union has paid off in substantial wage and pension and union security gains.

What was won from some of our toughest employers, however, is now in danger of being snatched away by the Wage Stabilization Board in Washington, created under the National Defense Production Act. This Board, for instance, has approved part of the wage-pension increase negotiated in Hawaii last February, but has refused to rule on the pension plan or on further wage increases for our Hawaii longshoremen, scheduled for January 1, 1952, in case no pension plan has been agreed to by the employers and our union by that time.

Pacific coast longshoremen, clerks, dock workers, car workers, etc., have just negotiated the best pension plan since that won by the United Mine Workers of America. This plan calls for 15 cents per man-hour employer contribution to a trustee pension fund, plus a 5 cents per hour wage increase, plus fringe and welfare improvements. The pension, wage, welfare settlement is subject to WSB approval, but the WSB has not even worked out the policy on pensions and presently is bound by a 10-percent wage-pension ceiling. So our union rank and file is left hanging on the hook. What is rightfully ours is being withheld, and we face the possibility of having our gains handed back to our employers by order of this Government agency.

We are told that the reason for this possibility is that pensions are inflationary and that inflation is a threat to the national economy and national security. One hundred dollars a month to retire a 65-year-old longshoreman or clerk who has spent 25 years or more in the longshore industry is said to be inflationary; but \$50,000,000,000 in profits for the employer is not.

Simultaneously, bribes are being paid in Washington to get war contracts, amortization privileges, and RFC loans, but these are said not to be inflationary. They are said to be the necessary price under our free-enterprise system of persuading business to produce in the interests of the American people.

We resolve as follows:

1. The ILWU demands approval of our Hawaii and Pacific Coast longshore agreements. Disapproval by the Wage Stabilization Board shall be considered by us the signal for simultaneous stop-work meetings up and down the Pacific coast and by longshoremen in the Territory of Hawaii. Such meetings will be held for the purpose of working out a definite program of economic and political action to secure for our rank and file the gains which we have negotiated.

2. If such meetings, or if the result of such meetings, is that it is determined to

tie up the ships, we serve notice now that all ships will be tied up, without any exceptions.

3. The executive board goes on record now to inform President Truman, Democratic Party Chairman William Boyle, Mr. Charles E. Wilson, Mr. Eric Johnston, and various Congressmen and Senators of the sentiments and program of our union, as expressed in this resolution, and our intention to take such action as we deem necessary to secure the results of our negotiations, and to achieve our objectives in this respect.

4. We call upon our locals to likewise support and endorse this program and to likewise notify President Truman, Mr. William Boyle, chairman of the Democratic Party, Mr. Johnston, and their respective Congressmen and Senators and the Chairman of the National Wage Stabilization Board of our program and of our determination to effectuate it.

Public Housing Contra National Policy

EXTENSION OF REMARKS OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. JARMAN. Mr. Speaker, later this week the House will vote on the conference committee report on the independent offices appropriations bill, 1952. It is my understanding that said committee report raises from 5,000 to 50,000 the number of public housing units authorized for 1952. For the consideration of the Members prior to their vote on this report, I have asked unanimous consent, to have this statement printed in the Appendix of the Record.

The House has recently passed a \$7,200,000,000 tax bill for the American people to pay in 1952. It is an emergency revenue-raising measure for a recognized emergency preparedness period in our Nation's history. Our recognized objective is to cut nonessential Government spending to the bone and to raise the necessary revenue to prepare our Nation.

Continuance of a public housing construction program would run contra to our national objective. Read again the House debate on May 4, 1951 and remember that in fiscal 1952 we are urged by our leaders, civilian and military, to prepare for tightening our belts and make our greatest effort to prepare our Nation to meet the Soviet threat. Remember that as one major segment of our national economy, the home-building industry produced approximately 1,400,000 units in 1950, but that for 1951, by imposition of credit controls, our Government has cut home-building volume approximately 40 percent, or to 850,000 units. In the light of these developments in our national preparedness program, there is no justification for the initiation of any new public-housing construction.

At a time when Congress is levying billions of dollars in new taxes on the

people of America, read the following newspaper items and decide for yourself whether Congress will be justified in approving a socialized public-housing program for 1952 that underwrites Housing Authority Federal tax-exempt bonds with an unconditional guarantee by the United States Government.

The following item appeared in the Washington Post on July 13, 1951:

BUSINESS OUTLOOK—COMPETITORS FOR HOUSING BONDS MUST BID IN FIVE PLACES AT ONCE

(By J. A. Livingston)

At 3 p. m. on Tuesday, July 17, two powerful financial syndicates will engage in an unprecedented competition. They'll bid in 58 places at once for the privilege of offering American investors \$171,000,000 of a new type of bond.

The securitizers are Housing Authority bonds of cities, towns, and counties. They're unconditionally guaranteed by the United States Government—lo and behold—totally exempt from Federal taxes. Other guaranteed housing bonds have been issued before, but the Federal guarantee applied only if the local housing authority complied with certain specific conditions. No strings are attached in this case. As for the lo-and-beholdness, I'll come to that later.

What makes the competition unprecedented is that the syndicates must submit bids by personal representatives in places as geographically far apart as Moultrie, Ga., St. Paul, Minn., Bethlehem, Pa., Omaha, Nebr., and San Francisco, Calif. While the bids are being opened officially in these various places, the syndicate managers in New York will engage in a game of show down.

One competing group is headed by New York's Chemical Bank & Trust Co. Because it comprises many of the Nation's largest banks, including the Chase National, Guaranty Trust, First National of Chicago, Philadelphia National Bank of America, it's called the "banking group," though many security dealers are in it. The other syndicate, headed by Blyth & Co., Phelps, Fenn & Co., and Lehman Bros., comprises investment dealers, exclusively, and is called the "dealer group."

The syndicate managers will compare their bids—city by city, town by town, and county by county, to determine who is highest, say, on New Orleans' \$17,340,000 block of bonds, or St. Paul's \$9,270,000, or Bethlehem's \$5,150,000, or Tuckahoe's \$1,320,000, or Pittsburgh's (Tex.) \$544,000. But even that won't be final.

A local bank, or a local investment house, or even a group of local investors might make the best bid on the Public Housing Authority's bonds issued by, say, Jesup, Ga., or Nampa, Idaho. So, the winner will be determined not in New York, but on the spot. On this you can bet, the Western Union and American Telephone & Telegraph offices serving Wall Street will have a busy 30 minutes next Tuesday afternoon.

Obviously, the public-housing deal is not like most competitive-bidding deals—winner take all. If the Blyth group bid is much higher than the Chemical's or vice versa, then one group might swallow the entire issue, except for a local winner here and there. But if the two syndicates gage the municipal bond market at about the same level, then the bonds might be split up 70-30, or 60-40, or 51-49 between the groups.

In that event, the Chemical group might offer for sale to investors one lot of Housing Authority bonds and the Blyth group another lot. Or, they might decide, if the split is nearly even—to combine the offerings into a single, big bundle. In any case, a precedent will be established in the bidding,

and—if the bidding's close—in the subsequent public sale of the bonds.

By specific act of Congress—and here we come to "lo and behold"—the bonds are exempt from Federal income taxation, present and future. That's of great significance at a time of rising personal and corporate taxes. For the \$171,000,000 bonds now being issued are only a beginning.

The law authorizes issuance of bonds for 810,000 dwelling units. If costs run to \$8,000 per dwelling, then \$6,480,000,000 bonds could be issued; if \$10,000, then the issue could run to more than \$8,000,000,000. Either amount would be an impressive addition to the \$23,000,000,000 tax-exempt bonds now outstanding. This is ironical, indeed.

For years, Secretaries of the United States Treasury have tried to do away with tax exemption of State and local securities. The Federal Government declines to accord its own obligations this privilege. Yet, Congress has approved an increase of at least 25 percent in the supply of tax exempts. And on a security Congress, itself, guarantees. So, having approved and sponsored housing bonds, Congress cannot in the near future try to legislate against tax exemption.

Thus, the housing bonds are more than an attractive security to the high-income taxpayer. They're a legislative decision of fundamental economic importance.

The following item appeared in the Washington Post on July 18, 1951:

DISTRICT OF COLUMBIA FIRMS AID \$155,449,000 BOND OFFERING

A syndicate headed by Blyth & Co. and Lehman Bros., and including Folger, Nolan, Inc., Robert C. Jones & Co., and Mackall & Coe yesterday were the successful bidders for \$155,449,000 of \$171,319,000 of housing bonds offered by Housing Authorities of 58 communities spread over the Nation.

The bonds are being offered today at prices to yield from 1.05 percent for 1952 maturities to 2.25 percent for those maturing in 1992.

Judging from preliminary inquiries, dealers said yesterday that many of the earlier maturities would be bought by the larger New York banks and insurance firms. Because of the tax-exempt status of the issues it was thought that most of the longer term bonds would be sold to private investors as the 2.25 percent yield is equivalent to a 4.50 percent yield to people whose incomes are high enough to bear a 50 percent United States income tax.

The \$15,870,000 of bonds not awarded to the foregoing syndicate were sold to a banking group headed by the Chemical Bank & Trust Co. and the Chase National Bank both of New York.

Bond dealers reported yesterday that they expected relatively few of the \$9,000,000 of refunding mortgage bonds of the Washington Gas Light Co. awarded to Kuhn, Loeb & Co. would be sold to investors in the District. It was probable that they would be sold principally to out of town institutions, it was said.

The following item also appeared in the Washington Post on July 18, 1951:

PHA TO DECIDE TODAY ON ACCEPTING LOW-RENT HOUSING BIDS

(By Alfred Friendly)

The Public Housing Administration late last night deferred until this morning a decision whether to accept bids from underwriting syndicates on more than \$171,000,000 worth of bonds to finance low-rent housing projects in 58 communities.

PHA Acting Administrator Marshal W. Amis announced the agency's determination would be made at 10 a. m. today.

The sealed offers were opened yesterday afternoon; the interest rates demanded averaged out to about 2.073 percent.

The fact that PHA did not announce its decision at once indicated that the rate demanded was higher than had been expected, but was not so high as to be rejected outright.

PHA had hoped that the bonds could be floated on a yield basis of less than 2 percent. Some months ago, in a less tight credit situation, the expectation was that they could be sold on a 1½ percent annual interest rate.

The bonds are tax-exempt and guaranteed by the Government, thus constituting attractive securities for investors in the high-income-tax brackets. They are offered by the local housing authorities in 58 communities which have developed the low-cost-housing projects to the point where they need temporary financing.

The \$171,000,000 offering is the first under the 1949 amendments to the 1937 Housing Act. Before the year is out, bonds for more than \$200,000,000 more are expected to be offered, and in the first half of 1952 projects needing \$500,000,000 to build are expected to be ready for permanent financing.

Under the new program the Government is authorized to pay out a subsidy of \$1,500,000,000 over a 6-year period to local housing authorities. This was initially expected to permit the building of 810,000 housing units, but with rising costs only 640,000 to 700,000 are likely.

Here is the way the program works: A local housing authority, borrowing enough money from the Government to get a survey going, lays plans for a housing project. If it is approved by the Public Housing Administration it arranges temporary financing, usually from private sources, and then begins the erection of the units. Later—and this is the case with the 58 projects now offering bonds—it either makes arrangements for permanent financing from the Government or—because it is much cheaper—floats its own bonds, federally guaranteed, for public sale.

Private bidders make offers to underwrite the issue, planning to sell the bonds in turn to individual investors. They indicate, as they did yesterday afternoon, what interest rate they demand to take the issues. Offers are made individually on each project.

The housing units are built to rent for about 20 percent below the going rate for decent housing in each community. The Government subsidy is calculated to make up the difference between the operating cost of the project, to be covered by returns from rental payments, and the cost of paying the interest and amortizing the principal of the bonds in 40 years.

Only low-income families are allowed to rent the units. The definition of low incomes varies from a high of \$2,800 a year to a low (in New Orleans) of \$1,500. No family earning more is allowed to occupy the units.

The average rental for a four- or five-room unit—living room, kitchen-dinette, and two or three bedrooms, and bath—is \$23 a month, plus \$7 for utilities. Rents are not fixed for the unit but for the tenant. That is, the tenant pays a monthly rent exactly one-fifth of his monthly income, whatever kind of apartment he occupies.

Under earlier housing acts a total of 191,700 units have been built and rented. Currently, there are over 800 local housing authorities with projects in active stages.

In yesterday's dealings no projects in nearby areas were involved. The nearest was one in Bethlehem, Pa., which is seeking to float \$5,150,000 worth of bonds. Figuring a cost of \$10,000 for land and construction for each housing unit, this would provide for the erection of something more than 500 dwellings.

A Bill To Get Facts on Point 4

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Detroit Free Press of Tuesday, July 17, 1951:

A BILL TO GET FACTS ON POINT 4

Rising water, bringing fire in its wake, has visited dire disaster on Kansas City. It could have been prevented. With adequate flood control the whole tragic, desolating horror would have been avoided.

Flood control costs billions. So does elimination of erosion and dust bowls, reforestation, slum clearance, adequate hospitals and institutions for the insane, and all the other vast works which must be done before America will be secure against vicissitudes.

Until it is so, any talk of the United States setting out to remake the world—as President Truman does when he speaks of his point 4—is fatuous, puerile nonsense. Before we undertake to provide each Hottentot with a daily quart of pasteurized milk, our own house must be set in order.

That is why his Capitol Hill colleagues should give earnest consideration to a bill introduced by Representative GEORGE MEADER, a new Member of Michigan's Republican delegation in Congress.

WOULD SHOW ADVANTAGE OF AMERICAN WAY

MEADER concurs with the President that large portions of the earth's surface need what Mr. Truman referred to in his inaugural address as "the benefits of our scientific advances and the industrial progress available for the improvement and growth of undeveloped areas."

He agrees also that the President was right when he said that "their poverty is a handicap and a threat both to them and to more prosperous areas."

Where MEADER stops is at the administration demand that billions of dollars in American tax money be used as the magic wand with which it aspires to transform blighted regions into Edens.

Before the necessity for doing that is accepted the Michigan Congressman would find out exactly why the workings of private enterprise rather than exported socialism can't be made to do the job. Very pertinently he said:

"Just as the United States miraculously outstripped state-controlled economies in war production in World War II by calling upon the immense store of energy and initiative residing in a free people, we can demonstrate the superiority of the free enterprise system over state ownership and management in developing the world's natural resources for the benefit of its people."

Nobody has bothered to discover the truth

Admittedly there are hindrances to that. A major one is the political uncertainties which makes private capital hesitant to undertake ventures abroad.

That is exactly where MEADER's bill comes in. It would create a nonpartisan, nonpolitical body modeled on the Hoover Commission to explore existing barriers to the exercise of American initiative in lands where Mr. Truman would activate his hit-the-taxpayers point 4.

It is the obvious beginning point. Until the bars to private initiation of our "scientific advances and industrial progress" in un-

developed areas are precisely known they cannot be removed.

And until we know to what extent they can be done away with neither Mr. Truman nor anyone else can vouch for the validity of his point 4 concept or any part of it. Yet until MEADER introduced his measure no one, Mr. Truman least of all, ever bothered to find out whether there was even partial justification for the point 4 idea.

That is why we say MEADER's colleagues ought to give his bill their serious attention.

Pro and Con on United States Medical Academy

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. PRIEST. Mr. Speaker, the current July issue of the well-known journal, Medical Economics, contains two articles by two of our colleagues in this House, Representative LOUIS B. HELLER, of New York, and Representative A. L. MILLER, of Nebraska. They discuss the question, Do we need a Federal medical academy? The gentleman from New York [Mr. HELLER], who is the author of a bill to establish a United States Medical Academy, takes up the affirmative side; the gentleman from Nebraska [Mr. MILLER] replies in the negative.

Both articles are clearly and ably written, and the views of each are interestingly presented. I am placing the two articles in the RECORD so that all of us in the House may have the opportunity to read them and become acquainted with the views and opinions of our two distinguished colleagues.

The articles follow:

DO WE NEED A FEDERAL MEDICAL ACADEMY?

(Less than a month after Korea, two proposals for a United States Medical Academy were docketed in the House of Representatives. Although neither bill gained much headway during the Eighty-first Congress, the idea is far from dead. Since May, when one of the proposals was reintroduced, doctors have begun to show rising interest in the scheme. To help crystallize thinking, here is the case for and against a West Point of Medicine. Supporting the idea is Representative LOUIS B. HELLER, Democrat, of New York, its chief sponsor in the current Congress. Writing against the proposal is Representative A. L. MILLER, Republican, of Nebraska, one of the M. D. Members of the House.)

"YES," SAYS CONGRESSMAN HELLER

Twice running, our Nation has come up against a grave emergency with doctors in short supply. What's needed seems almost certainly to be a new source of M. D.'s.

Ideally, any fresh source of supply should provide a steady flow of physicians for the armed services, for Government health agencies, and (under extraordinary conditions) for civilian requirements. A federally supported medical academy would, I believe, meet all these needs.

Had a ready reservoir of doctors been available in June 1950, the confused scramble for medical men we have witnessed during the past year might have been averted. We

would have had, instead, a firm nucleus upon which to expand our military medical forces without disrupting the civilian economy.

As things stand, there are huge gaps all along the line—and little hope of respite. Priority I has claimed 10,000 young doctors; by fall, nearly all of them not deferred will be in uniform. This year's graduating class will scarcely make up the deficit.

Clearly, the pinch will not be temporary. By 1954, Dr. Howard Rusk warns, there will be a shortage of 22,000 physicians. For the moment, we must rely on the doctor draft. But what about later on—the next decade, and the one after that?

The answer I believe, may be found in a Federal medical academy. Here are some of the specific proposals contained in H. R. 3931, which I introduced in Congress on May 2.

Students would be appointed in a manner similar to that used by the Military Academies. Age limits: 20 to 25.

Admission requirements would include a college or university degree (or sufficient entrance qualifications to meet the standards of the student's home-State medical school).

Courses would consist of those prescribed by the AMA.

Students, upon graduation, would be commissioned in any branch of the armed services, in the Public Health Service, or in any other Federal service for 5 years.

Not only would such an academy create a reserve pool of military M. D.'s. It would also offer specialized training which, except in rare instances, medical students do not now get.

Specialization is as important today in Federal services as elsewhere. We need more men specifically trained in aviation medicine. We need more men who know the medical factors of life in underseas craft. We need more authorities on the physiological aspects of service in tropical and polar regions.

And consider our woeful lack of specialists in the Public Health Service, both at home and abroad. Existing medical schools simply don't turn out enough public-health men to meet minimum needs. A Federal medical academy would help fill all these gaps.

Furthermore, specialists in military and Government medicine would attain, through such a medical academy, the full professional status they deserve.

Obvious precedents for this idea are the two United States Military Academies, which produce some of the finest Army and Navy officers in the world. Applied to the study of medicine, why shouldn't the same idea produce some of the finest doctors in the world?

Critics of the academy plan say it would dilute the quality of medical education. Military rigidity, it is charged, would hamper professional freedom.

I must emphasize, therefore, that the proposed medical academy would have students, not cadets. Teaching would be in the hands of fully experienced civilian and military professors. The curriculum would include all courses now prescribed in civilian medical colleges.

A Federal medical academy would keep us better prepared for national emergencies and would, at the same time, help to broaden the scope of medicine in this country. Specialists could be trained for many research fields not now fully exploited. Veterans' care and civil defense would be aided. We could have new assurance that no region of our country would be without a sufficient number of doctors at any time for any reason.

The idea of Federal responsibility in these matters is gaining wide acceptance. It falls logically upon the shoulders of Government to train personnel for its own purposes. No

one questions the Government's responsibility to train Army and Navy field and staff officers. So why shouldn't the Government educate and train its medical officers?

"NO," SAYS CONGRESSMAN MILLER

America's medical schools produce the bulk of the world's best doctors. Within our existing frame-work, and without turning to an untried system, we have the means of producing enough well-trained physicians for all our needs.

Why, then, set up a Federal medical academy?

Supporters of such an academy favor it chiefly as a means of relieving the doctor shortage. And this shortage, they claim—because of the country's emergency status—has become essentially a Federal problem.

Actually, when there are not enough physicians for our Armed Forces, there are also not enough doctors for the home front. So the problem is a lot broader than has been admitted.

We are told that the Korean mobilization points up the desperate need for doctors. The facts of the Korean mobilization are these:

In June 1950, the Army called for 2,167 physicians. Just recently another 1,200 were called. Perhaps 2,800 more will be needed as recruitment for the Armed Forces progresses.

Thus, under present circumstances, the military forces will have taken 6,167 physicians by next fall. If the draining off of this comparatively small number of MD's will create a desperate need and will leave us without enough medical care for civilians, then it's passing strange that we were able to spare 60,000 physicians during World War II.

A Federal medical academy. It's claimed, can be operated outside bureaucratic and military influences. But I have yet to be convinced. The late, unlamented red-tape days (circa 1941-46) proved that military science cannot be compared with medical science. For further proof, consider the Government-administered system of military medical education in France.

One Washington doctor, an authority on the system, describes it this way: "The emphasis is placed on degrees and advanced studies, at a sacrifice of practical experience. Doctors attain medical stature and rank almost automatically on completion of a certain type of course. To my mind, there is an excess of theory; sometimes French medical officers spend up to fifteen years taking one course after another."

Which raises a pertinent question: Would a theorist of 15 years' standing help alleviate a doctor shortage?

Obviously, the development of the individual student gets scant attention under such a system. In this country, fortunately, the medical curriculum focuses on individual needs. And that's the way it should be.

Our present medical schools stress the all-importance of the doctor-patient relationship. Would this concept survive the academy system? My guess is that it would be supplanted by emphasis on the relationship between subordinate and superior.

Recently I asked a top-level Government doctor what he thought would happen in a Federal medical academy. His verdict was that "The therapeutic trial-and-error method would suffer; the scientific approach would be displaced by the 'Yes, sir' approach. We've got complete freedom in medical education, and we want to keep it that way."

It is interesting to note, in passing, that the armed services recently turned to civilian consultants for guidance in their residency training programs. Only since this has happened have standards in military hospitals approached those in civilian hospitals.

And how about mechanics of the academy scheme? Signs are that its sponsors are not

entirely familiar with medical education machinery.

For one thing, the type of academy they foresee would be several times the size of our largest existing medical school. Ten years might well be needed to establish its facilities and faculty. Thus the plan would not seem quite so expedient as we have been led to believe.

Then, too, the proposed method of selecting students raises some serious questions. Would a system of selection controlled by Federal officeholders insure choices based on merit alone? Would the Academy, against stiff competition from established schools, really attract the best-qualified applicants?

It is my belief that the best-qualified applicants would not be enticed into an academy where the prospect was 6 or 8 years' regimented training followed by 5 years' captivity. Such an academy would appeal only to men interested primarily in security, a regular routine, and a retirement pension.

The specialized training proposed would have serious limitations also. Too early specialization in aviation medicine, for example, might seriously impair the sound general training every doctor needs. Likewise, the problems of the submarine specialist bear little relation to those of the public health man. How, then, would the academy give students a thorough medical grounding and still prepare them for widely divergent specialties?

Civilian planners have foreseen clearly the need for certain specialists. The Olsen report of the Association of American Medical Colleges, for example, already has recommended an additional 278 hours of instruction in such fields as aviation and civil defense.

If the need for specialists is more immediate than that, why does not the Government now offer inducements that would attract young doctors to the special fields of military and public-health medicine? Basic training in medicine could very well be left up to the existing medical schools and, if the future were attractive enough, many physicians would enter Government medicine on graduation.

Even West Point and Annapolis do not undertake such an ambitious program as that suggested by the medical academy proponents. Their graduates, after a militarized undergraduate course, are sent to other training centers—often civilian universities—for specialized training.

All of which points up the essential fallacy of the medical academy idea. There is no real proof that our existing medical schools are unable to meet the national demand for doctors. And there is no real proof that the academy structure would be suitable for the study of medicine. It would be as logical, in my opinion, to set up academies for statisticians and lawyers.

The Spanish Bishops and the North Atlantic Pact

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I include two recently published articles which are significantly connected, one with the other.

The first is an editorial from the magazine *America*, dated July 14, 1951. It

deals with the recent statement of the archbishops of Spain on the economic problems of that country and the approach of the hierarchy in meeting and solving such problems.

The second article is an editorial from the *Washington Star* by Mr. Constantine Brown on the subject of the possible admission of Spain to the North Atlantic Treaty Organization.

If the positive approach to Spain's economic problems, advocated by the Spanish Metropolitan and which conforms to our own democratic principles, becomes the firmly-adhered-to policy of the Spanish Government, there will be little left to the already weak arguments against the admission of Spain as a full member of the western alliance against Communist imperialism.

SPANISH BISHOPS SPEAK

Social-minded Catholics the world over, not to mention the suffering people of Spain, will be heartened by the plain-spoken statement on economic problems issued by the archbishops of Spain on June 28. In not a few foreign circles, the opinion has been expressed that the church has been too negative in her hostility to communism. The archbishops' statement, entitled "Instructions of the Conference of Spanish Metropolitans on the Duties of Justice and Charity in the Present Circumstances," should do much to allay these suspicions.

It will not allay all of them, however, since unfriendly critics will see in the episcopal action only a belated and necessary recognition of the current unrest in Spain. Actually, the archbishops agreed on their document last December, several months before widespread dissatisfaction in Spain erupted in strikes in Barcelona, Bilbao, and elsewhere. Publication was postponed until the statement could be submitted to Rome for approval. It is possible that the Holy Father had the document in mind when he said last March, in his broadcast to Spanish workers and employers: "Nobody can accuse the church of having been indifferent to the labor question and the social question, or of not having given them their due importance."

Certainly, whatever one may think of the timing, the statement itself allows for no reservations. Though the archbishops do deal abstractly with such subjects as charity and justice, as is entirely proper in a document of this kind, they also descend into the market place and come to grips with the harsh realities of life in Spain today. Read against the background of contemporary Spain, the statement is not a collection of what some people call pious generalities.

For one thing, the churchmen mince no words in spelling out the duties of government. Calling attention to the inflation ravishing the country and to the scarcity and high cost of food, they remind the Spanish Government of its mission to promote the common good, which "includes in the first place the sustenance of the individual." The archbishops themselves have no mission "to descend to technical economic questions," but this, they dryly observe, is not the case with the Government. Hinting rather broadly that the Franco regime has been something less than inspired in dealing with economic problems, the statement says that "it is indeed the obligation of those who govern to be informed by competent technicians."

More pointedly, the pastoral exhorts the Government to crack down on "all monopolies and hoarders that try to impose high prices." The profit motive is legitimate, say the archbishops, but "to exploit the shortage of goods to amass huge profits by

selling well above the just price" is a sin "that cries to the heavens for revenge."

The archbishops also refer to the touchy question of corruption in the Franco government. It is the duty of the state, they teach, "to exact with severity the fidelity of subordinate agents." And they remind the politicians and bureaucrats that they "can sin doubly against justice by damaging the state and by damaging unjustly their fellow citizens" (Those, incidentally, who refuse, in their hostility to Franco, to distinguish between an authoritarian and a totalitarian state should ask themselves whether religious leaders could ever have published such words in Moscow or Bucharest, in Warsaw or Budapest, in Prague or Peiping.)

Finally, the archbishops, alluding to a grave evil in Spanish life, are critical of the luxurious display of plenty in the midst of widespread suffering and want.

"Let us above all not exasperate the poor, the needy, with contrasting luxury and waste. In difficult times, in times of want, austerity is imposed on all, whether they be private persons or organizations, austerity and charity."

In addition to encouraging clerical and lay leaders to work for social reconstruction, the episcopal statement should be a sufficiently clear indication to the Franco government, and to its uncritical supporters abroad, that something more than anticommunism is expected of an avowedly Christian regime.

[From the Washington Evening Star of July 17, 1951]

FRANCO MAY SOON JOIN THE FACT—ADMIRAL SHERMAN'S VISIT TO MADRID IS EVIDENCE OF SERIOUS ATTITUDE TOWARD SPANISH ARMS

(By Constantine Brown)

Evidence is accumulating rapidly now that the western powers are getting serious about the business of bringing Spain into full-fledged partnership with the Atlantic nations' campaign for preparedness against Communist aggression.

Admiral Forrest Sherman, Chief of Naval Operations, is in Europe on a week's visit, which will include a trip to Madrid for conferences with Spanish officials. It will be the first time a member of the Joint Chiefs of Staff has conferred directly with the Spanish leadership under the Franco regime, and certainly will provide the basis for subsequent negotiations to bring the Spanish forces up to the level of other western forces as a bulwark against the Reds.

It will be recalled that Admiral Sherman was in Lisbon, Portugal, last year and was denied permission to go to Madrid at that time to talk things over with Gen. Francisco Franco's aides. However, some Spanish officials went to Lisbon, where conferences were held. Admiral Sherman was told by the State Department that he could go to Madrid on a private visit in civilian clothes if he wished, but that any official mission there was out of the question.

Admiral Sherman's present trip is to be taken in conjunction with the visit to Madrid last week of the Senate Foreign Relations Committee's group which is touring the continent to see how our defense efforts are doing.

Following the Senators' visit to Madrid the story was put out by authoritative sources there that General Franco has arranged to alter drastically the composition of his cabinet, in what was described as an effort to tighten relations with the western powers. In effect, the shake-up may be an effort to meet some of the western powers' objections to practices of the present Spanish government. If so, there is every reason to believe that the major powers of the North Atlantic coalition can get together with the Franco regime's leaders.

Spain is vitally important to the western powers, not only for the 32 divisions of active troops which she now possesses, but also for the vital airfields which she possesses and which would be a most valuable adjunct of those air bases which we are constructing in France and other continental countries.

The Spanish Army is sadly lacking in modern implements of war. It requires heavy equipment—tanks and other motorized vehicles—as well as such things as modern planes, radar, and antiaircraft artillery. These things could be provided her under pending foreign-aid appropriations if barriers now standing in the way of Spain's association with the North Atlantic Treaty Organization can be surmounted.

The selection of Admiral Sherman for this mission of reconciliation with Spain signifies the interest of the American Navy in the acquisition, too, of Spanish naval bases in the Mediterranean for the use of the sea forces now under the command of Admiral Robert Carney. The whole Mediterranean set-up of NATO is up in the air, however, and some agreement with Spain will go far to eliminate difficulties in arranging that part of the defense system.

With the Korean conflict on the way—although not far yet—to some kind of settlement, if only a cease-fire, and with the Iranian situation boiling over as the United States takes a more direct hand in settlement of what could become an extremely dangerous situation, the European members of the NATO who heretofore have stood in Spain's way should be aware that the peril of Soviet aggression is drawing closer to them than ever before.

Admiral Sherman's mission to Madrid and whatever modernization of Spain's policy grows out of it as well as the Senators' visit must be matched by a similar relaxation of Britain's and France's opposition to the participation of the Franco regime in western-defense arrangements.

The United States is more or less in the middle of the whole matter, with a large and vocal part of the American press and Congress pressing for Spain's inclusion and our principal allies in Europe opposing such action. The American Government itself has moved and is moving closer to a formal commitment to Spain, but it has been prevented from moving all the way by the flat opposition of London and Paris.

Coming weeks may see important progress toward the removal of barriers which now stand between Spain and the other western powers.

Commission on Aid to Underdeveloped Countries

EXTENSION OF REMARKS

OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Spruille Braden, of New York City:

NEW YORK, N. Y., July 3, 1951.

The Honorable GEORGE MEADER,
Congress of the United States, House of Representatives, Washington, D. C.

DEAR MR. CONGRESSMAN: Please accept my thanks for your June 14 letter enclosing your address before the House when introducing your bill to create a Commission on Aid to Underdeveloped Areas.

While I thoroughly agree with your repeated emphasis on the fact that the development of the natural resources of underdeveloped areas must largely be accomplished by private enterprise, I am somewhat fearful that a Commission such as you suggest would find it difficult to make an adequate investigation of this situation, which, in effect, would necessarily have to comprehend a survey of the entire world economy and the economies of each area. In this connection, I respectfully urge your perusal of my testimony given to the Foreign Affairs Committee of the House on October 6, 1949.

Incidentally, I doubt that any commission could get very far in convincing the rest of the world to go along the path of individual endeavor such as made this Nation great, when we are, ourselves, departing so rapidly and largely from this sound principle. In other words, the first step must be the setting of a good example by the United States.

With assurances of my high esteem, I am,
Faithfully yours,

Spruille Braden.

Letter From the Secretary of the Air Force Concerning Rotation

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1951

Mr. HILLINGS. Mr. Speaker, for many weeks I have been encouraging the Air Force to develop a positive program of rotation and replacement to relieve men in Reserve units such as the Four Hundred and Fifty-second Bomb Wing who have been facing constant enemy fire in Korea.

Last month I addressed a communication to the Secretary of the Air Force, Mr. Finletter, again directing this situation to his attention and urging that a rotation and replacement program be developed. In replying to my communication, Mr. Finletter expressed encouraging news that the Air Force is now prepared to work out such a program.

I wish to place in the RECORD at this point, Mr. Finletter's letter to me on this important subject:

DEPARTMENT OF THE AIR FORCE,

Washington, July 12, 1951.

HON. PATRICK J. HILLINGS,

House of Representatives.

DEAR MR. HILLINGS: I have your letter of June 30 in which you enclose a letter from a member of the Four Hundred and Fifty-second Light Bomb Wing.

I think there is some misapprehension on the part of your informant. What I said about morale applied generally to the Fifth Air Force. I was not singling out any particular unit. I obviously did not have the time to make any thorough inspection of the morale of the units. As far as the general morale is concerned, I and the various officers who were with me talked to as many people as we could in the short time we were there and were impressed by the morale, which was reflected in the magnificent record which the Fifth Air Force is producing in Korea. The information given me about the Four Hundred and Fifty-second was that its morale also had improved very greatly. I cannot of course know this of my own knowl-

edge, but I cannot help but believe that this must to a large extent be the case in view of the excellent fighting record which the Four Hundred and Fifty-second is making. I cannot believe that any organization with the record that all of these wings of the Fifth Air Force have can be specifically deficient in morale. But perhaps I may be wrong.

The rotation situation is this:

There are two phases of the operation in Korea. In the first phase we had the job of building up our air power. This meant that rotation could not be carried out at the rate that we would like to see it carried out. This is particularly true of the light bomber wings, of which unfortunately there are none too many in the Air Force. The B-26's are our standard light bomber and are playing an especially important role in the Korean operation. It has just unfortunately not been possible to rotate units of the light bombers because we didn't have them. As a result of the light bombers, as well as many of the fighting units of the Fifth Air Force, have had to stay.

Now this situation is improving. We hope by the end of August and the beginning of September to enter into another phase wherein proper rotation will be achieved. The method is as follows:

There are two different sets of standards, one for the combat crews and the other for the ground personnel. In the case of combat crews General Weyland is taking a number of factors (such as time in the combat area, number of missions, and type of equipment) into consideration to establish the so-called optimum standard for rotation. This standard will enable a man to be replaced in accordance with criteria which the Air Force thinks proper and equitable. You will note that this rotation standard was not based on a number of missions alone, although in the case of the Four Hundred and Fifty-second I am informed that they have been told they will be replaced after 75 combat missions.

As far as the ground personnel is concerned, it goes geographically. In the case of Korea the time on an optimum standard is set at 18 months.

Your correspondent also states that other matters are unsatisfactory, although he is not specific about them. I wonder if you would have any objection to my asking the Chief of Staff to send a copy of your letter to General Weyland, as well as a copy of my reply. I shall not do so unless I receive your agreement.

If there is any other information I can give you, please call me.

Sincerely yours,

THOMAS K. FINLETTER.

National Affairs Platform of the American Veterans' Committee

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, July 19, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the national affairs platform of the American Veterans' Committee recently adopted at the fifth annual convention in New York City. At this meeting of this World War II veterans' organization our distin-

guished colleague the senior Senator from Connecticut [Mr. McMAHON] was the guest of honor. While I do not subscribe by any means to every item in the platform, I feel that it admirably demonstrates the long-standing slogan of the members of AVC that they are "Citizens first, veterans second."

There being no objection, the platform was ordered to be printed in the RECORD, as follows:

NATIONAL AFFAIRS PLATFORM

A. PREAMBLE

National affairs are necessarily conditioned by the prospect of our being a partially mobilized society for many years to come. The policies we here advocate in and of themselves will not preserve and extend democratic values; essential to their ultimate effectiveness is the caliber of the administration and its devotion to the interests of all our people rather than to any single sector of our society.

B. STATEMENT OF PRINCIPLES

It is appropriate in this preliminary statement of national affairs principles, first to reaffirm our support of the great aims and principles contained in the Charter of the United Nations. The traditional category of national affairs no longer comes vacuum-packed; fiscal and economic policies, labor and manpower programs, the social and economic opportunities that are either opened or denied to individuals—all these have an impact on the effectiveness of American and U. N. efforts to achieve an honorable peace and economic well-being for all.

Since the Communist aggression in Korea, traditional policies of AVC, and of every other civic organization, have been in a state of reappraisal. In making this reappraisal, we reaffirm our whole-hearted support of liberal principles and urge their continual application and, indeed, extension to allow us to surmount the emergency as a free Nation. We cannot afford to place AVC principles in the deep-freeze locker of a fallacious "all guns and no butter" economic mobilization.

The platform proposals contained herein assume an emergency of a long-range character—perhaps a generation or more. In this realistic view, all Americans must learn to live with tension and not to buy the first "quickie" solution offered by an irresponsible individual or group.

Over a long-run period of national mobilization, the greatest internal threat to our way of life is potential development of a garrison-police state. In our natural desire to protect ourselves from external aggression or from the related threat of the small minority of Communists in America, we cannot afford to sabotage the very freedoms we are trying to protect. Of vital importance in the prevention of a garrison-police state is the principle of civilian supremacy. The subversion of this principle would be a first step on the road toward totalitarianism.

Democracy will be effective only if all major segments of our national life are active participants in the formulation and execution of national policies. The exclusion of any major segment—whether it be big or small business, or labor, or the farmer—would severely handicap the national mobilization program. Even more vital is the development of leadership in Government that is tied to the public interest, broadly conceived, and which is capable of rising above the special viewpoint of any interest group—whether that be big or small business, labor, the farmer, the veteran, or the professional military. Our Government must recruit men who are motivated by a

desire to serve all our people and not any particular interest group.

C. ECONOMIC AND FISCAL POLICIES

We recommend that economic policies be directed toward increasing productive capacity, maximizing total production, more rapid fulfillment of military needs, preventing further inflation and rolling back those prices, such as beef, which have far exceeded the general indices, assuring equality of sacrifice, curtailing less essential goods and services prior to cutting down essential activities and keeping always in the forefront those measures necessary for sustained full employment.

We further recommend:

1. That Government expenditures, both military and nonmilitary, be under constant scrutiny with a view to eliminating any unnecessary or wasteful items, but without curtailing essential public, social, and economic services.

2. That corporate taxes, with emphasis on excess-profits taxes, closing of loopholes, progressive personal income and inheritance taxes and excise taxes on luxury goods be utilized in that order to produce new revenue. We are unalterably opposed to general-sales taxes.

3. That appropriate measures be taken to control: (a) bank credit and inventory expansion; (b) prices, including subsidies, dollars-and-cents ceilings, and quality control of consumer goods; (c) wage and salary stabilization consistent with stable prices and a fair sharing of all categories in the distribution of our total income; (d) residential and commercial rents; and (e) Government procurement so as to minimize economic dislocations in the United States and among its allies.

4. That this program be administered on a fair, nonpolitical, and nonpartisan basis and not dominated by any one sector of the economy.

5. We emphasize the need for expanding our national productive capacity to the point that we can produce for both civilian and military needs; during this transitional period all Americans will face some cut in the standard of living and should be prepared for the necessary sacrifices, which sacrifices should be in relation to the ability to sacrifice. The business-as-usual philosophy must also be eliminated as a matter of public policy and the emphasis placed on a production of adequate quantities of bulk-line, popular-priced essential consumer goods.

6. Vital to our democracy is the preservation of small business, and we urge that Government procurement and other controls be administered to preserve and stimulate small business. We condemn the policies which have favored big business and furthered economic concentration.

D. MILITARY MANPOWER

The Federal Government should conscript citizens for military service only in time of war or in periods when it is necessary to do so to prevent war. We believe that in the current crisis the United States is justified in adopting some program of universal military training. Congress should specifically review the program and vote on the question of its continuance at the end of a 5-year period.

E. CIVIL RIGHTS

1. The freedom and dignity of the individual citizen constitute the very foundation of American democracy. AVC has always stood firmly against all practices of segregation and discrimination because of race, creed, or national origin. We hereby reaffirm our faith in the democratic way of life and in the civil liberties and basic human rights upon which it rests and we call

upon our fellow citizens to join us in resisting all assaults upon it.

2. We are opposed to the restrictions being imposed upon the rights of free inquiry and free expression of opinion by governmental bodies and private groups.

3. We oppose those activities of the House Un-American Activities Committee that have fostered its definition of un-American thoughts and have created fear and suspicion.

4. We oppose the misuse of the cloak of congressional immunity for unprincipled attacks upon individuals and groups.

5. Although we recognize the existence of security problems in sensitive areas, we oppose the conduct of the Federal loyalty program insofar as it lacks adequate safeguards for the rights and reputations of Government employees.

6. We oppose the casting of suspicion upon particular groups by the imposition of special oaths.

7. We oppose the suppression of books, movies, works of art, and so forth, at the behest of private groups simply because they are not to their liking.

8. We urge the repeal of the McCarran Act.

9. We urge the establishment by executive order, and/or by legislation, of an FEPC. We urge the establishment of State FEPC's.

10. We urge the passage of antipoll tax, antilynching, and related measures recommended by the President in his Civil Rights messages of 1948.

11. We urge the absolute end of all segregation in the Armed Forces, including the National Guard.

12. We urge that there be included in all Federal legislation making grants to States, cities, or private institutions a provision requiring the benefits of those grants to be administered without discrimination or segregation as to race, color, or creed.

13. We urge the creation of a Civil Rights Division in the Department of Justice with adequate funds for effective operation.

14. We urge the withdrawal of all tax exemptions from all institutions practicing discrimination except as to sectarian institutions administering or granting preference to a particular sectarian group.

15. We urge that the immigration and naturalization laws be amended to eliminate discriminations, qualifications, and limitations based on race.

F. EDUCATION

1. We recommend that Federal aid to the States should be granted by the Federal Government only to public schools to achieve equality of educational opportunity.

2. We recommend that a Federal program of scholarship aid to individuals should be undertaken to enable outstanding young men and women to secure higher education at accredited institutions of their choice where they are prevented from doing so by economic barriers. Scholarships should be awarded on the basis of ability and financial need without regard to race, color, creed, or national origin.

G. HEALTH AND SOCIAL WELFARE

1. We favor a Federal program of national health insurance and aid to medical education to increase the number of trained doctors and nurses.

2. We support extension of unemployment benefits to persons who are unemployed because of illness or injury not connected with employment. We demand that the principle of administration of all social insurance through a public insurance fund at a pooled risk be maintained.

3. We favor the expansion of social security to cover all employed persons, and a program of family allowances, with adequate benefits to meet the needs of increased cost of living.

4. We urge the creation of a Federal Department of Public Welfare under a secretary with cabinet rank.

H. HOUSING AND CONSTRUCTION

1. Defense housing must be given top priority. Other civilian housing—for low- and middle-income families—should be given a number two priority. Construction of schools, hospitals, and other public service buildings must be given precedence over all nondefense commercial building, luxury housing, and high-cost apartments.

2. We oppose the cut-back in the public-housing program and urge the implementation of the Public Housing Act of 1949.

3. We support the principle of cooperative housing.

I. NATURAL RESOURCES

We urge the establishment of a Federal Department of Natural Resources which would be responsible for over-all development and conservation of natural resources. The Interior Department has the staff and the know-how around which this new department should be organized.

We strongly support the principle: "One river—one plan" which has been tested and proven under the Tennessee Valley Authority. To make most effective the harnessing of water power, irrigation, reclamation, flood control, navigation, and other beneficial uses of our resources, we urge that the Federal functions of natural resources development in each river basin should be administered under one Federal agency. We must use the best organizational and administrative techniques available for the effective development of our natural resources. We therefore urge prompt establishment of a Columbia Valley Authority, a Missouri Valley Authority, a Central Valley Authority, and similar authorities in other major river basins, whose program would be integrated by the Secretary of Natural Resources.

The prompt development of the St. Lawrence seaway and power project is essential to avert a threatened shortage of iron ore, to provide access between our Great Lakes and the Atlantic, to develop the finest undeveloped hydroelectric site on the North American continent, and to spur the development of Canada's rich natural resources for our common benefit in this national mobilization and for our future expanding economy. We urge that Congress promptly take steps to initiate its development.

Our natural resources development must be geared toward utilization for the benefit of all the people. Toward this objective, we urge that Congress appropriate funds for transmission lines to carry electric power from Federal dams; that access roads be built to bring timber on Federal lands within reach of the small logger; and that Federal cooperative sustained yield timber programs uniformly include provision for reciprocal use of the cooperator's logging roads by other loggers. The management of public lands and forests must aim for both conservation and the development of their fullest uses, including watershed protection, control of stream pollution, grazing, mineral development, flood and erosion control, fish and wildlife habitat protection, recreation, and other uses. Our Federal mining laws must be amended to prevent their abuse and to provide more effective safeguards for the development of both the mineral and non-mineral uses of the land.

The needs of our national security and our expanding national economy require increased development and effective conservation of our lubricants and liquid fuels. We urge the prompt establishment of a commercial synthetic liquid-fuels industry based on our great coal and oil shale reserves, the enactment of legislation for administration by the Federal Government of the oil re-

sources in the submerged lands on the continental shelf and the expansion of hydroelectric power development to conserve our exhaustible supplies of fuels as well as to meet the demands of our industrial expansion.

The increased threat of severe water shortages in many industrial and agricultural areas of our Nation demands prompt development of economical methods of desalting sea water.

In the light of our national security needs, we urge that Congress provide increased funds for the exploration and survey of our mineral and other natural resources, as well as for increased research to develop their most effective utilization. We cannot afford to continue to gorge and waste.

J. CIVIL DEFENSE

We deplore Congress' gross neglect of the civil-defense problem. We recommend a dynamic program of civil defense based upon national leadership and guidance, as well as a national absorption of a preponderance of financing.

We favor a strong State and local effort in terms of personnel, and pledge the full support and participation of our State and chapter organizations.

We favor the policy of "dual purpose" projects wherever possible.

K. CONGRESSIONAL RESPONSIBILITY

1. The Congress must assume new and heavy responsibilities in the present emergency. It must act efficiently and it must be responsive to the national interest rather than representative of regional or private interests. To this end we urge:

(a) That the House of Representatives reinstate the curbs imposed on the House Rules Committee during the Eighty-first Congress.

(b) That the Senate repeal the Wherry cloture rule and adopt a rule for closure of debate by a simple majority. Cloture rules should apply with full force to a motion to take up a bill.

(c) That both Houses take action to improve the quality and safeguard the tenure of the professional staffs of congressional committees.

(d) That there be established a Joint Standing Committee on Lobbying Activities and Campaign Expenditures.

(e) That the Celler bill requiring a fair redistricting of congressional districts be enacted.

2. The investigatory power of Congress is one of the most important means by which it can maintain an effective and needed surveillance over the activities of executive agencies, and over other matters within its legislative competence. At the same time, it is a power which, when entrusted to ruthless and ambitious men, can be used for groundless and expensive harassment of public agencies, and for the vilification of public officials and private citizens. To enable Congress to properly exercise its lawful investigatory authority, but to safeguard the rights and reputations of individuals we urge:

(a) That congressional committees accord full rights of rebuttal and cross-examination to interested persons.

(b) That congressional committees adhere more closely to judicial standards on the admissibility of hearsay evidence.

(c) That Congress itself develop a meaningful code of ethics that would apply to all Members of that body as a means of eliminating irresponsibilities and curbing libelous and slanderous statements.

L. TERRITORIES

We urge that Congress should grant home rule to the District of Columbia.

We urge that Congress immediately act to extend statehood to the Territories of Alaska and Hawaii.

We further urge that Congress enact legislation providing for a Presidential-Congressional Commission to make an intensive investigation of the problems of the remaining United States Territories and to recommend a long-range policy for their administration, a policy which should be directed toward the granting of either statehood or independence.

M. CRIME, CORRUPTION, AND POLITICS

We urge the immediate enactment of legislation that will implement the recommendations of the (KEFAUVER) Crime Committee. Even more important we urge an acceleration of activity on the part of State and local law-enforcement agencies as a vital step in cleansing our national political stables; we pledge the full support of our National, State, and chapter organizations to this program, one phase of which must be the transformation of the AVC "Credo of a Public Servant" into a living reality. The real job of political house cleaning belongs at the grass-roots level. Passing the buck to Washington can bring sensational headlines that are meaningless if State and local officials—and the public—meanwhile sit on their hands.

The Chiefs of the Children's Bureau

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, July 19, 1951

Mrs SMITH of Maine Mr. President, I have prepared a brief statement about the distinguished women who have served as Chiefs of the Children's Bureau of the Department of Labor, and about the present Chief, Dr. Martha Eliot, which I ask unanimous consent to have printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Someone has said that an institution is the lengthened shadow of a man. I would add that the Children's Bureau is the lengthened shadow of four great women: its first three Chiefs, Julia Lathrop, Grace Abbott, and Katharine F. Lenroot, and now its fourth Chief, Dr. Martha Eliot. Dr. Eliot does not come lately to her new tasks, for she served on the staff of the Bureau from 1924 to 1949, and for 15 of these 25 years she was, first, Assistant Chief and then Associate Chief.

Devoted and self-denying, all these distinguished women would disclaim such a tribute. Indeed, Katharine Lenroot expressed such a disclaimer most beautifully in a speech she made at the twenty-fifth anniversary of the Bureau when she said:

"The Children's Bureau is not an office or a staff or an appropriation or a body of experience or a method of procedure.

"It is one expression of an appeal and a response—the appeal of the billions of children whose lives have been snuffed out or who have been doomed to suffering, misery, and sorrow from the birth of humanity to the present day; and the response of the sympathetic and understanding spirits of every age—from the ancient Hebrew prophet who cried, 'Shall I give my first-born for my transgression, the fruit of my body for the sin of my soul'—to the prophets among our own friends and associates. * * * Such is the soul of the Children's Bureau."

Despite such generosity, those of us who have followed the Children's Bureau over the years know what great spirit and sacrifice these women have brought to their public service in behalf of children.

Katharine Lenroot came to the Children's Bureau as a young woman not yet 24 years old. She was a graduate of the University of Wisconsin, having been trained by that great teacher and social leader, Prof. John R. Commons, and had served some 2 years in the Wisconsin Industrial Commission. She won her position with the Children's Bureau through competitive civil-service examination.

Starting as an investigator for the Bureau, she was given increasing responsibilities, as she rose to the position of Assistant to the Chief and later Assistant Chief. In 1934 President Franklin D. Roosevelt made this daughter of a Republican Senator the Chief of the Children's Bureau, a position which she has dignified and enhanced through 17 years.

I emphasize the nonpartisan character of this appointment, because I think it expresses a fundamental principle to which we must always hold. Children must not be made a party issue. The Bureau that serves our children must not be made a party issue. I am proud to testify to the fact that its Chiefs have faithfully adhered to this principle and have never allowed their high office to be used for political advantage. Whatever party each of us may belong to, our ministering to the needs of children must be above party consideration if we are to give all children their fair chance in life and to build a new generation that is truly sound and secure in body, mind, and heart.

With the retirement of one Chief and the appointment of a new Chief, the temptation to look backwards to see how far we have come is great, and I have indulged in it. But we have an even greater obligation to face up to our unfinished business for children and to set our sights even higher than they have been set before. It is one of the distinguishing marks of our people, in which we can take justifiable pride, I think, that each generation of us wants to make life richer, fuller, and more meaningful for the next generation than it has been for us.

I do not need to belabor the point that there is still a great task ahead of all of us and ahead of the Children's Bureau, in particular.

Happily, that Bureau will continue to be lead by an able and dedicated person. Dr. Eliot comes to her new duties after service as a medical social worker and experience in the medical field for many years. She has behind her 25 years on the staff of the Children's Bureau. In her early days with this Bureau, she directed some of its most important research in the field of child health. One of her significant research projects concerned the prevention and control of rickets in children. During this period, she wrote one of the early revisions of Infant Care, since 1914 the Government's best-selling guide on how to raise babies.

Appointed Assistant Chief of the Bureau in 1934 and made associate chief in 1941, Dr. Eliot headed the health and medical services of the Bureau. During World War II, she supervised the operations of the maternity and infant-care program which brought great comfort to the servicemen in our Armed Forces and was used by close to 1,500,000 of their wives and infants.

For the past 2 years, Dr. Eliot has served as an assistant director general in the World Health Organization, with headquarters in Geneva, Switzerland. From this vantage point she helped in the development of WHO's programs concerned with environmental sanitation, malaria, tuberculosis, venereal-disease control, maternal and child health, and nutrition. During her period

with WHO, Dr. Eliot made extended visits to India and to a number of European countries. She now returns to the Children's Bureau enriched by these opportunities to observe the way other nations are tackling their children's needs.

The Tungsten Program of the Defense Minerals Administration

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, July 19, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dated July 6, 1951, from the Western Mineral Survey, of Salt Lake City, Utah, analyzing the recently announced tungsten program of the Defense Minerals Administration.

This analysis makes it apparent that the present program is going to result in very little new tungsten production. I particularly invite the attention of the Preparedness Subcommittee to this article, since that committee has recently issued a very excellent report on domestic tungsten production.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROMINENT UTAH MINER SCORES TUNGSTEN PROGRAM

Arthur Blake Thomas, well-known mining operator of Salt Lake City, Utah, has done a great service for the miners of tungsten ore with his analysis and comment relating to the recent release by the United States Government that set a price of \$63 per unit for 60-percent tungsten ore.

Mr. Thomas has called the attention of James Boyd, of the United States Bureau of Mines, and Otto G. Klein, regional director of United States General Services Administration, to the fact that their statements contradict one another and that the small miner will find that the \$63 price for ore is an illusion. Mr. Thomas sets forth his analysis of the tungsten market price set-up as it exists at the present time.

"Dr. Boyd has stated that the tungsten purchasers to be made by the Government, will be routed into commercial channels by utilization of presently built mill facilities and that it will be within the ceiling prices of \$65 per unit, the price of Government specification concentrates. In other words the price on crude tungsten ore, f. o. b. Government buying depots will be settled on the amount of Government specification concentrate that can be produced therefrom.

"Mr. Klein, of Denver, has widely spread the news that the Government ore price is to be \$63 per unit for crude ores less penalties involved. To begin with Dr. Boyd and Mr. Klein contradict each other. If the penalties involved are those now in use in the regular commercial channels, who are to handle Government ores, then the price of crude tungsten ore will be under \$20 per 1-percent unit—a price at which the miner cannot produce.

"People in Salt Lake have phoned Mr. Klein and asked him to explain what he means by the term less penalties involved. He has stated that he does not know what

they are. Evidently the tungsten project of the Government is going to be like zinc—a quotation price of 17 cents a pound, but pay to the miner at from 4 to 6 cents per pound. The crime of the matter is that Utah and Nevada, and perhaps Colorado, are full of good-intention small miners now spending their small-venture capital to develop tungsten and under the assumption they will get a price of above \$50 per unit for it.

"I have taken the matter up with various Senators and so forth, to see if the Government won't at once announce its price on crude tungsten ore in a dollar-and-cents statement so that this potential loss might be cut short before too many miners are hurt. I know of your long interest in behalf of mining and hence send you the summary of the situation. I believe it is clear. If there is enough publicity, it might lead to prevention of sacrifice of the miner's interest and to the eastern refinery interests."

As I understand the matter the price of crude ore is to be derived from a price of \$63 per unit of Government specification concentrate that can be produced therefrom. Government specification concentrates are defined as a 60 percent WO₃ concentrate and also devoid of certain contaminations common to most ores. The mine which yields ore from which such a concentrate can be produced is a freak—in the 1,000 to 1 variety. If a given ore is capable of producing only a 20- to 25-percent WO₃ concentrate, through milling at western points, then this material is sent east to chemical refineries where a pure product is achieved. The price paid f. o. b. western points for 20 to 25 percent WO₃ concentrate is far below \$63 per unit of 1 percent and in the vicinity of \$40 per 1 percent unit. Here is an immediate \$23 per ton deduction or penalty that must be imposed on the western miner who has a 1-percent crude ore.

The many fine metallurgical testing laboratories as well as the Bureau of Mines experimental stations will verify the assertion that a recovery of 60 percent of the tungsten content in a 20 to 25 percent concentrate is a realistic average for our domestic tungsten ores, which are very difficult to mill to additional advantage. This brings up the question of "tailings" or mill losses of unrecoverable tungsten in any given ore. Here is another penalty or deduction to be imposed on the miner. What will it be? In actual practice it will probably reach to 40 percent of the gross value of his tungsten or on a 1-percent ore about \$16 per ton. A résumé of what a 1-percent WO₃ is now worth, through established commercial channels is of interest.

For Government specification concentrates impossible to produce from almost all western mines or ores, \$63 per ton.

The going price for 20- to 25-percent concentrate, and this represents the type of concentrate that western mines can produce, \$40 per unit.

Representing mill or tailings loss from the average western mill which can be conveniently erected and operated, \$16 (minus).

The actual worth of 1 percent ore after assessment of penalty for failure to make specified concentrate and mill losses, \$24.

Western mills now processing ore for the miner charge \$7.50 for their service plus \$1.15 independent sampling charges. The figure is entirely in line and just, \$8.65 (minus).

Net value at the mine of a 1-percent tungsten ore, \$15.35.

The above figures are entirely proper. One can safely state that a 1-percent tungsten ore at a western mine now has a value of between \$15 and \$20 per ton. From this figure the miner must pay the costs of mining, which can reach from \$5 to \$8 to \$12 per ton, depending on the amount of exploration carried on to put a new ton of ore

in sight for each ton extracted. Mines are seldom on the railroad and a truck charge of from \$2.50 for 50 miles or \$5 for 100 miles must be met. Railroad freight of from \$2 to \$4 to \$6 per ton is also in order. All this must come from a product worth from \$15 to \$20 per ton at the mine, if a 1-percent ore is to be utilized. If it can't be, only small amounts of tungsten will appear.

At the moment I know of a number of groups of miners who purchase expensive compressors, trucks, and other equipment and move to their 7-percent or 8-percent of 1-percent mines or prospects to produce ore in anticipation of a \$63 per unit price, less \$5 or \$10 or \$15 in penalties they expect to be deducted at the point of delivery. This is the very natural result of recent press releases. Cannot the depot price be announced at once to save eventual loss to a class of people upon whom we all depend for most necessary material.

The refinery is the only point where saving seems possible, if a realistic program is to be put into effect. I understand that only a handful of such establishments are in the East. They assumedly pay \$63 for Government specification concentrates. But such concentrate is never available except from a few sources. The net result is that western concentrates are purchased at around \$40 per unit. These people then produce tungsten powder for industry. The quoted price, as I understand the matter is \$4 25 per pound or \$85 per ton. Government specifications concentrates are apparently not of themselves of any value to industry. The term is simply used as a marketing expression to gauge prices. It is confusing and unnecessary and logs the real issue.

Comments on Atomic War

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 19, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Caraker Comments on Atomic War," written by George Ernest Caraker, a broadcaster for the North Dakota Broadcasting Co., Inc., of Minot, N. Dak. Mr. Caraker is a bachelor of science and master of arts. He is one of our outstanding citizens, and an authority on atomic energy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARAKER COMMENTS ON ATOMIC WAR

(By George Ernest Caraker)

The defense against an atomic war can not come from the material world. I attended conferences at the United Nations, met and talked with world-famous scientists on both sides of the Atlantic, and did much research. At the end of all this the scientist had one sentence to give the world: there is no defense against an atomic attack.

The only defense in an atomic war is not to have one. The only way not to have the war is to outlaw the destructive uses of the atomic energy. The way to outlaw the destructive uses is to agree to a plan. There are two plans, untouched, unfinished, and almost abandoned. The Gromyko and the

Baruch plan. Unfortunately the dust is beginning to settle on those two plans out there in the United Nations.

The fact that Russia has the atomic bomb, renders useless our claim to the priority of the atomic potential. I mention this atomic question for one reason, to remind, that behind the curtain in the struggle for agreement between the east and the west lies a threat unparalleled in all our history. Make no mistake about it, when you think of Korea and China—think of atomic bombs. When you think of Western Europe and the iron curtain—think of atomic bombs. When Russia moves in the west—expect atomic bombs to fall. And think, how, in this grave hour of crisis man is going to solve the problem with which he is confronted.

Our hope in this crisis, is, that man can repeat history by drawing from some moral or spiritual force to guide him. Somehow in the past, he made it, and now once again is trying to save himself from destruction. This is the world at midcentury, where never before in our history did mankind seek so desperately for the answers to its morals and physical questions. Nations, suddenly aware that they must solve deep problems, began dumping overboard, old ideals, old concepts, old graces, and respects for the humanities.

How can we save ourselves? We can, as in the past, by realizing our own worth, and reinforcing our appeal for those who are unsure of the road to follow. Unlike democracy, Communist ideas laugh at the assertion that individual freedom is essential. But it is essential, because it is freedom which enables man to achieve progress. But these newcomers claim to have found, inside a few years, the answer to all problems which have beset us since the dawn of history. They look upon freedom and individual decency as an outmoded relic. They say, freedom is a barrier to Communist power, and that freedom is something with which the masses may not be trusted.

Yet, despite these fanaticisms—despite the universal aggressiveness—despite all these things, these ideologies reveal fatal weaknesses and misgivings. For it is the lesson of history, that in the long run, freedom is strength and suppression and compulsion is weakness. But such a fact also means that we should be on the alert, for the strength which comes from freedom must be understood and used and not abused or, we will lose that freedom. Such is the challenge of the twentieth century. That we live our daily lives, conduct our community life and our local and Federal Government in such a fashion, that people will see in our way of life the solutions to their severest problems.

The central fact behind socialism and communism is that man cannot think for himself, govern himself, or plan for himself. This means that power goes to a selected group of men, who believe in man's perfection, or the power goes to one man who dictates to millions. The people then find themselves unable to protect themselves through law, justice, politics, and the press. If we use 30 centuries of history, then powerful groups of individuals end up by confusing the issue and by losing touch with the masses. The few leaders fall in their approach to reality and sanity. Then the grand end comes for his country and unfortunately for a large part of the world. This trend today could lead to an atomic war and, because of Russian tactics, threatens to engulf the whole world.

From the central theme of communism has come a vast, mad dogma which has spread far and wide, brutalizing nations, undermining nations, violating treaties, gaining fanatical converts, and controlling 750,000,000 people.

Born during periods of economic distress, we find their leaders largely recruited from the ranks of adventurers and malcontents and social misfits, with the idea of setting up an all-powerful state to control economic activity and eliminate political choice.

While it would be a serious and perhaps fatal mistake for the free world to underestimate the strength and determination of the Communists and Socialists within our midst and in other countries, particularly communism, there is ample evidence that all systems which deny freedom and rely upon compulsion and suppression carry within themselves the seeds of defeat. It would seem that if we are able to solve this threat, then the danger of the atomic bomb might be converted into an instrument for the good of man. If the people of the United States ever decided to abandon their freedom for some new ideology offered them by some powerful dictator, it will not be for the lack of warning—for today America is in the enviable position to study the countries about her—where socialism and communism have taken over.

The free world has two battles to win—the one is a social revolution, a revolution in human relations; the other is the atomic threat—the two battles cannot be separated from each other. It is a world-wide struggle with ethics on one hand and physics on the other, and the decision will have to be reached.

Tribute to the Flag by Mrs. Nora L. Kearns

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 19, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article entitled "What Price, Old Glory," by Mrs. Nora L. Kearns, wife of CARROLL D. KEARNS, Representative in the House of Representatives from the Twenty-eighth District of Pennsylvania. It discusses the necessity of taking steps to protect the American flag.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT PRICE, OLD GLORY

(By Nora L. Kearns)

Throughout history, the great nations have had laws to prevent the desecration and mutilation of their flags. The United States, however, has no such Federal law applicable outside the District of Columbia.

The record reveals that efforts to have a Flag Act enacted into law, "To make it an offense against the United States to use the flag . . . for advertising purposes, or to mutilate, defile, or cast contempt upon the flag of the United States," have materialized only to the extent of having such bills consigned to committees of the House and Senate where further action has remained pending—pending since December 18, 1897.

The flag itself was born amid the turbulent days of revolution, June 14, 1777. It was more than 100 years later, however, on June 14, 1899, that a hitherto obscure teacher-principal of a free kindergarten for the poor decided to commemorate that birthday by holding patriotic exercises. The program attracted attention far and wide

and marked the beginning of ceaseless efforts to promote a popular awareness to the historical significance of the flag; to preserve and to perpetuate the aims, ideals, and principles which it symbolizes; and to secure by law, the protection which is its right.

The day itself, June 14, first designated as "Flag Day" by the Colonial Dames of Pennsylvania in 1893, has generally come to be observed as a holiday, though it exists legally as such only in Pennsylvania. The thousands of inspirational public meetings held on Flag Day each year throughout the United States are evidence of American patriotism and the message of the flag, upon that—her greatest day—resounds anew on the Fourth of July and other national holidays.

There does exist a code of flag etiquette, adopted by 68 patriotic organizations, through the auspices of the American Legion. This code can represent the opinion of these organizations only, however, and is not Federal law. The War Department prescribes rules and regulations governing the use of the flag for observance within the Army, but again, it is beyond its province to prescribe them for civilians.

The first national flag bill was introduced in 1897 through the efforts of the Daughters of the American Revolution. They have not relaxed in their Operation Patriotism and in their most recent Continental Congress, April 1951, reaffirmed by resolution.

"Whereas the flag of the United States has no protection by Federal law against desecration and mutilation; and

"Whereas there have been introduced House bill 1333 and Senate bill S 555 for the protection of the United States flag from mutilation, desecration, and mercenary exploitation, with penalties for violation of said laws,

"Resolved, That the National Society, Daughters of the American Revolution, support House bill 1333 and Senate bill 555."

Their efforts to arouse public sentiment toward the passage of a flag bill have been duplicated by hundreds of similarly minded patriotic societies, veterans organizations, civic groups, lodges and benevolent orders, and individuals. Representatives of foreign governments in the United States have also, understandably, requested a national code of flag etiquette.

Of course, if such a bill were passed, no longer, lawfully, could business establishments use the United States flag for advertising, no longer, lawfully, could one mutilate the flag as an article of wearing apparel, deface it in household decoration, nor consume it in icing, candy, or molds of ice cream.

The flag is worth sacrificing for, suffering for, dying for, living for. When will it be worth legislating for? When will it be granted the protection by law which other nations from time immemorial have given their flags?

What price, Old Glory. How dear, Old Glory.

Why the Livestock Men Oppose Mr. DiSalle's Control Program

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. MURRAY of Wisconsin. Mr. Speaker, one of the main reasons why livestock men feel that the administration has not had the right approach to

the meat problem is shown in the following official table:

Cattle—Number on farms, United States, Jan. 1, 1935-51

Year	Kept for milk	Other cattle	Total
	Thousands	Thousands	Thousands
1935	36,357	32,489	68,846
1936	35,452	32,395	67,847
1937	34,853	31,245	66,098
1938	31,774	30,475	62,249
1939	35,626	30,408	66,034
1940	36,432	31,877	68,309
1941	37,383	34,372	71,755
1942	38,837	37,188	76,025
1943	40,210	40,964	81,174
1944	41,257	44,077	85,334
1945	40,849	44,724	85,573
1946	39,093	43,341	82,434
1947	38,468	42,739	81,207
1948	37,175	40,951	78,126
1949	36,528	41,770	78,298
1950	37,265	43,012	80,277
1951 ¹	37,665	46,510	84,175

¹ Estimated

Source: Agricultural Statistics, Bureau of Agricultural Economics, U. S. Department of Agriculture.

During World War II, while the housewives of the Nation were standing in line in the markets to get a piece of meat, cattle numbers were increased from 68,000,000 to 85,000,000.

Livestock producers would have no reason to receive any special consideration, but they are justified in feeling that when Mr. DiSalle limited the number of cattle to be killed he was following the same program that caused so much inconvenience to the housewives by Henderson-Bowles and company.

Once more I call your attention to the fact that cattle numbers during World War II increased by 17,000,000 head and that following the war large numbers were diverted to Europe, mostly to Britain.

We must also keep in mind that this country has been on an importing basis so far as beef is concerned ever since 1913 when the Underwood Tariff Act was passed during the Wilson administration.

Mexican Wetback Labor in the United States

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, July 19, 1951

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Is Ike's Icy Glare at Exploitation of Wetbacks an Omen of Politics?" which appeared in the Parkersburg (W. Va.) News of July 8, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS IKE'S ICY GLARE AT EXPLOITATION OF WETBACKS AN OMEN OF POLITICS?

Now that Gen. Dwight D. Eisenhower, amid all the grave problems engaging his attention in Europe, has found time to deplore the exploitation of illegal Mexican wetback labor in the United States, under conditions little if any better than peonage, we

suppose that sooner or later the bigwig commentators will be compelled to take notice of this renaissance of colonialism in the States not far from the Rio Grande.

Before, in effect, denouncing such inhuman practices as "racketeering," General Eisenhower cited the following item he had noticed in the New York Times.

"The rise in illegal border crossings by Mexican wetbacks to a current rate of more than 1,000,000 cases a year has been accompanied by a curious relaxation in ethical standards extending all the way from the farmer-exploiters of this contraband labor to the highest levels of the Federal Government.

"Although wetbacks are fugitives from justice, southwestern cotton, citrus, and vegetable growers have come to the fixed view that there is nothing wrong in employing them, harboring them, or even in actively recruiting them across the international boundary. Further, they have come to feel they have a vested right in the traffic."

A DRAMATIC GESTURE

If Ike at length had determined to let his name be presented to one of the approaching Presidential conventions, he could not have made a more dramatic political gesture toward the wage-workers of the Nation than to turn his icy glare on the shocking wetback evils, for the exploitation of the illegal wetback labor deprives native American citizens of work at fair wages, and in general serves to lower the living standards of the country. It is a pertinent question to ask, we believe, whether the general's comment does have political significance? Ike is not given to going off half-cocked.

Meanwhile, the Senate of the United States, rather shame-facedly it seems, a few days ago approved a watered-down conference report on a bill purporting to deal with the wetback situation. A record vote was not taken on the conference report. Only a few of the Senators, it seemed, cared to go on record.

SENATOR CHAVEZ SEES SLAVERY

Among these was Senator DENNIS CHAVEZ, of New Mexico, who denounced the measure as fostering slave labor in the United States and contrasted our moral condemnation of such colonialism in other parts of the world with our actions at home. Senator CHAVEZ said:

"Mr. President, I shall not take very much of the time of the Senate, but I think a record should be made, and that the American people should know what would be done if this conference report should be adopted.

"First, I invite the attention of the Senate to the record and history of the past 10 years. Our political thinking and our so-called philosophy of government have resulted in hundreds of thousands of white crosses over the graves of American boys. It was hoped that they had not died in vain. It was hoped that they had died in an effort to carry forward an idea. We sermonize all over the world, asserting that we are for free peoples, and we suggest to the Congress the appropriation of funds out of the pockets of the American taxpayers in order to help so-called forgotten people, or those who are not doing very well.

"If it were not for such legislation as the Senate is now called upon to pass, we would not need the four-point program. If we were more opposed to imperialism and colonialism, even in economics, we would not need a point program, or even need to talk about forgotten peoples.

"Mr. President, I congratulate my good friend the senior Senator from Louisiana [Mr. ELLENDER]. I think he has a fair bill, as a whole, but I, for one, do not believe in slave labor, even if it happens to involve a Mexican. I prefer the philosophy of Jefferson, who said that the Government should be for people instead of for dollars. It seems to be the trend of the moment to forget about humanity and to take advantage

of an opportunity to make a measly dollar. Then we talk about doing something for free people all over the world.

"Does the Senate know why there are backward people in Iran and Saudi-Arabia? It is because of the basic idea in the bill which the Senate is asked to approve this afternoon. Do Senators know why there are starving Mexicans? It is because we are so anxious to make 10 cents or a dollar. Do we mean what we say? There is colonialism in Indochina, in Java, and elsewhere, and there are many backward people there. That situation is fostered by the basic idea and philosophy of the pending legislation, because it is not based upon humanity; it is not based upon freedom about which we love to boast and about which we do so little. It is based upon permitting a few people to take advantage of someone who is hungry. That is what it is, purely and simply.

"I invite the attention of every Senator to the fact that a seat in the United States Senate is not worth that kind of action. I prefer to convey to the American people the idea that I believe in those things which made the Declaration of Independence possible. There are probably those who do not like what I am saying, but I still say it. Fighting for things which I do not feel I should fight for is not worth a seat in the United States Senate.

"Mr. President, only a few years back some of our ancestors left Europe or elsewhere to come to America. For what reason? In order to take advantage of the sacred freedom of this country.

"Without questioning the motives of a single Member of this body, I say that approval of this bill is contrary to common American fair play and decency."

HOW RECONCILE IT?

In connection with the above assertion by Senator CHAVEZ, we can only inquire, How do some Senators of the United States who approved this bill expect to reconcile such callous indifference at home with their professed indignation over conditions in India, Indonesia, China, Africa, and elsewhere in the world? They cannot satisfactorily do so, in our opinion. And there can be no doubt that this lethargy toward the evils of the wetback peonage will be interpreted as but a new sign of the moral decadence of the Government in Washington. For an administration which professes to be the friend of the wage workers to tolerate such wetback immigration, or even supervised wetback immigration at substandard wages along the Rio Grande and in the Imperial Valley while depriving native American labor of jobs, certainly should be listed in the category of not delicate irony.

INJURY TO OUR NATION

But the larger injury to our Nation consists in the racial discrimination, because the so-called Indian peoples, such as those in Mexico, are descendants, according to the leading anthropologists, of Mongoloid races that came originally from China, Manchuria, and Siberia. Thus the United States appears to have aligned its policies against the colonial victims in Indonesia and other parts of the world, with the exception of the Philippines, and this only after long years of tutelage. And sadder even than this, is the fact that some Senators of the United States, together with the southwestern and western exploiters of this immigrant labor cannot see what they are doing to themselves. The Nation is still paying a heavy price today for ruthless exploitation of solicited immigrant labor in the 1880's and 1890's from southeast Europe.

Our country should take pride in being the champion of oppressed peoples everywhere, in accordance with our Declaration of Independence; but if circumstances inhibit us from doing that overseas, then at least we should refrain from giving a bad example at home.

Senator CHAVEZ and those who associated themselves with him—including General Eisenhower—are so right that it is painful to observe the derelictions—the moral blindness, if you will—of those who vehemently denounce communism, yet by their actions add fuel to the flames.

William N. Oatis

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the Record the following editorial from the Washington Daily News under date of July 18:

In Red-ruled Czechoslovakia it is a crime to be an American.

That is one reason why William N. Oatis, former Associated Press correspondent at Prague, is in a Communist prison.

The other reason is the supine attitude of our State Department.

The State Department has been dealing with hostile Communist governments for 6 years. But it still has not decided how to protect the rights of an American citizen, abroad on legitimate business, when a Red puppet regime gets nasty.

Mr. Oatis was arrested on charges which the State Department has declared to be false—as they obviously were.

He was sentenced to prison after a trial which the State Department has branded a travesty on justice.

This outrage never would have been perpetrated if the Czech commissars had not been given good reason to believe they could get away with it.

They had seen how the State Department reacted when Moscow's stooges in Hungary threw an American businessman, Robert Vogeler, into jail.

Mr. Vogeler's only crime also was that he was a citizen of the United States. But he stayed in a cell for 17 months while the State Department made futile protests, and he got out only when it finally paid a heavy ransom.

Once yield to blackmail and other blackmailers are encouraged.

Our Government was not always so ineffective.

When Theodore Roosevelt was President, the rights of Americans abroad were treated with respect. He and his Secretary of State made it plain that such rights would be protected—and that the Government of the United States could not be pushed around.

But it is a far cry from John Hay to Dean Acheson.

An official who is soft in dealing with Reds in his own Department cannot be expected to get tough with arrogant Red governments.

Pain

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. SIEMINSKI. Mr. Speaker, the anonymous lines below are said to have

been discovered scribbled upon the walls of a hospital room next to a bed where a sufferer from an incurable disease had lain. I thought they might be of solace to some in the days ahead:

PAIN

The cry of man's anguish went up to God,
 "Lord, take away pain!
 The shadow that darkens the world Thou
 hast made;
 The close coiling chain
 That strangles the heart; the burden that
 weighs
 On the wings that would soar—
 Lord, take away pain from the world Thou
 hast made
 That it love Thee the more!"

Then answered the Lord to the cry of the
 world,
 "Shall I take away pain,
 And with it the power of the soul to endure,
 Made strong by the strain?
 Shall I take away pity that knits heart to
 heart,
 And sacrifice high?
 Will ye lose all your heroes that lift from the
 fire
 White brows to the sky?
 Shall I take away love that redeems with a
 price,
 And smiles with its loss?
 Can ye spare from your lives that would
 cling unto mine
 The Christ on his cross?"

Refutation of Charges of Magazine of Building Regarding Housing Permits at Savannah River Project

EXTENSION OF REMARKS OF

HON. JOHN J. RILEY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. RILEY. Mr. Speaker, I have just noted in the Columbia State, a daily paper in South Carolina, that an unwarranted attack has been made on the Federal Housing Administrator for South Carolina, Hon. H. E. Bailey, by the Magazine of Building which I understand is published by Time, Inc.

To my knowledge numerous commitments for building dwellings and apartments have been issued by the Federal Housing Administration office in Columbia, S. C. Daily, holders of these commitments have been calling and writing my office asking how they can get these commitments financed. As everyone knows, the Federal Housing Administration mortgage market has dried up and until some provision can be made to attract mortgage investors into the Federal Housing Administration market, adequate housing cannot be financed in the critical areas. Numbers of individuals are putting their own savings into construction work in the area of the Savannah River project in an effort to relieve the tremendous demand for housing in that area. I sincerely trust that Congress will soon pass the housing and facilities bill which will be an aid in obtaining the necessary housing in the critical defense areas. I beg to list below a statement by Hon. H. E. Bailey,

Federal Housing Administration Director for South Carolina, in refutation of the charges made by the Magazine of Building, as follows:

FHA SAYS MORTGAGE FUND DEARTH DELAYING AEC BUILDING

The South Carolina director of the Federal Housing Administration yesterday tacked a label of "bosh" to charges that out-of-State builders are unable to get commitments from the FHA office in Columbia for the housing program in the AEC's Savannah River plant, and an attack on AEC area housing by a building magazine.

H. E. Bailey, State director of the FHA, said "shortage of mortgage funds," is the hitch to the building program.

"We have issued in Aiken, Barnwell, and Allendale Counties commitments for 721 living units, approximately \$5,000,000. These mortgages have not been sold, and therefore construction cannot begin," Mr. Bailey said.

The Augusta Chronicle said in its July 4 edition that it had learned "that a number of out-of-State builders" have complained bitterly to the AEC that they have been unable to get commitments from the FHA office in Columbia."

"Shortage of funds is no local matter," Mr. Bailey said. "It is nationwide. In South Carolina today we have between ten and eleven million dollars in outstanding commitments upon which the builders are unable to borrow money," he said.

The Magazine of Building, published by Time, Inc., will say in its July issue, according to the Associated Press, that "some people were less interested in getting housing built for the AEC's \$900,000,000 H-bomb plant than in getting housing construction safely in the hands of good local Democrats."

Mr. Bailey said, in explaining that the tie-up in building is not confined to the AEC plant, "a commitment issued for 500 units at Shaw Field, Sumter, has not been sold and therefore construction cannot begin. A commitment for 85 units at Parris Island has been issued to a New York builder. The mortgage has not been sold and therefore construction cannot begin."

"FHA does not lend any money," Mr. Bailey explained. "The commitments are converted into mortgages and these mortgages after insurance by the FHA are sold to long-term holders or buyers of mortgages, in what is known in the trade as a take-out. Each operative builder employs his own personnel."

"The same housing condition that prevails in the South Carolina H-bomb area prevails in Paducah, Ky., and other areas where there are defense activities," Mr. Bailey said.

"Since December 1, I have talked to between 800 and 1,000 builders. All of them, with the exception of a few local builders, have been waiting on the passage of the defense housing bill, which, as yet, has not passed the Congress."

The St. Lawrence Shindig

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. VAN ZANDT. Mr. Speaker, the newspapers of the country are still commenting on a junket recently made by a delegation of Congressmen from the House Committee on Public Works in connection with the proposed construc-

tion of the most expensive boondoggling economic monstrosity ever conceived—the St. Lawrence seaway.

Every Member of the House should read the following editorial taken from the June 22, 1951, issue of the Mobile (Ala.) Register:

ST. LAWRENCE SHINDIG

It is common knowledge by now, we presume, that a delegation of Congressmen from the House Committee on Public Works went on a junket recently to make a so-called inspection of the so-called St. Lawrence seaway project route.

The Congressmen in question could not resist junketing about the country at the expense of American taxpayers, even though vast volumes of almost everything imaginable concerning the so-called seaway project were available to them right in Washington, D. C., this great record having resulted from years and years of investigations, studies, surveys and hearings.

On the heels of the junket by Members of the House Public Works Committee, Representative JAMES E. VAN ZANDT, of Pennsylvania, who has been vigorously pointing out the fallacy of the St. Lawrence project, was attracted by a conference arranged at Omaha, Nebr.

This, he noted in remarks on the floor of the House, was the First Governors' Conference of Inland America.

What impressed Congressman VAN ZANDT most, however, was not the conference but the pro-St. Lawrence flavor he saw in it.

"It is interesting to note," he commented, "that no one has been invited to the governors' conference unless he favors the St. Lawrence project."

If anybody wanted to pitch a party in Omaha to whoop it up for the proposed white elephant so-called St. Lawrence seaway, they had a perfect right to do it, so far as we know. But if the purpose was to propagandize for the project, why call it a governors' conference instead of a St. Lawrence propaganda party?

The Case of Dr. Edward U. Condon

EXTENSION OF REMARKS OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. VELDE. Mr. Speaker, I want to call special attention to my letter of July 18, 1951, addressed to our Secretary of Commerce, Mr. Charles Sawyer, in which I have requested that the case of Dr. Edward U. Condon be reconsidered by the Department's loyalty board in view of the recent Presidential directive revising procedures before the board. The letter reads as follows:

HON. CHARLES SAWYER,

Secretary of Commerce, Department of Commerce, Washington, D. C.

DEAR MR. SAWYER. I was very pleased to note that a recent directive was issued by the President revising procedures before the Loyalty Review Board and understand now that a check may be made on Federal employees who are not good security risks.

During the past 3 years the Committee on Un-American Activities, of which I am a member, has been making an investigation into the security risk of a number of Government employees, including Dr. Edward U. Condon, Director of the Bureau of Standards, which is under your Department.

The Honorable RICHARD B. VAIL, who was a member of the Un-American Activities Committee in the Eightieth Congress, carried on some of the investigation of Dr. Condon and on April 23 last, prepared a statement which includes much of the information obtained in the investigation and hearings he conducted. I am enclosing herewith, for your information, a reprint of the statement Mr. VAIL made.

In addition to the material contained in this statement, I am satisfied that other material in the files of the Un-American Activities Committee could be made available to the Department's loyalty board should an investigation by that board be undertaken.

I feel strongly that such a renowned and able scientist as Dr. Condon, who has access to all of our atomic and highly classified military information, should have his alleged associations with known Soviet agents thoroughly explored.

I respectfully request that your Department consider this matter seriously with the view of bringing the information to the attention of your loyalty board.

Sincerely yours,

HAROLD H. VELDE,
Member of Congress

Visiting Instruction Corps, District of Columbia Schools

EXTENSION OF REMARKS OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of the Members of the House the fine service rendered in the District of Columbia by the Visiting Instruction Corps of the Public Schools. This program has a group of teachers who provide education to the home bound and hospitalized children. Children are eligible who are expected to be out of school for two or more months because of some prolonged illness or physical disability. They are taught from the first grade through senior high school. During the 13 years of its existence, the Visiting Instruction Corps has taught over 3,500 children.

Through the skillful and understanding manner of the teachers a renewed purpose in life is each year brought to the victims of poliomyelitis, rheumatic fever, nephritis, serious accidents, as well as those with epilepsy, cerebral palsy and many others. The majority of youngsters are able to return to regular school after being on the program for 1 year. There are some who receive this type of school for 2 or 3 years and eventually enter regular classes. Occasionally there is a child who is not physically able to do this and his only school is the VIC. Each child has the satisfaction and opportunity of progressing in his school work according to his ability and chronological age and does not find himself embarrassed by being a grade misfit upon returning to school.

The period of convalescence has become busy and full of as many normal experiences as the child's physical con-

dition permits. He covers the three R's as well as develops hobbies and projects around his interests. He develops qualities of self-reliance, independence of thought and action which he frequently carries with him long after he leaves the special program.

Regular graduation exercises are held with the Board of Education awarding diplomas to the pupils of the Visiting Instruction Corps who matriculate from junior or senior high school.

The following letter to the editor in the Washington Post of June 16, 1951, shows the grateful reaction of one of the many parents whose children have been enrolled in this excellent program:

LETTERS TO THE EDITOR

GRATEFUL PARENT

On June 11 there graduated from junior high school the smallest class of children in the city. Our son was one of the six boys and girls in this group completing a course of study under the supervision of Miss Bertha E. Taylor, Mrs. Bessie W. Cramer, and Mrs. Elizabeth M. Goodman. The teachers working under them comprise the Visiting Instruction Corps. Through the columns of this paper, may I take this opportunity to publicly express our gratitude to the above-named women and to Mrs. Alys McCullough, Mrs. Esther Gillespie and the art teacher, Miss Watts who made yesterday possible.

There has been so much adverse criticism of teachers and educational facilities and curricula that I cannot but pay this tribute to this group who literally have not been stopped by rain or snow in the completion of their work. The sympathy and understanding, the determination to help each of these physically handicapped children develop to the utmost those qualities with which he was born resulted yesterday in a group of children so well poised, so buoyant in spirit, so confident in the future despite their experiences of the past that I'm sure all of us present felt a little ashamed of our own fears.

This is a group of teachers little known to the general public, because, fortunately, few parents need their services. To those of us who know the corps there has come the realization that the very existence of this group is possible only because of our American philosophy of life.

HANNAH STONE BARGTEIL.

WASHINGTON.

Jersey Joe Walcott, Example of a Fine American

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. RODINO. Mr. Speaker, thanks to Arnold Raymond Cream, the highest prize of the boxing world, the heavyweight championship has come to rest in the State of New Jersey. Jersey Joe Walcott, as he is more affectionately and popularly known, is truly a great champion. And the residents of our Garden State can well be proud of him as such. But there is something even more basic for which New Jersey can take pride in Jersey Joe; it is the fine quality and sterling character of the man which

stamps him as truly a fine American. He displayed this last night, when in a dramatic contest and classed as the underdog, he won the championship crown from Ezzard Charles. In this moment of his great triumph, Jersey Joe did not forget to give thanks to Almighty God. In simple, moving, but eloquent language and with a sincere sense of humility he expressed the thought that, no matter how many times you lose, if you have God on your side, you will come out a winner in the end. This lesson in simple faith is one which should be inspiring to the youth of America and all Americans regardless of color, race, or creed.

Jersey Joe believes in translating his words into action. So it was that he also expressed the desire to be able to devote more of his time to teaching youngsters at Sunday-school classes that faith in God is necessary to our way of living.

Yes, Mr. Speaker, faith is necessary in these troublesome times when we are battling the forces of the faithless and the godless who seek to enslave the world. But if all of us remember the simple words of Jersey Joe—that if you have faith in God—no matter how many times you lose, you will come out a winner in the end, then we know that we will ultimately triumph.

I wish to salute a great champion, a fine man, a great American—Jersey Joe Walcott.

Foreign Economic Aid

EXTENSION OF REMARKS OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. MEADER. Mr. Speaker, in the interest of obtaining the advantage of the thinking of persons in various fields of activity on the question of foreign economic aid, which now is being considered by the House Foreign Affairs Committee, I have obtained comments from scores of persons on House Resolution 3798, which I introduced to create a Commission on Aid to Underdeveloped Areas.

From time to time I have included the comments of various persons in the RECORD in order that the Congress might have the benefit of their views on this important subject.

Under leave to extend my remarks in the RECORD, I now include several more of these very excellent expressions of viewpoint:

THE AMERICAN POLITICAL
SCIENCE REVIEW,
OFFICE OF THE MANAGING EDITOR,
DUKE UNIVERSITY,
Durham, N. C., June 2, 1951.

HON. GEORGE MEADER,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE MEADER: I was pleased to receive a day or two ago, your letter of May 17 and the enclosed extracts of your speech from the CONGRESSIONAL RECORD. I have discussed the proposal which you made

with certain of my colleagues and we were favorably impressed with the details of your plan.

If your bill should be passed, I would be most happy to make one or two suggestions regarding membership of technical personnel on it. I particularly feel that the American Political Science Association has some members who would be of great assistance to such a Commission.

Sincerely yours,

TAYLOR COLE.

FRIENDS MEETING OF WASHINGTON.

Washington, D. C., June 5, 1951.

The Honorable GEORGE MEADER,
House Office Building,

Washington, D. C.

DEAR MR. MEADER: Thank you for your letter of May 29, enclosing a reprint of the statement which you made on the floor of the House when you introduced a bill to create a Commission on Aid to Underdeveloped Areas.

I wish to commend you on the bill which you have introduced and on the statement which you made supporting the bill. It seems to me that your plan offers an opportunity for real statesmanship in bipartisan foreign policy at a highly constructive level.

The idea of bipartisanship in the Commission which you propose is a good one, and I should like to see that similar idea extended to insure that aid would be given to underdeveloped areas of the world, without regard to political considerations. I am aware that it may be more difficult to secure approval for such a program, if the aid offered by our Government is free of political attachments, but it will fall in its humanitarian and constructive purpose unless it can be offered freely to all areas where there is need.

Sincerely yours,

HERBERT M. HADLEY,

Meeting Secretary.

NASH-KELVINATOR CORP.

Detroit, June 28, 1951.

Hon. GEORGE MEADER,
Congressional Office Building,

Washington, D. C.

DEAR CONGRESSMAN MEADER: We believe that prior to taking any tangible steps for the implementation of the point 4 program, Congress should pass the Meader bill for the establishment of a bipartisan commission to investigate and report on ways and means to remove barriers to overseas private investments.

By increasing foreign investments on a business basis with appropriate guaranties against expropriation and with assurance of conversion into dollars of annual returns on such investments, the American taxpayers might well be relieved of a heavy financial burden inherent in the government-to-government formula of foreign aid.

We congratulate you for your constructive contribution to the point 4 program as proposed in the Meader bill.

Our best wishes for your success in securing passage of your proposal.

Sincerely yours,

C. W. WEYAND,
Executive Assistant.

THE DETROIT EDISON CO.,

Detroit, Mich., July 10, 1951.

Hon. GEORGE MEADER,
House of Representatives,

Washington, D. C.

DEAR MR. MEADER: I was very happy to receive a copy of your speech on American foreign policy which Mr. Durbin was kind enough to give me. I note with particular interest the positive and concrete approach that you have taken to the problems of overseas development. Particularly outstanding is the effort which you have exerted to place

emphasis on the part of private enterprises in implementing the objectives of our foreign economic policy. The Detroit Board of Commerce has given considerable publicity on the major developments many firms have already made in expanding their overseas manufacturing facilities. However, our ability here in the United States to do the job can best be shown by intelligent and positive action.

Let me compliment you for the wonderful progress that you have made in this direction and in furthering those outstanding objectives of your thinking.

Sincerely,

FRED A. COMPTON.

INTERNATIONAL BUSINESS

MACHINES CORP.

New York, N. Y., July 12, 1951.

The Honorable GEORGE MEADER,

The House of Representatives,

Washington, D. C.

DEAR MR. MEADER: In Mr. Watson's absence, I am writing to acknowledge and thank you for your letter enclosing a reprint of your statement of April 23 in Congress, introducing a bill to create a Commission on Aid to Underdeveloped Areas.

You have presented a very comprehensive program for eliminating the barriers to the development of the natural resources of the underdeveloped areas of the world. I am sure that this interesting approach to the point 4 program would comprise an effective means for combating the influence of communism by improving the economic and social conditions of the peoples of these areas. You are to be congratulated on your efforts and I wish you continued success in all your endeavors.

Very truly yours,

GEORGE L. RIDGEWAY,

Director of Economic Research.

McGraw-Hill Publishing Co., Inc.

New York, N. Y., May 31, 1951.

Congressman GEORGE MEADER,

Congress of the United States,

House of Representatives,

Washington, D. C.

DEAR CONGRESSMAN MEADER: Thank you for sending me a copy of your speech in the House on April 23, calling for the creation of a Commission on Aid to Underdeveloped Areas.

It seems to me exceedingly important that the point 4 program now getting under way should have focused upon it some intense thinking. Point 4 over the years could become as big and persuasive as the Marshall plan. It makes sense that we know what direction it is taking in its infancy, and we should certainly insist, as you point out, that these overseas programs be keyed to private initiative, not to paternalistic government, operating on a world-wide scale.

Cordially yours,

ELLIOTT V. BELL.

YALE UNIVERSITY SCHOOL OF LAW,

New Haven, Conn., June 19, 1951

The Honorable GEORGE MEADER,

House of Representatives,

Washington, D. C.

DEAR MR. MEADER: I want to congratulate you on taking the initiative in introducing a bill to create a commission on aid to underdeveloped areas.

I think the time is more than ripe to bring all of our experience to bear on this problem.

By giving aid to underdeveloped areas, I am sure you are right in foreseeing that we can make an effective demonstration of our basic policy objectives, and show in a constructive way what we can offer the world.

Very truly yours,

HAROLD D. LASSWELL.

THE UNIVERSITY OF THE STATE
OF NEW YORK,
THE STATE EDUCATION DEPARTMENT,
Albany, June 8, 1951.

Hon. GEORGE MEADER,

House of Representatives,

Washington, D. C.

DEAR CONGRESSMAN MEADER: I have had the pleasure of reading your speech in the CONGRESSIONAL RECORD on April 23, 1951. It seems to me that our Government has already been following an affirmative foreign policy through its point 4 program, which is designed to affect favorably the long-range interest of the United States through teaching other people how to help themselves. I grant that the program is to be carried out through Federal funds under the leadership chiefly of the Department of State. Be that as it may, teaching people how to use machinery, how to industrialize their own economies is in itself an excellent program. It will help to raise the standard of living, reduce the effectiveness of subversive groups in the countries concerned and increase the trade of those countries with ourselves.

You see I am entirely in accord with the point 4 program as I understand it.

I am equally in accord with the proposals which make for a dynamic policy which makes it possible for private capital in this country to undertake long-range economic programs in those countries where raising the standard of living will have substantially the same effect as the point 4 program is designed to secure. The advantage of such a program is that it will obviously increase the opportunities for investment and trade abroad, secure the interest in foreign countries in the development of their own economies, I trust, on a private enterprise basis. At any rate, it should have the effect of preventing the development of cartel controls and of Government bargaining, both of which are so restrictive of international trade.

I am frankly in favor of your proposal and trust that a commission on aid to underdeveloped areas may be established and that the findings will be such that they can be put into effect.

Sincerely yours,

ALBERT B. COREY

UNIVERSITY OF MICHIGAN,
DEPARTMENT OF POLITICAL SCIENCE,
Ann Arbor

The Honorable GEORGE MEADER,
House of Representatives,

Washington, D. C.

DEAR GEORGE: I have found the time to look over your address on foreign policy somewhat more carefully and I congratulate you on a very careful presentation, logically and clearly done. I believe you have convinced me that we need a commission similar to the one you propose. While I was reading your speech, I was called from Washington and asked to testify before the Senate Committee on Expenditures which is having hearings on the Hoover Commission proposal to study this question. I think therefore there is considerable interest in the matter and maybe we can get somewhere with a good proposal. I don't have the time now to go over all of the details of your bill in this letter, but on the principal point I am, I believe, now convinced that we need a study independent of the agencies now handling overseas affairs although their participation and testimony would, of course, be essential. I am a little worried that we could not get a commission of high caliber and between ourselves, I was never very enthusiastic about the congressional contingent on the Hoover Commission. With the exception of CLARENCE BROWN, who worked hard and conscientiously, the others were pretty much a total loss. The work on any such commission,

if it is to be done, will be done by public members and any prestige which attaches to their recommendations necessarily arises from the quality of the membership.

Cordially yours,

JAMES K. POLLOCK.

YALE UNIVERSITY LAW SCHOOL,
New Haven, Conn., June 13, 1951.

Hon. GEORGE MEADER,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MEADER: I have your letter of June 9 and your enclosed speech on the Commission to Aid Underdeveloped Areas. I think that your proposal is a grand one and wish you success on it. I agree that we should be much more aggressively formulating a positive policy along the lines you indicate.

When you formulate another version of the proposed agenda it might win friends to include a number of points on how to ease the impact of such a program on the recipient countries.

With thanks and good wishes,

MYRES S. McDUGAL.

TRUST TERRITORY OF THE
PACIFIC ISLANDS,
OFFICE OF THE HIGH COMMISSIONER,
June 2, 1951.

Hon. GEORGE MEADER,
House of Representatives,
Washington, D. C.

MY DEAR REPRESENTATIVE MEADER: Thank you for sending me a copy of your fine speech.

If a commission could be set up with the problem of thinking through the possibilities of point 4 some great mistakes would be avoided in developing a sentimental and statesmanlike idea into an actuality. Therefore, your commission idea has great merit.

There is some phase of point 4 in practically everything we have to do in the administration of the trustee islands, but there is hardly a place for us under the projected organization should it ever become law. Our people are so few, and so widely scattered, and so limited in economic possibilities, that any thought of a quick return is out of the question. I am going to keep your talk very close to me because it contains much which we may on a very, very small scale translate into action.

Thanks again for writing.

Most sincerely yours,

ELBERT D. THOMAS,
High Commissioner.

COUNTY OF LOS ANGELES,
BOARD OF SUPERVISORS,
Los Angeles, June 19, 1951.
Congressman GEORGE MEADER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MEADER: While I have not had time to study and analyze in detail your April 23 speech and the accompanying bill, it seems to me your principle is thoroughly sound. I hope you will press persistently for enactment.

I returned from a study tour of Jordan and Israel last month and I am convinced that, in Jordan, for example, where technical guidance is needed, great strides could be made in large-scale irrigation with the help your Commission could provide. And such development would have a far-reaching effect to stabilize the potentially explosive Near East and Middle East. Many other examples in other parts of the world could be cited.

Very cordially,

JOHN ANSON FORD.

NEW YORK, N. Y., June 12, 1951.
Representative GEORGE MEADER,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MEADER: I was very happy to receive your letter telling about your introduction of a bill in the House of Representatives to create a commission to aid underdeveloped areas. May I congratulate you upon this approach to a positive foreign policy for the United States. I agree with you so heartily that this is a far more effective way of containing communism than all the coercive legislation that could possibly be passed.

It seems to me that we have so much to give in technical ability and creative imagination in this country that it is important we make the world realize what America can do and what it really is and means to her citizens.

I wish you good luck with your suggestion.

Sincerely yours,

Mrs. HENRY G. (AGNES) LEACH.

TUNNELL & TUNNELL,
Georgetown, Del., June 11, 1951.
Hon. GEORGE MEADER,
House Office Building,
Washington, D. C.

DEAR GEORGE: Your letter of June 11 has just been received.

I have gone over, rather carefully, your bill and your speech. I think your ideas are good and hope that it might be possible for you to get this bill through in some form. I think possibly, if I had any suggestion to make, it would be with reference to a report of the Commission either to the President or to the President and to both Houses of Congress. It might be well to consider whether it would be desirable to have a provision that such a report should be made within a specified time.

I knew of your being a Member of Congress and have, at different times, thought of writing you. I don't believe I have done so. We are pretty busy here at this time and perhaps I may be forgiven for being a little lax in my social practices. However, I often think of you and wish you the greatest success in your congressional activities.

Thanking you for your thoughtfulness, I remain,

Very sincerely yours,

TUNNELL & TUNNELL,
JAMES M. TUNNELL.

LITTLE, LEISOURD, PALMER & SCOTT,
Seattle, Wash., May 29, 1951.
Hon. GEORGE MEADER,
House of Representatives,
Washington, D. C.

DEAR MR. MEADER: I acknowledge receipt of your letter of May 21, enclosing reprint of the statement you made on the floor of the House in connection with your bill to create a commission on aid to underdeveloped areas. I have read your remarks and the bill with genuine interest. I think definitely that it is a step in the right direction. To what extent, if any, it overlaps or differs in basic policy from the recent report of the committee headed by Nelson Rockefeller I have not been able to determine from a cursory reading of both your statement and the latter committee's report.

There is no doubt in my mind that something along this line is badly needed, and I certainly am happy to give it my support in principle.

I have recently returned from a round-the-world trip and, over a period of the last 20 years, have traveled extensively in foreign countries. I agree 100 percent that we need a foreign policy which is essentially

positive, rather than negative. Mere containment is not enough.

Please let me know if there is anything I can do to help. I have many friends in both the Senate and the House, and will be glad to do whatever I can.

Sincerely yours,

HERBERT S. LITTLE

MAVERICK, PUTMAN & PUTMAN,
San Antonio, Tex., June 26, 1951.
Hon. GEORGE MEADER,
House of Representatives,
Washington, D. C.

DEAR MR. MEADER: As a Democrat and former Member of Congress I am glad to endorse your bill to create a Commission on Aid to Underdeveloped Areas. There isn't the slightest doubt that your belief of a positive foreign policy, "rather than the negative policy" in reference to communism, is the best. Of course, we should have strong preparedness and always be willing to go to war if absolutely essential. The point 4 program and all positive measures should be greatly expanded, and, as you say in your speech, "we must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas."

As Chairman of the Smaller War Plants Corporation I established the technical advisory service for all small businesses, or any business for that matter, and during World War II it was a huge success. I suggested it internationally also, and it met with enthusiastic international response from all nations.

As you intimate, the voluminous literature of the point 4 program has spilled out very much, and, as you say, the American people must be for it and the ablest minds must work for it.

In writing you this I am not criticizing my own party, nor praising the Republican—I am only writing to compliment and congratulate you on your excellent move, and I assure you that if there is anything I can do I will do so.

With best wishes, I am

Sincerely yours,

MAURY MAVERICK.

(Written in longhand as a postscript:)
Your idea will save millions of lives, will benefit the whole world and help your own district, too

M.

PHILADELPHIA, May 24, 1951.
Hon. GEORGE MEADER,
House of Representatives,
Washington, D. C.

DEAR MR. MEADER: I wish to acknowledge your letter of May 21 together with the copy of your speech on an affirmative American foreign policy as appeared in the CONGRESSIONAL RECORD. Your suggestion of creating a bipartisan Commission on Aid to Underdeveloped Areas under the point 4 program is splendid. You have prepared a fine argument on its behalf and I certainly wish you success in your efforts.

On Monday I am flying to Europe by TWA for a month, otherwise, it would be a pleasure to call on you and discuss your ideas. After my return I may possibly have an opportunity to do this.

With very best wishes, I remain,

Sincerely yours,

MICHAEL FRANCIS DOYLE.

LOS ANGELES, CALIF., July 5, 1951
Hon. GEORGE MEADER,
House of Representatives,
Washington, D. C.

DEAR SIR: I have reviewed your bill to create a Commission on Aid to Underdeveloped

Areas and the underlying principle of your bill is much better than the underlying principles of the present law providing aid to underdeveloped areas.

My observation in foreign countries where ECA has been in existence is that the funds have been used in the main to develop Government-owned industries and other semi-socialistic institutions such as cooperatives, etc., and nothing has been done to foster private competitive enterprise in these countries. The net result of the operations to date has been to strengthen cartels and other such institutions which are inimical to the private competitive enterprise system and it has done much to hold back the economic development of Europe.

A program designed to aid the private competitive enterprise system in foreign countries and by the same token aid underdeveloped areas would go a long way toward accomplishing what these funds should accomplish. Your bill is in the right direction.

Very truly yours,

E. S. HARTWICK.

NEW YORK, July 12, 1951

HON. GEORGE MEADER,

Congress of the United States,

House of Representatives,

Washington, D. C.

DEAR CONGRESSMAN MEADER: I have read your April 23 statement which you were kind enough to send me with a request for comment.

My personal reaction is that you are on solid ground. There has been a considerable succession of official reports laying out plans and programs for development of so-called underdeveloped areas abroad. All of these, I believe, have mentioned "obstacles and hazards presently inhibiting the development of the natural resources of underdeveloped areas through the efforts of private citizens and companies and the investment of private capital." Then they go on to use the existence of these obstacles and hazards as a proof that government grants and loans are necessary, and come out with the conclusion that some large sum must be put up by the American taxpayer each year to bring about development. There is a cart before the horse aspect to it, and the unfortunate result is that attention is distracted from the fundamental task of relieving obstacles and hazards, and focused upon getting some more money out of the Congress. I like what you have to say about penetrating below the surface of emotional generalities and getting down to the bedrock of hard facts. If your commission could do this, in a fair and objective manner, it could make a real and lasting contribution to world economic development.

Sincerely yours,

MORRIS O JOHNSON.

Communist Czechoslovakia Continues to Be a Most Favored Nation in the Eyes of the Administration—Why?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. REED of New York. Mr. Speaker, the typical abuse of free men by Russian "stooges" in other foreign countries grows worse and worse. Congress has

told the President as plainly as words can be that we should take steps to counteract the uncalled-for persecution of our citizens by withdrawing from all Communist-dominated areas the concessions made in international trade agreements.

The public is entitled to and is beginning to get the attention in the press that will force something to be done.

The following article in the Washington Evening Star of July 19, 1951, gives an accurate picture of how we are pampering these nations:

UNITED STATES TREATS CZECHS AS MOST-FAVORED-NATION DESPITE ABUSE AND JAILING OF OATIS

(By Edwin G. Martin)

Believe it or not, Czechoslovakia, which has just jailed American newsman Bill Oatis on trumped-up spy charges, is one of our most-favored-nations. It says so right in the General Agreement on Tariffs and Trade (GATT), negotiated at Geneva, Switzerland, in 1947.

Although the Communists have taken over Czechoslovakia since the Geneva negotiations and are pursuing a straight party line in opposition to our efforts toward peace, we still accord the Czechs all the trade benefits originally granted at Geneva, with a single exception. Among those benefits are savings of from \$4,000,000 to \$5,000,000 a year in United States customs duties.

Czechoslovakian rugs, textiles, glassware, pottery, jewelry, boots and shoes, hops, and many other products continue to be imported at reduced rates of duty, and some of them continue to cause distress to American industries, farmers, and labor producing similar goods.

In the recent Trade Agreements Extension Act of 1951 Congress has specifically directed the President to take away those benefits from Russia and all other areas dominated by the world Communist movement. In recognition of our treaties and agreements with several of these countries, Congress did not make the change effective immediately but directed the President to take action "as soon as practicable."

AVOIDED VIOLATION

Congress wanted to change our policy of giving trade benefits to Communist areas, but did not want to violate our existing treaties and agreements. This strict observance of international obligations conforms to our long-established policy.

The State Department has notified Russia and several satellites of termination of our most-favored-nation obligations, effective at various dates in accordance with the provisions for denunciation of the various treaties and agreements. However, no action has been taken vis-à-vis Czechoslovakia, presumably because the general agreement (which contains more than two dozen members, including Czechoslovakia) has no explicit provision for expelling a member country.

GATT does contain provisions for voluntary resignation, so that one possible way out of our obligation to the Czechs would be for us to get out of the whole agreement. But the administration would regard that as too strong medicine, because GATT now is the main stem of the foreign trade-agreements program, and the administration is strongly committed to continuation of that program.

Accordingly, the State Department can be depended on to explore other possibilities for carrying out the will of Congress. While we are waiting the Department's decision, a little of the background might be of interest.

Of course, the attractiveness of the United States market for Czech exports is likely to decline somewhat if other friendly nations

join us wholeheartedly in cutting off exports of military potentials to iron-curtain countries. Nevertheless, all the dollars earned by Czech exports will still be welcome to the Kremlin, not only for obtaining civilian goods but also for the more important projects of propaganda and fomenting discord in the free world.

TWO AGREEMENTS NEGOTIATED

The United States has negotiated two trade agreements with Czechoslovakia, the first in 1938 and the second in 1947. Without intending criticism of the State Department, both seem, in retrospect, to have been ill-timed from the point of view of the millions of Americans who have worked, prayed, and hoped for Czech freedom. Each agreement was followed, within a year, by suppression of that freedom by the Nazis in 1939 and by the Communists in 1948.

The writer does not believe that either agreement contributed to the death of the democracy in Czechoslovakia. Nor did either agreement retard the conquest. But the coincidence of events might make it seem that a trade agreement with the United States is a particularly lethal type of poison for a Czech.

The 1938 agreement was bilateral—that is, the only parties to the agreement were Czechoslovakia and the United States. However, under our established policy all the duty reductions made by the United States were extended to the goods of other countries, except Germany and Australia. These are the only two countries that have been blacklisted by the President under the trade-agreements program to date because of discriminations on our trade (Both are now back in our good grace and get all trade-agreement benefits that are applicable to the goods they ship us.)

In the 1938 agreement we reduced our tariffs on most of the goods the Czechs shipped us and agreed not to increase already favorable tariffs on other goods. In return, the Czechs made concessions on our exports, reducing or "binding" tariffs, or promising certain quotas on goods subject to direct controls. In addition, each country promised most-favored-nation treatment to the other—that it would not impose any higher tariffs than on the goods of third countries, and that if quotas were used, the other country would get a fair share of the market.

Among the products on which we made substantial tariff reductions were bottles, other glassware, window glass, hops, knit gloves, various textiles and rugs, beads, handbags, ladies' hat bodies, buttons, buckles, imitation stones, leather gloves, pencils, and certain types of shoes.

IMPORTANT CONCESSION ON SHOES

On the most important type of shoe imported (cemented-sole shoes) the duty was not reduced, but was "bound" against increase above the current rate of 20 percent of the foreign value—i. e., the value in Czechoslovakia. This was one of the most important concessions because it forestalled a possible substantial increase in the duty.

Imports of this type of shoe had been increasing by leaps and bounds at the time of the negotiations and the Tariff Commission was then conducting a cost-of-production investigation to learn whether the duty should be increased. The law provided that if the statutory duty was not enough to offset the excess of domestic over foreign costs, the duty should be increased by as much as 50 percent, and if that was not enough, the statutory duty might be based on the value of domestic shoes rather than the lower values of shoes in Czechoslovakia.

Since the trade agreement was signed before the Tariff Commission completed its

work, the investigation had to be dismissed. Although the Commission did not make any formal findings of cost differences, it was generally believed, both in the United States and abroad, that the agreement actually prevented a considerable increase in the tariff on shoes.

During the life of the agreement, imports of many products increased markedly and domestic industries, particularly glassware and shoes, felt the pinch of severely increased competition and complained bitterly. However, in a very short time, Hitler moved into the picture.

First, the Nazis took over the Sudetenland. American officials scurried to their maps and geographies to check the areas of production of particular articles in Czechoslovakia, to see whether there was a basis for continuing the agreement in force. Meantime, goods produced in the Sudeten area were considered as products of Germany and, as such, were denied the reduced trade-agreement rates. However, the agreement rates were continued in force for other areas and Sudeten goods, by subterfuge, may have actually gotten reduced rates in many cases.

EFFECTIVENESS TERMINATED

Events continued at a fast pace and, by early 1939, the Nazis had taken over practically all of Czechoslovakia. The President terminated the effectiveness of the agreement, but not the agreement itself. In other words, the rates of duty were restored to the statutory levels because the other country was not, de facto, able to live up to its side of the bargain and goods from all of Nazi-dominated Czechoslovakia were treated as German when imported into the United States. But the trade agreement remained as an international document which the President might once more put into operation if the Nazis should be nice enough to go home.

The agreement retained its ambiguous status—out of operation but with the possibility of revival by purely executive action—until 1945. In that year the Congress extended and increased the President's power to reduce tariffs pursuant to trade agreements but forbade reactivation of the 1938 agreement with Czechoslovakia with these well-chosen words: "No proclamation shall be made pursuant to this section for the purpose of carrying out any foreign trade agreement the proclamation with respect to which has been terminated in whole by the President prior to the date this subsection is enacted."

It is understood that the diplomatic coup de grâce was given when, in later correspondence between the United States and Czechoslovakia, the 1938 agreement was referred to as "the former agreement."

From 1939 to 1945, Czechoslovakia was behind the Nazi curtain and most of our imports from that country were goods that had been shipped out before hostilities of World War II. With the end of hostilities, Czechoslovakia was reconstituted as an independent democracy—but one with a strong Communist element hanging over from the Russian occupation.

In 1946, the United States invited 19 other countries, including Russia and Czechoslovakia, to engage in tariff negotiations. Russia spurned the offer, possibly because she had a government monopoly of trade, or because of a dearth of zeal for cooperation, or because her exports to the United States were duty free or subject to very low rates, or maybe for other reasons. Czechoslovakia accepted.

The Czech position was technically different from the Russian. Although some industries were already nationalized and plans for placing trade under government monopolies were progressing, most Czech

exports to the United States were highly competitive and subject to tariffs well above our average levels of import duties. Accordingly, the Czechs had much to gain from substantial cuts in our tariff.

SUBSTANTIAL REDUCTIONS

In the conference at Geneva in 1947, substantial tariff reductions were negotiated with Czechoslovakia on most of her exports to this country. As in the earlier agreement, the rate on cemented-sole shoes was bound at 20 percent. Duty reductions were made on practically everything that had been included in the earlier agreement, frequently on broader classifications and at even lower rates.

In addition, reductions were made on pottery, tableware, zippers, folding rules, bentwood furniture, woodenware, dolls and toys, artificial flowers, and rubber boots. Furthermore, many rates were reduced in negotiations with other countries on products shipped us in large quantities by Czechoslovakia, including burlap and woolen fabrics. All these reductions were applied, of course, to Czechoslovakian products.

By conservative estimate, based on the principal imports in 1950, Czech products pay \$4,000,000 to \$5,000,000 less per year under GATT than they would pay if denied the benefits of trade agreements, as Congress has directed they shall be. Perhaps theoreticians may challenge this estimate on the ground that, if the higher rates were applicable, we wouldn't get the imports. That may be sound, or it may not. Anyhow, this method of computation is probably the best method of illustrating to non-technicians the significance of tariff changes, and is standard practice.

As stated above, GATT was negotiated in 1947. Most of our concessions were made effective by the United States on January 1, 1948. However, some of the concessions negotiated with certain countries, including Czechoslovakia, were withheld at that time because these other countries had not yet signed the agreement.

The Communists usurped control of Czechoslovakia in February 1948. Many persons in the United States thought that because Russia had refused to participate in GATT, they would not permit the Czechs to sign the agreement. This was naive.

MAINTAINS MEMBERSHIP

Czechoslovakia signed GATT in March, shortly after Communists took over. Perhaps the Kremlin preferred to have an agent on the inside, especially since it didn't cost Russia anything and might give them more dollars for propaganda. At any event, Czechoslovakia became a "contracting party" in April 1948, when her concessions were made effective. She has since maintained membership, with full rights of complaint.

At the time of the Czech signing, some wondered if the United States might not refuse to make its concessions effective, since the friction between east and west had already generated considerable heat. However, this country had given its word in the agreement to apply the concessions and it proceeded to honor its obligation literally. With a single exception, all the concessions we initially negotiated with Czechoslovakia are in force today. The exception is ladies' hat bodies on which the concession was withdrawn under the "escape clause" after the Tariff Commission found imports were seriously injuring the domestic industry.

There have been five formal meetings of the contracting parties of GATT since the Geneva negotiations. These meetings are convoked to review the operation of the agreement, consider amendments, admit new members and, in general, to see how the individual members are living up to their obligations.

At these meetings the Czechs have amiable representatives whose conduct is quite correct diplomatically. In at least three important instances they have accused the United States of proceeding illegally.

Along about 1949 the United States, implementing the North Atlantic Treaty policy, began restricting exports of goods having a military potential when destined for iron-curtain countries. The Czechs charged this violated GATT as an unlawful discrimination against them and also as a contravention of the commitment against quantitative restrictions on trade. The United States defended its action as authorized by the security exceptions of GATT. The matter was argued for several weeks. Finally, the Czechs were overruled by the contracting parties.

AGAIN VOTED DOWN

At the Ancey meeting in the summer of 1949 the United States proposed negotiations with the Federal Republic of Germany with a view to its accession of GATT. This time the Czechs charged us with violating the Potsdam Agreement. Again they were voted down.

In both these cases the Czechs were obviously following the Moscow party line.

The third Czech charge of illegality followed our invocation of the escape clause to withdraw the Geneva concession on certain ladies' hat bodies after the Tariff Commission found that imports were causing serious injury to domestic producers. This controversy raged for several months at the Torquay meeting last winter and spring. A special working party of several nations was appointed to review the charges, but its report has not yet been published. However, an analysis of the Tariff Commission's report indicates that the United States action was entirely justified under the escape clause. It is unlikely that any foundation will be found for the Czech contention.

One having access only to published material may be pardoned for wondering if the Czech participation in GATT has been in harmony with the objectives of the agreement.

Analysis of the various courses of action that might be available to carry out the congressional direction that Czechoslovakia be denied all trade-agreement benefits would unduly protract this review. It is a large subject in itself. However, two possibilities, both provided for in GATT, might be mentioned.

Article 23 (entitled "Nullification or Impairment") provides that if the objectives of the agreement are being impeded, one or more of the members might be permitted to suspend some or all of their obligations to the offending member. Article 25 provides for waiver of obligations "in exceptional circumstances not elsewhere provided for in this agreement."

The question confronting the State Department is not especially easy to solve. Our own minimum policy of withdrawing our concessions from Communist areas is clearly settled. But whether we want to go further and try to persuade the other countries to take punitive measures is not easily answered. For one thing, Finland, Denmark, Norway, and others are in exposed positions and would naturally hesitate to offend the Communists unnecessarily.

The important thing, it seems to me, is that our course of action be promptly determined so as to carry out the congressional mandate of withdrawing the concessions "as soon as practicable." Our proposals should be crystallized so that they can be approved by the contracting parties at the meeting scheduled to open at Geneva, Switzerland, on September 18, 1951.

Point 4 Dangers**EXTENSION OF REMARKS
OF****HON. GEORGE MEADER**

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Democrat and Chronicle, Rochester, N. Y., for July 8, 1951:

POINT 4 DANGERS

Enthusiasts for the point 4 principle of lavishing American technical and financial assistance in backward countries to help raise their standards of living, have been cooled off a bit by recent evidence of ill will toward America in parts of the world where they had expected to launch their experiments. While this ill will is largely manufactured by propaganda of Communist origin, it is nonetheless a barrier to large-scale aid programs, at least for the present.

Representative GEORGE MEADER, of Michigan, aims to get around this barrier by introducing a bill to set up a commission to survey the point 4 program with a special view to carrying it on through the private enterprise system, and less through the Federal Government. His idea, apparently, is that point 4 would be an irresistible temptation to the Government planners and spenders, unless checked by level-headed businessmen.

The question that occurs to us is whether private enterprise will warm up to the project after seeing what has happened to foreign investments in China, Iran and other places where our capital has ventured. It does not take much to change legitimate investments into the charge of exploitation. American money invested in large-scale foreign projects becomes imperialism when it begins to return a profit. Wise and sympathetic management may evade this danger, as our oil interests have done thus far in the Arabian region, but it seems doubtful that any large-scale foreign program can safely be projected on this basis.

First-hand observers have advised that we extend our help only after requests from foreign governments for definitely specified projects. If, even with the best intentions, we try to force our help, whether of techniques or of money, we are likely to run into difficulties.

**Address at Final Reunion of United
Confederate Veterans****EXTENSION OF REMARKS
OF****HON. GEORGE M. GRANT**

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. GRANT. Mr. Speaker, last month it was my pleasure to attend the sixty-first and final reunion of the United Confederate Veterans in Norfolk, Va. At the banquet given by the United Sons of Confederate Veterans, Gov. Theodore Roosevelt McKeldin, of Maryland, made a most excellent address. He presented to the three veterans present certificates designating them honorary citizens of the State of Maryland.

XCVII—App.—284

His address follows:

It takes a long, long time to decide who wins a war—or, indeed, to determine whether there is a victor or a loser.

Oh, yes; a general may be forced to surrender his sword to his antagonist, and have the terms of peace dictated to him or to his government. He may see the army of his erstwhile enemy swarm over his land, and see the banner of the opposition fly over the institutions which he sought to defend. Conscienceless speculators, scavenger-like opportunists, and other rascals may follow the conquering troops over the scorched and bloody earth to enrich themselves by loot and exploitation of a suffering people.

But wars, with all their horrors and seeming futility, are based on principles and cannot be decided on points like a football game or on the degree of punishment like a prize fight.

In the final analysis, the historians must decide who fought for what, and then those principles must be assayed in the light of survival and strength.

No one wants war at any time—no one, that is, except the little men who become big agitators, and those few who may stand to profit personally from conflict and who hold that profit above their love for their fellowmen—but, as Lincoln Steffens expressed it "some of us do want the things we can't have without war."

Surely armed conflict was not desired by the rank and file of people in the Southern States in 1861.

Surely there was no wish for war by the masses of the people in the North.

There was little to indicate that those in the Government of the United States, where northerners and southerners deliberated together and fraternized day in and day out over a long period of years, wanted war. There were great debates, but for the most part they were not sectional. There were disagreements, but those men knew how to disagree without becoming disagreeable.

Leaders worked out compromises to settle their differences.

Only the agitators kept the war drums beating through the decades when calmer men worked for peace.

There was little difference in the main planks of the party platforms in 1850—just 11 years before the outbreak of the war. The Democrats placed themselves squarely in favor of preserving the compromises, too, adding only these words: " * * * until time and experience shall determine the necessity of further legislation."

The industrial progress in the decade from 1850 to 1860—the greatest in the history of the Nation up to that time—hardly indicated the approach of war.

The President, at the beginning of the decade, was a southerner, Zachary Taylor, and he had received a majority of votes from the Northern States as well as from the Southern States.

It was Daniel Webster, of Massachusetts, who fought shoulder to shoulder with Henry Clay, Virginia-born Kentuckian, for the compromises of 1850.

Yes; the great men of the South and of the North abhorred the thought of war.

"It is painful enough," said Thomas Jonathan Jackson—the Confederacy's "Stonewall" of a few years ago—"to discover with what unconcern they speak of war and threaten it. They do not know its horrors. I have seen enough to look upon it as the sum of all evils."

But the trees from the seeds of the agitators grew through the troubles of the times and bore their bitter fruits. Secession became the order of the day among the Southern States.

Even then there were efforts to head off the holocaust of war. There were many in

the South who believed secession could be accomplished in peace. There were others who saw a short war. They counted on the apathy among the people of the North.

In the North Horace Greeley advised the Nation to "let the erring sisters go in peace." Abraham Lincoln wrote letters to southern friends urging the maintenance of peace. He demonstrated the humaneness of his nature by the very vacillation and uncertainty of his inaugural address. He declared against the right of secession, but at the same time admitted there was no way to coerce a State that wanted to withdraw from the Union.

Many who loved the Union—North and South—thought of the quick decisions and very certain actions of an earlier President—a great southerner.

"Oh," they cried, "for one hour of Jackson."

Mr. Seward, the Secretary of State, told representatives of the Confederacy that the Federal Fort Sumter in South Carolina would be surrendered to them without a battle. Indeed, the Cabinet was practically agreed on this until President Lincoln intervened.

The fatal shot was fired there on April 12, 1861, and the war was on.

Slavery, of course, had been a great issue in the North—a moral issue.

Tariff long had been an issue in the South—tariff which leading southerners found interfering with the section's trade with Europe.

But slavery was opposed on moral grounds by many in the South as well as by many in the North. There were few in either section who considered it a cause for war in itself. Historians agree rather generally today that human slavery would long since have been abolished without war—and so one wonders if the comparatively few years by which the war advanced the ending of slavery in America justified the bloodshed and suffering that was inflicted by the conflict on both races.

Protective tariffs have come and gone—have been modified, reduced, increased, and debated throughout most of our history. The tariff is a political question of international significance. It is not a satisfactory cause for war.

The Federal Government's real purpose in taking arms against the South, of course, was the preservation of the Union.

The South's real and decisive reason for responding to the challenge was the refusal of the Southern States to accept without a struggle the coercion which it saw forthcoming from the Federal Government. It was not so much to defend an institution which was of little profit to a great majority of southerners and which, indeed, was opposed by many southerners on both moral and economic grounds, as it was to protect the rights of the States to solve their own problems.

There, then, was the issue of the war that may have had the most far-reaching effect on the history of the United States—an issue that lives today as it did then—the issue of State sovereignty.

There it was written in blood on the fields of Bull Run, Chancellorsville, and Gettysburg.

A lost cause? Hardly that.

Who can say to what ends the Federal Government might eventually have gone to dominate the States had it not been challenged by the extremity of war in 1861?

Who can tell what type of dictatorship might have grown from the top-heavy federalism with which the people were threatened in those hectic years had there not been men who were willing to fight and even to die to maintain the rights—yes, and the very identity—of the sovereign States?

There is a principle that survives. There is the fight that goes on—and there in the

vanguard of the continuing battle stand the great States of the South. There among the leaders in the great fight for the preservation of State sovereignty stand the men of the South. I wish I could mention them all—men like North Carolina's Governor Scott, South Carolina's Senator Maybank and Governor Byrnes, and Virginia's own great Governor, John S. Battle, and great educators, like the president of this State's own magnificent university, Colgate W. Darden.

With men like John Battle and Colgate Darden, one wonders why the voters of America ever let Virginia lose her once proud title, the mother of Presidents, or if, perhaps, she will not regain it in the not too distant future.

It well might be—although it is not my place to suggest it—that a greater development of the two-party system within the borders of the State would bring Virginia's outstanding men in both political parties more recognition.

Yes, the sovereignty of the States is under constant challenge by power-hungry men in the Federal Government, and happily there are men and women everywhere—but particularly in the South—who stand constantly ready to meet the challenge. It is important that it be met at every turn if we are to preserve our form of government and maintain the freedoms of the Republic.

And so as we look on this thin gray line of men—the remnant of a once great and proud army in gray—we know that they did not fight in vain.

They, I am sure, join with us in thanking God that the Union of American States—now the bulwark of freedom for a troubled world—was not permanently dissolved. They, I am sure, have no regrets because a large segment of our population has been delivered from the bonds of slavery.

And now it is our turn to join with them in thanking God that the sovereignties of the States have been preserved, for this is the real cause for which they fought and for which their comrades died.

We can be sure that these old soldiers will never die, nor will their glory fade away. They have lived to personify the greatness of our Nation united—the passing of the bitterness of nearly a century ago, and each, I know, can say, as their great leader, Robert E. Lee, once said:

"My experience of men has neither disposed me to think worse of them nor indisposed me to serve them; nor, in spite of failures, which I lament, of errors which I now see and acknowledge, or of the present aspect of affairs, do I despair of the future. The truth is this: The march of providence is so slow, and our desires so impatient, the work of progress is so immense, and our means of aiding it so feeble; the life of humanity is so long, and that of the individual so brief, that we often see only the ebb of the advancing wave, and are thus discouraged."

"It is history that teaches us to hope."

Congress Should Make Thorough Study of Flood Control in Missouri Valley

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of July 17, 1951:

A VALLEY INVESTIGATION—JOB FOR CONGRESS

The Army engineers have been working on the Missouri River system more than 100 years. They spent \$300,000,000 on deepening it for navigation up to 1945, plus many other millions for flood control.

For the past 23 years they have been operating under a mandate of Congress that flood control is a national responsibility and that theirs is the responsibility for carrying it out. Congress has given them appropriations totaling one and a quarter billion dollars in the last 6 years for work on the Missouri River and its tributaries.

With so much time and so much money, is it unreasonable to expect some progress in the control of floods?

Yet the floods in the Missouri and its tributary, the Kansas, which are now devastating the Kansas City area and eastern Kansas, are the worst in history. The only exception in actual flood height is the flood of 1844, which struck when Kansas City, Mo., was only a village of 700 population.

There is no exception at all in the amount of damage done—it is not only the Missouri Valley's costliest flood, but the Nation's also. Flood stages at Kansas City, Mo., went as high as in the record flood since 1844—that of 1903—though the Army engineers had had 48 years meanwhile to effect some improvement in flood control.

Is this a performance which the people of Missouri and Kansas are willing to accept, and keep on accepting? Or does it represent failure on a monumental scale, failure so complete and so inexcusable that drastic changes are called for?

Should flood control in the Missouri Valley be left in hands which failed to prevent, or even to keep within reasonable bounds, the present debacle?

The Army engineers, as usual, are saying that they are in no wise to blame, Maj. Gen. Lewis A. Pick, Chief of Army engineers, says there is really nothing to be surprised at in the fact that the flood overtopped by three feet the \$41,000,000 levees built under his Pick-Sloan plan at Kansas City.

"We have consistently pointed out," Gen. Pick says, "that the Kansas City flood control measures would not be effective in event of a big flood unless supplemented by a system of tributary reservoirs." Congress is to blame, General Pick indicates, for not appropriating more money, and the Army engineers are busily engaged in stirring up a public demand for more appropriations for them.

Some Members of Congress may feel that the appropriations for the Missouri river system have been large enough already to produce better results. But the Army engineers' system of wooing the support of Members of Congress by building large public works in their States and congressional districts does not lend itself to making funds go the longest way—or doing the most good.

If the Army engineers are not responsible for this colossal failure in flood control, who is responsible that the people of Missouri and Kansas can hold accountable?

The answer seems to be, nobody. The buck has been passed. The evasion of responsibility for failure that we are witnessing now is nothing compared with the failures, and the evasions of responsibility for them, that we shall see as long as the Pick-Sloan makeshift is allowed to substitute for a Missouri Valley Authority.

The Army engineers can always say the failure was caused by the Reclamation Bureau, which is building and is to manage some of the dams, and the Reclamation Bureau can always say it was the fault of the Army engineers, which is building and is to manage others.

The floods at Kansas City and in eastern Kansas are not the result of water alone. They are the result of flood control work

done on a basis of political favoritism, done piecemeal, over a period of many years—and the result of divided planning, divided construction, divided management and divided purposes since the Pick-Sloan compromise was made.

The Post-Dispatch believes a serious responsibility rests on Congress to send an investigating committee to the Missouri Valley to see how the country's money has been spent and how the trust it imposed in the Army engineers has been kept.

This should not be one of the committees which are so closely allied with the Army engineers that they are equally responsible for the politics and boondoggling that have hobbled Missouri Valley flood control for a century. It should be a truly independent committee of the Senate and House combined, empowered to examine the results of the Army engineers' stewardship and to compare them with what the MVA method of unified management has to offer.

We propose that the Senators and Representatives from Missouri and Kansas take the lead in a demand for such an examination by Congress, in the determination to have done with half-measures and to give the Missouri Valley the best that modern technical skill can provide.

Pittsburgh

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 19, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column on Pittsburgh, by Ed Sullivan, the New York newspaper columnist.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THERE'S EVERYTHING IN PITTSBURGH, AND STILL MORE TO COME

(By Ed Sullivan)

PITTSBURGH, June 3.—In all your life you've never seen such building as is going on in this city. For utility and for beauty Pittsburgh is spending about one billion and a half tearing down older buildings which will be replaced by skyscrapers; building parks, and completing the Penn-Lincoln Parkway which will permit autoists from the west to escape the traffic snarls in the narrow streets of the city's west end.

To accomplish this Pittsburgh literally sliced through rocky mountains to carve out a roadbed.

Having already solved its smoke problem, Pittsburgh's staggering building program of new buildings and fine parks will add the final touch of glamour.

Residents of the city are proud as peacocks over what's happening. Hotel men—Joe Duddy, of the Pittsburgher, and Tommy Troy, of the Statler—made decisions that were typical of other locals.

To get the huge building program under way it was necessary for the contractors to work through the night dynamiting and drilling. The hotel managers after consulting their guests and explaining the purpose of the round-the-clock dynamiting told the contractors to go to it.

"The idea," said Troy, "was to get the program off the drawing boards and into actual work. We got it off the drawing boards in a hurry. Now it's so well advanced

that the contractors stop dynamiting at midnight."

Troy, proudest of Pittsburghers, comes from Boston. The veteran Duddy is a Pittsburgher by birth, dates back in hotel history to the days when the father and mother of screen star Adolphe Menjou worked at the old Antlers hotel in this town.

This Pittsburgh is a fabulous city, not easily impressed, because it has seen everything within its own city limits. You can't impress Pittsburgh with wealth, because Andrew Carnegie, Andrew Mellon, the Fricks, and other local families had more multimillions than you could stash in Fort Knox. Even today in Sewickley Heights there are mansions that have over 100 rooms.

It has three big universities, University of Pittsburgh, Carnegie Tech, and Duquesne, and perhaps five other colleges of lesser size. It even has two rivers in its front yard, merging to produce a third.

From its station KDKA came some of the first radio programs. It has fine newspapers, expert newspapermen. In baseball, it boasted immortal Honus Wagner; in the ring the immortal Harry Greb, plus the Zivics and the spectacular Billy Conn. It has produced all-Americans in every field.

It is a city that conveys the impression of enormous strength, an impression heightened, in the day, by the streams of smoke pouring into the sky; accented, at night, by the orange and red glare of steel mill furnaces. There is nothing of the dilettante about Pittsburgh.

In the feudal baron days thousands of immigrants came here, each wearing a tag on his outer clothing that read: "Andrew Carnegie, Pittsburgh." That was sufficient address. Long before bulldozers, these immigrants carved into mountains, built tunnels, dug coke, and cooked steel.

There is a huge Irish and Slavic population here, and sturdy stock of other races. It took tough-fibered men to build Pittsburgh into a colossus, and it took men of fine dreams and great imagination.

As steel goes so goes Pittsburgh, is a local maxim. The national maxim runs to the effect that when smoke is pouring from the Ohio valley, the Nation is prosperous, because the entire country has a stake in steel. Right now, smoke is pouring from the Ohio Valley, as the Nation turns to one of its great arsenals.

Americans should visit Pittsburgh. It is easily one of the most exciting of all star-spangled experiences.

Conditions in Korea

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, July 19, 1951

Mr. KERR. Mr. President, I have read a very clear and informative analysis of certain events in Korea by a distinguished news commentator, Mr. Bill Downs. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

A year ago today I was one of the most frightened men in the world. The Korean War was less than 2 weeks old. CBS had just rushed me to the Far East and I was spending my first day at the fighting front near Chochowon.

I've spent a lot of time covering a lot of different kinds of armies, and a reporter learns that fear is as much a part of war as is noise.

But just 365 days ago today, it seemed different. And when I say I was one of the most frightened men in the world, I mean I had a lot of company.

The United States Army in Korea at that time consisted of one regiment. Its only friends, the South Korean troops, had broken. Our GI's at times were outnumbered 100 to 1. And there seemed to be nothing that anyone could do about it.

The American soldiers of that day were "kids" who had joined the Army for the "soft touch." They were soft and badly trained. Someday there will be an investigation as to why they were allowed to sit on occupation duty in Japan and grow all the wrong callouses in the wrong places. Many of them didn't even know the importance of digging in. They knew more about comic books and Japanese women than they did about their own weapons. Many of the early American casualties can be laid directly to neglect of the men by the officers who were supposed to have trained them in Japan.

I had a chance to think these things over under fire, a year ago today, in a Korean ditch nuzzling an odiferous Korean rice paddy. And, as I said, I was extremely frightened and filled with despair. At that time I would not have given a plugged nickel for our chances of staying on the peninsula.

You know the rest of the story. I have gone into this because in weighing the results of the past year's fighting at this time of imminent cease-fire, it is well to remember the deplorable state of readiness in which the United States found itself when the Communists marched in Korea.

In the 12 ensuing months the revival of American power has been miraculous. It is something you have to remind yourself to remember.

And it may be that historians will some day record that Josef Stalin made his greatest strategic mistake when he sent his North Korean puppets across the thirty-eighth parallel and thus aroused the American military and industrial giant to action.

There has been much argument as to whether the Korean campaign has been worth the cost in blood to the United States. I admit that I was one of those who in the early days did not think it was. Korea was of no military value to us; it looked like we were heading for a disastrous defeat; we were forced into battle at the time and place of the enemy's choosing. And no one here at home, including some Congressmen, seemed to care.

Events have changed my mind. Fourteen other United Nations joined us in the fighting. Their contribution was token, but it was there. The Communists have paid a tremendous price for their adventure. The free world has proved that a deliberate breach of the peace can be disastrously costly.

And, most important, the United States is becoming strong. Strong enough to prove that the ideal of freedom, backed by strength, can defend itself against totalitarianism.

You will hear much argument about whether or not the United Nations achieved a military or diplomatic victory in Korea or not.

What we have really won is a measure of future security for the kind of world we stand for. The dangers still exist, but the men who fought and died in Korea have given us this one priceless thing, the time and the ability to defend ourselves.

We will betray the trust of the men who died in Korea only if we waste this time or dissipate this ability through petty, partisan politics at home or a relaxation of our vigilance at other danger areas around the world.

The Armistice in Korea

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 19, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "U. N. Command Takes Big Risk," written by David Lawrence and published in the Washington Star today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U. N. COMMAND TAKES BIG RISK—COMMUNISTS BRING TENS OF THOUSANDS OF TROOPS INTO KOREA WHILE ARMISTICE TALKS ARE STILL PRELIMINARY

(By David Lawrence)

All that has been happening at the conference table in Korea since July 8 is only a preliminary discussion of what the armistice negotiations should discuss. The main parleys haven't begun at all.

Meanwhile the United Nations command, under pressure from politically minded governments, is taking the biggest risk that any army in military history ever assumed.

The Communists are bringing troops into Korea by the tens of thousands. It is estimated that the enemy now has about 720,000 men, while the U. N. has something around half that number.

The U. N. is not likely to bring in reinforcements because of the distance to the various member countries. Yet the Red Chinese can continue to send in reinforcements.

Now the Communists have raised the real issue—the withdrawal of "foreign troops" from Korea. This, of course, means all but North and South Korean troops. This is exactly what happened before, when Russian and American forces were withdrawn. The way was opened to Communist infiltration and control of the North Korean Government.

The Communists have found that the U. N. negotiators in the preliminary conferences will not agree to their demand for withdrawal of "foreign troops." But the Red Chinese and North Korean representatives are not asking at this time for a decision on it. They merely want the item on the agenda of the main conference. The U. N. negotiators can hardly refuse to discuss an item which they themselves have brought up. It cannot be dismissed as out of bounds on the ground that it is political, because the presence or absence of troops in an area where a war has occurred is a vital subject for negotiation. In the end the U. N. will probably consent to seeing the item placed on the agenda of the main armistice discussions and will then urge that it be left to the diplomatic representatives to settle when the political factors come up.

So the procedure appears now to be this:

First, a conference on the preliminaries to decide what the armistice negotiators shall talk about. This is what the present series of talks, begun on July 8, is supposed to resolve. This has already consumed nearly 2 weeks.

Second, a conference of the main representatives to decide on the actual conditions of the armistice—the military terms to assure inspection of both north and south zones, the establishment of a demilitarized zone and similar matters of a military nature. This has not yet begun and may take a month or more to negotiate. Among other things, the conference has to decide when

and where the diplomats will meet to take up the political factors and what countries shall be represented. Then will come the actual cessation of hostilities on an agreed-upon date.

Third, the conference of diplomatic representatives will then ensue and all political factors will be discussed, such as admission of Red China to the U. N., the status of Formosa, withdrawal of foreign troops from Korea and arrangements for the future government of all Korea. These items will surely lead to a deadlock which based on previous experience, may take from 6 to 9 months, and probably will never be settled. This means an indefinite continuation of the armistice.

At any moment that a sign of disagreement arises before the "cease-fire" is actually put into effect, tension will increase and the danger to U. N. forces will be intensified. The presence of the large Chinese armies will be a constant threat and the U. N. will find itself negotiating under the duress of the reinforced Communist armies.

If a "cease-fire" does occur, the chances are that the Communists will then allow the situation to stagnate indefinitely. For there is no pressing reason from their side to make an agreement when they already have achieved what they had a year ago—namely, control of North Korea above the thirty-eighth parallel. If all this sounds like a great victory for the Allies, administration spokesmen and the peace at any price elements which do not like to hear any questions raised about the victory will have to find a new definition of victory to teach in the war colleges where officers of tomorrow are educated in the art of warfare and its objectives.

Katharine Lenroot

EXTENSION OF REMARKS OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 18, 1951

Mr. KILGORE. Mr. President, Miss Katharine Lenroot, one of the great public servants of our time, has retired as Chief of the Children's Bureau after more than 30 years of devoted work. I ask unanimous consent to have printed in the Appendix of the RECORD the exchange of letters between Miss Lenroot and President Truman, and several of the scores of tributes to her career which have appeared in the press of the Nation on the occasion of her leaving the Federal service.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

MISS LENROOT'S LETTER TO PRESIDENT TRUMAN JUNE 22, 1951.

DEAR MR. PRESIDENT: I hereby request retirement from the Federal service as Chief of the Children's Bureau, effective September 1 or as soon thereafter as arrangements can be made for my successor to take office.

It is, indeed, a hard decision to make to leave the Children's Bureau, with which I have been associated throughout almost my entire working life. In the 36 years in which I have been a member of the staff, great advances have been made in maternal and child health, child welfare, and child-labor protection. The Bureau has played a significant part in these changes through research, dissemination of information, coop-

eration with the States in grants-in-aid, establishment of Federal child-labor standards, and development of methods of co-operation with citizens in behalf of children. It has shared with other nations knowledge and experience relating to child life. The Midcentury White House Conference on Children and Youth served to broaden our understanding both of the importance of going forward in extending and improving services to children, especially in this critical period of world history, and of the need for much more extensive research. I am grateful, especially, for your sponsorship of the conference and the great contribution you made to its success.

In laying down my task, because I have reached the age when I must have more leisure, I am confident that with your understanding and support of its program, the Children's Bureau, with its broad concern for children and youth, will be given still greater opportunity to serve our country and the children who are its future.

Respectfully yours,

KATHARINE F. LENROOT,
Chief.

PRESIDENT TRUMAN'S LETTER TO MISS LENROOT

JULY 9, 1951.

DEAR MISS LENROOT: With real regret I accept your resignation as Chief of the Children's Bureau of the Federal Security Agency effective at the close of business on August 31 next.

You have been in Government service for 36 years, and for the past 17 years you have headed the Children's Bureau. That is a long tenure of office for any public servant. But it is especially significant because you have been one of that small and select group of women who have risen to high public office through merit and determination. Best of all your service has been as distinguished as it has been long continued.

Toughness is a quality not often attributed to women but the plain fact is that you have been a tough and persistent champion of America's children. You have made them both your vocation and your avocation. The children of this country are better off for your having been in the Government. What greater satisfaction could anyone take into retirement?

Although you will soon retire to a well-earned rest, I hope that from time to time I shall have the chance to look to you for advice and help in matters affecting the children of America. I know that you will never relinquish your interest in their welfare as long as you live.

With warmest good wishes, I am

Very sincerely yours,

HARRY S. TRUMAN.

[From the Washington Star of July 10, 1951]

KATHARINE LENROOT AND HER TIMES

(By George Kennedy)

This half of the twentieth century in America has been wonderful for those who have lived it—experienced it.

Few have done better than Katharine F. Lenroot, who announced yesterday that she is retiring as head of the Children's Bureau at the end of August.

It was her good fortune to become aware of what was going on at the turn of the century, at the age of nine in Wisconsin. What was going on was the La Follette revolution.

Her father was in the thick of it. Irvine L. Lenroot, born of immigrant Swedish parents, was one of the young Progressives in the Republican Party in Wisconsin whose responsive surge made Robert M. La Follette Governor and then United States Senator.

She heard the play-by-play account of those events at the family dinner table in Superior, the city that almost shares with

Duluth the position at the head of the Great Lakes.

Miss Lenroot is not all Swedish, although she has shown the marked traits of the Scandinavian in her beauty and strength. Her mother's name was Clough, a Welsh name that came West from New York.

Then Washington, for her father was elected to Congress in the same campaign that put Taft in the White House. He later became a Senator. In those automobileless days she especially remembers the turnout of Mrs. Nelson W. Aldrich, wife of the Senator from Rhode Island, a splendid victoria drawn by a spanking team. She also remembers picking wild flowers in the spring where the Wardman Park Hotel now stands.

Then the University of Wisconsin under John R. Commons. Professor Commons, who wrote the basic literature of the American labor movement, used to send his pupils to watch the legislature in action—one advantage of having the State university in the State capital.

When Katharine Lenroot emerged from the university in 1912 it was an exciting time for a young woman college graduate. It was clear that women were not to be denied much longer. Anna Howard Shaw, Carrie Chapman Catt, and the beautiful Inez Mulholland were leading the fight for woman suffrage.

But Miss Lenroot, like many young women of the day, did not wait for the vote. Wisconsin, sparked by Commons, was about to put a minimum-wage law for women into effect—assuring them \$10 or \$12 a week. Massachusetts already had such a law. Her first job was with the Wisconsin Industrial Commission, working on cost-of-living surveys for the new law. It was at that time that Frances Perkins was directing a survey of New York factories to prevent a repetition of the Triangle Shirtwaist Factory fire.

In 1915 Miss Lenroot took a Federal civil-service examination and was appointed an investigator for the Children's Bureau. She has been there ever since.

Yesterday in her office, surrounded by pictures of Miss Perkins, Jane Addams, Julia Lathrop, the first chief of the bureau; Grace Abbott, the second (Miss Lenroot is the third); Lillian Wald of the Henry Street Settlement and Florence Kelley of the Consumers League, she told some of the history of the office.

The Children's Bureau had its birth when Miss Wald and Mrs. Kelley, both of whom lived at the Henry Street Settlement in New York, sent President Theodore Roosevelt a letter suggesting that the Federal Government should open an office that would give out information to save lives of infants and children much in the same way that the Agriculture Department was advising farmers on how to avoid the loss of calves and pigs.

No idea that sounded good was too radical for Teddy, and he sent them a wire: "Sounds bully, come down and we'll talk it over."

The campaign to get Congress to approve of the idea took 6 years. The Federation of Women's Clubs, church organizations and the National Committee on Child Labor waged a campaign for it.

When the Children's Bureau came into being, women went into Government to work on something they were interested in, ahead of their getting the vote. Julia Lathrop, Miss Addams' assistant at Hull House, Chicago, became the first director.

One of the first tasks of the bureau was to get all the States to report on that most important element of vital statistics, infant mortality. Slowly State after State came into the conference of those reporting.

Some of the reports were shocking. They brought the national average down to one infant death to 10 births.

The change that has come about since is due to medical advances, public-health

measures, and in no small measure to the work of the bureau in getting the facts before the public and getting groups to cooperate in the localities.

Today four deaths in 100 births is high, and as she talked Miss Lenroot pointed to a map showing the black spots. Strangely enough, several of the States that used to lead in unfortunate statistics no longer are in the ten with the highest infant mortality. Today New Mexico, Texas, and Arizona, States where the "wetbacks," the Mexican migratory laborers, flood across the border with their families, lead all the rest.

In 1916 Congress passed a child-labor law which was held unconstitutional by the Supreme Court. Two years later a North Carolina father sued for the right to send his boys to work in the cotton mills—*Hammer v. Dagenhart*. For years proponents tried to pass a child labor amendment to the Constitution. Miss Lenroot became head of the bureau in 1934 by appointment of President Franklin D. Roosevelt. The Fair Labor Standards Act or Wage and Hour Law went into effect in 1938 with its provision against child labor, and in affirming its constitutionality in 1940, the Supreme Court reversed the *Hammer v. Dagenhart* ruling.

As chief of the bureau, Miss Lenroot had charge of the enforcement of the child labor provisions. Her experience in that showed her how things had improved.

"We found that children no longer were employed in the cotton mills," she said. "They were going to school. We only found them in fringe industries, cleaning shrimps or pulling turkey feathers. We have come a long way since the child labor fight of the World War I period."

[From the Washington Post of July 15, 1951]

CHILDREN'S FRIEND

The Children's Bureau was in its infancy when Katharine Lenroot joined it as a special investigator 36 years ago. It had been established to report "upon all matters pertaining to the welfare of children and child life among all classes of our people . . ." and had found a sorry picture of needless mortality among mothers and babies. It was estimated from the limited reports available that throughout the country 61 mothers died for every 10,000 live childbirths, and for every 1,000 live births the country lost 100 babies during their first year of life. In 1949, the maternal mortality rate was down to 8, and infant mortality to 29.

Such vital statistics afford but a partial insight into the intertwined careers of the Children's Bureau and of Miss Lenroot who has been its chief for the past 17 years. With the passage of the Social Security Act in 1935, the Bureau assumed administration of title V, providing for grants to the States for development of maternal and child-health services, services to crippled children, and child-welfare services. In 1938, it undertook responsibility for the child-labor provisions of the Fair Labor Standards Act. From 1943 to 1947, it handled the Emergency Maternity and Infant Care Program, under which Federal funds were used to pay for medical, hospital, and nursing care during childbearing for over 1,200,000 wives of men in the Armed Forces, and for the care during illness of more than 200,000 children of servicemen.

Few public careers could have provided richer rewards than Miss Lenroot must have gained from the accomplishments of the Children's Bureau. "The children of this country," President Truman wrote in accepting her resignation, "are better off for your having been in the Government. What greater satisfaction could anyone take into retirement?" What higher accolade could any public servant earn? It is a matter of great good fortune for the country that the

President has already selected Dr. Martha Eliot as her successor. Dr. Eliot herself has served the Children's Bureau for a quarter century, directing some of its most important research work in the field of child health and working with Miss Lenroot as associate director. The Nation's children will continue to be in good hands.

[From the Louisville (Ky.) Courier-Journal of July 18, 1951]

SHE HELPED BROADEN THE HORIZONS OF LIFE

In America today far more children survive their fragile years of infancy than 40 years ago. They live in sturdier health. They live in prospect of freedom from exploitation as they grow older, yet not old enough for grinding labor. They live in brighter prospects of opportunity, in assurance that the institutions which serve them—the courts, the hospitals, the shelters, the centers of recreation—are better and more enlightened in every aspect.

That all this is so is due in a large part to operations of the Children's Bureau, once a part of the Department of Labor, now in the Federal Security Agency. And to refine the record further, much is due to the personal work of Katharine Lenroot, Chief of the Bureau. There is a point in saying this now, as Miss Lenroot retires after 17 years in that post, after 38 years altogether with the Children's Bureau.

The daughter of a former United States Senator, Miss Lenroot is known all over the world as one of its foremost authorities on child welfare. She has given the largest part of her life to that field, with such results of richer, more radiant existence and promise for millions that her departure from public service is a national loss.

[From the New York Times of July 11, 1951]

MISS LENROOT TO RETIRE

Announcement has been made of the impending retirement of Miss Katharine F. Lenroot, Chief of the Children's Bureau of the Federal Security Agency. Miss Lenroot joined the Children's Bureau in 1914, 2 years after its creation, and has served as Chief of the Bureau since 1934. Thanks in large measure to her tireless efforts, these last 30 years have seen many improvements in the field of child and maternal welfare.

The Children's Bureau is, in a sense, the conscience of the American people toward our children. It has been the pilot plant for many of the now well-established social-welfare projects. Through the establishment of health and maternal facilities and the publication of bulletins on prenatal and child care, the Bureau has made available the latest and most scientific information and advice. In all these matters Miss Lenroot has encouraged the closest cooperation between public and private agencies.

Writing in this newspaper in 1947, Miss Lenroot listed the goals before us on behalf of the Nation's children as proper housing, adequate food and medical care for all families, good schools, and able teaching for all children, the expansion and strengthening of both public and private child guidance and social-welfare programs. Though much still remains to be done, American children of today are undoubtedly better off than were those of a generation ago. Miss Lenroot may well take leave of office with the satisfaction of many goals achieved.

The President has nominated Dr. Martha Eliot to succeed Miss Lenroot. As Associate Chief of the Children's Bureau from 1941 to 1949, Dr. Eliot has shown herself to be a courageous champion of America's children. Under her direction we are confident that the Bureau will continue to play a splendid role.

[From the Madison (Wis.) Capital Times of July 11, 1951]

WISCONSIN IS PROUD OF KATHARINE LENROOT

One of Wisconsin's great daughters announced the other day that she is retiring from her long and distinguished career of public service. She is Katharine F. Lenroot, chief of the United States Children's Bureau and the daughter of a shining name in Wisconsin's history, the late Senator Irvine L. Lenroot.

Katharine Lenroot began the career that was to bring her national fame here in the State of Wisconsin, as a member of the State industrial commission. She later went to the Children's Bureau in Washington and rose rapidly to the position from which she has now resigned.

Few people have brought such selfless devotion to so good a cause as Katharine Lenroot brought to her job of defending and protecting the children of this Nation. Her rich experience and her limitless capacity for understanding and work brought lasting benefits to America. In recent years the world has borrowed from her through her contributions to the welfare programs of the United Nations.

The Nation's sentiments were well expressed by the President, who paid tribute to her as "a tough and persistent champion of children's rights."

Wisconsin is grateful to and proud of Katharine Lenroot.

Public Housing Conditions in Los Angeles

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a telegram from Mr. Nicola Giuliani, chairman of the Housing Authority of the City of Los Angeles for 14 years.

This telegram completely contradicts and refutes an article appearing in the July 17, 1951, Wall Street Journal, regarding the rental housing situation in Los Angeles. According to Mr. Giuliani the article presents a biased viewpoint and is not factual.

In the interest of making available information on the actual rental and public housing conditions in the city of Los Angeles, I am placing this telegram in the RECORD:

LOS ANGELES, CALIF., July 17, 1951.

CONGRESSMAN CHESTER HOLIFIELD,
House Office Building,

Washington, D. C.:

My attention has just been directed to an article appearing in the July 17, 1951, issue of the Wall Street Journal concerning this agency's new 10,000 dwelling unit low-rent housing and slum-clearance program. In my 14 years as chairman of the housing authority of the city of Los Angeles, I have never read a more unfair, untrue, and patently biased article in a supposedly responsible newspaper. While the article consists primarily of conclusions of the writer based upon alleged quotations from various individuals, it purports to be a factual summary of our new program in relation to general housing conditions in the city of Los Angeles. At the outset of the article the

writer states "nearly 1 in every 20 Angelinos will be a public housing tenant." The truth is that when our new program is completed there will be a total of 14,852 dwelling units of permanent low-rent public housing in the city of Los Angeles. According to the 1950 Federal census there are a total of 709,100 family dwelling units in the city of Los Angeles, therefore a little simple arithmetic reveals that instead of 1 out of every 20 families, not persons, only 1 out of every 50 families will be living in public housing. A further example of the writer's completely misleading and inaccurate statements is contained in his statement of half truth wherein he says the new program will "add 45,000 more people to the 48,000 already in public housing." The full truth is that of the 48,000 persons presently occupying public housing in the city of Los Angeles approximately 21,000 occupy temporary war housing and temporary veterans' emergency housing which are to be replaced by the new program. In other words, instead of a total of 93,000 persons occupying public housing the correct figure is approximately 72,000. After leading off with these untrue and half true conclusions, calculated to alarm the reader, he proceeds to quote three individuals who represent the local counterpart of the main organizations composing the national real estate lobby, to wit: James M. Udall, a past president of the Los Angeles Realty Board and the Los Angeles Apartment House Owners Association; Fritz B. Burns, a past president of the National Association of Home Builders; and Earl S. Anderson, current secretary of the Los Angeles Real Estate Board. He quotes no one else. He quotes Mr. Udall as saying that "a recent survey shows that there are 2,000 apartments here renting at less than \$40 per month and vacant and that this survey covered only a third of the city's 425,000 rental units." In addition, he also stated "It suggests that there is not only a housing surplus, but it exists for the same low-income group for which the new housing project is designed." What organization made the alleged survey and where in the city these 2,000 apartments are located is not stated. The housing authority at the present time is engaged in relocating approximately 1,707 families from the 11 sites for this new program. The Los Angeles Apartment House Owners Association, of which Mr. Udall is a director, has not referred this agency to one single dwelling unit in its relocation program nor has it done so in the past when this agency has been engaged in removing excess income families from our permanent low-rent projects. In addition, the residential research committee of Los Angeles which is a non-profit private community organization organized for the development and distribution of factual information on conditions affecting housing, mortgage lending, construction, and related aspects of real estate in Los Angeles County, in its last quarterly report dated May 11, 1951, states that vacancies in single dwellings renting for \$40 per month or less had dropped from 14 percent in July 1950 to 0.80 percent in April 1951. It also states that vacancies in unfurnished multiple dwellings stood at 1.90 percent but no rental breakdown is given. Normal vacancy ration in the city of Los Angeles is considered to be 6 percent. In considering Mr. Udall's statement, however, it should also be borne in mind that to the \$40 per month quoted must be added from ten to fifteen dollars per month for utilities making a total cost of fifty to fifty-five dollars per month compared with the \$32.50 per month which is the average rent for a two-bedroom unit in our new program including utilities. Therefore, based upon this agency's own experience as well as the most reliable private research organization in the city of Los Angeles Mr. Udall's statement and conclusion is just not true.

The writer quoted Mr. Burns as being critical of the Housing Authority's "estimated construction cost of \$11,000 per unit," and in commenting said, "We just completed some two-bedroom units at a cost of \$5,000 each. Less than half the cost of these project housing units." The \$11,000 estimated cost quoted by Mr. Burns is the total cost per dwelling unit including the cost of land and slum improvements, clearing of said slums, the cost of new site improvements, including all utilities, sidewalks, streets, etc., and is, therefore, not comparable in any way with the \$5,000 net construction-cost figure cited by Mr. Burns. The estimated net construction cost per dwelling unit for our new program is estimated at \$5,312 for one-bedroom units, \$6,265 for two-bedroom units, and \$7,905 for three-bedroom units. In addition, room sizes will be larger and construction of a more permanent type than anything presently being constructed by speculative builders. Mr. Anderson is quoted as saying, "The national rearmament effort has taken up the unemployment slack and the surplus of housing is evident at hand," and refers the reader to the rental section of the Los Angeles Times on a "certain" Sunday. His point concerning unemployment is completely irrelevant and his statement concerning the surplus of housing has already been factually refuted.

In addition, the article refers to the recent action of the city council in approving sites for our entire new program by a vote of 10 to 5, but again because of obvious bias only contains a statement of Councilman Debs, who voted against two of the projects referred to. The writer failed to quote a single person or organization who supports the program, such as all local veteran organizations, all local labor organizations, the League of Women Voters, and some 75 other organizations. It is a shame and a disgrace that an allegedly responsible newspaper would print such an unfair and biased article, and I am sure thousands of our citizens join me in my views.

I am supplying you with the facts concerning this matter in the hope that you will use them in debating tomorrow when an effort is scheduled to be made in the House to limit the national program to 5,000 dwelling units for the next fiscal year. Please do everything you can toward sustaining the conference committee report of 50,000 units.

Kindest personal regards,

NICOLA GIULII,
Chairman.

Prayer for a Missouri Valley Authority

EXTENSION OF REMARKS OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. RANKIN. Mr. Speaker, the American people are horrified by the disastrous floods now sweeping through Kansas and Missouri, drowning people, demolishing homes, schools, and business houses, destroying crops, and washing away the land.

This could all have been prevented by the creation of a Missouri Valley Authority, such as we have on the Tennessee River. As I said the other day, the Tennessee Valley Authority has wrought the greatest development of ancient or modern times.

I have been introducing bills for a Missouri Valley Authority in every Congress for many years.

If my bill had been passed years ago, this, and similar disasters, could have been averted. The people throughout those States drained by the Missouri River and its tributaries could have been enjoying reduced electric-power rates. By holding back the floods on those streams and preventing them from synchronizing with the floods on the upper Mississippi and the Ohio Rivers, we could have protected the lower Mississippi, as well as the Missouri Basin, and saved enough money to have paid for the entire development.

If Congress wants to prevent these disasters in the years to come, save that vast volume of hydroelectric power that is now going to waste every year on the Missouri and its tributaries, protect the lower Mississippi from the disasters with which it has been visited, conserve the soil of the area, and save untold hundreds of millions of dollars in flood-control expenditures on the lower stretches of the father of waters, then you should follow the example set by the creation of the Tennessee Valley Authority and pass the bill which I have introduced for a similar authority for the Missouri River and its tributaries.

At this point I am inserting a verse which seems to me to be appropriate at this time.

It reads as follows:

When dust storms sweep from every field
And fill our eyes and ears and throat,
When all our steamboats are aground,
Or all our houses are afloat,
When transportation has become
As obsolete as Noah's Ark,
When all our land is washed away
And all our people in the dark,
Then hear our prayers, God, speed the day,
When Congress gives us MVA.

Sales Tax Proposals

EXTENSION OF REMARKS

OF

HON. CHRISTOPHER C. McGRATH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. McGRATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Benjamin L. Masse, which appeared in the July 21, 1951, issue of the magazine America:

SALES TAX PROPOSALS

Before a skeptical Senate Finance Committee on July 5, the National Association of Manufacturers dusted off its old proposal for a general consumption tax. As outlined by Charles R. Sligh, Jr., chairman of the NAM tax committee, the consumption tax would be imposed at the manufacturing level and apply to everything except food, liquor, and tobacco. (Liquor and tobacco would continue to be subject to heavy excise taxes.) Mr. Sligh estimated that at a 19-percent rate the consumption tax would raise \$18,000,000,000 a year.

The Finance Committee also heard a proposal for a general sales tax at the retail level from the American Retail Federation

and other retail groups. Formerly opposed to such a tax, the influential National Retail Dry Goods Association told the committee that it was preferable both to an increase in personal and corporation income taxes and to the NAM's tax at the manufacturer level. The committee was also cool to this proposal.

The standard objection to sales taxes, of whatever kind, of course, is that they are necessarily regressive. In taxing the purchases of rich and poor at the same rate they fall more heavily on the poor. As our tax system has developed, the dominating principle has become "ability to pay," and this is reflected in the progressive tax on personal and to a lesser extent, on corporation incomes. From this source we are currently deriving about 85 percent of our revenue. Sales taxes, in the form of excise taxes, also have a place in the Federal tax picture, but a relatively minor one. If the country wishes to maintain the equitable tax principle of "ability to pay," the present emphasis on income taxes must be maintained, although in times of emergency there is a legitimate excuse for expanding somewhat the scope of excise taxes. Senator TOM CONNALLY, Democrat, Texas, had this tax philosophy in mind when he accused proponents of a general sales tax of attempting to shift the tax burden from their shoulders to the shoulders of consumers.

The conservative chairman of the Senate Finance Committee, Senator WALTER GEORGE, Democrat, Georgia, pointed out another difficulty, which rendered the proposal for a general sales tax "impractical." Were the Federal Government to expand its operations into the sales-tax field, it would gravely interfere with State and municipal efforts to raise revenues. At the present time 29 States have a sales tax. They would resent and fight any attempt of the United States Treasury to poach on their preserves.

Proponents argue (1) that only a sales tax will reach \$130,000,000,000 of personal income not now under levy, and (2) that high income-tax rates destroy personal initiative and imperil corporate finances. The first argument forgets that the "untouched" \$130,000,000,000 is actually taxed, indirectly, in all kinds of ways. The second argument, a strong one in peacetime, loses much of its cogency in time of war and national emergency.

Economy Where It Hurts and Rule by Lobby

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. MULTER. Mr. Speaker, the following two items which appeared in the Washington Post of July 19, 1951, I understand are being reprinted in newspapers throughout the country as a public service by the International Latex Corp.

Both items have an important bearing upon the Defense Production Act now before the House. I recommend that every Member read them:

[From the Washington Post of July 19, 1951]

ECONOMY WHERE IT HURTS

(An editorial in the New York Times)

Both Houses of Congress have, as usual, spent a good deal of time this spring and summer worrying about the annual appro-

priation bills to pay for the manifold activities of the Federal Government for the year 1951-52. The House has been cutting down the President's budgetary requests and in some cases the Senate has been going the House one better.

Though some of the specific cuts they make may not be wise, it is an excellent thing for our legislators seriously to concern themselves with economy in Government. But while economy-minded Congressmen have been wrangling over a slash of 525 automobiles in one bill and elimination of 46 chauffeurs in another we wonder why so many have been insistently turning their backs on a really fertile field for the economizers, where savings could be measured in terms not of millions but of billions.

General Marshall reported not long ago that of the \$35,000,000,000 voted for rearmament last year a full 20 percent had gone up in smoke. He didn't use the word smoke, however. He used the word inflation. Charles E. Wilson reminded us the other day that a heavy antiaircraft gun that cost \$180,000 before Korea is now \$250,000; a pair of combat boots has gone from \$5.22 to \$11.63; wool shirts from \$7.84 to \$17.35, and so on. No citizen needs to be reminded of what has happened to the price of food or clothing for him. The Government, no less than the average citizen, can be bled white by inflation, and the process is already well under way. This is something for the economy bloc in Congress to have the courage to face up to. It is all right to economize on smaller things; but inflation is the biggest thing to have hit this country's pocketbook yet.

[From the Washington Post of July 19, 1951]

RULE BY LOBBY

(Sylvia F. Porter, in the Atlanta Journal)

What we are being forced to witness is nothing short of and nothing more than pressure-group government in America.

That's one of the most evil and disastrous things that can happen in a democracy.

Yet, that is what we have seen in Congress' frantic fumbling over the Defense Production Act these last several days.

The exhibition has been downright shameful.

The farm bloc? The farmers want floors under but no ceilings above farm prices.

The business lobbies? They're all for stabilizing wages but they don't want an official finger touching prices or profits.

The unions? They want stiff price controls but weak wage controls or if it can be managed, no wage controls at all.

The auto and appliance dealers? They don't care what happens to controls generally but they sure don't want any tough curbs on installment buying of autos or television sets.

The meat interests won't stand for meat controls.

The banking interests won't even listen to an argument for additional loan controls.

The real estate lobbies are livid at the idea of continuing or tighter rent and housing controls.

And so it goes up and down the line. Each is acting as a group unto itself—and the devil take the country as a whole.

Each wants the "benefits" of inflation (I use the word "benefits" sarcastically) and each wants some other group to pay the bill.

And what's so shocking, so shameful about it is that our Congress is bowing meekly before the lobbies, is giving in to the most arrogant demands and not even blushing about it.

Only the patriot hasn't been heard; only the consumer hasn't been consulted; only the national defense hasn't been mentioned.

As for the reaction of the special interests, one auto dealer said it all as far as I am

concerned: "I never believed we could swing it, that we could get what we asked. Wow."

We still have a little time left to regain our balance. Let us cut through the name-calling, try to reach the fundamentals.

Let us assume we will continue our remobilization; let us assume we will not be so insane that we will give up our defense program now, fall back into another pre-Korean unpreparedness.

What then?

Defense Mobilization Director Wilson says we will be over the remobilization hump by 1953. Between now and the end of 1952, though, the schedule calls for rapidly mounting defense spending. In a few months, spending is slated to rise to \$1,000,000,000 a week.

Even though the entire emphasis right now is on deflation, therefore—and there is more talk of bust than boom—there still will be a big pinch on materials, manpower, and equipment next year.

To face even that possibility without plenty of ammunition in the locker is downright stupid. To risk another inflation is to make sure that we will have another deflation.

And the signposts on that road are written in the pages of history in the blackest of letters—inflation to deflation to bankruptcy to dictatorship.

That is why we must keep our powder dry, in the economic as well as the military sense.

If we use our heads and pull together these next several months, we can attain and we can maintain economic stability.

Pressure-group government is sick government. We cannot afford this sickness; we must not permit this sickness.

The Tungsten Scandal Reported by the Senate Committee on Armed Services

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 6, 1951

Mr. ENGLE. Mr. Speaker, recently a subcommittee of the Senate Committee on Armed Services, known as the Johnson Subcommittee on Preparedness, issued a statement on the tungsten program. Tungsten is an absolute essential in our war effort. The statement by the Preparedness Subcommittee of the Senate Committee on Armed Services fully confirms everything which has been stated by the House Subcommittee on Mines and Mining with reference to this important subject. I have prepared some excerpts from this Senate report, which I think will be of interest to the House and the country at large, and, under unanimous consent, I include them at this point in the Record:

SIGNIFICANT STATEMENTS CONTAINED IN THE REPORT OF THE PREPAREDNESS SUBCOMMITTEE OF THE SENATE COMMITTEE ON ARMED SERVICES ON TUNGSTEN

BLIND MAN'S BLUFF

Here were two agencies—the Munitions Board and the Department of the Army. Each was the child of a parent organization—the Nation's Defense Establishment. Each had an important defense responsibility involving a vital metal—tungsten. Each had the clear obligation to work together for the national security. * * *

The Army had an important program—the development of armor-piercing shells—which required large amounts of tungsten. The Munitions Board had the responsibility of stockpiling the metal lest America's supplies be suddenly cut off.

It would be difficult to picture a situation crying more loudly for the closest cooperation. The armor-piercing shell development—the so-called core program—was a foundation stone of the Nation's military plans. The stockpiling was absolutely essential since the major sources of tungsten were overseas—particularly in China—and could readily be cut off.

The two agencies had merely to get together, decide how much was needed and ask the Congress for the appropriations.

And yet, for nearly 3 years no one—absolutely no one—informed the Munitions Board of the amount of tungsten required for the Army's core program and the Board made no effort to find out about it. The two agencies seem to have been playing blind-man's bluff.

Meanwhile nobody was storing up tungsten.

When they finally got together it was too late. China, the principal source, was just about ready to fall into the hands of the Communists.

Even then, they acted as though time were something not for action. The program for stockpiling tungsten merely stepped up from a crawl to a shuffle. For nearly 2 years, the agencies planned to make plans but rarely took any action.

TUNGSTEN STARVATION

Today, the United States and the free world stand on the verge of tungsten starvation. Production can be increased; more efficient methods can be found; nonessential uses can be slashed ruthlessly. But the fact remains that no foreseeable eventuality will provide all that is needed by the European democracies and the Americas to meet their essential civilian and military requirements.

SHORT-SIGHTEDNESS AND BUNGLING

A detailed study of the actions of the Munitions Board in connection with the stockpiling of tungsten reveals a startling degree of short-sightedness and bungling which has hampered our preparedness program and impaired our security. While all of the facts upon which this conclusion is based cannot be made public without direct aid and comfort to our enemies, enough are set forth below to be indicative of the remainder.

The main reason for the low state of our tungsten stockpile, in our opinion, is the inadequacy of the stockpile objectives from July 23, 1946, the date of the enactment of the Stockpiling Act, to July 20, 1950, after the beginning of the Korean war. * * *

The initial objective was increased on December 31, 1948, but even this new objective was inadequate in that it failed to recognize the need to discount the probability that some imports would be cut off during a war. It is obvious that such an inadequate objective would not protect this country from a "dangerous and costly dependence * * * upon foreign nations * * * in times of national emergency," as contemplated in the stockpiling statute. This second inadequate objective was maintained for over a year and a half because of a disagreement between the Department of the Interior and the Munitions Board over strategic assumptions which are the basis for discounting imports. * * *

Of course, inadequate objectives resulted in inadequate procurement of tungsten for the stockpile. * * *

NO SINGLE AGENCY

This committee is of the opinion that so long as the responsibility for imports of tungsten and other strategic materials is not centralized in a single Government agency, there can be no certainty that imported

supplies available to the United States will be adequate. Reliance on market fluctuations, subject as they are to speculative manipulation to assure needed imports, is a weak reed for our preparedness program. More use should be made of our Government's international bargaining power, e. g., one of our strongest assets, the power to make loans abroad has remained unused. * * *

CUT OFF FROM MAJOR SUPPLIES

Almost overnight, we have been cut off from our major sources of this metal which is so essential in peace and so vital in war. Those sources are the rich reserves of the Far East which we have lost through the Communist conquest of China, the bloody conflict in Korea, and the ceaseless guerrilla fighting in southeast Asia.

At the same time, our tungsten coffers, which should have been filled to the high-water mark against just such a contingency, are down to the danger point. We face the lean years without the comforting fat we should have accumulated in the days of plenty.

THE PRICE WE PAY

The price we will pay for our sins of omission will be high—very high.

We can increase our production; we can dip into our stockpiles; we can buy from what is left of the free world. But the harsh, inescapable fact is that we can foresee nothing short of a miracle that will produce enough tungsten for the combined essential needs of ourselves and our allies. * * *

Taking into consideration all the circumstances, reasonable men would expect the United States Government to have a policy for stimulating both domestic and foreign production. However, reasonable men are frequently disappointed in their expectations. There is very little in the line of a well-rounded domestic program and less than that—in fact, nothing—in the line of a foreign program.

Tidelands Oil

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. MANSFIELD. Mr. Speaker, I am today introducing House Joint Resolution 296, to provide that royalties received under certain mineral leases covering submerged lands of the Continental Shelf shall be set aside in the Treasury for use as grants-in-aid of education, and for other purposes.

The Supreme Court has ruled in *U. S. v. California* (332 U. S. 19), June 23, 1947. The Supreme Court stated without equivocation that "California is not the owner of the 3-mile marginal belt along the coast." And in *U. S. v. Texas* (339 U. S. 704), October 16, 1950, the Court settled for all time this controversial argument between the United States and the several States by holding that the ownership and proprietary rights to this marginal sea, as well as the governmental powers of regulation and control, was in the United States of America as a whole.

Thus, the Supreme Court has declared without question that permanent rights and dominions in this area have been vested in the Government of the

United States and not in the respective States themselves.

It is the purpose of this bill, which is in large part a companion measure to similar bills introduced in the Senate by Senators HILL, DOUGLAS, MORSE, BENTON, TOBEY, NEELY, SPARKMAN, KEFAUVER, CHAVEZ, HUMPHREY, and HENNING, to provide on a long-range basis for the education of the children of the United States and to place the funds derived from the oil deposits in the marginal sea areas in a special account in the United States Treasury for that purpose. It is also the intent of this resolution that during the time of the present national emergency, all funds derived from the so-called tidelands oil shall be used for only such urgent development essential to the national defense and the national security as the Congress may determine. After the termination of the present national emergency, the moneys in this special account shall be used exclusively as grant-in-aid of primary, secondary, and higher education.

Under section 3 of the resolution a National Advisory Council on Grants-in-Aid of Education will be established. This Council will be composed of 12 persons having experience in the fields of education and public administration. Four will be appointed by the President of the Senate; four will be appointed by the Speaker of the House of Representatives; and four will be appointed by the President of the United States. Not more than two from each group of four appointees shall be members of the same political party. It shall be the function of the National Advisory Council to formulate and transmit to the President of the United States for submission to Congress, not later than February 1, 1953, a plan for the equitable allocation of the moneys available for use as grants-in-aid to American schools.

The moneys to be derived under this resolution would not be intended as a substitute for but rather an additional supplement to any program for Federal aid to education to be paid for out of tax revenues.

Mr. Speaker, this resolution offers a reasonable solution to the present tidelands situation which will not, in my opinion, be settled definitely until legislation is adopted either to permit the normal private exploration of the offshore fields to go forward under the control of Federal Government, which I think would be the proper action for Congress to take or to turn the properties over to the States as the legislation, recently reported out by the Judiciary Committee, would do. This quitclaim measure has the full endorsement of the coastal States involved in the tidelands controversy.

It is estimated by the United States Geological Survey that there may be \$40,000,000,000 worth of oil in the offshore deposits. This money, if used properly, should go far toward strengthening the foundation of the American public-school system which, at the present time, is finding it exceedingly difficult to survive. I might say at this point that it is not unusual for the United

States Government to devote a portion of its natural resources to the advancement of education because the country's system of land-grant colleges was created through grants of public lands under the Morrill Act of 1862. This has been a wise use of a great resource in creating a national asset.

It is my hope, Mr. Speaker, that the resolution, which I have just introduced, will receive the support of this body and while I recognize that the details concerning its administration, may be difficult to work out, I feel that the matter is of such import to all the people of the United States, that a satisfactory management of the problem could be achieved. These oil lands are not the properties of the individual States but they belong to all the United States of America.

Mr. Speaker, under unanimous consent, I insert at this point in my remarks a copy of House Joint Resolution 296 which I have today introduced:

Joint resolution to provide that royalties received under certain mineral leases covering submerged lands of the Continental Shelf shall be set aside in the Treasury for use as grants in aid of education, and for other purposes

Whereas the Supreme Court of the United States on June 23, 1947, rendered an opinion in the case of *United States v. California* and on June 5, 1950, rendered opinions in the cases of *United States v. Louisiana* and *United States v. Texas*, holding that the United States has paramount rights in, and full dominion and power over, the submerged lands of the Continental Shelf adjacent to the shores of California, Louisiana, and Texas, and that the respective States do not own the submerged lands of the Continental Shelf within their boundaries; and

Whereas the American system of primary, secondary, and higher education faces a financial crisis of severe magnitude because of the unusually large growth in the school-age population, because of the inadequate supply of teachers, and because of the deteriorating and infirm physical plan of the American educational system; and

Whereas the children of the United States are this Nation's most precious natural resource and their education has from the beginnings of this Republic been traditionally held most dear by all Americans: Therefore be it

Resolved, etc., That the Secretary of the Interior, under such regulations and subject to such terms and conditions as he may prescribe, is authorized to issue mineral leases covering the submerged lands of the Continental Shelf. The Secretary shall require the payment under each such lease of a royalty of not less than 12½ percent of the amount or value of the production saved, removed, or sold under such lease.

SEC. 2. All moneys received by the Secretary of the Interior from leases issued pursuant to this resolution shall be held in a special account in the Treasury during the present national emergency, and until the Congress shall otherwise provide the moneys in such special account shall be used only for such urgent developments essential to the national defense and the national security as the Congress may determine. After the termination of such national emergency the moneys in such special account shall be used exclusively as grants in aid of primary, secondary, and higher education.

SEC. 3. There is hereby created a National Advisory Council on Grants in Aid of Education (hereinafter referred to as the "Council"), to be composed of 12 persons having experience in the fields of education and public administration, 4 to be appointed by

the President of the Senate, 4 by the Speaker of the House, and 4 by the President of the United States. No more than two from each group of four appointees shall be members of the same political party. It shall be the function of the Council to formulate and transmit to the President of the United States, for submission to the Congress not later than February 1, 1953, a plan for the equitable allocation of the moneys available under section 2 for use as grants in aid of primary, secondary, and higher education.

SEC. 4. It shall be the duty of every State or political subdivision or grantee thereof having issued any mineral lease or grant covering submerged lands of the Continental Shelf to file with the Attorney General of the United States on or before December 31, 1951, a statement of the moneys or other things of value received by such State or political subdivision or grantee from or on account of each such lease or grant since January 1, 1940, and the Attorney General shall submit the statements so received to the Congress not later than February 1, 1952.

Congressional Medal Winner Lauds Captain Bailey

EXTENSION OF REMARKS

OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement made recently by Master Sgt. Stanley T. Adams when he received the Medal of Honor. Sergeant Adams has given high praise to Capt. Charles R. Bailey, of Jackson County, Ala., and I am pleased to bring his fine statement to the attention of the Members. The following article appeared in the *Progressive Age*, July 12, 1951:

CONGRESSIONAL MEDAL WINNER LAUDS CAPTAIN BAILEY

WASHINGTON, D. C., July 3.—President Truman today pinned the Medal of Honor on Master Sgt. Stanley T. Adams for heroism "above and beyond the call of duty" in the Korean War.

In this exclusive article Sergeant Adams writes that even if the war in Korea ends, the Communists will "start to fight the same kind of dirty, stinking fight all over again, maybe in India, maybe in Iran."

The Olathe, Kans., sergeant who let enemy grenades bounce off his body when he led a 13-man unit against 250 troops, bluntly asserts that the Reds won't stop in Korea.

Sergeant Adams said:

"I'm not much different than anybody else who has been to Korea. Maybe I'm lucky I got back. There're plenty of good sergeants, good soldiers, the best buddies a man ever had still over there. They will never come back. Maybe I'm lucky."

"Sometimes I'm not too sure. Everybody back here thinks that we're going to have an armistice and everything will be O. K. again. They are the same people who think the war is for somebody else to fight, while they sit home nice and comfortable and read about it, if they can spare the time.

"I think about all the good men we lost over there and I just want to tell the American people what it means to live and fight in filth, with insects and heat or maybe

freezing cold, and maybe to die that way on some crawling, dirty Korean hill, or next to a road, or all by yourself where nobody even knows about it.

"The American people have to know what war means and what aggression means. They have to know that to the Reds human life means nothing. Aggression means everything. They won't stop in Korea.

"I hope all the lives we lost over there aren't wasted. They will be wasted if the people back home forget what has happened, or don't know about it.

"We have to realize that even if the fighting should stop in Korea, it just means the aggressors will start to fight the same kind of dirty, stinking fight all over again, maybe in India, maybe in Iran, maybe somewhere else.

"They say all men are created equal. But who is equal? Are the people who sit back home and worry about business profits equal to the man who is dying on the thirty-eighth parallel?

"We are all equal—equal in our responsibilities and duties to America and to the kind of life I want my kids and your kids to have.

"I just want to say another word about something that has bothered me. We heard a lot of talk over there about people back home worrying about the rough treatment their boys get in training.

"Let me tell you this, the training they get in the Army just can't be rough enough. You can't realize this until you've seen the kind of war the Communists fight. When you are in it, it means the difference between living and dying, just how tough you are—and how much you know.

"I'd like to say something else.

"I'm receiving a big honor today, but all the honor and everything else reverts back to one wonderful man. He's Capt. Charles T. Bailey, of Scottsboro, Ala. Whatever I live to be, will be due to him."

Joe Walcott's Great Victory

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. WOLVERTON. Mr. Speaker, truer words were never spoken than the comment of a sports writer last night following the winning of the heavyweight championship by Jersey Joe Walcott, of Camden, N. J. In speaking of Jersey Joe, he said: "A good clean life pays off."

No one who knows Jersey Joe Walcott, whose real name is Arnold Raymond Cream, will ever question the fact that his life is a living example of the truth of that statement.

I have known Jersey Joe Walcott for many years. He and his family, consisting of a wife and six children, lived until recently in Merchantville, N. J., which is my home town. The last few years he and his family have lived in Camden, N. J., a few miles distant from his former home. Thus, I have had the opportunity to know him personally. I can testify today to the fine, upright, and moral life that he has lived. This fact was recognized and expression given to it by the leading citizens of Merchantville in a testimonial dinner given to him

a few years ago, after what most people believed was his victory over Joe Louis.

On the occasion of the testimonial dinner he was also spoken of as the uncrowned champion and confidence was expressed in his ability sooner or later to establish himself as the heavyweight champion of the world. He has now made good. He has accomplished what was predicted at that time.

The course that Jersey Joe has traveled to reach his pinnacle of fame has been no easy one. He has had many setbacks, but, with his eye continually on the ultimate goal, he has persevered until success was finally gained. Through all these years of struggle, from the time of the depression when he worked as a WPA laborer to support himself and his growing family, through years of ups and downs in the boxing game, through disappointments without number, he has battled on constantly with the thought that some day he would be champion. His courage, perseverance and willingness to sacrifice for the gaining of his goal has carried him forward when less courageous souls would have faltered and given up the struggle.

I wonder if we can fully estimate the good that will come throughout the years as a result of the thoughts and desires he has expressed. His brief speech reached 60,000,000 people by radio and television immediately after his victory. He spoke as one to whom faith in God was a deep religious conviction. He spoke of his desire to help the boys of America to live right. He hoped that he would have the opportunity of addressing Sunday schools to accomplish this purpose. This was no cheap publicity stunt. He spoke what was uppermost in his heart. His life is a guaranty of his sincerity of purpose. On Sunday mornings it is a fine sight to see Joe Walcott, his wife, and six children attending church service. To him participation in the sport of boxing is no different than participation in any other manly sport, track, basketball, baseball, and all the other sports.

The fact that Joe Walcott at 37 years of age could gain the championship is something that has never been accomplished before in the history of boxing. His ability to do so leaves no doubt that throughout the years he has lived a clean life. Night clubs and bright spots have never had an attraction for him. His home, with a faithful and splendidly educated wife and six bright, promising children, has been his joy and satisfaction. Too much credit cannot be given to his wife and the children as a helpful influence. It is for them that he has worked and striven, and they honor and respect him as a true and faithful father.

In conclusion, I can safely say that no victory in any major sport has brought forth such genuine and wholehearted expressions of good will, satisfaction, and congratulations to the victor as has come to Joe Walcott since his victory last night. He has the best wishes of all that he will have many years of health, happiness, and success and, that his life will continue to be a living example of the truth that a good, clean life pays off.

Jack Daniel's Whisky

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, July 13, 1951

Mr. McKELLAR. Mr. President, as everybody who knows me is aware, I have been a temperate man all my life. I have voted that way, and I have acted that way. However, the State of Tennessee, after trying out prohibition, provided for local option in the State and also permitted the manufacture of liquors.

One of the most celebrated liquors in our State, and indeed one of the most celebrated liquors in the country, is manufactured at Lynchburg, Moore County, Tenn. It is called Jack Daniel. The distillery was started by a gentleman by the name of Jack Daniel nearly 100 years ago. Mr. Daniel was a splendid man, and he began the manufacture of a liquor which I am told is peculiarly enticing and attractive to anyone who tastes it.

He had no children, and in 1907 he deeded the distillery over to his nephews, Lem Motlow and Dick Daniel. Later Mr. Lem Motlow became the sole owner. He was a man of the highest character and standing, and I knew him very well. Although I had favored prohibition, and it was a very live question at that time, he supported me in 1915 for the Senate. Of course, if he had been considering only his business, his every interest would have been the other way. I knew him, esteemed him, and respected him most highly.

I first met Mr. Motlow when I visited Lynchburg in 1915. I was told that he had been very much against me because I favored prohibition. In my talks with him he very frankly told me that the first time I ever met him he decided he was going to vote for me because he believed that I was an honest man. It was a very high compliment to me, and I have told the story with great pride and affection ever since. I esteemed Mr. Motlow most highly. We were good friends from the first time I met him until he passed away.

He died in 1947, leaving his distillery to his four sons, who have run it ever since, and its products still enjoy the high favor which it enjoyed under Jack Daniel, the founder, and Lem Motlow, his successor.

It is now owned by Mr. Motlow's four sons, but I am advised that the chief manufacture is in the hands of his eldest son, Reagar Motlow. The sons, like their father, have always been my friends, and their friendship I esteem and respect in the highest degree.

Recently, in the July number of *Fortune*, is a description of the distillery. Everyone in Tennessee is proud of the successful operation of this plant. Tennesseans are proud of the memory of Jack Daniel; they are proud of the memory of Lem Motlow; they are proud of the splendid character and citizenship of Mr. Motlow's four sons.

I ask unanimous consent that the article in *Fortune* describing this plant be printed in the Appendix of the *Record*.

I am informed by the Public Printer that the article will make $2\frac{1}{3}$ pages of the *Record*, at a cost of \$191.34.

There being no objection, the article was ordered to be printed in the *Record*, as follows:

RARE JACK DANIEL'S

If you have never heard of Jack Daniel's whisky, so much the better. Its relative obscurity is part of its charm. For this backwoods brand of spirits, which is scarcely advertised at all and amounts to the merest ripple in the oceans of whisky produced and consumed in the United States, has become the beneficiary of a wonderful whispering campaign. Little knots of Jack Daniel fanatics are to be encountered in all parts of the country and in all walks of life. They pluck at one's sleeve and whisper, "Try some of this. It's made in a li'l ol' still way off somewhere in the hills of Tennessee. The same family has been making it by the same secret process for nearly a hundred years. It's expensive, and hard to get, but no other whisky in the world tastes quite like it."

The enchanting thing about this legend is that it's largely true. Jack Daniel's indubitably has a distinctive taste, though it is made, as most good whiskies are made, of no other blessed thing but grain and water. Though not quite the oldest in years, the Jack Daniel Distillery is the oldest registered distillery in the United States, being the first under the wire when the registration law was enacted shortly after the Civil War. It is owned and managed by the four brothers Motlow, grandnephews of founder Jack Daniel, who died childless in 1911. They make the whisky by the exact formula followed by their late father, Lem Motlow, and Uncle Jack before him, and they even employ some of the original primitive equipment.

They make as much of this whisky as they can without impairing its quality, imperiling their financial security, or plumb tiring themselves out. Each year they make more—sometimes 50 percent more—whisky than the year before, but just can't seem to catch up with the demand. It is a situation over which the brothers Motlow neither exult nor despair. They like people to like their whisky, and they enjoy living well as a result. But they have no ambition to become big rich, and especially not at the expense of family pride in the product.

Though the Motlow boys, all University of Vanderbilt graduates, are by no means guileless, there is no hint of trumpery, no evidence of calculation even, in the remarkable word-of-mouth build-up that Jack Daniel's enjoys. In a field where endorsements are bought at fancy prices, the roster of Jack Daniel's rooters is something to make a professional whisky publicist tear his hand-painted tie to shreds. John N. Garner, when he was Vice President of the United States and used to invite friends into his chambers to "strike a blow for liberty," invariably struck the blow with Jack Daniel's. One of the few things reported publicly about the private life of shy William Faulkner, Nobel prize novelist, is that he prefers to drink Jack Daniel's "on the rocks." A typical votary is a rich and retired industrialist who entertains lavishly on his Long Island estate and tells guests, "There are three kinds of whisky—cookin' whisky, drinkin' whisky, and sippin' whisky. This here (proudly patting a bottle of Jack Daniel's) is sippin' whisky."

HEAVENLY HOLLOW

Jack Daniel's whisky is made in a sylvan setting of such cool beauty and graceful conformation of rock mountain, fell, and stream, that the visitor, caught up in reverie, finds it difficult to rid himself of the

illusion that he is reliving something out of a long-forgotten novel by John Fox, Jr. The little court-square town of Lynchburg, Tenn., lies in the foothills of the Cumberland Mountains some 70 miles southeast of Nashville. A mile beyond the town, off the old turnpike to Chattanooga, the traveler comes suddenly upon "the hollow," the name given a rugged ravine that runs several hundred yards back into the hills until it meets a sheer limestone cliff. At the base of the cliff is a cave, and from its great mouth there gushes, summer and winter, a stream of cool, sparkling water. Anyone with an ounce of sentiment should be willing to believe that this heavenly water, springing from somewhere deep in the limestone formation, is a major tributary to the clarity and flavor of Jack Daniel's whisky. There is some scientific support for the belief, too. The water flows at an invariable year-round temperature of 56 degrees and it tests completely free of iron (which is murderous to whisky).

Along the bank of the stream a road cuts through the center of the ravine. On either side, the modest buildings are grouped. At the stream's edge are the brick stillhouse, the leaching shed, a picturesque remnant from the original still, and United States warehouses No. 1 and No. 2. Across the road is the wooden one-room office building (which catches the constant cool draft emanating from the cave), and below it are a new administration building, the powerhouse, two additional warehouses, and finally the white-pillared mansion, facing the turnpike, where Lem Motlow's widow lives.

Fanning out from the centerpiece of the cliff are two lesser undulating hills. On the left slope, 400 head of beef cattle are pastured, and into their pens is piped the nurturing "slop" or stillage from the distillery—the finest cattle feed in the world. On the right-hand swell stand the sawmill and the ricks of sugar maple slowly burning to char. It is through this char that Jack Daniel's whisky, by an ancient but now unique process, is leached after distillation. The only argument about the whisky countenanced around Lynchburg is whether it is the spring water or the leaching that makes Jack Daniel's the finest whisky in the world.

Whisky has been made in the Hollow, legally or otherwise, since revolutionary times. Jack Daniels was born not 5 miles distant from the spot in "about" 1848. At age 12 he went to work for Dan Call, who ran a distillery a few miles up the pike at a place called Louse Creek, and became a full partner at 15. Shortly after the Civil War, Call, a pious Lutheran, was ordered by the elders either to quit the church or to quit whisky making. Jack Daniel, who was a Primitive, or "foot-washin'," Baptist, suffered from no such compunctions or pressures, so he bought Call out. He then purchased the Hollow and the 500 acres surrounding it, and began making sour-mash whisky under his own label.

LITTLE JACK'S MASH

It was a straight whisky made from a sour mash that was dominantly corn, a small percentage of rye and, of course, an addition of barley malt to convert the starch into sugar. By "sour mash" is meant merely that when the fresh yeast is added to the mash to cause fermentation it is inoculated with a portion of the ripe yeast, or spent beer, from the previous day's run. This is called yeasting back, or in Tennessee hill terms, "sloppin' back." Compared with the sweet-mash or fresh-yeast process, a sour mash usually requires 24 hours longer to ferment. It thereby forms a higher amount of lactic acid, hence the term "sour," though no one but a professional whisky taster could detect sour from sweet. It is claimed, however, that the yeasting-back process helps to ensure uniformity.

Several fine bourbons today are made from a sour mash—there is nothing exclusive about it. But the leaching process, which Jack Daniel learned from old fellows in and around the Hollow, is something else again. It was peculiar to Tennessee, and the Motlows are the only ones to have carried it down, in just that fashion, to present-day distilling.

BIG, LITTLE MAN

From the time he acquired the Hollow little Jack Daniel (he stood 5 feet, 5 inches high), garbed himself in a knee-length frock coat of black broadcloth, affected a high-rolled planter's hat, fawn-colored vest, and broad bow tie, and was never thereafter seen, day or night, in any but such formal attire.

As 76-year-old Uncle Jess Motlow, the family whisky taster and raconteur, recalls him, "He was a tidy little man, vain, exactin', but generous." He was fond of his own liquor, and of the ladies, but remained to the end of his life a preening bachelor. Some years before he passed on he had a life-sized statue of himself sculpted. It stands today on a little patch of greensward at the entrance to the cave.

Though Jack Daniel prospered and grew to preeminence over all other Tennessee distillers, he never worked more than "a hundred bushel a day," and his market and reputation were mostly regional. He didn't try to buck Kentucky, for instance, or any States north of it, but sales of Jack Daniel did spill over into Alabama, Georgia, and to Texas, which has always had a strong affinity for Tennessee. However, in 1904 a friend induced him to ship a case along to the St. Louis Exposition, and to the chagrin of the big distillers, unheralded Jack Daniel's won the highest gold medal. Thereafter Jack Daniel's picked up gold medals at Liège in 1905, Ghent in 1913, and at the Anglo-American Exposition in London in 1914. Apart from their listing on the back label, no particular capital was made out of these rather extraordinary honors. But they show that Jack Daniel's always had something about it that intrigued the connoisseur.

In his shanty of an office, hard by the cave, little Jack had a safe that was as stubborn and unpredictable as he was. One morning in 1905, in the usual tempest of opening the safe, Uncle Jack gave it an unusually hard kick and incurred such a severe clot in the arteries of his leg that eventually it had to be amputated. Thereafter he left most of the management of the plant to his nephew, Lem Motlow, who had come to work for him at 17, in 1887. Finally, in 1907, Uncle Jack deeded over the business to Lem and Dick Daniel, another nephew. Two years later Lem bought out Dick's share.

LEM MOTLOW, PROPRIETOR

Lem Motlow was as much a character, in his own right, as was Uncle Jack. He was, by contrast, big and burly, but he, too, had his idiosyncrasies of dress. He always wore an expensive black broadcloth suit, a wide-brimmed black hat with its crown uncreased, immaculate white shirt buttoned at the collar, and no tie. Even when he sat, proud and erect, in the State legislature he disdained a tie. His operations were decidedly more expansive than Uncle Jack's. He bought vast tracts of land, engaged in large-scale farming, and bred championship Tennessee walking horses. Like Uncle Jack, he was quick tempered, and once wounded an antagonist fatally in a quarrel. But his generosity was legendary, like the time he bought two carloads of model T Fords and passed them out to relatives and friends.

It was Lem Motlow's fate, however, to be driven, for many long years, from the hollow. In 1909 Tennessee went dry, and 2 years after that (the year of Uncle Jack's death) even the manufacture of whisky for shipment outside the State was banned. Lem Motlow set up shop in St. Louis, was

burned out, then opened a distillery in Birmingham, Ala., and Alabama went dry. He started up again in St. Louis, but in 1920, of course, he was forced out of the business completely.

When national prohibition was repealed in 1933, Tennessee still clung to the dry side. Farmer Lem Motlow won a seat in the State legislature and began to battle for manufacturing privileges and a county-option liquor law. By 1938 he had muled it through. Though he was now an old man (67), short of cash money and plagued with ill health and other troubles, he was determined to reopen the hollow and put Jack Daniel's, without change, back on the map.

Lem had four sons, Reagar, Evans, Conner, and Robert, all living on fine farms that he had deeded to them in the early twenties. Even with the mortgage money thus supplied, the precious spring, the Jack Daniel name, and the know-how, they had to go outside the family for additional capital. The problem was to find investors who'd understand that their share would give them no call to tamper with the principles and practices of making Jack Daniel's whisky. They found them among a few friends in Nashville, who took a 50-percent interest and a respectful attitude toward Lem Motlow's ideas on how the business was to be run. They have never regretted it.

It was, however, a long hard pull to get back into production. After 30 years of disuse, the hollow had little usable equipment. Without benefit of architect or engineer, the Motlows and their hired hands put up a new brick distillery and mash room, and began processing, in November 1938, 50 bushels of grain (about 200 gallons of whisky) a day. Soon Lem Motlow's illness developed into semiparalysis, but disdaining a wheelchair he had a big Negro carry him about the premises as he tested and tasted every step of the operation.

Then, when their first batch of whisky had barely matured, the war came along, and except for a few brief holidays whisky production was banned by the United States Government. Many straight-whisky makers stretched out their inventories by resorting to blends with neutral or cane spirits. The big distillery combines combed the country offering fabulous prices for whisky stocks, and indeed bought dozens of small distilleries outright. Jack Daniel, however, refused either to sell to or buy from other distilleries a single gallon of whisky. It bottled a few hundred cases of straight whisky a month, and nothing more. But its most dramatic gesture of fidelity came in 1946, just a year before Lem Motlow's death. The Government had lifted the ban, but still imposed restrictions on the type of grain allowable for whisky. The old man would have none of it. "Jack Daniel's," he said, "has been made from No. 1 grain—the finest white corn money can buy—for 75 years, and so long as I live we're not going to use anything else." So they continued to make industrial alcohol, on a break-even basis, for the Government.

As a result of these factors the postwar boom caught the Jack Daniel Distillery in a poor quantitative position. Not only was it in short supply over-all, with less than 18,000 barrels in the warehouse in 1948, but it had practically no fully aged whisky for sale. But if this was the penalty management had to pay for its pride, there were certain compensations. What little whisky it had made and sold was awfully good whisky, and the word began to get around. Those who liked the 3-year-old green label began to yearn for the 4- and 6-year-old black label that "money can't buy." And so it snowballed. The Motlows are as much in the dark as anybody as to why Jack Daniel's, though always a good draw in the South began to pull so suddenly in the big cities in the East and on the West coast. They do know that "Jack,"

as it is called in Tennessee, made a good many friends among the 500,000 or more troops that were trained at nearby Camp Forrest during the war.

To be sure, the rise of Jack Daniel's is doubtless a sociological phenomenon to some extent. In drinks (the Gibson cocktail, for example), as in the arts, coteries, and cults spring up, and as mysteriously vanish when the novelty rubs off. To the drinking elite there is a certain cachet to the rare, the quaint, the romantic Jack Daniel's. Elegant Lucius Beebe, for instance, who can collect money on his testimonials for food, drink, and shaving lotions, delights in touting Jack Daniel's for free. The Motlow brothers, who wear shoes, too, are aware of this. But with all due modesty they think the majority of drinkers who cheer Jack Daniel's do so because of its superior quality and taste.

THE PERSONAL TOUCH

Reagor Motlow, 52, Lem's chunky, chatty, sharp-minded eldest son, who now heads the enterprise, has vastly more technical learning than his predecessors, but far from turning his head it seems rather to have reinforced his allegiance to the old ways in whisky making. "With good straight whisky," he says, "and not those fruit-salad concoctions, you can't substitute formulas and instruments for instinct and experience. There's no escape from the 'four unknowns' all whisky has to go through—mashing, fermenting, distilling, and barreling. Each time, despite controls, any one of these reactions is liable to turn out differently. You have to be alert enough to spot something wrong about a batch, and then have the guts to do it over again until it's right. Why, Uncle Jess here never read a chemistry text in his life, but after 54 years of stillin' whisky you can't fool his eye, his nose, or his tongue."

Uncle Jess gives with a faint, leathery blush. "Why, Lord a' mercy," he says, "I don't know nothin' about diastase and such things as Reagor talks about. All we was taught was how to take a bushel o' grain and get some whisky out of it."

"There's another thing we hold to," Reagor continues, "and that is that it's not age that's important in whisky; it's what is done to it before it gets in the barrel. We think that 4 years in the wood is quite sufficient for Jack Daniel's because it matures faster than other whiskies, but if custom has led people to insist on 6-year-old whisky we'll have to give it to them again, I suppose."

In the Jack Daniel Distillery's leisurely, choosy way with a batch of whisky, the sour mash usually bubbles away for the full 96-hour cycle before old-time stiller Lem Tolley, with an approving nod from Uncle Jess, declares her ready to run. When she does run, it is a source of pride to the Motlows that she runs less than 4½ gallons to the bushel compared with the 5 gallons of liquor the average United States distiller extracts from a bushel of grain. The whisky comes out of the still, white and clear, at about 120 proof (it is barreled at around 105 proof and bottled at exactly 90 proof). But before it goes into the barrel Jack Daniel's gets that extra blessing.

The leaching process is no lick-and-promise ceremony. Though once upon a time sugar maple abounded on the distillery property, much of it now has to be imported from Alabama and other States at an average cost of \$18 a cord. The distillery hands split the logs in the sawmill, pile them in open ricks, and burn them to a carefully calculated char. The charcoal is then ground fine and tamped down 10 feet deep into the leaching cisterns. Three thicknesses of specially loomed blankets cover the false bottoms of the leachers. The raw, white whisky is poured into this filter in a lively stream, and emerges in an agonizing trickle. If it runs any faster, they examine the leacher for gaps

or trenches, retamp it, and run the whisky through again. On the average, it takes approximately as long again to leach as it does to mash, ferment, and distill the liquor in the first place.

What does this do for Jack Daniel whisky? The jest is that it removes the "hangover," and it could well be the true word so spoken. The Motlows say only that it apparently removes some objectionable impurities and heightens esters and other congeners, which give a desirable character and flavor to the whisky. Some judges believe that 4 days in the leacher is worth 2 years in the barrel, and they cite the dark, rich color of 1- and 2-year-old Jack Daniel as substantiation. At any rate, visiting amateurs who take what Reagor Motlow kiddingly calls the "organalptical test" (be sure to spit, and now swallow) have no trouble in distinguishing between the leached and unleached liquors.

After the leaching, the whisky, under the eye of Government inspectors, is poured into new, charred, white oak barrels. Here again the Jack Daniel people get in a final, custom-tailored touch. They insist that their coopers expose the staves to 12 months of rain, frost, and sun. "The weathering takes out some of the harmful tannoids," Reagor explains. "You get green cooepage, and you're liable to get a persimmony taste in your whisky—God forbid."

PRICES AND PROFITS

From these attitudes and exactitudes it can perhaps be appreciated why Jack Daniel's, though not a bourbon according to label, not bottled in bond, and not often available even in the 4-year-old state, is nevertheless a premium whisky (the green-label, 3-year-old sells at \$6.05 a fifth in New York, the black-label, 4-year-old at \$6.67). It's not a bourbon merely because Lem Motlow, who wanted to distinguish it from Kentucky whisky, convinced Government experts that though his whisky was made from a bourbon mash, the leaching gave it special characteristics, and he was entitled to label it plain "whisky." It is not bottled in bond because of its traditional 90-proof (B. in B. must be 100 proof). But it is a costly whisky to make, not only because of the special processes, but because of its production of a mere 2,400 gallons a day.

To be sure, the Motlows are taking a nice profit, and in the last few years the small group of investors has been enjoying a return of from 15 to 20 percent on the Jack Daniel shares. But it is still something this side of a gold mine. Out of the gross sales of some \$4,500,000 last year, the Jack Daniel distillery paid out around \$3,000,000 in gallanage taxes alone. The underwriting or banking aspect of the whisky business is a considerable burden for an outfit in Jack Daniel's circumstances. After all, Jack Daniel has had only five full years of production since it reopened. The whisky it is producing now, at a cost of around \$60,000 a month, won't be available for shipment and sale until 3 years and more have passed. To raise ready cash the distillery has reluctantly marketed, in the past couple of years, a 1-year-old whisky called Lem Motlow's Tennessee Sour Mash Whisky. That it is a popular and potable whisky at this tender age is a remarkable tribute to the process, but as soon as matured stocks will allow, this brand will be dropped.

Thus, while the amazing word-of-mouth campaign buzzes on, the Motlows, juggling their small stocks (40,000 barrels now) back in Lynchburg, can capitalize on it only fractionally. There won't be any fresh stocks of black label, for instance, until 1952, and the amount then available will depend upon how much green label the distillery bottles in the meantime. And always over their heads hangs the threat of local prohibition and of Government restrictions on grain. Sometimes, on a dark day, the siren song

of the syndicates is a real temptation to Reagor and his brothers.

The circumstances, naturally, pressure the Motlows either to expand or to sell, and neither alternative particularly appeals to them. Right now they are following the former course, insofar as it can be financed out of earnings, but with the definite determination to keep the business within bounds of the hand-tooled, intimate, ever-loving operation it has always been. They feel that around 30,000 cases a month, or, roughly, triple the current output, is as much whisky as they can make in the way, and in the place—meaning the Hollow, of course—that they want to make it.

Even so, it won't be easy. Some seventy-odd employees already crowd the Hollow a bit, and this month Reagor Motlow somewhat ruefully removes his wonderful collection of junk and memorabilia from the little low-roofed office that Jack Daniel built 60 years ago, and takes up quarters in a new air-conditioned brick building down the road a piece. He may even be forced to hire himself a female secretary. This means he will henceforth have to run the business without benefit of the kinfolk, neighbors, and superannuated employees who gather every afternoon on the porch of the old office to gossip, whittle, sip from the spring, and smile slyly at little Jack Daniel's marble image. It may be a pathetic fallacy, but one can't help thinking that this, too, has contributed to the fragrance and balm of Jack Daniel's Old Time Tennessee Sour Mash Whisky.

U. S. S. "Walke" and the Korean War

EXTENSION OF REMARKS

OF

HON. FRED E. BUSBEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. BUSBEY. Mr. Speaker, I think the House of Representatives should know about the remarkable record made in the Korean War by a great American warship, the destroyer *Walke*; and also I want to pay tribute to the fine example of leadership exhibited by its captain, Marshall F. Thompson, and other officers of the ship.

I know quite a bit about the *Walke* and its crew because one of my close friends, Alfred D. Garvin, a Chicago boy, is executive officer of the destroyer which has been in the thick of the fight to subdue the expansion of communism in Korea.

The *Walke* has covered more distance, fired more rounds of ammunition, and in turn been under more fire from the enemy than any other naval unit in the area. This destroyer, which came out of the "moth-ball fleet" inflicted terrific punishment on the Reds, especially at Wonsan.

Throughout its operation in Korean waters Captain Thompson has demonstrated wonderful leadership, has inspired his men, and has maintained morale in the highest traditions of our Navy.

Under leave to extend my remarks I include in the RECORD a Memorandum to All Hands which Captain Thompson distributed to the *Walke* crew. This memorandum, a unique document, explains the records and accomplishments

of the destroyer. It is an outstanding example of how an officer can keep up the spirit of his men, make them all a part of a splendid fighting team, and put over to them in clear, understandable language the part they are playing in the Korean war. The memorandum follows:

A MEMORANDUM TO ALL HANDS—U. S. S. "WALKE" AND THE KOREAN WAR

1. It has been almost 7 months since the *Walke* joined the active fleet, of which the past 15 weeks have been in the western Pacific. While most of us understand the importance of the struggle in Korea as a part of the efforts of the free nations to repel communism, I think it is time we reviewed the situation, with emphasis on the part of the *Walke* has played and is still playing.

2. To cover the subject with some program let's consider: first—what has the Navy accomplished; second—what has the *Walke* done; and finally, has it been worth while, that is, are the Koreans worth fighting for?

WHAT HAS THE NAVY ACCOMPLISHED?

The Korean war, like every war so far in history, will be won ultimately by the soldier, the GI who carries the gun and lives in the mud and dirt of war. In Korea the U. N. Navy has been helping the foot soldier in two ways. First, by cutting off the flow of supplies from Communist China and the U. S. S. R. by a tight blockade of the entire peninsula. Second, by providing close air support from our carriers for the front-line troops, and by blasting rail and road routes by ship's fire and air bombardment.

When the Soviet-created illegal government of North Korea invaded the U. N.-sponsored Republic of Korea, the North Koreans were supplied by three sea routes and two land routes from China and Manchuria. You can see these routes on the attached map. In the first surge of victory, the enemy made an amphibious landing at Samchok, on the east coast. Supplies flowed in heavy stream along the five routes until the U. N. acted and authorized the use of force in the defense of Korea.

Within a few days the United States Navy had completely severed the three sea routes, and Communist shipping disappeared from the Japan Sea and the Yellow Sea. At the same time our carrier-based planes, with the Air Force, tried in vain to stop the Communist advance. All of you know the story of the retreat to the Pusan beachhead. There, with their lines of supply under constant attack, the Communist forces were held and finally driven back, out of South Korea, past the thirty-eighth parallel, and up to the Yalu River, the border with Manchuria. There, in December, with the North Korean invaders in complete defeat, it seemed that the war would end. However, without warning, and in defiance of the United States, the Chinese Communists hurled an army of hundreds of thousands of men against the U. N. forces.

During the long and painful retreat that followed, the Navy evacuated the trapped marines and infantry at the Hungnam beachhead. Naval guns and naval aircraft pounded every line of supply. The blockade was made so complete that not a single enemy junk or sampan could operate. The Chinese Communists were finally slowed, stopped, and then pushed back. At the present time the front lines are north of the thirty-eighth parallel, and our forces are braced for a new Chinese assault.

As a part of the Navy plan to support the troops by cutting off enemy supplies, it was decided to cut the east coast highway and rail net at Wonsan and Sonjin. At Wonsan the longest naval siege in history continues. Surrounded on all sides by hostile shores, U. N. warships anchor and keep the transportation system under con-

tinuous fire. At Sonjin, where the siege is also continuous, destroyers keep the roads and rails under daily bombardment. Traffic on the east coast system has been reduced to zero by day, and to furtive and unreliable movement by night.

The enemy works hard to keep his bridges and tunnels in repair, by working all night. The next day his work is demolished by the Navy. Supplies get through by occasional truck, by oxcart, and by being carried on the backs of men. It is not sufficient to supply an army.

The only enemy route not cut by the surface ships of the Navy is the west-coast rail and highway route, which has become the main source of supplies for the enemy. There the Air Force and Navy planes scour the area by day, forcing the Communist to travel only at night. During darkness radar-equipped planes find their trucks and trains, bombing and strafing them. It must be tough to be a part of the Communist supply system.

WHAT HAS THE "WALKE" DONE?

Of course, we can start off by saying that of the 8 ships in our squadron that came out of the mothball fleet the *Walke* has steamed more, fired more, spent more time in Wonsan, and been fired at more than any of the others. During the 4 weeks we had with the blockade and bombardment force the *Walke* fired over 4,000 rounds of 5-inch ammunition at the enemy. In Wonsan we knocked out a gun position, burned up a radio station, troops barracks, and a large gasoline dump. Shells from the *Walke*, on three occasions, forced out of action the enemy batteries on Kalma Gak which fired on the ships in Wonsan. At Sonjin, as well as at Wonsan, the *Walke* delivered that steady bombardment which is needed to keep the enemy off their roads and bridges. Far to the north, in the Chonjin area, *Walke* has closed in to within 2 miles of the beach to bombard the transportation net. We have made antijunk sweeps to within 40 miles of the U. S. S. R.

It is not hard to feel we are helping the war when we anchor in Wonsan, shooting all night. But it is a little more obscure when all we do—apparently—is to chase the carriers around. When escorting the carriers our job is to protect the big ships and their planes from air and submarine attack, so that the planes can carry out their missions. If and when the Commies launch their air force against us, our training and weeks of fruitless screening will have been worth while. In the meantime we know that the presence of our destroyer screen has kept the Communist Air Force away from our carriers.

The important thing to remember is that when the firing key is pressed in plot, it is not just a gun crew that is firing. Every man on the ship has played his part in getting that shell on the target. The engineers who get us there, the supply personnel who order the ammo, the cooks that feed us, the electronics technicians, the fire-control men, and the repair personnel who keep the ship operating, all have played their part. Every shell fired must be brought aboard by hand, by some man on the ship. The orders received by radio and visually play a part, along with the men who receive them. The officers who conn the ship, control the battery, and manage all the departments play their role.

On a destroyer every man is essential for the ship to steam, fight, communicate, and live. When the firing key is pressed, there are 300 fingers on it. Every shell that hits the target plays a part, not only in the Korean war, but in the world-wide struggle for liberty in which free nations are engaged.

The most important question remains:

HAS IT BEEN WORTH WHILE?

In other words, has the sacrifice made by both the Regulars and the Reserves been

worth while? Are the Koreans really worth fighting with and for?

Let's take a look at the Koreans. For almost 50 years they were a plundered colony of Japan. During that period the spirit of freedom was kept alive by a sort of government in exile and by an underground at home. When World War II ended, the Koreans became a free people, sponsored by the U. N., but with no history or tradition of freedom and independence as a background. In spite of this, and in spite of the illegal refusal of the Soviet Union to allow North Korea to become a part of the republic, the new state overcame its difficulties, and was on the way to becoming stable and self-governing.

When the Communist invasion began, the small Korean Army was driven back rapidly. Seoul, the capital was taken, the country overrun, and only the small Pusan beachhead remained. Under these conditions the South Koreans fought on, aided by the United Nations. They are still fighting and still suffering the heaviest casualties of all U. N. troops. Their nation is devastated, cities ruined, industries destroyed. Compare their fighting belief in their country with, say France in 1940. When the Germans took Paris, all France surrendered. They deemed their cities more important than their liberty. Compare Korea with all the European nations that have fallen to the U. S. S. R. since the war. Czechoslovakia, Bulgaria, Hungary, and many others fell without a fight. Only Greece and Korea have fought for their freedom, even at the expense of their cities, their industry, their lives.

If all our allies in the struggle against international communism were as steadfast as Korea, we would have little to fear indeed.

To sum up then, I believe we are fighting in a good cause, I believe the Navy is playing an important part in this fight, and I believe that what the *Walke* has already done has made it worth while to put her back into service.

MARSHALL F. THOMPSON,
Commanding Officer.

Gill Robb Wilson Declares, "The Skies Hold Key to Peace," While at the Same Time Secretary Finletter Declares, "The Strategic Air Arm Is the Single Most Important Part of the Armed Services"; Nothing Should Be Spared To Make It the Most Powerful Military Service on Earth

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. BOYKIN. Mr. Speaker, for the last 2 years I have repeatedly stated that our possession of the atom bomb, our strategic Air Force, and the B-36's are the only things which have contained the Russians and prevented the outbreak of a full-scale global world war III.

There are many in this House who disagreed with me. They thundered here on the floor and in committee in the B-36 investigation that the Air Force, in building a strong strategic Air Force, was putting "all of its eggs in one basket." Today we find these same critics bemoaning the fact that the Air Force

has not built enough B-36's, although I am sure they know not of what they speak.

Mr. Speaker, the people of these United States not alone believe in, but they have implicit faith in, their Air Force and rightfully regard it as the greatest military force on the face of this earth.

Oh, yes; I know about the money we voted the Air Force that was withheld from them, and which they weren't permitted to spend for planes, but I also know of the great work they did with the money which they did receive and did spend for planes—planes of all makes, of every type, of the latest designs; planes with the greatest speeds; planes that afforded the greatest safety; planes that achieved the highest altitudes, possessed the greatest gun platforms; and planes which justifiably make the American people feel proud of its Air Force.

The pride and the faith of this Congress in the Air Force could not have been greater expressed had it been shouted by the Speaker from the top of the dome of the Nation's Capitol than was expressed by the approval of the Air Force program by the Armed Services Committee of the House a short 72 hours ago.

Mr. Speaker, on Sunday last I came upon the first of a series of three articles written by Mr. Gill Robb Wilson summarizing his conclusions on the hope of world peace after 3 months of observation and study in Europe and the Middle East.

There are few men in America today who are more qualified to speak on such a subject than is Gill Robb Wilson, and I do certainly commend the reading of this article to every Member of the Congress. World conditions as they exist today make the article entitled "Skies Hold Key to Peace" one of tremendous interest to every Member on both sides of the aisle.

Now, Mr. Speaker, there is still another item to which I wish to direct your attention. It was written by our good friend John G. Norris, reporter for the Washington Post. Mr. Norris' article treats briefly of a proposal to establish an Air Force academy. This proposal is covered by a bill placed in the hopper by the distinguished chairman of the Armed Services Committee, Hon. CARL VINSON, of Georgia.

Mr. Speaker, I know that I bespeak the opinion of the vast majority of the Members of this House when I say that we are all fully conscious of the benefits that will come to this Nation from the establishment of an Air Force Academy of equal stature to the institutions we maintain at West Point and Annapolis.

Moreover, I feel that the present need for such an establishment is so pressing that funds should be made available, not a year from now, but at once. This would enable the Air Force to associate the faculty and establish all criteria and curriculum to such a degree as to permit them to operate the school in some temporary quarters while the permanent plant facilities are being located and es-

tablished. With the further increase in Air Force strength provided for by this Congress, there is now a greater need than ever for competent military airmen—men highly trained in all branches of aeronautics to take over and administer and even enhance our great Air Force along the lines of economy and efficiency under which it is now functioning. The need for that high type of Air Force personnel follows the appropriation which we made to that service just as surely as a tail follows a dog.

Mr. Speaker, realizing the deep interest of the Members of this body in Gill Robb Wilson's findings on the recent investigations in respect to European air power as well as in the bill which the Hon. CARL VINSON introduced to establish a separate Air Force Academy, as covered by the article written by John G. Norris, I am asking unanimous consent to place these two articles in the RECORD of this day's proceedings.

The articles are as follows:

[From the New York Herald Tribune of June 24, 1951]

SKIES HOLD KEY TO PEACE

(By Gill Robb Wilson)

(This is the first of three articles by Mr. Wilson summarizing his conclusions on the hope of world peace after 3 months of observations in Europe and the Middle East.)

Air power's first major prophet, Billy Mitchell, was wont to tell us youngsters in the air service that the 2,200-mile Mediterranean, "the Big Ditch," would be as significant to the air age as it had been to a thousand years of sea power.

Mitchell would point out that the narrow sea had cradled ship handling and navigation and so had projected western rather than eastern standards around the globe. It had enabled the maritime fringe lands of Europe to exercise restraint upon the hordes of Eurasia.

Mitchell forecast that in future time a combination of land-based and sea-borne air power in the Mediterranean would succeed to the main responsibility of preventing Russian imperialism from gobbling up the globe.

So often did Mitchell dwell on the threat of potential Russian imperialism in discussions with the writer that when he died in 1936 I wrote some verses reflecting the rise of the Red star titled "Epitaph to Mitchell." Now, 15 years later, with General Eisenhower's right flank in the Mediterranean just in process of organization, a few lines of the humble epitaph might be recalled:

"Look up, Uncle Sam, through the haze
o'er the hills

To see what swings over the head:

Arcturus and Mars and Polaris have formed
A fresh constellation in Red!

Your surveys and maps are decadent with
age

Be they either of land or of sea;

Look up, Uncle Sam, and take bearings
again

To see what your heading should be!"

Since World War II the free nations have been so distracted by Soviet pressures and bluff that the cold fact of Communist failure in the Mediterranean Basin has escaped general notice. The Mediterranean remains today with all its possibilities for containment of Soviet imperialism practically unimpaired.

Target distances from the Mediterranean and its border lands to Russian industrial centers are still the shortest. Western control of the Mediterranean still interposes between Eurasia and the vast resources of

Africa which would give the Soviet world domination.

The Mediterranean contains many peoples who are willing to face up to their problem—Turks, Greeks, Yugoslavs, Italians, Spaniards—mountaineers.

If determination to prevent war is the main theme of American policy, the political vacuum which exists in the Mediterranean must be filled immediately. Spain must be accepted into the United Nations and become a member of the North Atlantic Pact. Greece and Turkey must be brought into full western partnership. The bargains of the west with the oil-producing Arabian states must be modified to create a better standard of living for the Arab peoples. The Moslem nation of Pakistan must be guaranteed as inviolate from Indian ambitions.

A clear-cut line of coordinated responsibility in the Mediterranean and Middle East must be established as between the United States and Great Britain. An integrated Mediterranean command embracing elements of border lands supplemented by American air and sea power is now possible under the recent appointment of Admiral Robert B. Carney as General Eisenhower's commander in chief of Atlantic Pact forces in Southern Europe.

If these matters are accomplished, the historic significance of the Mediterranean can be kept inviolate and its influence serve to deny traditional Russian imperialism its voracious ambitions.

[From the Washington Post of June 23, 1951]

BILL ASKED TO SET UP AIR ACADEMY

(By John G. Norris)

The Pentagon asked Congress yesterday to establish an Air Force Academy of equal stature to West Point and Annapolis.

With White House approval, the Department of Defense proposed spending \$20,000,000 to get the project started. Somewhat similar legislation was sidetracked last year because of the Korean war.

Chairman CARL VINSON, Democrat of Georgia, of the House Armed Services Committee, introduced the bill. He said he hopes to get it passed this session.

TEMPORARY LOCATION FIRST

Under the administration proposal, \$10,000,000 would be authorized to set up an Air Academy at a temporary location. This would permit the faculty to be organized and operating while a permanent school is established.

Another \$10,000,000 would be authorized for purchase of land and preparation of plans for a permanent academy.

A Pentagon board has narrowed prospective permanent sites to Camp Beale, Marysville, Calif.; Colorado Springs, Colo.; Madison, Ind.; Charlotte, N. C.; Grapevine, Tex.; Grayson County, Tex.; and Randolph Air Force Base, Tex.

PROPORTION OF GRADUATES

A recent survey showed that 47 percent of Regular Air Force officers are college graduates, compared to 71 percent of Army officers, and 87 percent of Navy officers.

The Air Force now takes 25 percent of each West Point and Annapolis graduating class, but the Department said the Army and Navy need all their officers today and that it is not practical to expand those schools. Under the bill, the Air Force would take half its Regular officers from the new academy and half from ROTC and similar programs.

When Louis Johnson was Secretary of Defense, legislation was sought for a third service academy. He favored abolishing the separate service character of West Point and Annapolis and simply training officers for the Armed Forces. This plan was opposed by the Joint Chiefs of Staff and an advisory board of college presidents.

Political Hot Potato—The China Lobby**EXTENSION OF REMARKS**

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1951

Mr. ENGLE. Mr. Speaker, I wish to make a part of the RECORD a column by Joseph C. Harsch, chief, Washington news bureau of the Christian Science Monitor, which appeared in the Sacramento Bee of July 7, 1951, entitled "Political Hot Potato—The China Lobby." I have introduced a resolution to create a select committee to investigate this political hot potato. I hope it will be given the serious and favorable attention of the House. The article is as follows:

POLITICAL HOT POTATO—THE CHINA LOBBY
(By Joseph C. Harsch)

When Republican Senator WAYNE MORSE, of Oregon, gave notice during the Acheson questioning in the MacArthur hearing that he intended to raise the question of the so-called China lobby a low whistle could be heard through the political fabric of this city on the Potomac.

When Democratic Senator BRIEN McMAHON, of Connecticut, twice brought forth by question and answer two specific incidents alleged to be related to the activities of this alleged lobby the professional politicians of both parties began looking to the fittings on their storm cellars.

It remains to be seen whether the preliminary moves made by these two daring Senators from opposite sides of the political aisle really result in a serious effort to discover how much substance may lie behind one of the most talked about subjects in the fabric of American politics.

There has been talk before, many times, of an investigation into the China lobby. Always before it has ended in just talk.

The reason why it has ended in just talk is entirely speculative. There is a wealth of gossip and rumor on the subject, but almost no publicly documented fact.

The rumor and gossip are to the effect that if Congress ever seriously starts working on the subject the chips will fly in all directions and may hit names which will prove highly embarrassing, both to the Democratic and to the Republican Parties.

What Senator McMAHON has brought out in his two preliminary excursions is equivalent to the previews at a movie house. They avoid giving away the plot but, at least in theory, whet the interest of the audience for a ticket to next week's show.

In this case Senator McMAHON established that the United States sent \$200,000,000 in gold bullion to China and that according to Treasury views, this became the basis of inflation which is said to have been manipulated deliberately for some more personal purposes than the defense of China against the Japanese armies.

Then, 6 years later, a group of Chinese, unidentified, attempted to corner the United States market in soybeans.

Is there a connection between speculative manipulation of United States gold in China in 1943 and an effort to rig the soybean market in 1949?

One can only state the question. If anyone in Washington knows the answer, he has not put it into the public record. The implication is that if the full facts ever are brought to light they may show that private Chinese fortunes coined out of China's wartime misery moved to the United States and have since been used to make more money for their owners.

The belief behind the initiative of Senators MORSE and McMAHON is that part of this process of making more money for the owners was heavy investment in influencing Congress to vote more money for the Chinese Nationalist Government.

What Senators MORSE and McMAHON propose is that some agency of Government, whether congressional or executive is not yet clear, find out how much Chinese money came to the United States and what happened to it.

Did it finance an actual China lobby working for purposes more personal and less altruistic than the rescue of China from communism?

Did some influential Americans take chunks of that money innocently or otherwise? Is there any connection between such possible taking of the money and various votes in Congress?

These are questions arising from the streams of gossip and rumors which have flowed around the political citadels of this city for years. Will they be answered? That is a question causing the politicians some anxiety.

How Far Shall We Go in Controlling Prices?**EXTENSION OF REMARKS**

OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. MUMMA. Mr. Speaker, as with other Members of the House, a good many letters have come in to my office during the past month asking me to vote for or against the controls demanded by the Truman administration in connection with extension of the Defense Production Act of 1950.

The views expressed in a letter of June 11, 1951, from Mr. Harold Fritchman, of my home city of Harrisburg, Pa., are typical of the group that would go all-out on these controls.

Under leave to extend my remarks in the RECORD, I include copy of Mr. Fritchman's letter and my reply of June 13, which explains my general attitude on this important subject. These communications are as follows:

HARRISBURG, PA., June 11, 1951.

Congressman WALTER MUMMA,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN MUMMA: I am writing this letter in the hope that it may have some influence in persuading you to join with other Members of the House of Representatives in passing a strengthened Defense Production Act.

Despite all assurances by big business interests in 1946 that abolishing controls at that time would bring about a leveling off of prices, we found the contrary to be true, as prices spurted after these controls were abolished. We are now faced with a renewal of this propaganda by the same interests with no reason to believe that the result will be any different.

Instead of permitting profiteers to run rampant and siphon off so-called excess money which abolishing price controls will permit, the low- and middle-income groups should be encouraged to put this money into savings to bolster our postwar economy. Higher prices will not only prevent this wise action but will further increase already

profit-swollen Government defense and war expenditures making a continued long period of high taxation necessary on the general public whose buying power is the lifeblood necessary to the preservation of our free-enterprise system.

Very truly yours,

HAROLD FRITCHMAN.

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 13, 1951.

Mr. HAROLD FRITCHMAN,
Harrisburg, Pa.

DEAR MR. FRITCHMAN: Thanks for your letter. I am deeply interested in the present economic plight of our country and its millions of citizens. Our present national debt is \$254,789,979,267.58, which is really something to think about.

I appreciate advice and truly seek a solution of current problems that will afford relief to all our people—especially those who must live on fixed incomes based on the old purchasing power of the American dollar.

We are now being asked by our President for a stronger Defense Production Act with roll-backs and stiffer controls on commodities and prices, etc. From my observation, it is locking the barn door after the horse is stolen. A sincere effort was made immediately after the Korean incident to get right down to business and set up wage and price controls. Mr. Bernard Baruch, whose opinion is generally accepted, advocated such action and predicted quite accurately what would happen otherwise. We finally wound up with the present legislation which allows the President to put into effect when he sees fit such controls as he deems necessary. This was much too late, as you know.

The Korean police action was continually being minimized until the mounting casualty lists and military reverses brought us to the point where the American people realized—despite official denial—that world war III was upon us. All along the way, scare buying on the part of merchants and consumers created temporary shortages, and up went prices. Merrily the vicious circle of one round after another of wage and price increases continued. The question now seems to be which increase should, would, or can be stopped first or last. The Macy-Gimbel case may, better than any law Congress could enact, be a step toward correcting the situation. Let's hope so. The test will be their ability to replace the material from the manufacturer at a reasonable price—and, too, the manufacturer's ability to secure labor and material costs on a replacement sale price basis.

This has been the story since 1946, when the first decision of which you speak was made to drop controls. This continued until the time the President was driven into action to stop the floodwaters of inflation.

Personally, I have wondered if the Government does not desire to have prices as high as they can go without rampant inflation so that people will be lulled into a feeling of contentment with their present rate of wages as compared to 1945, when controls were removed. However, as the wheel turns, they find themselves back where they started in actual purchasing power.

For instance, each month I have the opportunity of cashing in a war bond. The \$50 I receive from a \$37.50 bond does not give me the return in actual cash it was supposed to. First of all, out of the so-called profit of \$12.50 come the new high income, State, and county taxes. Then you will find, for example, a \$50 suit is now priced at \$75 or \$80, and that everything else you buy is in proportion. This can be stopped, a more natural value established, and further price rises prevented by cutting governmental expenditures, resisting pressure groups—local, national, and international—who know economies are necessary but want them at the other fellow's expense. That this situation

obtains is brought out in the debate on every appropriation bill. I think our military expenses can be cut down materially and still have as good, if not a more alert, defense organization. If you look around at our local military and defense set-ups, you see much waste of material—and manpower, especially. If there were a slight undermanning there would possibly be more alertness, rather than the feeling that John will do it. Note the Senate vote on June 12 cutting down the forces of Government agencies 10 percent.

Not trying to argue against your thought of profiteering, I know from my own knowledge of Government purchasing that your Uncle Sam isn't doing so bad. There are no doubt cases of excessive prices or profits in certain supplies, but here Uncle Sam comes in again, with his normal income tax, his excess-profits tax, and last but not least, renegotiation. In World War II, General Motors' actual profit was around 1½ percent on figures I have seen.

Free trading on the basis of supply and demand, to my mind, is the best insurance against profiteering. There are tremendous stocks at all levels of some items, particularly television, appliances, etc., and I have read quite recently of new automobiles being offered in Texas at a percentage off list. Today we hear of the impending relaxation of credit buying, which is surely the result of pressure from the above causes.
